

$$\begin{array}{ccccccc}
 I & \xleftarrow{n} & D & \xrightarrow{d} & A & \xrightarrow{a} & I \\
 \uparrow \scriptstyle h & & \uparrow & & \uparrow & & \uparrow \scriptstyle h \\
 H & \xleftarrow{\gamma} & H' & \xlongequal{\quad} & H' & \xrightarrow[\alpha]{} & H
 \end{array}$$

A commutative diagram with two rows of objects and arrows. The top row consists of objects I , D , A , and I connected by arrows labeled n (pointing left), d (pointing right), and a (pointing right). The bottom row consists of objects H , H' , H' , and H connected by arrows labeled γ (pointing left), an equals sign (pointing right), and α (pointing right). Vertical dashed arrows point upwards from H to I (labeled h on the left), from the first H' to D , from the second H' to A , and from the final H to I (labeled h on the right). A right-angle bracket connects the vertical dashed arrow from H' to A and the horizontal arrow labeled α .
