## Select references

The reference list is updated after a successful query to reflect the references included in the customized sample. If you change any of the options above to do a new query, you need to *reselect the desired references manually*, otherwise the references selected in the previous query would be used. This extra step is to make sure that you manually inspect the references selected for each query.

Select by author and year: **First author/s**

e.g. Frebel, Roederer

Year range: **From**

e.g. 1990

**To**

e.g. 2017

**i** Add last name of first author separated by a comma (e.g. Frebel, Roederer) and year range.

OR

select references from the table below.

## Customize plot

- ☒ Show duplicate entries for each star when available ☒ Include upper limits in plot/table  
☒ Show legend for plot

Plot abundances

Show data table

## Add more information to the output table

**i Note:** These options do not affect the sample selection. This information is only added to the output table after the stellar sample is selected above.

Add up to 3 extra elements to the output table in addition to those selected above:

+ Add element

Remove element -
