KRISTI GOOD, Assistant Professor, Dramaturgy – Ph.D., University of Pittsburgh; Carnegie Mellon, 2021-–

KYLE HADEN, Associate Professor, Acting – M.F.A., Columbia University; Carnegie Mellon, 2016–

ROB HANDEL, Professor, Dramatic Writing – M.F.A., Brown University; Carnegie Mellon, 2009–

HUGH HANSON, Associate Teaching Professor, Costume Production – M.F.A., University of Hawaii at Manoa; Carnegie Mellon, 2015–

JED ALLEN HARRIS, Associate Teaching Professor Emeritus, Directing – M.F.A., Carnegie Mellon; Carnegie Mellon, 1991–

KEVIN HINES, Associate Teaching Professor, Production Technology & Management – M.F.A., Yale University; Carnegie Mellon, 1998–

GARY KLINE, Teaching Professor, Voice – B.F.A., Carnegie Mellon; Carnegie Mellon, 1990–

GREGORY LEHANE, Professor Emeritus, Directing – M.F.A., Carnegie Mellon; Carnegie Mellon, 1991–

CINDY LIMAURO, Professor, Lighting Design – M.F.A., Florida State; Carnegie Mellon, 1987–

GARY LOGAN, Professor, Voice & Dialects – M.F.A., American Conservatory Theater; Carnegie Mellon, 2016–

BARBARA MACKENZIE-WOOD, Raymond W. Smith Professor Emerita, Acting – M.F.A., Carnegie Mellon; Carnegie Mellon, 1986–

ANTHONY MCKAY, Associate Professor, Acting – B.F.A., Carnegie Mellon; Carnegie Mellon, 1985–

MICHAEL MCKELVEY, Assistant Professor, Musical Theater – D.M.S, University of Texas-Austin; Carnegie Mellon, 2024–

CATHERINE MOORE, Teaching Professor, Movement – M.F.A., University of Cincinnati, College-Conservatory of Music; Carnegie Mellon, 2000–

ANNE MUNDELL, Professor Emeritus, Design – M.F.A., Brandeis University; Carnegie Mellon, 1989–

JOE PINO, Associate Professor, Sound Design – M.F.A., University of Virginia; Carnegie Mellon, 1999–

NICA ROSS, Associate Teaching Professor, Video and Media Design – M.F.A., NY Bard-International Center of Photography; Carnegie Mellon, 2016–

BRIAN RUSSMAN, Associate Teaching Professor, Costume Production – M.F.A., Ohio State University; Carnegie Mellon, 2009–

TINA SHACKLEFORD, Teaching Professor – M.F.A., University of California, San Diego; Carnegie Mellon, 2004–

LAWRENCE SHEA, Professor, Video and Media Design – M.F.A., Massachusetts College of Art; Carnegie Mellon, 2010–

ANDREW SMITH, Associate Professor, Acting – M.F.A., University of California, San Diego; Carnegie Mellon, 2014–

LISA VELTEN SMITH, Assistant Professor, Voice – M.F.A. , University of California San Diego; Carnegie Mellon, 2019–

MARY ELLEN STEBBINS, Assistant Professor, Lighitng – M.F.A., Boston University; Carnegie Mellon, 2024–

AUSAR STEWART, Assistant Professor, Voice – MFA , York University; Carnegie Mellon, 2019–

ROBERT THOMSON, Associate Professor, Lighting; Carnegie Mellon, 2014–

SUSAN TSU, Bessie F. Anathan Professor, Costume Design – M.F.A.,Carnegie Mellon, 2003–

DON WADSWORTH, Professor Emeritus, Voice & Speech – M.F.A., University of Pittsburgh; Carnegie Mellon, 1989–

BRIA WALKER-RHOZE, Assistant Professor, Acting – M.F.A., Acting, National Theater Conservatory; Carnegie Mellon, 2023–

KAF WARMAN, Teaching Professor, Movement – M.F.A., Goddard College, Ecole; Carnegie Mellon, 1996–

CHELSEA WARREN, Associate Professor, Scenic Design – M.F.A., Northwestern University ; Carnegie Mellon, 2023–

KIM WEILD, Associate Professor, Directing – M.F.A., Columbia; Carnegie Mellon, 2017–

MISO WEI, Assistant Teaching Professor, Stage and Production Management – M.F.A. , University of California, San Diego; Carnegie Mellon, 2020–

YONG SUK YOO, Associate Professor, Directing – M.F.A, California Institute of the Arts; Carnegie Mellon, 2024–

TJ YOUNG, Associate Professor, Dramaturgy – M.F.A., Texas State University; Carnegie Mellon, 2022-–

BETH ZAMBORSKY, Associate Teaching Professor, Scenic Art & Drawing – B.S., La Roche University; Carnegie Mellon, 2003–

School of Drama Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

54-011 Introduction to Alexander Technique

Fall: 1 unit
TBD

54-012 Warmup

Spring: 1 unit
Drama majors only. Freshman Acting Warm Up is a three-day-a-week course which is designed to help the actor prepare mentally and physically for daily training and/or rehearsal. The preparations are based in yoga exercises and are meant to help the actor gain a greater self-awareness, fuller breathing, a greater degree of being centered, and focused on the immediate moment.
Prerequisite: 54-011

54-101 Acting I

Fall: 10 units
A knowledge and beginning understanding of the components of acting. Basic exercises, improvisations and prepared work in relaxation, concentration, imagination, communication. The ability to create the reality of a given situation in theatrical terms. Craft fundamentals in preparation for scene study. The beginning development of the students creative resources. This course is open to Drama majors only.

54-102 Acting I

Spring: 10 units
A knowledge and beginning understanding of the components of acting. Basic exercises, improvisations and prepared work in relaxation, concentration, imagination, communication. The ability to create the reality of a given situation in theatrical terms. Craft fundamentals in preparation for scene study. The beginning development of the students creative resources. This course is for Drama majors only.
Prerequisite: 54-101

54-103 Speech I

Fall: 4 units
(Speech I) The course introduces students to the pronunciation of the sounds of Standard American English pronunciation as presented by Edith Skinner in her textbook SPEAK WITH DISTINCTION. The International Phonetic Alphabet is used to introduce the students to a distinct symbol for each vowel, diphthong and consonant sound. This process will strengthen the student's placement of sounds and will help to illustrate and control regional characteristics. The work is applied to regular individual presentations of various texts. Phonetic transcription is required of class participants throughout the course. Written accuracy of the sounds are required and assigned regularly. This course is open to first year Acting majors who have been accepted to the School of Drama only.

54-104 Speech I

Spring: 6 units
The Spring course continues to develop the foundational work from the pervious term. This includes the identification and pronunciation of the sounds of Standard American English. Students will study the physical placement and pronunciation of each sound in isolated applications. The International Phonetic Alphabet (IPA) has been introduced and will continue with further diphthong and triphthong sounds and symbols. Further study will involve strong and weak forms of words, linking 'r' sounds and syllabic consonants; students will apply the advanced speech work to challenging extravagant material as well as exercises with commonly mispronounced words.
Prerequisite: 54-103

54-105 Voice for the Stage I

Fall: 5 units
An Introduction to the fundamental foundation of speaking voice training for the actor; physical awareness, breath, and the free release of sound. Resonance, range, articulation, vocal clarity and expressiveness are also emphasized. The work is based upon the classic progression of voice exercises of Kristin Linklater. The exercises are designed to liberate the voice from habitual psychophysical tensions as well as developing sensitivity to impulse. This approach offers the possibility of liberating your natural speaking voice rather than adopting a vocal technique in order to truthfully embrace the performer's instincts. The natural voice is transparent, revealing, connected to thought, emotion, sound, and the spoken word; elements that are essential to an authentic embodiment of a character.

54-106 Voice for the Stage I

Spring: 5 units
Introduction to basic speaking voice and Alexander Technique work. Actors explore building a vocal preparation employing the principles of the Alexander for actor?s speaking voice through explorations that help develop awareness of the head, neck torso relationship and the movement of the spine; vocal release, breath support, stamina. range, use of resonators and the application to text. Actors learn to identify components of healthy and unhealthy voice usage, basics of vocal anatomy and strategies for maintaining vocal health. Writing exercises are employed to help actors connect the voice to creativity and imaginative, essential for the actor?s development.
Prerequisite: 54-105

54-107 Movement I

Fall: 4 units
This course serves as a foundation for all future movement studies. Kinesthetic awareness and responsiveness is developed through the introduction of the Viewpoints method of physical training. The importance of physical expressivity and specificity in storytelling is achieved by the creation of physical movement based compositions. This is a required course for all first year undergraduate Acting and Musical Theatre and Directing students.

54-108 Movement I

Spring: 4 units
This course is designed to continue the physical actor training sequence begun in the previous semester by introducing new methodologies and working vocabularies. This course examines and explores the use of the human body as an expressive artistic instrument of communication. Concepts of the body in relation to Time, Space, Weight, and Energy will be explored. This is a studio course in which learning is experiential. In addition to daily class activities and exercises, assignments will include a written test and solo presentations/performances. Admission to this course fulfills a requirement for first year undergraduate acting and music theatre majors
Prerequisite: 54-107

54-109 Dramaturgy 1: Approaches to Text

Intermittent: 9 units
This course is an introduction to dramaturgical analysis of a play; the goal of this course is to provide students with a number of text analysis "tools" to use in understanding plays for production.

54-110 Text for Actors

Fall: 2 units
This class is in conjunction with Acting I in the School of Drama. The actor/director learns how to investigate the written text and translates it actively for performance.

54-111 Theatre Process for Non-Majors

Fall and Spring: 6 units
This course is designed to increase students' appreciation and awareness of theatrical art through lectures, discussion, projects, and live performance.

54-115 Rhythmic Exploration

Spring: 1.5 units
Optional course.

54-117 Design Collaboration Project

Spring: 3 units
This course is intended to provide students with hands-on experience in the process of collaboration on a design for a production. Students in the course will work in teams to design a hypothetical production of a given play.

54-119 Vocal Technique

Fall: 1 unit
Singing technique for first-year Music Theatre students.

54-121 Directing I: A Director's Mindset

Fall: 9 units
A discovery of the director's mindset. Through discussions, readings, exercises, projects and explorations, this course is intended to give the aspiring director a foundation for the continual investigation into multiple forms of expression that might feed the director's imagination and toolbox.

54-122 Directing I: A Director's Preparation

Spring: 9 units
A continuation of the previous semester focusing on a director's preparation.
Prerequisite: 54-121

54-123 Dance Technique I: Physical Mechanics and Anatomy

Fall: 5 units
This course uses Classical technique (Ballet) to build body placement, alignment and muscular strength and flexibility. Designed to help the student develop a way of learning how to work and train for any dance form. This technique is the basis of the choreography in American musical theater. This course is for Music Theatre majors only. Permission of instructor.

54-124 Dance I: Applying Dance Technique

Spring: 5 units
This course continues Classical technique (Ballet) to build body placement, alignment and muscular strength and flexibility. Designed to help the student develop a way of learning how to work and train for any dance form. This technique is the basis of the choreography in American musical theater. This course is for Music Theatre majors only. Prerequisite: 54-123 and permission of instructor.
Prerequisite: 54-123

54-125 Music Skills I

Fall: 4 units
The students explore the basics of music theory, which includes intervals, rhythm, notation and musical vocabulary. Emphasis is on acquiring these basic skills through sight singing. For School of Drama MT students only.

54-126 Music Skills II

Spring: 4 units
The students explore the basics of music theory, which includes intervals, rhythm, notation and musical vocabulary. Emphasis is on acquiring these basic skills through sight singing.
Prerequisite: 54-125

54-134 Writing for Television

Spring: 9 units
Students will write an original pilot, focusing on structure, character, and an analysis of what makes great TV.

54-135 The Basics of Self-Producing: How to Put Up Your Show in NYC and Get It Reviewed

Fall and Spring: 6 units
For any actor/writer/director/theatre artist in New York City, the time between jobs can feel stressful and frustrating. Self-producing is the quickest way to get your work on stage without permission from anyone else or having to adhere to anyone else's restrictions. From blurbs to budgets to rehearsal space to press releases to equity paperwork, this course covers everything you need to know in order to get your work produced and noticed in New York City without breaking the bank. This course will draw from readings on independent theatre, interviews with working independent producers in New York, and the working experience of Anderson Cook, author/producer of The Disembodied Hand That Fisted Everyone to Death - the Musical!, Blatantly Blaine, Pop Punk High, Donny and Kelly Save the Slumber Valley ASPCA, and more - all produced and reviewed in NYC.

54-151 Stagecraft

Fall and Spring
The stagecraft class is designed to provide an introductory level of technical training in all the theatrical technical disciplines over the course of two semesters. The intent is to produce people who can capably fill roles on production crews and perhaps serve as an assistant to the head of the crew. Course content will cover materials, tools and amp; equipment, procedures, safety and operations for Carpentry, Props, Paints, Media, Costumes, Lights, Sound, Rigging, and Run Crew. As well as providing opportunity and experience to grow as technicians, this content will also help establish a foundation to begin the process of becoming managers and designers. As craft skills are often best communicated in a master/apprentice environment this course is set up as a mentored practical experience. This course requires significant additional scheduled time on evenings and weekends for crew calls, which are an important element of the course.

54-152 Stagecraft

Spring
The stagecraft class is designed to provide an introductory level of technical training in all the theatrical technical disciplines over the course of two semesters. The intent is to produce people who can capably fill roles on production crews and perhaps serve as an assistant to the head of the crew. Course content will cover materials, tools equipment, procedures, safety and operations for Carpentry, Props, Paints, Media, Costumes, Lights, Sound, Rigging, and Run Crew. As well as providing opportunity and experience to grow as technicians, this content will also help establish a foundation to begin the process of becoming managers and designers. As craft skills are often best communicated in a master/apprentice environment this course is set up as a mentored practical experience. This course requires significant additional scheduled time on evenings and weekends for crew calls, which are an important element of the course.

54-157 Production Science

Fall: 6 units
Students in the Production Science course are exposed to the very fundamentals, the primitives, of entertainment technology. The intent is to provide the absolutely strongest beginning for all the work to come, to provide a solid foundation for students and instructors to build upon. Production professionals routinely perform organizational tasks. In order to be able to meet that challenge, students will need to build a toolkit of information and procedures. That toolkit will be comprised of knowledge of the kinds of parameters and techniques that are normally selected, the indices that parameters and techniques are evaluated against, and many of the wide range of issues that might point a manager toward one decision or another. There also exists an entire pantheon of information that people typically learn "on the job." Activities and information presented in this course are designed to try to expose students to as much of this on the job type development as possible with the goal of leapfrogging them past the bottom rung of the workplace ladder. Drama Design/Production majors only, or with instructor permission.

54-158 Production Planning

Spring: 6 units
Students in the Basic PTM course are exposed to the very fundamentals, the primitives, of entertainment technology. The intent is to provide the absolutely strongest beginning for all the work to come, to provide a solid foundation for students and instructors to build upon. Production professionals routinely perform organizational tasks. In order to be able to meet that challenge, students will need to build a toolkit of information and procedures. That toolkit will be comprised of knowledge of the kinds of parameters and techniques that are normally selected, the indices that parameters and techniques are evaluated against, and many of the wide range of issues that might point a manager toward one decision or another. There also exists an entire pantheon of information that people typically learn "on the job." Activities and information presented in this course are designed to try to expose students to as much of this on the job type development as possible with the goal of leapfrogging them past the bottom rung of the workplace ladder. PREREQUISITES: Declared Design/PTM focus in the School of Drama FOR: First Year Undergraduate Students

54-159 Production Practicum

Fall: 6 units
Hands on experience in most aspects of installing and running a production.

54-162 Introduction to Costume Design

Spring: 6 units
A rigorous introductory studio course for newly declared School of Drama Costume Design Sophomores in their fourth semester of matriculation. Basics of the design process are covered as well as drawing, sculpture, semiotics, play and character analysis, research and character building are explored. An intensive collaboration project with students of other design disciplines comprises the second half of the course. All others: interview/portfolio review and instructor permission. FOR: 3rd semester Sophomore Costume Designers and students outside of School of Drama.
Prerequisites: 54-172 and 54-171 and 54-231 and 54-232

54-163 Production for Non Majors

Fall: 6 units
Non-major involvement in a Schools of Drama production or classroom project.

54-166 Introduction to Sound Design for Theatre

Spring: 6 units
Students explore the basic principles and theories of sound design from technical, psychological and aesthetic standpoints. Course work includes instruction in the controllable properties of sound, practical planning of sound plots, cue creation, and the design process. Prerequisites: Basic Design and Design For The Stage. Drama majors have priority, however this course is also open to Music Technology majors and minors, or with permission of instructor.
Prerequisites: 54-172 and 54-171 and 54-231 and 54-232

54-167 Acting for Directors I

Fall: 10 units
Acting I for Director BFA students.

54-168 Acting for Directors I

Spring: 10 units
A knowledge and beginning understanding of the components of acting. Basic exercises, improvisations and prepared work in relaxation, concentration, imagination, communication. The ability to create the reality of a given situation in theatrical terms. Craft fundamentals in preparation for scene study. The beginning development of the students creative resources. This course is for Directing students only.

54-169 Studiocraft 1

Fall: 13 units
The studiocraft course provides beginning level instruction in Drawing, Hand Drafting, and CAD Drafting.

54-170 Studiocraft 2

Spring: 8 units
Using the basic skills learned in the first semester, we will develop better and explore the use of basic drafting processes to solve more complex problems. The conventions of drafting do not change with the different types of drawings so line weight, clarity, neatness and organization will continue to be emphasized. We will also begin to discuss ways to improve the cosmetics of draftings. As before, classes will consist mostly of lecture and demonstration. Some class sessions will be dedicated to working on assigned projects, generally one class meeting per project.
Prerequisite: 54-169

54-171 Basic Design 1

Fall: 6 units
A year-long studio course that explores the principles and elements of design utilizing discreet exercises and projects first semester. Research and reports expose the students to designers, theatres and artists of note in the world. Second semester focuses on the semiotics of the visual and aural aspects of theatrical design. Projects fold in each of the disciplines of scene, costume, lighting, sound and media design. PRE-REQUISITE: Declared Design/PTM focus in the School of Drama. FOR: First Semester Design/PTM Undergraduate Students only.

54-172 Basic Design 2

Spring: 6 units
A year-long studio course that explores the principles and elements of design utilizing discreet exercises and projects first semester. Research and reports expose the students to designers, theatres and artists of note in the world. Second semester focuses on the semiotics of the visual and aural aspects of theatrical design. Projects fold in each of the disciplines of scene, costume, lighting, sound and media design. PRE-REQUISITE: Declared Design/PTM focus in the School of Drama. FOR: Second Semester Design/PTM Undergraduate Students only
Prerequisite: 54-171

54-175 Conservatory Hour

Fall: 1 unit
A discussion class for first-year Drama students. Open to non-majors interested in declaring a Drama minor.

54-176 Conservatory Hour

Spring: 1 unit
A year-long discussion class for first-year Drama majors. Open to non-majors interested in declaring a Drama minor.

54-177 Foundations of Drama I

Fall and Summer: 6 units
In this course, students receive training in the basic analysis of scripts to determine key elements of structure, plot, characterization, thematic content, theatricality, and aesthetics. In addition, the course provides training in dramaturgical research and writing.

54-179 Making Room: Study of Black American Playwrights

All Semesters: 6 units
This course, a research forum, is an opportunity to investigate, share and analyze the work of Black American Playwrights. Classics from artists like Marita Bonner, Georgia Douglas Johnson and Pearl Cleage are entryways to the dynamic expressions of Black authorship. This course will add to the analysis pool of both classic and contemporary text. Expanding the assembly's general knowledge, students will be invited to share work that sparks their interest as well.

54-180 Introduction to Playwriting

Fall and Spring: 9 units
This course provides a basis and the building blocks for beginning playwrights. This course will serve as an introduction to character development, monologues, subtext, action, style, and pacing in theatrical writing. Students will write short theatrical pieces in a workshop setting, where feedback will be given by the instructor and other students.

54-183 Introduction to Playwriting

All Semesters: 9 units
What is a play? And why bother writing one? There is no correct way to write a play, but there are distinctive elements to stories written for the stage. Students in this course will define what these elements are and practice using them to write plays of their own. Aristotle's Poetics will provide a framework and a common vocabulary as students explore plays by Lynn Nottage, Clare Barron, and other contemporary playwrights. The first half of the course will be reading-intensive and discussion-based with some short writing exercises. In the latter half of the semester, students will write and revise original short plays. No prior theatrical or creative writing experience required.

54-184 Dramaturgy 2: Introduction to Production Dramaturgy

Intermittent: 9 units
Dramaturgy 2 introduces students to the essential tasks and processes that dramaturgs perform on productions of established plays (i.e., plays whose texts are not changing). Students perform text analysis, conduct research, curate and present information, develop and provide critical feedback on production work in progress, and design pre- and post-performance experiences for an audience. This is a writing-intensive course with a high reading load. Dramaturgy 2 is a prerequisite for higher-level courses in the Dramaturgy curriculum.

54-187 Writing for an Inspired Life

Fall: 9 units
Each of us has a deep pool of creative life within us, but often as we grow older we lose touch with that life source that guided us as children to explore, dream, and create. What seeds exist within you that have yet to grow? Are there loose pages to a film script, a poetry collection, or illustrations for a comic that you haven't had the space to explore and cultivate? This class will provide a safe weekly space to develop, explore, and reignite your creative passion project. We will give ourselves the gift of time. In this class, we will develop our artist self through small daily intentional exercises, workshop our pieces in a space without judgment of it being "good" (to me as long as you try that is what matters), and learn from inspiring media and great guest teachers who will visit our class and lead workshops on cultivating an inspired life. This class is open to all CMU students who are curious about how to use art as fuel for their personal, creative, and professional lives: playwrights and engineers alike.

54-189 Advanced Writing for Television

Intermittent: 9 units
In this course students will be introduced to the major components of writing for TV, including character and structure, while analyzing genre television and pilot writing. Exercises designed to familiarize students with the tools available to TV writers will be assigned, and over the course of the semester, students will develop an original TV pilot. (Students who have not taken "Intro to TV Writing" need to seek permission from the instructor, but don't let that deter you!)
Prerequisite: 54-134

54-190 Intro to Writing the Television Pilot

Spring: 9 units
When you write your television pilot, you are crafting the engine that will generate year after year of stories. The opening image makes clear that this is a show like no other, the show only you could create. The first ten minutes set the bomb that's going to blow up your hero's world. Your pilot as a whole lets us know what we can expect here every week, with our new family, as they look for a way to get through this thing. In this class, we will meet and master the elements of the television pilot, then use them to build a marketable script. We will devote ourselves extensively to practicing the habit of revision.

54-191 Acting for Non-Majors

Fall and Spring: 9 units
This course is designed to develop the students' awareness of the actor's process and to foster a general sense of theatre as an area of human endeavor. Students will be introduced to basic communication skills, including physical and vocal presence in front of an audience. The course will also develop an introductory level of acting skill through the use of regular warm-ups, theater games, improvisation, and simple scene study. Scenes will be selected from a diverse range of playwrights and students will examine the political, cultural and social context of each play. The course will also provide an introduction to basic theater terminology and foster the ability to respond to and reflect on theatrical performances.

54-192 Acting Ensemble for Non-Majors

Fall and Spring
This course offers an opportunity to work with undergraduate student directors on their projects, which will widely range in material (e.g. adaptations of literature to television scripts to musical theatre). Directors will hold auditions in the first week of school for their projects, and the actors who are cast will then have the opportunity to enroll in this class. Depending on the project, actors may be cast for one mini or two, potentially working with more than one director. Actors will be required to attend rehearsals outside of class up to 5 hours a week, and to attend class when showings happen. Audition required at the beginning of the semester. Admittance to class by permission of professor. If you are interested, add yourself to the waitlist.*****

54-193 Acting for Non-Majors: Improv

Intermittent: 9 units
This course will introduce students to the history and components of improvisational performance. Students will explore short and long form improv styles and work in teams to create original, in-the-moment performances. We will also investigate real-world applications of improv techniques and imagine a future rooted in cooperation. A desire to work together is essential for this class.

54-195 Mystic and Supernatural Writing for the Screen and Stage

Fall: 9 units
Are you obsessed with all things supernatural, misunderstood, and/or mystical, ranging from bigfoot/sasquatch all the way to Gods and demons? This course aims to channel that interest into generated work, newly written screenplays as well as plays for the stage. I believe that these mediums are tailor made for supernatural elements because of the intimate nature of theatre and visual spectacle of the screen. For this course, we will use Noh theatre, African folklore, urban legends, and more to give shape to our individual fascinations. We will "give them shape" by reading plays such as The Piano Lesson by August Wilson and watching films such as Candyman (2021). The first mini will revolve around writing exercises and in-class discussion about what we are reading and watching. The second mini will revolve around the generation of pages depending on your goals. Pages can be ten-minute plays, short films, and more. There are NO WRONG ANSWERS and NO WRONG WAYS of going about this in the course other than not putting your best foot forward. I encourage students to explore their interests regardless of how developed they may be or how familiar with writing you may be as the course is open for all students both in the SOD and outside of it. Come with a positive outlook, various stages of ideas, and a willingness to grow with others!

54-196 Introduction to 10-Minute Plays

Spring: 9 units
Wanna write a play but think it's too hard? Maybe this is a way to start. This class focuses on 10-minute plays. It is designed to provide non-theater majors with an introduction to the writing and appreciation of short plays. In this class, we will have the opportunity to conduct stage reading of short plays of your interest, understand and analyze the structure of short plays, and practice your writing skills. This course will be writing-feedback based workshop, you'll get a chance to share your works with your peers and gain their feedbacks. Students are expected to complete four original 10-minute plays by the end of the semester.

54-198 Plays With Words: Exploring Language-Driven Theater

Fall and Spring: 9 units
This course will provide students with an understanding of the category of plays that use language as their main engine of storytelling. Students will learn to identify and analyze the conventions of language plays, as well as practicing techniques to write their own. Some of the elements of language plays discussed in this course include plays with non-naturalistic language, emotionally expressive language, and action-driven language. The course will culminate in a final project in the form of a completed, full-length language play.

54-200 Dramaturgy Forum

Fall and Spring: 1 unit
Programmed and taught by senior students in the Dramaturgy program, this course is required for all Dramaturgy majors and meets once per week to discuss issues and topics of significance to the dramaturgy community.

54-201 Acting II

Fall: 12 units
Scene study: the fundamental techniques needed to participate in the developing conflict within the imaginary world. Character building through unfamiliar behavior and beliefs; relationships; language. Spring semester: The use of classical texts and ensemble playing. The deepening of the actors inner resources to be supported by the craft techniques.
Prerequisites: 54-102 and 54-101

54-202 Acting II

Spring: 12 units
Scene study: the fundamental techniques needed to participate in the developing conflict within the imaginary world. Character building through unfamiliar behavior and beliefs; relationships; language. Spring semester: The use of classical texts and ensemble playing. The deepening of the actors inner resources to be supported by the craft techniques.
Prerequisite: 54-201

54-203 Voice and Speech II

Fall: 4 units
The actors take a more concentrated approach to elevated text. The course focuses on the effective production of classical text. The warm up sessions are geared towards preparing the student actors for the extravagant language from Shakespeare?s plays and sonnets. Meter, imagery and further specific text work is also employed to encourage each student to find clear shape in the work. A repertoire of at least five classical monologues will come from the course work.
Prerequisites: 54-103 and 54-104

54-204 Voice and Speech II

Spring: 4 units
The actors take a more concentrated approach to elevated text. The course focuses on the effective production of classical text. The warm up sessions are geared towards preparing the student actors for the extravagant language from Shakespeare?s plays and sonnets. Meter, imagery and further specific text work is also employed to encourage each student to find clear shape in the work. A repertoire of at least five classical monologues will come from the course work.
Prerequisites: 54-203 and 54-103 and 54-104

54-205 Dance II: Pillars to Build Dance Technique

Fall: 3 units
This course is designed to build on the technical foundation, work habits and professional behavior established in Ballet I. The material presented expands the classical dance vocabulary to the next level of difficulty. Course closed: Only for Music Theatre majors in Drama. Prerequisite: Permission of instructor
Prerequisites: 54-124 and 54-123

54-206 Dance II: Pillars to Build Dance Technique

Spring: 3 units
This course continues to build on the technical foundation, work habits and professional behavior established in Ballet I. The material presented expands the classical dance vocabulary to the next level of difficulty. Course closed: Only for Music Theatre majors in Drama.
Prerequisite: 54-205

54-207 Movement II

Fall: 4 units
Movement II is a Lecoq-based course that weaves together three approaches to physical development: movement foundations, mime, and mask. Foundational work covers the basic principles and practices required to gain a solid physical technique as an actor: grounding, centering, balance, tension/relaxation, tempo variance, listening, levels of play, physical imagination, etc. Mime studies of dramatic action sequences such as pulling, pushing, climbing, throwing and classical mime illusion encourages economy and precision. Mask work conceals the face and reveals the body, forcing the actor to rely less on facial expressions and focus more on the stories being projected by the body. The main objective of this course is to encourage a disciplined mastery over bodily control and physical expression that has a direct application to playing a variety of theatrical styles. Limited to Acting/MT majors only.
Prerequisites: 54-108 and 54-107

54-208 Movement II

Spring: 3 units
This term is divided between two classic physical forms: Commedia dell'Arte and Clowns. In the first half of the semester students wear the half-masks of the archetypal Commedia characters (Harlequin, Pantalone, et al), to learn their psychology and physicality, improvise on historical and contemporary scenarios, and apply Commedia technique to modern comedy. Commedia dell'Arte gives them the tools to tackle physical comedy from any era, past or present. In the second half of the term students discover their personal Clowns. This clown has nothing to do with the American Barnum and amp; Bailey Circus clown; this is not a character or caricature, but rather a revelation of the clown each student hides under the mask of adulthood. Discovering this clown gives them all a way to laugh at themselves, to uncover what makes each individual uniquely funny; it also lets them see how we only laugh at truth and in the personal material lies universal humor. Inside this freedom is the technique to know what's funny and why, and the ability to apply these rules in comedy."
Prerequisites: 54-107 and 54-207 and 54-108

54-209 Voice and Speech II: Practicums

Spring: 3 units
TBA

54-211 Actor Dance II

Fall: 3 units
This course introduces the basic, fundamental vocabulary of Classical technique (Ballet) to train the body in proper alignment, placement, and muscular strength. Course closed: Only for Acting majors in Drama. Prerequisite: Permission of instructor
Prerequisites: 54-101 and 54-102

54-212 Actor Dance II

Spring: 3 units
Beginning Ballet. A continuation of Classical technique (Ballet) and a unit of social dance styles, waltz, polka, foxtrot, tango, swing. Course closed: Only for Acting majors in Drama.
Prerequisites: 54-102 and 54-211 and 54-101

54-213 Singing for Actors II

Fall: 3 units
The students have a class voice experience which includes a physical and vocal warm-up and discussion and practice of healthy singing technique. There is group and individual rehearsal of potential audition and performance material. Toward the end of the term, there are weekly opportunities to perform in public, thus preparing for auditions.
Prerequisites: 54-102 and 54-101

54-214 Singing for Actors II

Spring: 3 units
The students have a class voice experience which includes a physical and vocal warm-up and discussion and practice of healthy singing technique. There is group and individual rehearsal of potential audition and performance material. Toward the end of the term, there are weekly opportunities to perform in public, thus preparing for auditions.
Prerequisites: 54-102 and 54-101

54-216 Technical Solutions from the OSF

Spring: 3 units
This course is an introduction to planning for repertory theater using the Oregon Shakespeare Festival as a model. Students will explore topics including the inherent tensions between time and space created by a rep, interdisciplinary technical design, automation, collaborating with designers, and common rep pitfalls. By course end, students will not only have a working analysis of the inner machinations of a repertory model, but also a deeper understanding of regional theater art making overall.

54-217 Jazz II

Fall: 2 units
This course is designed to incorporate the strength of classical dance technique to a jazz dance style. Training the body in a variety of contemporary Jazz styles, i.e. Latin, Blues, Lyric, African, using body isolations and rhythmic patterns. Course closed: Only for Music Theatre majors in Drama. Prerequisite: Permission of instructor
Prerequisites: 54-123 and 54-124

54-218 Jazz II

Spring: 2 units
This course continues to incorporate the strength of classical dance technique to a jazz dance Training the body in a variety of contemporary Jazz styles, i.e. Latin, Blues, Lyric, African, using body isolations and rhythmic patterns. Course closed: Only for Music Theatre majors in Drama.
Prerequisite: 54-217 and Permission of instructor
Prerequisite: 54-217

54-219 Special Topics: Music Theater History and Repertoire

Fall: 6 units
This course is a survey of musical comedy and musical theatre performances throughout history. Often considered a quintessential American theatrical form, we will also consider what "musical theatre" or "musical drama" means beyond the borders of the United States. The course will primarily focus in the time frame of 1860-present. We will examine the historical background, development and evolution of form, as well as impact and proliferation of this performance style. The class will look at all levels of musical theatre: music/lyrics, book, production, direction, choreography, marketing, popularity, cultural impact, globalization, etc. The course will involve lecture-based, discussion-based, and project-based styles of engagement. For this section of the course, students will engage in practice-based learning to build a diverse repertoire of songs. They will also continue to reinforce the principals of music theory learned in the first year by learning a new piece of repertoire every week that coincides with said week's topic.
Prerequisites: 54-281 or 54-500

54-220 Acting A Song

Spring: 4 units
This class is for Music Theatre majors only. This class explores the personal relationships between performer and song. Exercises include Class Interrogation, Story Telling, and Text Analysis. Based primarily on the personal experience the actor brings to the text, rather than technical aspects. Acting a Song is the prerequisite for Cabaret class.
Prerequisite: 54-500

54-221 Directing II: In the Studio

Fall: 9 units
Directing II This is a fall-semester course for 2nd-year Directing students and others with special permission introducing the fundamentals of the director's craft: text analysis; the concept of Action and amp; Change, directors units and amp; transitions) Visual Vocabulary and amp; Staging. Tools including planes, levels, body positions, composition, picturization, emphasis and amp;movement, and the ground plan. Work includes unscripted exercises, scene breakdowns, detailed character analysis, and a final 7 to 10 minute devised performance

54-222 Directing II: In The Room

Spring: 9 units
A continuation of the work done in the first semester of Directing II. This course is for Directing sophomores and BXA Directing students only.
Prerequisite: 54-221

54-223 Tap II - Rhythmic Technique/Foundational to Complex

Fall: 2 units
This course trains the student to develop a comfort level to execute percussive sounds, in a variety of percussive rhythmic patterns while applying the technical foundation of alignment and placement from classical technique. Course closed: Only for Music Theatre majors in Drama.
Prerequisite: Permission of instructor
Prerequisites: 54-123 and 54-124

54-224 Tap II: Rhythmic Technique/Foundational to Complex

Spring: 2 units
This course continues to technically train the student in a variety of percussive rhythmic patterns. Course closed: Only for Music Theatre majors in Drama.
Prerequisite: 54-223

54-225 TD Case Studies

Fall: 3 units
This course will through a weekly round table discussion look at examples of real-world experiences involving technical direction concerns, obstacles, and dilemmas. Each week the class will be given a situation or example that occurred in the past during production of a Pittsburgh Civic Light Opera summer season. The students mediated by the instructor will brainstorm and discuss reactions and solutions to these problems. Realizing that often there are many solutions to the same TD problems depending on any given situation, not only will the discussion look at what was done at the time of the example but how other methods might be weighed against those used. Once the group comes to a consensus on the week's issue the students will be responsible for outlining the process to correct the problem, avoid future similar concerns, or alter the contributing situations. This outline might be in the form of mechanical drawings, excel files, word docs, or actual outlines.

54-227 How to Write a Shakespeare Play

Fall and Spring: 9 units
There are dozens of books that present a set of rules for writing a play, but not one of them will result in a play like those written by the world's most beloved playwright. This is madness. Whom should we take as a model if not Shakespeare? Can we invent an alternative set of rules that will permit mad shifts of tone, disregard for unities of time and place, stages shared by people from different social classes, inside-out characters (driven by individual psychology) alongside outside-in characters (driven by archetypal imperative), bad puns, dirty jokes, storms, slapstick, and the raising of unanswered (and unanswerable) questions? In this course, we will ransack our colleague Shakespeare's work to find strategies we can steal and reshape for our own purposes, through a series of writing projects on the level of the line, the speech, the scene, the act, and the play.

54-229 The Biz - In Practice

Fall: 4 units
Students will assess and investigate their personal professional path using the information and experiences from The Business of Acting course.

54-230 Make-Up for Designers

Spring: 6 units
This course is structured as a lecture/demonstration and lab employing and exploring the principles of stage makeup, the variety of materials available and the practical application of these materials. The course is designed to provide the student with a working knowledge of broad-based application procedures, materials and techniques. We will also explore the principles of characterization allowing for the development, planning, and execution of effectual character makeup designs. The student should also be able to determine the stage-worthiness of a makeup application and how light will influence its appearance.

54-231 Design for the Stage

Fall: 6 units
This course is divided into four minis to introduce the student to the design process for costumes, lighting, scenery and sound. For Drama majors only, or instructor permission
Prerequisites: 54-170 and 54-171 and 54-172 and 54-169

54-232 Design for the Stage: Lighting

Spring: 4 units
This course is an introduction to the process of lighting design. Students will engage in various hands-on light lab exercises and group projects to explore the physical properties of light in storytelling. Discovery and experimentation are encouraged. Students will begin to build a process for visualizing a play though the principles of design, interpreting a text, and communicating ideas.
Prerequisites: 54-170 and 54-172 and 54-171

54-233 Acting For Directors II

Fall: 12 units
Acting II for Directors

54-234 Acting For Directors II

Spring: 12 units
Acting II for Directors

54-237 Scenic Painting I

Fall: 6 units
This is a one semester studio course in the foundations of scenic painting for theater and related fields. Students will complete projects that address the following topics: preparation of and paint techniques for both soft goods and hard covered surfaces, drawing and painting to scale, representing textures in both 2 and 3 dimensions, and color mixing. Subject matter changes often and may include: architecture, natural and man-made textures, drapery, interior/exterior scenes, the human figure, still life objects.

54-238 Scenic Painting II

Spring: 6 units
This is a studio course in the foundations of scenic painting for theater and related fields. Students will complete projects that address the following topics: preparation of and paint techniques for both soft goods and hard covered surfaces, drawing and painting to scale, representing textures in both 2 and 3 dimensions, and color mixing. Subject matter changes often and may include: architecture, natural and man-made textures, drapery, interior/ exterior scenes, human figure, still life objects.

54-239 History of Architecture and Decor 1: Ancients to Gothic

Fall: 6 units
This course is a survey of architecture, furniture and interiors from ancient times to the Gothic period. A lecture/slide course, the discussion of architecture is done with reference to social, political and economic history.

54-240 History of Architecture and Decor 2: Renaissance to the 21st Century

Spring: 6 units
This course will cover the styles and movements of architecture, furniture and to a lesser degree, the decorative arts, from the Italian Renaissance to modern day architecture in the West as well as the major Chinese, Indian and Islamic periods in the East. Discussions will include the social, economic, religious and political history of each period in as much as it helps illuminate the reasoning behind the visual nature of its architecture.

54-241 Dramaturgy 3: Dramaturgy in Translation

Fall: 9 units
Theatre is a global art form, and the average student's knowledge of world drama is made possible by the practice of translating seminal works into the English language. But what if a play has more than one translation? How does a theatre artist/scholar choose which text is right for their project? And what do you do when you don't speak the other language in question? Dramaturgy 5: Dramaturgy in Translation will introduce students to contemporary theories and questions of translation studies and equip them with a set of best practices for selecting the most appropriate text for their needs. Speaking a language in addition to English is not required for this course.
Prerequisites: 54-109 and 54-184

54-242 Improvisation

Spring: 2 units
This course is for Sophomore Actors only. This course not only sharpens their skills as ensemble performers, but also allows for more playfulness, creativity and exploration, cultivating risk-taking and a certain abandon. The course concentrates on non-verbal psychological improv, helping actors achieve a kind of physical truth and spontaneity, while becoming aware of the importance of the body in conveying information.
Prerequisites: 54-102 and 54-101

54-245 Who Wore What: When, Where, and Why

Fall: 6 units
This year-long course surveys the development of garments in the Western World from ancient civilizations to the first half of the 20th century. We will look at the progression of the shapes and forms that aesthetically define the clothing of each period, while also exploring the broader relationship of costume to culture and society through history. The course will comprise visual presentations of the art of each period, especially pertaining to representations of clothing, along with research projects, quizzes and exams.

54-246 Who Wore What: When, Where, Why II

Spring: 6 units
The 2nd part of this year-long course surveys the development of garments in the Western World from ancient civilizations to the first half of the 20th century. We will look at the progression of the shapes and forms that aesthetically define the clothing of each period, while also exploring the broader relationship of costume to culture and society through history. The course will comprise visual presentations of the art of each period, especially pertaining to representations of clothing, along with research projects, quizzes and exams.

54-247 Dramaturgy 6: In Company

Intermittent: 9 units
Dramaturgical work in a theatre company extends far beyond individual productions. In this course students get hands-on practice in season planning, writing fundraising text, writing marketing text, and public speaking - all responsibilities that are typically but less visibly part of a dramaturg's job description. This course provides good grounding for a future in artistic leadership. Required for dramaturgy and directing majors; open to non-majors with instructor permission.
Prerequisite: 54-184

54-249 Stagecraft II

Fall: 14 units
Stagecraft II presents advanced shop skills and beginning department head skills for Scenery, Lighting, and Costumes. This course will require additional time during the evening and on weekends. Prerequisites: Stagecraft I (two semesters) OR Instructor Permission
Prerequisites: 54-151 and 54-152 and 54-158

54-250 Introduction to Scenic Design

Spring: 6 units
This course will introduce students to the principles and methods of designing scenery using the development of ideas based on a text.
Prerequisites: 54-169 and 54-232 and 54-172 and 54-231 and 54-171

54-251 Automated Lighting Maintenance

Spring: 2 units
Hands-on exploration of the operation and maintenance of equipment that falls into the category of automated lighting.

54-252 Introduction to Lighting Design

Spring: 6 units
Students explore the physical properties of light in various design applications and develop a process of storytelling that involves analysis, research, exploration, questioning, problem solving and implementation of a successful design product. Prerequisite: Design for the Stage, or instructor permission.
Prerequisites: 54-231 and 54-232

54-254 Dramaturgy 7: New Play Development

Spring: 6 units
This course will serve as an intensive workshop for new plays in collaboration for playwrights and dramaturgs. Playwrights will present pages from a piece they are currently developing, utilizing other playwrights and dramaturgs as their "cast" for the purpose of hearing the play aloud. The dramaturg paired with each playwright will facilitate a feedback session, built from conversation with the playwright, to elicit feedback from those in class that will aid in the creation of future drafts.

54-255 New Play Collaboration for Actors

Fall: 1 unit
TBA
Prerequisite: 54-101

54-256 Dramaturgy 4: New Play Dramaturgy

Intermittent: 9 units
This course focuses on the dramaturg's collaborative relationship with a playwright during the creation of a new play. During the first mini, dramaturgs work on close reading of multiple drafts of a new play, tracking changes and assessing their impact, and developing healthy collaborative processes. During the second mini, playwrights join the course; each dramaturg is matched with a playwright and puts those new skills into practice. Required for dramaturgy majors; no non-majors will be admitted to this course in fall 2020.
Prerequisites: 54-184 and 54-109

54-257 Directing: Production II

Fall: 6 units
Assignments as stage manager or assistant director.

54-258 Directing: Production II

Spring: 6 units
Assignments as stage manager or assistant director for the Rauh Studio and Chosky Theatres.

54-264 Welding

Fall and Spring: 4 units
An introduction to the two most commonly used welding processes used in the entertainment industry. GMAW (MIG), and GTAW (TIG). Welding safety, equipment setup and basic welding techniques will be covered. This is a required course for Drama Technical Direction majors. Open to non-majors if space is available.

54-265 Advanced Fabrication 1

Fall: 6 units
This class sets forth to gain a comprehensive understanding of the various tools found in a well-equipped fabrication shop . Shop safety will be emphasized at all times and rigorously promoted per tool. Understanding the differences between tools and when to choose each will be a constant theme. Exploring the various ways of achieving a certain result but with different tools will be a recurring theme. Since most shops use tools for multiple applications, understanding how various materials relate to various tools will be discussed in detail. For TDs only. The first task will be to do an overview of all of the common tools used for woodworking and metalworking. Then we will go through the shop tool-by-tool and make sure everyone understands what the tool was designed for, how it is used, and how it may be utilized for alternative uses.

54-266 Stage Management: Cue Lab

Fall and Spring: 4 units
Required for Production Management / Stage Management majors. Practical experience in cue calling from a variety of sources and with various tools and methods.

54-267 Conceptual Sound Design

Fall: 9 units
Students explore the unique qualities of audio as a design element and the development of a design process through script analysis. Emphasis on the creative application and utilization of the studio in sound shaping and soundscape design. PREREQUISITE: 54-166 Introduction To Sound Design for Theater, 54-231 Design For The Stage. Drama majors have priority, however this course is also open to Music Technology majors and minors, or with permission of instructor.
Prerequisite: 54-166

54-268 Collaborations in Organized Sound

Fall: 3 units
Both music and sound design are defined by the presence of a human hand in the organization of sound. This course explores what lies at the intersection of music, technology and sound design, as well as the challenge of writing for an experiential, time-based art. Using compositional and dramatic writing techniques in conjunction with the creative application and utilization of studio techniques, field recording, editing and sound manipulation, the student will explore this interstitial landscape. Drama majors have priority, however this course is also open to Music Technology majors and minors, or with permission of instructor.
Prerequisites: 54-166 and 54-267

54-269 Studiocraft II

Spring: 3 units
A continuation of 169/170, this course introduces applied drafting practices, perspective drafting, 3D CAD modeling, model building, and other graphical skills. Prerequisites: 54169 and 54170 OR Instructor Permission
Prerequisites: 54-171 and 54-172

54-271 Technical Management

Fall: 6 units
Required for all sophomore Design and PTM students. This class establishes a set of standards for creative project management and introduces students to several software packages that can be utilized within these tasks.
Prerequisites: 54-158 and 54-157

54-272 Scenic Fabrication and Installation

Spring: 3 units
The Scenic Fabrication and amp; Installation course consolidates and builds upon material presented in the first semester of Basic PTM and in the three semesters of Stagecraft class. Whether they intend to pursue careers as technicians, engineers, or managers students much understand how scenery is built and what is involved in the assembly of the scenery in the theatre. Throughout the semester students will explore the materials and equipment used by all kinds of professionals in the fabrication industry. Through this exploration students will become conversant with the kinds of properties, and the advantages and disadvantages of many different items. Along with this exploration is a concurrent investigation of entertainment industry accidents. This material is valuable in how it contextualizes the kind of work students will be involved in, and helps to drive home the very real consequences of errors pertaining to scenery. In the classroom and in lab students in this course will develop their knowledge and processes for building scenery. The course has three basic units. The beginning of the semester focuses on building materials and on tool use. Through the center of the semester course material focuses on traditional scenery practices. The end of the semester material addresses rigging systems and scenery rigging practices. Laboratory assignments tied to this course will consist of carpentry assignments in the shop and carpentry and rigging assignments during load in. Occasionally students pursuing a more customized path may have lab assignments in the paint department in the shop and in the electrics department during install. All students may receive apprentice assignments in the scenery office.

54-273 Technical Direction I

Fall: 6 units
This course is an exploration of techniques and practices of the Technical Director. The class has three main components: classroom presentation of School of Drama production technical direction process, classroom lectures centering on TD process, and project work. Over the course of the semester, students will work on two productions as paper projects. This is an opportunity to have a somewhat less stressful pass through a show, completing estimates, schedules, and drawings designed to help establish a professional foundation for the student as a technical director. All of the course components run concurrently. Prerequisites: 54272 or Instructor Permission
Prerequisites: 54-158 or 54-272

54-274 Seminar in Costume Management

Fall: 4 units
This mini course focuses on the fundamentals of organizational paperwork surrounding costume production and basic operational protocol. The evolution of this paperwork and its usefulness in multiple professional applications is covered.

54-275 History of Sound Design

Intermittent: 3 units
The history of the use of sound in theater from the Greeks to current day including study of the development of the art, significant practitioners and landmark productions.

54-277 Negotiation and Conflict Management

Fall: 3 units
This class is a focused exploration of the process of negotiating, both formally and everyday. We will examine interactions on all levels and environments, with an evaluation of tactics, strategies and the measure of success. From there, the class expands into the nature of conflicts and the manager's role in identifying and confronting them. Throughout the class, we hope to find solutions to implement in our lives and work. In-class exercises and roleplay will be a fundamental part of class activity.

54-278 Stage Management I

Spring: 6 units
This class introduces the student to the work of a stage manager on a theatrical production. Students learn the functions and responsibilities of the stage manager. Also covered: blocking notation, cue organization, rehearsal reports and AEA rules and regulations.

54-279 Embedded Electronics

Fall: 3 units
TBD

54-281 Foundations of Drama II

Fall and Spring: 6 units
In this course students build on the skills of Foundations I to develop acumen in targeted research in support of production. The students learn the "circles of knowledge" technique to provide evidentiary arguments concerning a play script, its author, the historical contexts in which it was written, the theoretical frameworks that may be applied to its interpretations, its production history, and what knowledge is needed to bring its themes to relevance in a modern production. As in Foundations I, there is a great deal of exposure to significant texts, both artistic and philosophical, from theatre history. Registration for this course is limited to Drama majors. All other majors must request the instructor's permission.
Prerequisites: 54-178 or 54-177

54-284 Fundamentals of Directing

Fall: 6 units
Fundamentals of Directing is a fall-semester course for Drama Design and PTM sophomores. It is an introductory course that examines some of the basic tools of the director. Emphasis is completely on theatrical work although some elements are applicable to television and film.

54-285 Alexander Technique Tutorials

Fall and Spring: 1.5 units
Half-hour tutorials, individually scheduled per student. Optional for Acting and Musical Theater students.
Prerequisite: 54-101

54-287 Introduction to Lighting Design Skills

Spring: 3 units
Students will gain the basic skills and practical experience to use the lighting industry's primary software programs: Vectorworks and Lightwright. The class will be seminar based and allow focused opportunity to acquire the skills to execute some of the assignments in the Introduction to Lighting Design course. This course must be taken simultaneously with Introduction to Lighting Design (54-252).

54-290 IDeATe: Movement for Animators

Fall and Spring: 4 units
Movement serves as a basis for communication and visual storytelling. This course will provide actual physical movement training so that you may better understand its implications and applications for technology-based usage and your own engagement in the creative process with others. Playful participation, observation, and discussion will allow you to consider how to apply physical movement and movement theory in the areas of Animation and Special Effects, Motion Capture, Game Design, and other technology practices and research. Drawing from a number of methodologies you will explore how the variances of Time, Space, Weight, and Energy affect communication, storytelling, character development and narrative structure. We will examine the ways in which movement conveys psychological intent and emotion. This course is designed for students who may range from having no prior movement training experience to those who have some background in sports, dance or theatrical movement.

54-294 Make-Up for Performers

Spring: 2 units
PREREQUISITE: Acting/MT major in the School of Drama. Basic techniques of stage make-up and their adaptation to theatrical styles.
Prerequisite: 54-102

54-295 Advanced Fabrication II

Fall: 6 units
Continuation of Ad Fab. For Drama PTM-TD only.

54-297 VMD Systems Studio

Spring: 9 units
This course is designed to augment the conceptual background and technical skills of First year Graduate students and newly declared VMD Sophomores, and others interested in learning about media design for theater and installations. The course reviews foundational readings about media, technology and society and explores the skills used in contemporary media work. Through real-world examples, building custom media servers, experimenting with materials and software, rigging multiple types of display systems and visiting artists - students will learn the best practices for bringing their designs to life. A great deal of technical information will be covered including; video compression formats, projector optics, cueing software, projection mapping and amp; custom surfaces, media servers both custom and professional, networking and control protocols, live camera systems, and stage rigging for projection systems. The class will give students a clearer perspective of the field and help them plan a fulfilling course of study, based on their goals and interests. Class projects range from presentations of research to building media installations over at Studio 201. Required for new VMD Sophomores, 1st Year VMD Grads; open to IDeATe and BXA students; others accepted up to class limit.
Prerequisites: 54-232 and 54-231

54-299 Dramaturgy Production:Assistant

Fall and Spring: 9 units
For Dramaturgy majors.

54-300 Dramaturgy Research Hours

Fall and Spring: 6 units
For Dramaturgy majors.

54-301 Acting III

Fall
This is a two-semester course in Acting for Third-Year Actors and amp; MTs who will explore performance within directed structure in various non-Fourth-Wall forms of Theatre including: Greek Tragedy, the Greek Chorus, Moliere Comedy and amp; Brecht. This is not a course that will aspire to provide any "correct" way to play various "styles". Rather, it is a course in which to acquire new tools and amp; perspectives when working in new theatrical worlds. Goals include: to find the appropriate level of external expression to meet the demands of the particular text and amp; its directed world, and amp; to "fill the Form" believably and amp; passionately; to make active choices within a directed framework; to learn to work within industry standards; to learn the nature of the actor's "homework" in a directed framework; to include the Audience in the work.
Prerequisites: 54-201 and 54-202

54-302 Acting III

Spring: 5 units
This is a two-semester course in Acting for Third-Year Actors and amp; MTs who will explore performance within directed structure in various non-Fourth-Wall forms of Theatre including: Greek Tragedy. This is not a course that will aspire to provide any "correct" way to play various "styles". Rather, it is a course in which to acquire new tools and amp; perspectives when working in new theatrical worlds. Goals include: to find the appropriate level of external expression to meet the demands of the particular text and amp; its directed world, and amp; to "fill the Form" believably and amp; passionately; to make active choices within a directed framework; to learn to work within industry standards; to learn the nature of the actor's "homework" in a directed framework; to include the Audience in the work.
Prerequisite: 54-301

54-305 Voice for the Stage III

Fall: 5 units
Students explore voice work and various methods in more depth and Alexander alignment/awareness work to enhance vocal freedom and full body support of the voice. Areas include: breath support, vocal release, developing freedom in resonating areas, clarity in articulators, building range and stamina. Emphasis is placed on integration of methods with speaking of text. Writing projects are sometimes explored as a way to free the voice creatively and imaginatively. Voice/Alexander 1 is a pre-requisite to registering in this course.
Prerequisites: 54-105 and 54-106

54-306 Voice for the Stage III

Spring: 5 units
Students explore voice work and various methods in more depth and Alexander alignment/awareness work to enhance vocal freedom and full body support of the voice. Areas include: breath support, vocal release, developing freedom in resonating areas, clarity in articulators, building range and stamina. Emphasis is placed on integration of methods with speaking of text. Writing projects are sometimes explored as a way to free the voice creatively and imaginatively. Voice/Alexander 1 is a pre-requisite to registering in this course.
Prerequisites: 54-105 and 54-106 and 54-305

54-307 Movement III

Fall: 5 units
This course is designed to provide students with an introduction to the actor training method of Tadashi Suzuki in conjunction with a more advanced investigation of the Viewpoints actor training gained in the student's first year. This course examines and explores the use of language and the human body as an expressive artistic instrument. Concepts of the body in relation to Time, Space, and Energy will be explored. This is a studio course in which learning is experiential.
Prerequisites: 54-207 and 54-208

54-308 Movement III

Spring: 5 units
This course is designed to expand the student's movement skills to include the basic principles and techniques of unarmed stage combat and an introduction to weapons fighting. As a studio course, activities will consist of learning and performing physical techniques, reading materials pertaining to the subject matter, viewing filmed examples of work, and giving performance presentations.
Prerequisites: 54-207 and 54-208

54-309 Speech III

Fall: 4 units
TBA

54-310 Dialects and Accents

Spring: 6 units
For School of Drama Acting/MT students only.

54-311 Rehearsal and Performance III

Fall
Performance training through projects at different levels of difficulty and staging, directed by students and presented in the studio theatre. The actor has the opportunity to put into practice with his/her peers, in a creative and experimental atmosphere, the principles and techniques developed in the classroom.
Prerequisites: 54-201 and 54-202

54-312 Rehearsal and Performance III

Spring
Performance training through projects at different levels of difficulty and staging, directed by students and presented in the studio theatre. The actor has the opportunity to put into practice with his/her peers, in a creative and experimental atmosphere, the principles and techniques developed in the classroom. Note: Tues or Thurs time used as needed for performance critiques.
Prerequisites: 54-201 and 54-202

54-313 Dance III: Expand the Dynamics of Dance Technique

Fall: 3 units
Intermediate ballet. This course is dedicated to honing technical skills, expanding the classical dance vocabulary to the next level of difficulty, and addressing issues of strength, stamina, and endurance. Course closed: Only for Music Theatre majors in Drama. Prerequisite: Permission of instructor
Prerequisites: 54-205 and 54-206

54-314 Dance III: Expand Dynamic of Dance Technique

Spring: 3 units
Intermediate ballet. This course continues to hone technical skills, expand the classical dance vocabulary to the next level of difficulty, and address issues of strength, stamina, and endurance. Course closed: Only for Music Theatre majors in Drama. Prerequisite: 54-313 and Permission of instructor
Prerequisite: 54-313

54-315 Jazz III

Fall: 2 units
This course is to expand the versatility of the student dancer to master more complex exercises, in dynamics, direction and rhythm using Jazz styles examined by decades. Understanding the 20th century historical background of the 20's, 30's 40's, 50's 60's and 70's. Course closed: Only for Music Theatre majors in Drama. Prerequisite: Permission of instructor
Prerequisites: 54-217 and 54-218

54-316 Jazz III

Spring: 2 units
This course continues to expand the versatility of the student dancer to master more complex exercises, in dynamics, direction and rhythm using Jazz styles examined by decades. Understanding the 20th century historical background of the 20's, 30's 40's, 50's 60's and 70's. Course closed: Only for Music Theatre majors in Drama.
Prerequisite: 54-315

54-317 Singing for Actors III

Fall: 2 units
The students have a class voice experience which includes a physical and vocal warm-up and discussion and practice of healthy singing technique. There is group and individual rehearsal of potential audition and performance material. Toward the end of the term, there are weekly opportunities to perform in public, thus preparing for auditions.
Prerequisites: 54-201 and 54-202

54-318 Singing for Actors III

Spring: 2 units
The students have a class voice experience which includes a physical and vocal warm-up and discussion and practice of healthy singing technique. There is group and individual rehearsal of potential audition and performance material. Toward the end of the term, there are weekly opportunities to perform in public, thus preparing for auditions.
Prerequisites: 54-201 and 54-202

54-319 Cabaret

Fall: 6 units
The Art of Cabaret: Explores the use of Stories and Song to communicate life experiences within an intimate setting, breaking down the invisible fourth wall for honest communication. The course includes a section on the use of the microphone for singers. This Study produces two Cabarets containing Material on a chosen Theme to provide hands-on Song Expression in a public forum.
Prerequisite: 54-220

54-320 Costume Forum

Fall: 1 unit
Costume Majors

54-321 Acting III for Directors

Fall: 9 units
An examination of various directing styles with particular attention to: verse forms including Greek and Elizabethan, comedy/ farce texts and Early 20th century styles including Ibsen and Shaw. On occasion, guest directors for our main-stage productions will be engaged to teach the style of the production that they are presently working on. Alternately, there is the possibility of this semester being used for an applied internship with a major producing organization.
Prerequisites: 54-201 and 54-101

54-322 Directing III: INTRODUCTION TO TV & FILM DIRECTING

Fall: 9 units
An intensive introduction to directing with a camera in narrative film and episodic television for third year undergraduate directing and dramaturgy students. Students learn how to prepare for a camera shoot including breaking down a script, camera terminology, shot types and what can be accomplished, how to make a shot lists, visual style and how to express it. Students learn shot progression in the scene and point-of-view. This class will also include working with actors where we use a camera to film them under strict COVID guidelines.

54-323 Tap III - Expand Percussive Rhythms

Fall: 2 units
This course expands tap vocabulary and clear precision of execution through moderately difficult and extended combinations. Course closed: Only for Music Theatre majors in Drama. Prerequisite: Permission of instructor
Prerequisites: 54-223 and 54-224

54-324 Tap III: Expand Percussive Rhythms

Spring: 2 units
This course continues to expand tap vocabulary and clear precision of execution through moderately difficult and extended combinations. Course closed: Only for Music Theatre majors in Drama. Prerequisite: 54-323 and Permission of instructor
Prerequisite: 54-323

54-325 Actor Dance III

Fall: 2 units
This course uses basic and fundamental contemporary Jazz styles, i.e. Latin, Blues, Lyric, African, to technically train the body using isolations and rhythmic patterns. Course closed: Only for Acting majors in Drama. Prerequisite: Permission of instructor
Prerequisites: 54-201 and 54-202

54-326 Actor Dance III

Spring: 2 units
This course continues to use basic and fundamental contemporary Jazz styles, i.e. Latin, Blues, Lyric, African, to technically train the body using isolations and rhythmic patterns. Course closed: Only for Acting majors in Drama. Prerequisite: 54-325 and Permission of instructor
Prerequisites: 54-201 and 54-202

54-327 Auditioning for TV/Film

Fall: 2 units
An optional course for Junior Acting and Music Theatre majors.
Prerequisite: 54-202

54-328 Advanced Digital Sound Design Skills

Fall: 9 units
Sound Design Majors ONLY. Advanced sound creation and manipulation through student designed and constructed software and hardware. Prerequisite: Conceptual Sound Design I.
Prerequisite: 54-267

54-329 Junior Theatrical Voice

Spring: 2 units
Missing Course Description - please contact the teaching department.

54-330 Introduction to Stage Management

Spring: 6 units
This course is intended to provide students an opening to the knowledge and skills of the professional stage manager. It will also illuminate the qualities of a good stage manager specific to personality and human interaction. Within this course we will examine the role of the stage manager throughout the full scope of creating a production, including preparatory work, rehearsal period, technical rehearsal, performance and closing.

54-331 Scenic Design: Explorations

Fall: 9 units
Students will spend the year in an exciting and intensive exploration of the process of Scene Design as well as an examination of the nature of creativity and storytelling. Students will also engage extensively in the skills a professional Scene Designer requires, such as drafting, drawing, model making, painting and general collaborative skills. Students will be expected to deal with in-depth research, scriptual examinations, careful arrangements of space, composition and groundplan, conceptual structure, real life obstacles and the elements of a successful final project. By the end of this course, students will have improved their overall design skills, have some projects they can include in their portfolio and have created new routes toward their creativity. (pre-req, intro to Scene Design)

54-332 Scenic Design: Boot Camp

Spring: 9 units
A rapid-fire design course for scenic design majors. This course offers the students the opportunity to work on six projects over the course of the semester. These projects may include contemporary, classical and non-linear plays, as well as TV workshop and a new plays collaboration with dramatic writing students. Co-taught by Scenic Design faculty.
Prerequisite: 54-250

54-333 Production Personnel Management

Fall: 6 units
Study of the management of production personnel for live theatrical productions. In depth analysis of union contracts from a management perspective: AEA, IATSE, USA. Projects in scheduling and budgeting based on those contracts. Study of hiring, evaluating, and retaining a quality staff. Examination of the role of safety protocols in production. The Course concentrates on the relationship between the Production Manager and all of the personnel that one comes in contact with. For Senior SMPM and TD ONLY or with instructor permission.

54-334 Production Resource Management

Spring: 6 units
This course examines the management of resources for the production of live theatrical productions. We start with analysis of scripts, to find the foundation for resource allocation. Then we move on to study the allocating two of the largest production resources: time and money. A significant exploration of the tracking of time and money extends throughout the course, with half of the class sessions taking place in a computer cluster, where we concentrate on advanced application of Excel, Access, and specialized calendar software.

54-335 Auditioning for the Stage

Spring: 2 units
An optional course for Junior Acting and Music Theatre majors.

54-336 Musical Theater History

Intermittent: 6 units
This course is a survey of musical comedy and musical theatre performances throughout history. Often considered a quintessential American theatrical form, we will also consider what "musical theatre" or "musical drama" means beyond the borders of the United States. The course will primarily focus in the time frame of 1860-present. We will examine the historical background, development and evolution of form, as well as impact and proliferation of this performance style. The course will involve lecture-based, discussion-based, and project-based styles of engagement. **No previous knowledge of or practice of "musical theatre" is necessary to succeed in this course. Open to non-majors.

54-337 Introduction to Lighting Technology

Fall: 6 units
Introduction to Entertainment Lighting Technology provides students with an overview of lighting equipment and software used in entertainment production. Topics include automated fixtures, console programming and pre-visualization software.

54-338 New Works Collaboration

Fall and Spring: 3 units
TBA

54-339 Stage Management Seminar

Fall and Summer: 3 units
This class provides stage managers an opportunity to participate in in-depth discussion about the production process. Specific issues related to CMU productions and troubleshooting problems are a particular focus. The class also presents guest speakers on related topics and will work on longer-term projects as needed.

54-340 Coding & Control for Theatrical Sound

Fall: 9 units
This course will explore coding techniques, show control, networking and software applications within the context of theatrical sound design and amp; engineering. Pre-requisites 54267, 54166 and amp; 54389 (or permission of instructor.
Prerequisites: 54-267 and 54-166 and 54-389

54-341 Fundamentals of Costume Design

Fall: 9 units
Multiple studio projects comprise this one semester course that focuses on the principals and elements of design, including color theory, as they relate to Costume Design. Projects focus on the empowerment and development of each student's individual imagination. PRE-REQUISITE: Declared Costume Design Major in School of Drama. All others: Portfolio Review and special permission of teacher required. Drawing For The Theatrical Designer and Figure Drawing may be taken concurrently. FOR: First semester Graduate Costume Design and Costume Production Students, First semester Junior Costume Majors.
Prerequisite: 54-162

54-342 Costume Design for TV and Film

Spring: 7 units
A course that explores the aesthetic and technical processes of designing costumes for the screen. The course introduces film-specific practical skills including the fundamentals of analyzing and breaking down screenplays for costume design, what design means during the pre-production and shooting phases of a production, and the aesthetic and technical differences of designing for the camera's eye compared to designing for the human eye. The course will consist of lectures, visual presentations, including viewing of films that illustrate the processes described in class, script break-down assignments, and design process projects. PRE-REQUISITE: Design/PTM Costume major. All others: Portfolio Review and special permission of teacher required. FOR: Second year Graduate Costume Design majors and Costume Design students.

54-343 Lighting Design Skills 2

Fall: 3 units
TBA
Prerequisite: 54-367

54-346 Introduction to Costume Construction

Spring: 6 units
This sophomore level course is designed to provide an intermediate level of training in the area of clothing construction. Students will learn how to read patterns, prepare and cut fabric appropriately for construction purposes, and complete a garment employing necessary finishing techniques. Additionally, students will be exposed to the rudimentary skills necessary for basic flat patterning and begin the process of project time management and comprehension of product value.
Prerequisites: 54-231 and 54-232

54-347 Sound Workshops

Fall: 3 units
TBA
Prerequisite: 54-166

54-349 Automated Lighting Technology

Spring: 9 units
Automated lighting equipment is explored, with a concentration in programming techniques on advanced lighting control consoles.
Prerequisite: 54-369

54-350 Scenic Design Forum

Fall and Summer: 1 unit
Required weekly meeting of all Scenic Designers.

54-351 Theatrical Lighting Design

Fall: 9 units
The student's ability to analyze and translate information in the script to descriptive stage pictures is developed in a more in-depth process. Verbal, written and visual communication of ideas is emphasized and explored through texts and lab work. Issues of collaboration with the director and other members of the design team are discussed as part of the design process. Prerequisites: 54252
Prerequisite: 54-252

54-352 Musical and Opera Lighting Design

Spring: 9 units
Through hands-on lab exercises and preparation of full lighting design plots, students will study lighting design for Musical Theater and Opera. The class will learn to visually analyze the emotional content of music, explore the various forms of musical performance, learn how to develop a design process, create focus in a large-scale space, and strategies for implementing a design.
Prerequisite: 54-351

54-353 Structural Design I

Fall: 9 units
Required for all senior undergraduate Technical Direction students. A concentrated training in Structural Design specifically developed for the theater technician. This course teaches the process of Allowable Stress Design for the engineering of scenic structures in wood and steel. Drama majors only, or with instructor permission.

54-354 Structural Design II

Spring: 9 units
Required for all senior undergraduate Technical Direction students. Upon completion of this two-semester sequence, students are familiar with beam and column design/specification, truss design, tensile systems and structural connections.
Prerequisite: 54-353

54-355 30 Hour OSHA

Intermittent: 2 units
For Production Technology and amp; Management majors.

54-356 Production Prep: Lighting Production

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama production and design students. The production experience provides students with experience in the following areas: production management, stage management, production run work, stage operations, design, lighting, sound, costume construction, prop construction, scenery construction, video and media, and scenic painting. Fully participating in these experiences will facilitate students' future success in the School of Drama as well as in the profession.

54-357 Directing: Production III JPP

Fall: 12 units
Assignments as stage manager or assistant director.

54-359 Introduction to Show Networking

Fall: 3 units
Introduction to Show Networking explores the integration of network structures and methods into entertainment production. Presented as two remote sessions (January 19 and February 16, 4-5:20 PM) and one in-person workshop (1/23, 9 AM-4 PM), the course will utilize readings and individual study as preparation for a series of projects to demonstrate networking techniques as applicable in the field of production technology.
Prerequisite: 54-249

54-360 Leadership Workshop: Ethics & Innovation

Intermittent: 6 units
This course will be an exploration of both innovative strategies and the ethics of leadership within the performing arts. It will build on the management principles covered in foundational courses and is designed to offer the student an approach to leadership development that is tailored to the individuals strengths and needs as well as their role within theatrical organizations. For PTM students only or with permission from the instructor.
Prerequisite: 54-333

54-361 Production Preparation

Fall and Spring
Participation in School of Drama productions in design or production roles.

54-362 Anti-Racist & Equitable Practices in Theater

Fall: 6 units
This course will be a series of workshops delivered in a hybrid format (partially online, partially in person, some independent work) exploring the topics of race and theatre with a primary focus on the US. Students will cover topics such as race and racism, creating welcoming theatre spaces, scene selections, tropes, and strategies for cultural competency and a survey of artists and theatres who have done culturally competent work. Practical skills around creating mission and values, cultural aesthetics, and advocacy will be covered. Students will practice research and critical analysis of various theatre systems as well as creative problem solving. Classes will not meet every week but the first day of classes August 30 and 31 will be in person where a schedule and syllabus will outline the semester.

54-363 Dramaturgy 4: Devising

All Semesters: 9 units
Dramaturgy students only. Others by permission. In this class, students will: - gain an introduction to the history and practice of devised and amp; documentary theatre - explore the dramaturg's role in devising theatre - investigate various methods for creating devised and amp; documentary theatre - learn techniques for developing theatre from source material - create original devised pieces in collaboration with other students
Prerequisites: 54-184 and 54-109

54-364 Dramaturgy 7 - Expo Prep

Intermittent: 9 units
For Dramaturgy majors.
Prerequisite: 54-363

54-365 Machine Design I

Spring: 9 units
Required for all senior undergraduate Technical Direction students. In this course, concepts from Physics of Stage Machinery are applied to the specification, selection, design and assembly of real-world mechanical components for the realization of winches, turntables, wagons and lifts for theatrical use. Drama majors only, or with instructor permission.
Prerequisite: 54-366

54-366 Physics of Stage Machinery

Fall: 9 units
This class teaches the basic physics of dynamic mechanical systems, specifically in the context of lifts, winches, turntables and wagons used in theatrical production. Material covered consists of Newtonian Dynamics, elementary mechanics, and fluid power. Required for all junior undergraduate PTM students. Drama majors only, or instructor permission.

54-367 Lighting Design Skills

Fall: 6 units
Students will concentrate on developing the skills necessary for lighting designers to successfully implement their designs in the theatre. Content includes communication, CAD programs, paperwork, focusing the show, programming conventional and moving light consoles, cue writing and expectations and responsibilities of the design assistant. Prerequisite: 54252
Corequisite: 54351
Prerequisite: 54-252

54-368 Introduction to Lighting Management

Spring: 6 units
Lighting Management I is an overview of the management process within a theatrical lighting department. Topics covered include communication tools, paperwork and physical resources used by department heads to facilitate lighting designs, as well as other duties performed within that role.
Prerequisite: 54-249

54-369 Lighting Management II

Spring: 4 units
Lighting Management II continues the investigation of the role of the department head within a theatrical lighting department, concentrating on skills needed to perform the role within the School of Drama.

54-370 Dramaturgical Sensibilities

Spring: 3 units
In this course, dramaturgy majors will meet with professionals in the field who have used a dramaturgical sensiblity to build careers in "dramaturgy-adjacent" fields.

54-371 Production Preparation

Fall
Participation in School of Drama productions in design or production roles

54-372 Theatre for the Ear

Spring: 6 units
Survey of aural storytelling with technology focusing on forms with no visual component. Topics include the history of radio drama to present day, radio sound art, cut-up and tape manipulation, comedy records and podcast dramas. Prerequisites: 54-166 Introduction To Sound Design, 54-267 Conceptual Sound Design 1 Restrictions: The course is open to sound design majors or with permission of the instructor.

54-373 Draping Fundamentals

Fall: 3 units
Draping Fundamentals is a half-semester introduction to the arena of the costume draper. This course illustrates what the draper's role is in effectively spearheading garment production for the performing arts, emphasizing the collaboration skills needed to propel a design from page to stage. The course instills a strong foundation in pattern development skills through the use of the dress or suit stand. Additional skills such as application of research, fitting procedures and protocol, pattern manipulations and refinements and complete construction plans are explored. This class provides tangential learning through a thorough investigation of sculptural and spatial relationships, emphasis on strategic planning, development of fine motor skills, and exposure to a broad spectrum of materials and methods that can be adapted to other purposes.

54-374 Musical Theater Audition

Spring: 5 units
Missing Course Description - please contact the teaching department.

54-375 IDeATe: Robotics for Creative Practice

Fall: 9 units
Robots come in all shapes and sizes: it is the integration of software and hardware that can make any machine surprisingly animate. This project-oriented course brings art and engineering together to build performance systems using embodied behavior as a creative medium. Students learn skills for designing, constructing and programming automated systems for storytelling and human interaction, then explore the results through exhibition and performance. Technical topics include programmed motion control, pneumatic machine design, closed-loop feedback systems, machine choreography, and human-robot interaction. Discussion topics include contemporary kinetic sculpture and animatronics. This interdisciplinary course is part of IDeATe Physical Computing but is open to any student.
Prerequisites: 60-210 or 99-361 or 15-112 or 15-104 or 60-212 or 15-110

54-376 Entertainment Rigging

Spring: 3 units
This course is a survey of the techniques and practices of theatrical rigging. The course has two main components: permanently installed rigging systems typically found in theatres, and background and technical information concerning the components typically used for stage rigging. Discussion topics include selection criteria for line, hardware, and terminations stressing entertainment industry standards, workplace safety and common industry misconceptions. Time permitting the course will shift from a general discussion of components to their assembly into custom rigging systems and amp; solutions. Instructor's permission only.

54-377 Production Composition Studio

All Semesters: 3 units
This course is a laboratory style studio class. It is designed to support the student through the process of composing music for theatrical and amp; film productions and projects. Students will be required to bring ongoing creative work materials to class.
Prerequisites: 54-389 and 54-390

54-378 Technical Direction II

Spring: 6 units
This course is an exploration of techniques and practices of Technical Designers. The class has four main components: an exploration of the types of strategies used by Technical Designers to arrive at solutions, building an expert vocabulary for discussion of technical design issues, development of actual technical solutions, on paper, in discussion, and in the shop, discussion of any pertinent technical issues for any of the school productions while in development.
Prerequisite: 54-273

54-379 Captured Storytelling

Fall: 7 units
In this course we will consider the differences between traditional live storytelling and stories that are captured to be viewed remotely or at a later date. Using the lens as the proscenium, you control how your audience experiences the story. How do you prepare for that? How does the lens change the way we design? We will talk with and explore the work of industry professionals such as directors, cinematographers, production designers, editors, and costume designers. Hands on, we will storyboard and shoot our own stories.

54-380 Music Reading for Production

Fall: 3 units
This class gives the basics of music theory, musical terminology and score reading. Students focus on the difference in various musical scores, ie. piano/vocal, full, hand written scores. Students are guided in classroom listening which a wide variety of music including, opera, musical theatre, ballet, and choral/orchestra works.

54-381 Special Topics: Feminist Theatre

Fall and Spring: 6 units
Every semester, the School of Drama offer seminars on special topics that investigate some aspect of theatre history, dramatic literature, dramatic theory, or a particular author, period, or genre. Feminist Theatre: Theory and amp; Practice of Cultivating a Feminist Theatre: This course investigates the relationship between feminist theory and performance. The syllabus is grounded in works that deal specifically and overtly with issues of gender, sexuality, race and class. We will pay particular attention to the ways in which these issues have shaped feminist thought and the process of canonization. Our study will focus on the following questions: Is there a feminist dramaturgy? Is there a feminist dramatic tradition? How has feminist performance been produced, staged, and received throughout history? What is feminist theater and has it served as an agent for social change? We will read representative feminist plays by writers of diverse backgrounds, using class discussion to analyze these dramatic texts alongside feminist theory. Playwrights whose work we'll investigate may include: Suzan-Lori Parks, Alice Birch, debbie tucker green, Mar and #237;a Irene Forn and #233;s, Sarah Ruhl, Caryl Churchill, Young Jean Lee, Lillian Hellman, Sophie Treadwell, Alice Childress, and Franca Rame. Feminist theorists/writers whose work we'll read alongside these plays may include: Audre Lorde, bell hooks, Silvia Fedirici, Lisa M. Anderson, Patricia Hill Collins, Kim Solga, Laura Mulvey, and Jill Dolan.

54-382 Anti-Racist Theater: In Context

Fall: 4.5 units
TBD

54-383 Introduction to Digital Media

Fall: 9 units
Software Covered: AutoCAD, Photoshop, Illustrator, InDesign, Sketchup, Vray for Sketchup Concepts Covered: 2D Graphics, Architectural Drafting, 3D Modeling and amp; Rendering, Hybrid Representation Limited to Drama students: Scenic Design Juniors, 1st Year Graduate Students

54-385 Automated Lighting Rig Engineering

Spring: 6 units
Students continue to develop technical drawing and engineering skills while completing the decision-making process for the implementation of a concert lighting rig.

54-386 Scenic Design Skills: 3D Model Making

Spring: 4 units
In this mini students explore a variety of three-dimensional media techniques as they learn to build models for the Scenic Designer. Students will investigate many aspects of model-making, from basic structural ideas to complex organic and architectural forms, furniture, and advanced techniques such as scale painting, soldering and carving. Through these methods, students will develop a better understanding of space and objects in space in the theatre.
Prerequisite: 54-231

54-387 Dramaturgy : Production I

Fall and Spring: 9 units
Working as a production dramaturg for a Horizons Reading or as an assistant dramaturg.

54-389 Composition for Theatrical Sound Design 1

Fall: 9 units
Composition for Theatrical Sound Design 1 This course will concentrate on developing compositional skills for use in theatrical sound design. The full length of this course is designed to take place over two semesters. The rst semester will examine the building blocks of composition such as rhythm, modes, harmony and counterpoint. The second semester will focus on more advanced skills in composition within a theatrical context. Through projects distributed throughout the semester you will practice the skill-based techniques of music notation, orchestration, synthesis, sequencing, and the creation and utilization of sample-based instruments. This course will also cover textual analysis as it applies to both the inspiration for composition and to the more direct challenge of setting music to text.

54-390 Composition for Theatrical Sound Design 2

Spring: 9 units
This course will concentrate on further developing compositional skills for use in theatrical sound design. The full length of this course is designed to take place over two semesters. This is the second semester and builds on compositional techniques such as writing melody, harmony, counterpoint and orchestration techniques. The second semester focuses particularly on more advanced skills in composition within a theatrical context. Through projects distributed throughout the semester students practice the skill-based techniques of music notation, orchestration, synthesis, sequencing, working with instrumentalists and the creation and utilization of sample-based instruments. This course will also cover textual analysis as it applies to both the inspiration for composition and to the more direct challenge of setting music to text.

54-391 Lighting Design for Directors

Fall: 4 units
An exploration of the lighting design process that will provide the tools for stage directors to communicate, collaborate and explore with designers. Students will explore the physical properties of light and the artistic potential of light through script analysis and hands on use of the Light Lab. (For Junior Directing Students)

54-392 Scenic Design Skills: 2D Drawing and Rendering

Spring: 4 units
This mini offers practice in two-dimensional drawing and rendering for the theatre.

54-394 Production Prep: Lorca

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-396 Theatrical Lighting Management

Fall and Spring: 6 units
Theatrical Lighting Management continues the investigation of the role of the department head within a theatrical lighting department, concentrating on skills needed to perform the role within the School of Drama.
Prerequisite: 54-368

54-397 Sound Design For Interactive Environments

Spring: 9 units
This course will examine the process, execution and implementation of sound design for interactive and non-linear storytelling paradigms. Emerging trends in immersive theater, gaming, installation art and multi-media place unique demands on the sound designer both in terms of content and delivery. The student will explore how these demands effect the fundamental processes of design, development of content and flexible delivery systems. Through a combination of directed readings, exploration of current and amp; emerging trends, and project assignments the student will be encouraged to experiment and explore design modes and methodologies that support this flexible method of storytelling.
Prerequisites: 54-267 or 54-268

54-398 Special Topics in Sound Design

Spring: 9 units
A one semester course covering various rotating topics including the history and critical theories of film sound design, the history of sound recording and technology, Foley sound, recording and editing techniques, and 5.1 audio. Prerequisites: 54-166 Introduction To Sound Design for Theater, 54-267 Conceptual Sound Design. Restrictions: The course is open to Drama sound design majors and minors, Music Technology majors and minors or by permission of the instructor.
Prerequisites: 54-267 and 54-166

54-399 Decoding Media

Fall: 9 units
Media technologies are designed to do a lot with very little effort. This creates a problem of abundance for artists trying to use these technologies in creative ways. One can relatively quickly pull images off the internet and project them huge onstage, but what does it mean? Decoding is the term I'm using to help you keep control of your process and create meaningful (not just dazzling) imagery for the stage. The entire theatrical process can be considered as a series of decodings and re-encodings, first decoding the text/idea (by the creative team), re-encoding (the design) and finally decoding by the audience. This class is designed to give students a solid foundation in contemporary media design skills while simultaneously providing an examination of the function of theater historically and the ways media technologies fill those needs today. Early assignments focus on students use of media in their everyday lives, by keeping media journals and bringing in media objects for examination. Later classes focus on taking ideas from this research and applying them in conceptual stage designs for an ancient Greek play and then a controversial adaptation from the 1990's by Sara Kane. Students learn how to go from textual analysis to a visual interpretation and staging with media. The class takes students through the process of initial creative brainstorming, to communication tools (concept sketches, digital renderings, 3D models), onto specifying a design through CAD documentation, projection optics calculations and final design presentations.

54-400 Staging Media- Immersive Edition

Spring: 9 units
Are you interested in learning advanced media design skills and creating a multi-room immersive science-fiction experience? Staging Media is a practical, process-oriented class, focused on building the skills to go from a conceptual design to an actual completed event. This semester will be structured around creating a science fiction themed, immersive experience at the 477 Melwood building off campus. Class projects will explore different kinds of immersion, looking at the spectrum from a really engrossing novel on one end, to the sensory overload of Omega Mart/Meow Wolf, or the sensory "capture" of VR systems on the other. Students will work with different technologies and media systems in ways that support these various levels of audience experience. We will read interviews and learn strategies from immersive theater companies such as Non Zero One, Punchdrunk, Blast Theory and others. And we will also read several short stories, parts of novels, and screen a few films in the Melwood screening room's 4K theater, as research and inspiration. Students will use multiple industry standard software systems as they design and build the experience, including Cinema4D, Vectorworks, TouchDesigner, Max/MSP/Jitter, and Unity/Unreal. Prior experience with some of these tools is preferred, but students will also be exposed to workshops and tutorials, and gain practical experience by learning in a project based manner. Visiting artists from the entertainment industry will open the class to their experiences and professional workflows.

54-401 Through the Lens : Storytelling with the Camera

Fall: 9 units
A unified, cross-disciplinary class focused on the artistic and technical requirements for single-camera storytelling. Students from each discipline will receive theoretical instruction, progress to in-class practicum work, and become an integrated production team on a field film project experience. The idea embraces: a single weekly time-frame for classes across several disciplines, a reintegration of management students; and a retooled Camera Lab class in which actors, writers, designers, managers and directors collaborate. Professional guest artists will be frequent visitors to the classroom and production process. Classes will include topics of universal interest to the larger group as well as discipline specific sessions.

54-402 Through the Lens : Storytelling with the Camera

Spring: 9 units
A unified, cross-disciplinary class focused on the artistic and technical requirements for single-camera storytelling. Students from each discipline will receive theoretical instruction, progress to in-class practicum work, and become an integrated production team on a field film project experience. The idea embraces: a single weekly time-frame for classes across several disciplines, a reintegration of management students; and a retooled Camera Lab class in which actors, writers, designers, managers and directors collaborate. Professional guest artists will be frequent visitors to the classroom and production process. Classes will include topics of universal interest to the larger group as well as discipline specific sessions.
Prerequisite: 54-401

54-403 Actor as Artist

Fall: 6 units
TBD

54-404 Writer's Room Workshop

Fall: 9 units
TBD

54-405 Digital Narratives

Fall: 5 units
This course combines options from the School of Drama in a unique configuration: through working collaboratively across disciplines, students will investigate innovative approaches to contemporary theater and new ways of storytelling. Contemporary techniques for ensemble creation, devising and media integration will be explored through exercises, readings, and viewing of other artist's work. This Fall the course will explore the wide variety of digitally mediated forms for online, remote and distanced work - techniques of collaboration, creation and experiencing of performance focused work. We will pursue multiple techniques for cross-platform storytelling, drawing from students' lived experiences to engage the current political and social milieu via multiple digital and mediated systems. Experimental and devised processes of theater making have long mined the complex relationship between the form and the content of an artwork - how can we do so in pursuit of a critical/political perspective? Students will become familiar with contemporary and historical companies who work this way and through small group in-class workshops create new narrative experiences and share them with the larger class. Through embracing these tools and forms, we utilize the theatrical conversation to engage in artistic discourse to discover new complexities of meaning. We invite students to come explore these possibilities in a spirit of experimentation and group exploration.

54-406 Media Creation Studio I

Fall: 6 units
Missing Course Description - please contact the teaching department.

54-407 Movement IV

Fall: 6 units
Movement IV is a Lecoq-based course that focuses upon the creation of actor generated physical theatre. In contrast to the actor-as-interpreter tradition, class work is completely centered upon the actor-as-creator. All performance material is created by the students themselves. Class work includes solo, duo, and ensemble explorations. Improvisational prompts and various themes will be introduced and explored, resulting in improvised or semi-rehearsed presentations. Potential themes include autobiographical material, topical issues, original music theatre, inspirations from nature, interpretations of art (music/poetry/paintings), mask performance, contrasting characters, clown entrees, etc. A final project or projects will be determined by the class material generated throughout the semester, as well as by student interest. Limited to Acting/MT majors only. Prerequisite Knowledge: Movement I, II, and III
Prerequisites: 54-208 and 54-207

54-408 Drama Directing TBA

Spring: 6 units
TBA

54-409 Theatre Lab for Undergraduates I

Fall
This is a two-semester class which teaches the collaborative process of theatre and #8212; including the role of the living dramatic writer. New scripts are written by graduate dramatic writers, then developed and realized by junior actors, senior dramaturgs graduate and undergraduate directors with the playwright. This work results in 10-minute play scripts, one acts, monologue dramas, and the texts for the MFA Thesis Productions. This class is co-taught by the Acting Dramatic Writing, Dramaturgy and Directing Options.

54-410 Theatre Lab for Undergraduates II

Spring
Theatre Lab is a place to practice collaboration. We will examine and explore the relationships between actor, director, and playwright in working on new plays. The objectives are to prepare students to work collaboratively on new play production as it is practiced in the field, to understand the responsibilities of actor, director, and playwright in work on a new text, and to practice being an outstanding collaborator.

54-411 Rehearsal and Performance IV

Fall: 16 units
Participation outside of class requirements in departmental productions. Putting into practice the techniques acquired over the years of training and exploring the development of a performance played before the public over two weeks.
Prerequisites: 54-312 and 54-311

54-412 Rehearsal and Performance IV

Spring
Participation outside of class requirements in departmental productions. Putting into practice the techniques acquired over the years of training and exploring the development of a performance played before the public over two weeks.
Prerequisites: 54-311 and 54-312

54-413 Showcase

Fall: 6 units
Senior acting class for actors and Mt's who are in good standing and in position to graduate in the Spring. Preparation for the New York and Los Angeles Showcase presentations.
Prerequisites: 54-301 and 54-302

54-414 Showcase

Spring: 9 units
Senior acting class for actors and Mt's who are in good standing and in position to graduate in the Spring. Preparation for the New York and Los Angeles Showcase presentations.
Prerequisites: 54-302 and 54-301

54-415 Broadway Dance Styles

Fall: 5 units
This course is designed to provide the student with a practical and historical knowledge of the dance repertoire in American Musical Theater using the original choreography from prominent Broadway choreographers. Course closed: Only for Music Theatre majors in Drama. Prerequisite: Permission of instructor
Prerequisite: 54-319

54-416 Broadway Styles

Spring: 5 units
This course continues to provide the student with a practical and historical knowledge of the dance repertoire in American Musical Theater using the original choreography from prominent Broadway choreographers. Course closed: Only for Music Theatre majors in Drama.
Prerequisite: 54-319

54-418 Songs for Showcase

Spring: 2 units
Vocal preparation for Senior Showcase presentation.
Prerequisite: 54-500

54-419 Production Prep: TBA 11

Fall and Summer
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-420 Production Prep: Mary-Kate Olsen

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-421 Production Prep: John Proctor

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-422 Directing IV: Next Steps

Spring: 9 units
TBD

54-423 Production Prep: Alcina (SOM 2)

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-424 Production Prep: Bright New Boise

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-425 Production Prep: Grown Ups

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-426 Production Prep: Mr. Burns

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-428 Production Prep: The Dumb Waiter

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-429 Production Prep: TBA 10

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-430 Production Prep: TBA 9

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-431 Scenography

Fall: 9 units
A core design class between scenic designers, costume designers, media designers, and directors collaborating to create projects on paper. This class allows students to experiment away from the pressure of a realized production. The course encourages students to cross traditional boundaries in their own work and to focus on the idea of world building for their projects. This class often includes guest designers and directors.

54-432 Design for Spaces

Spring: 4.5 units
A1: Design for Live Spaces: Scenic Design is a course that focuses on creating design within the format of live performance. The projects will be varied and will include new works, existing texts and other innovative forms of live design within the community. A2: Design for Screen Spaces: Scenic Design is a course that focuses on design for the screen. The projects may alternate between TV and Film design depending on the year. Industry professionals will be part of the course experience, giving students real-time knowledge. Projects will build towards a portfolio of work for use in the industry. This course focuses on developing the design tools in areas such as: research, collage assembly, model making, storyboards and creation of a short reel amongst other things.

54-433 The Basics of Self-Producing for Theater Artists

Fall and Spring: 6 units
Is self-producing for you, or do you prefer to use other people's resources? Basics of Producing for Theater Artists will introduce the mechanics of getting your work to the spectator while creating a sustainable life as an artist. We'll investigate old models and new platforms to help you find the location and the recipe for your unique mission. We will walk through budgeting, fundraising, marketing, contracts, rights, risks, and the audience of the future. As a final project, you will assemble a package you can hand to a potential funder that explains why your theater is needed to fill a void in the culture, and why no one is better suited to do it.

54-434 Production Prep: New Works

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-435 Production Prep: External Projects

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-436 MT Senior Voice Coaching

Spring: 1 unit
No course description provided.
Prerequisite: 54-500

54-437 Acting IV

Spring: 6 units
Tbd
Prerequisites: 54-302 and 54-301

54-438 Acting IV-Improv

Spring: 3 units
Introduces students to Comedy Improv performance; gives students an improv vocabulary; increases students freedom on stage; stimulates students sense of play; and increases students awareness of rhythm/timing/build/fall/recovery.
Prerequisites: 54-302 and 54-301

54-440 Production Prep:TBD 12

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-441 Costume Design for Dance

Fall: 5 units
A mini exploring the design elements specific to the aesthetic and performance requirements of dance. The course will examine the design of costumes at significant points in the history and evolution of dance, from classical ballet to a wide range of modern genres. Coursework will consist of lectures, visual presentations, viewing of filmed footage of notable dance performances, and research and design projects. PRE-REQUISITE: Design/PTM Costume major. All others: Portfolio Review and special permission of teacher required. FOR: Second year Graduate Costume Design majors and Junior Costume Design students.

54-442 Costume Design for the Classics

Spring: 5 units
This course focuses on left and right brain approaches to complex classics written by a playwright chosen from amongst Moliere, Brecht, Pedro Calder and #243;n de la Barca, and Shakespeare, as well as contemporary female playwrights such as Sarah Ruhl, Ellen McLaughlin and Lauren Gunderson who have written plays inspired by the classics. Special attention is paid to process: research, critical thinking, character development, style, nuts and bolts paperwork, and the honing of each individual designer's skills. PRE-REQUISITE: Design/PTM Costume major. All others: Portfolio Review and special permission of teacher required. FOR: First year Graduate Costume Design majors and Junior Costume Design students. Prerequisite: 54-341
Prerequisite: 54-341

54-443 Production Prep: Looking at You

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-444 Advanced Designer Draping

Spring: 6 units
Advanced Designer Draping is a continuation and development of the proficiencies established in Draping for the Designer I. This course emphasizes the draper's role in the creation of period women's wear: its history, unique pattern challenges, specific construction techniques, and how to manage its creation in the workroom. The synthesis of historical understanding with requirements for the performing arts is underscored. Through the patterning, fitting and making of a multi-layer, historic costume each student undertakes interrelated projects that allow for the application of research, development of complex patterns, composition of complete construction plans and fostering of effective teamwork. To take this class, the student needs to have taken either 54-373 Draping for the Designer I or 54-814 Draping for the Graduate Designer I or to have a background in draping and gain permission from the instructor.
Prerequisite: 54-373

54-445 Commercial Intensive

Fall: 3 units
This course helps actors to develop an understanding of commercial type, work with commercial copy, learn about the SAG-AFTRA commercial contract and use wardrobe, technology and self-taping to best effect in order to book commercial work.

54-446 Professional Prep for Costume Designers

Spring: 3 units
An optional professional preparation course geared toward Costume Designers entering the theatre industry. The slide/lecture course will cover doing taxes, job search information: including resume formatting, cover letter styles and tone, portfolios and websites; United Scenic Artists' union membership and benefits, "How to Survive the First Years in the Business." Minimal homework.

54-447 Figure Drawing

Fall: 3 units
Costume Majors have priority, then Design Majors. This course explores the realistic and expressive depiction of the human form primarily in two dimensional media. Working primarily from the live model, exercises will be undertaken that address gesture, proportion, movement, anatomy and structure, composition and expressive form. Students will experience a variety of media and formal approaches to the figure, working from nude, draped, and clothed male and female models. A primary goal of the class is to develop the ability to create the human figure from imagination, based on intensive empirical study of the forms and structures of the human body from life.

54-449 Production Prep: Carnegie Scenic

Fall and Spring
tbd

54-450 Painting for the Theatrical Designer

Intermittent: 9 units
Taught 2 days a week every other Spring, watercolor and acrylics are explored for scene, lighting and costume designers with discipline specific studies such as architecture, furniture, landscapes and interiors as lit for scene and lighting designers; human costume and accessories for costume designers.
Prerequisite: 54-473

54-451 Scenic Design Packet

Fall and Spring: 4 units
In Scenic Design Packet students will explore the full process and craft of scenic design deliverables, working with a previously designed class project. The course is a companion course to Scenic Design Bootcamp, taking one of the preliminary scenic design ideas to a complete final scenic packet. Through demonstrations, laboratories, and project work, students will create portfolio worthy drafting, models, paint elevations, storyboards and properties information.

54-452 Architectural Lighting Design

Spring: 4.5 units
The study of Architectural Lighting Design for interior and exterior spaces.
Prerequisite: 54-252

54-453 Production Management Workshop

Fall and Spring: 3 units
Investigates the organization, planning and interpersonal skills required to successfully manage a live theatrical production. Course is discussion based on 1) participants experience in laboratory productions in the School of Drama, 2) current practical examples of experiences of professional production managers, and 3) contemporary management texts. Topics covered include: Budgeting, Scheduling, Communication, and Project Management. Permission of instructor required.

54-454 Advanced SM: Management Styles

Fall and Spring: 6 units
In-depth exploration of Management Styles, examination of personal approaches, collaboration, and priorities for the future

54-455 Production Data Manipulation

Spring: 9 units
In depth analysis of how to work with production data across multiple software platforms to allow the Production Manager to make more informed decisions. Required for Production Management / Stage Management majors.

54-456 Production Preparation

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. In the Lighting Production course students will work within technical lighting teams to support production work on School of Drama shows and events.

54-457 Directing: Production IV

Fall
SENIOR DIRECTING CAPSTONE: Fully-designed presentation directed by a 4th-Year Directing student with the following goals: to publicly realize a playwright's purpose for an audience; to tell an entire theatrical story with a beginning, progression and amp; ending; to extend practical understanding of Theatre as a collaborative process; to synthesize and amp; apply prior studies at Carnegie Mellon, or other approved Capstone Project.

54-458 Directing: Production IV

Spring
SENIOR DIRECTING PROJECT: This is a 90-minute, public, fully-designed presentation directed by a 4th-Year Directing student with the following goals: to publicly realize a playwright's purpose for a live audience; to tell an entire theatrical story with a beginning, progression and amp; ending; to work as a team with actors and amp; design team to shape a cohesive and amp; coherent theatrical presentation; to extend practical understanding of Theatre as a collaborative process; to synthesize and amp; apply prior studies at Carnegie Mellon.

54-459 Future Stages for Undergrad Directors and Dramaturgs

6 units
FUTURE STAGES is a graduate level course (Drama undergraduates by permission only) which combines options from the School of Drama in a new configuration: through working collaboratively across disciplines, students investigate multimedia approaches to contemporary theater and new ways of storytelling. Directors, designers, actors, and dramaturgs work in groups to generate original ideas, images, texts, and material in a workshop environment. These working groups create projects over the course of the semester which are shown in informal presentations. The emphasis is on process, not product and #8212; devising an interdisciplinary performance requires a keen focus on combining creative invention with a rigorous structure of concept development and #8212; both of which are explored here. We also examine the work of several significant contemporary theater artists whose work approaches collaboration across a variety of disciplines. Artists have included: Ariane Mnouschkine, Dumbtype, Complicite, Ralph Lemon, Robert LePage, and more. Students learn to define and distinguish these artist's approaches through viewing video excerpts, readings, and discussion. This class is an opportunity to explore avenues outside of traditional production modes and beyond each student's individual discipline. We focus on the process of creating a theatrical language which truly integrates disciplines.
Prerequisite: 54-222

54-461 Experimental Capture

Fall and Spring: 12 units
This class will strengthen the student's video content creation process while centering conceptual strength in video design for live applications. Skills taught will focus on workflows and best practices for creating media content for live performance context. Tools and skills taught include FFMPEG transcoding, video generation via Touchdesigner, Advanced Millumin and NDI workflows. This intensive workshop style class's corequisite is the course Expanded Theater. This pairing will allow students to apply the skills acquired in this class to multiple collaborative and live mediated projects. Class time will be reserved for technical lectures/demonstrations.

54-463 Production Prep: Transformations (SOM 1)

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-464 PTM Professional Practice

Spring: 3 units
A seminar about issues surrounding a career as a technical manager. In a series of presentations and discussions students will encounter tools and strategies for job seeking and personal promotion. Guest lecturers will present materials on professional obligations like insurance and taxes and non-salary compensation like retirement and health benefits.

54-465 Production Prep: Gloria

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-466 Advanced Entertainment Lighting Programming Lab

Spring
Students will explore advanced techniques and methods while programming on top-end lighting control systems.

54-467 Costume Design with Music

Spring: 5 units
A second semester exploration of costume design for musicals and opera that engages students in aesthetic and practical techniques applied toward these two genres. Extensive presentations of the history of opera and musicals comprise most of this class. Students choose the opera or musical they wish to design. Special attention paid to music skills, glossary, process, research, designing for principals and chorus, swatching, nuts and bolts paperwork and the honing of each designer's individual skills. PRE-REQUISITE: Design/PTM Costume major. All others: Portfolio Review and special permission of teacher required. FOR: First year Graduate Costume Design majors and Senior Costume Design students.

54-468 Theater Management

Intermittent: 6 units
The course examines theatre enterprises, focusing on both existing and emerging business models for producing or presenting theatre organizations from Broadway to Omaha. Theatres are uniquely responsive to their audiences and ecosystems, hence, the course will investigate how the business works - internally and externally. While programming (plays) are at the core of the theatrical exchange, this course will focus its attention on the institutional frameworks that provide the financing, staffing and audiences to those works. The course will be organized in a seminar structure. Lecture will occur to deliver core concepts but the course emphasizes discussion, individualized investigations and creative projects.

54-469 Dance Lighting Design 1

Fall: 3 units
Through hands-on exploration, lecture and discussion, students will develop a design process for lighting dance. Topics will include: historical background of dance roots, approaches to lighting ballet and modern dance, designing a dance rep plot, and dance lighting techniques.

54-470 Costume Rendering

Spring: 9 units
This fast-paced course focuses on techniques and exercises specific to the development of versatile costume renderings enhanced by the mediums used in the creation. A variety of mediums and methods are explored including colored pencil, marker, ink, Doctor Martin's dyes, watercolor and acrylic as well as transfer drawings, resists and the use of a range of techniques. Color, texture, pattern, nude and clothed human models are carefully studied and rendered. Students also apply course techniques to the development of designs for production and portfolio preparation. PRE-REQUISITES: Drawing for the Theatrical Designer, Major in Design Option of School of Drama FOR: Graduate and Undergraduate Design Costume Majors only. Instructor Approval required. Prerequisite: 54-473
Prerequisite: 54-473

54-473 Drawing for Theatrical Designers

Fall: 9 units
This semester-long basic drawing course focuses on developing hand-eye coordination through discreet studio exercises that allow the theatre student multiple entry points into drawing. Developed for theatrical design students, accurate drawing of proportion while viewing first hand subjects and research images is stressed. Marker and pencil use only. Rigorous practice required. PRE-REQUISITE: Design/PTM major. All others: Portfolio Review and special permission of teacher required. FOR: First semester Graduate Design and Production Students, First semester Junior Costume Majors, other Design/PTM students by consent of instructor.

54-475 Advanced Topics in Stage Management: Cross-Boundaries

Fall and Spring: 6 units
This class will use the theory of cultural intelligence to explore cross-cultural and interdisciplinary collaboration in the world of performing arts and entertainment. We will delve into different interdisciplinary artists and productions' unique culture and process on both national and international platforms. The learning intention is to develop the students' managerial culture awareness and adaptability when encountering different areas including dance, branded experiences, theme park, cruise line, award shows, concerts, and USO Entertainment (United Service Organizations).

54-476 Media Creation Studio

Fall: 6 units
This class will strengthen the student's video content creation process while centering conceptual strength in video design for live applications. Skills taught will focus on workflows and best practices for creating media content for live performance context. Tools and skills taught include FFMPEG transcoding, video generation via Touchdesigner, Advanced Millumin and NDI workflows. This intensive workshop style class's corequisite is the course Expanded Theater. This pairing will allow students to apply the skills acquired in this class to multiple collaborative and live mediated projects. Class time will be reserved for technical lectures/demonstrations. The majority of work associated with project assignments will take place in the corequisite Expanded Theater.

54-477 Technical Direction III

Fall: 6 units
Required for all senior undergraduate Technical Direction students. This "capstone" course is the second semester of a sequence requiring application of concepts from earlier courses including Standard Scenery Construction, Production Planning, Structural Design, Stage Machinery Design and Technical Design 1. This is a project-based course requiring weekly presentation of solutions to various "unusual" technical challenges, drawn from actual production experiences. Thorough documentation (shop drawings, budgets, build schedules, etc.) is a requirement for each project.
Prerequisite: 54-378

54-478 Lighting for the Camera

Fall: 3 units
Through hands-on exploration in a studio setting, students will learn the basics of how to light for camera. A professional television lighting designer will mentor the students through the design process in a three-day workshop. Student teams will be formed comprised of a director, writer, lighting designer, costume designer, art director and actors. Each teams script will be produced in the Wells Video Studio as a three-camera shoot. Following the completion of taping each scene, students will view the final results and receive feedback on their work.
Prerequisite: 54-469

54-479 Lighting for the Camera 2

Intermittent: 3 units
Through hands-on exploration in a studio setting, students will learn the basics of how to light for camera. A professional television lighting designer will mentor the students through the design process in a three-day workshop. Student teams will be formed comprised of a director, writer, lighting designer, costume designer, art director and actors. Each teams script will be produced in the Wells Video Studio as a three-camera shoot. Following the completion of taping each scene, students will view the final results and receive feedback on their work.
Prerequisite: 54-252

54-480 Technical Direction IV

Spring: 6 units
The purpose of this class is to prepare Technical Directors as Technical Designers, specifying the engineering and fabrication of discrete scenic elements in a production context. Upon completion of this course, students should be able to: Understand how elements function to support production Recognize the limitations of standard approaches Develop unique approaches to technical challenges where appropriate Work with an ever-expanding body of methods, materials and hardware Integrate knowledge from prior PTM coursework Develop effective drawings and prototypes Iterate technical designs to achieve optimization
Prerequisite: 54-477

54-486 Understanding Textiles

Spring: 3 units
Understanding Textiles is a half-semester introduction to the textiles used for the performing arts. This course begins with an overview of the historical development of textile technology and the role cloth plays in world economies. Next it examines weaving structures and how they impact suitability for particular applications. Techniques for identifying fibers, weaves and fabric density are learned. The course culminates with a project that uses all the explored skills, a fabric in history swatch book. Each student takes an era of history, researches cloth production at that time, finds period appropriate swatches, accurately identifies them and suggests uses for each. These individual chapters are combined into a large resource book, a copy of which each participant keeps for future reference.

54-487 Dramaturgy: Production II

Fall and Spring: 12 units
Working as a production dramaturg for a School of Drama production in the junior year.

54-488 Dramaturgy: Production II

Spring
Working as a production dramaturg for a season show or a professionally-produced show at a LORT or similarly-ranked theatre in the US or abroad, in senior year.

54-489 Dramaturgy: Internship

Fall and Spring: 9 units
Professional internship with a dramaturg at a LORT or similarly-ranked theatre in the US or abroad.

54-490 Special Topics in Media: Mediated Reality

Spring: 10 units
Mediated Realities is an advanced studio course that investigates the potential applications of mediated-reality technologies and location-based interactivity for storytelling, site-specific art-making, and live performance (broadly defined). Converging trends in cultural production, mobile computation, and media technologies present new affordances for artists and designers to shape location-based experiences. Studio work engages a breadth of strategies in post-media aesthetics, as related to one's experience and understanding of place. Trans-media storytelling, real-time graphics, machine learning, gamification, locative artworks, augmented reality and powerful portable media devices present opportunities for artists and designers to create experiences that heighten multisensory experience by merging live performance and participant interaction with systems for digital information, imagery, and 3D visualization - all ubiquitously available in low-cost and widely distributable formats (e.g. apps, mobile web sites). The course frames technological experimentation in the context of 1970's Land Art, Happenings, Fluxus games, Performance Art, Expanded Cinema, and the unresolved theoretical issues emerging from this rich period in American history - site specificity, competing definitions of "community," the effects of media and representation, audience/performer dynamics, and the nature and limits of the art work. Reading discussions, site visits, and presentations from outside experts (CMU faculty, visiting artists) will expose a range of relevant topics, disciplinary and creative perspectives, and potential avenues for investigation. Specific areas of focus will include Pittsburgh history, local ecological dynamics, labor history and the effects of technology on the landscape and lives of Pittsburgh's population.

54-491 Concert Lighting Design

Fall: 9 units
Students will explore lighting design for concert touring. Emphasis will be on the conceptual development, design process, music analysis, methods of rendering ideas and strategies for implementation of designs. The course will demonstrate methods of working with the tools, vocabulary and technology available to the concert lighting designer.

54-493 Business of Acting & The Practice

Fall: 4 units
This course introduces the (advanced) actor to various aspects of the professional world. Emphasis is placed on the audition and interview process for casting directors, talent agents and personal managers. Each student will present either an individual or small group project chosen from a wide ranging list of topics which include performers unions, various production contracts, New York and regional theater season,s professional publications and web sites. Occasional tests are administered on the subject of current Broadway and Off-Broadway seasons. Registration for this course is limited to Drama majors only.
Prerequisites: 54-301 and 54-302

54-497 Directed Study

Fall and Spring
An opportunity to pursue a predefined project or content outside of the standard curriculum under the guidance and direction of a School of Drama faculty member. By special permission only.

54-498 Expanded Theater

Intermittent: 6 units
Expanded Theater is a hands-on studio course where students work with a wide variety of media, network, and computational technologies in a performance-focused workshop environment. Students work in small teams, experimenting and iterating, with low-stakes showings, to gather feedback and see things "on their feet." Through working collaboratively across disciplines, students investigate innovative approaches to contemporary theater and new ways of storytelling. Contemporary techniques for ensemble creation, devising and media integration will be explored through these exercises, readings, and viewing of other artist's work. The course is open to all students who are excited by "thinking with media" and how the systems and technologies we use every day can be incorporated more deeply into the design, dramaturgy, and experience of contemporary performance. The course will take place off-campus at the Melwood Building, and students will have a variety of different spaces to explore the creation of these hybrid media/performance experiences. The CMU Shuttle will allow students to quickly get to and from campus. Considering theater as an ancient technology of mass participation and social cohesion, this course explores how emerging technologies can expand upon the basic theatrical relationships in new and culturally relevant ways. Collaboration and integration of design, media, and storytelling is critical to this approach. The Melwood Building is the former Pittsburgh Filmmakers building that is being re-imagined as a performance and technology research center, engaging many schools and outside partners who are exploring how new technologies, networked systems, and experimental artistic practices bridge previously separate disciplines and open-up new possibilities for storytelling, performance, and art. This course is a model for this new collaborative initiative between Drama, Art, and other CMU Schools.

54-499 Advanced Digital Image

Intermittent: 6 units
Advanced Digital Image: (Mini) This class is designed to teach students how to conceive, create and present large scale, professional-quality imagery at "realistic" budget levels. Students choose specific theatrical scenes and create a media based solution for them. Through in-class workshops and Media Lab work-time, this class covers High Definition video production, editing, animation and amp; live video systems for the stage as well as a variety of media-server based presentation technologies. For Juniors, Seniors and Grads. No Prerequisite Open to non-majors

54-500 Voice Lab

Fall and Spring: 5 units
FOR MUSIC THEATRE MAJORS ONLY. Singing Voice based on speech-level and classical singing techniques, required of all Musical Theatre Majors Lessons are private, for the duration of one hour per week. Voice Lab combines all students of Musical Theatre in a one-hour performance class, where repertoire is performed for faculty and students alike. Training is progressive, with each semester building on the vocal mastery achieved from the previous semester. Repertoire spans from classical to rock, but with an emphasis on songs extracted from the American Musical Canon.

54-503 Directors' Practicum

All Semesters: 2 units
A mini-semester course introducing career paths and professional tools for directors.

54-505 Ear Training

Fall: 1 unit
Ear Training for sound designers and audio technologists. Introduction and development of skills and techniques for discerning, measuring and expressing the physical qualities of sound with accuracy and sensitivity. Topics include recognizing frequencies (1/3 octave and dual-octave) and analyzing effects and processing (pitch, amplitude, time domain and timbral). This course is open to Drama Sound Design majors/minors, Music Technology major/minors or by permission of the instructor.

54-508 Theatrical Sound System Design 1

Fall: 9 units
Intensive course exploring the theory, art and technology of large scale sound system design for entertainment, specifically live theater productions.

54-509 Theatrical Sound System Design 2

Fall: 9 units
Intensive course exploring the theory, art and technology of large scale sound system design for entertainment, specifically live theater productions. Prerequisites: Intro to Sound Design for Theatre and Production Audio, OR permission of instructor.
Prerequisites: 54-666 and 54-166

54-511 Millinery I

Fall: 9 units
This course surveys basic hat making skills and allows students to create project work in the areas of simple construction, blocked felt and buckram shapes.

54-513 Millinery II

Spring: 9 units
Millinery II (513/914):This course continues the explorations begun in Millinery I. The student undergoes advanced exercises in straw, wire frames, block making and non-traditional millinery materials. Continued emphasis is given to developing professional level skills and assimilation of advanced theories.
Prerequisite: 54-511

54-516 Fabric Painting

Spring: 9 units
This course is structured as a lecture/demonstration and lab employing the principles of fabric painting/printing techniques, fabric painting/printing materials and the practical use of these techniques and materials. The student should learn the basic concepts behind each of the covered processes, the materials and alternate methods involved with each process, and introductory concepts behind pattern registration. Additionally, the world of breakdown and distressing is covered in an ongoing exercise that spans the duration of the semester.

54-517 Directors Common Hour

Fall: 1 unit
Directors Colloquium is a weekly meeting for undergraduate Directing majors and BXA students in directing. Specific topics in directing are discussed and School of Drama productions are critiqued.

54-518 Director's Colloquium

Spring: 1 unit
Missing Course Description - please contact the teaching department.

54-519 Acting for the Camera

Fall: 6 units
This course teaches the skills necessary to work as an actor in the film and television industry. Incorporating the proficiencies and techniques acquired during previous training, we'll learn and practice the additional skills required to work on camera.
Prerequisite: 54-302

54-520 Acting for the Camera

Fall and Spring: 8 units
This course teaches the skills necessary to work as an actor in the film and television industry. Incorporating the proficiencies and techniques acquired during previous training, we'll learn and practice the additional skills required to work on camera.
Prerequisite: 54-302

54-521 Video Media Design Senior Thesis

Spring
TBA

54-522 Director/Dramaturg Play Lab

Spring: 3 units
Run by and for the directors and dramaturgs of the sophomore class, this course will foster collaboration while reading new plays every week. With a focus on analysis, presentation, and pre-production skills, the goal is to bring together directors and dramaturgs, while preparing for BFA Directors' Senior Capstone project

54-524 Dance Lighting Design 2

Fall: 3 units
Through discussions and collaboration students will develop a design process for lighting dance. The students will participate in the creation of a shared lighting plot for the next season's Dance/Light Concert.
Prerequisite: 54-469

54-525 Entertainment Lighting Programming

Fall: 9 units
Students learn and practice programming techniques on the MA2 series of lighting control consoles. Advanced programming techniques are explored, including media server control and user-defined commands for the console. Different applications are introduced, but the primary focus is on programming for live music performance.
Prerequisites: 54-349 or 54-337

54-527 Automated Lighting Workshop

Spring
In the spring semester Automated Lighting Workshop course will consist of seven distinct modules. The first will focus on the operation and maintenance of equipment that falls into the category of automated lighting. The second module will focus on the programming of media servers using lighting consoles. This year Eos Family consoles and MBox will be used. The third module will concentrate on the development of previsualization skills using LightConverse software. In the fourth portion of the class students will engineer the automated lighting rig that will be used for the summer and fall of 2020 in the Wells Video Studio. The fifth module will be a continuation of programming on the Hog4 console, concentrating on preparing students for the national Hog Factor competition. Module six will be an introduction to the Vx76 line of control consoles. In the seventh module students who have experience on the GrandMA2 line of consoles may continue the development of skills on that platform.
Prerequisite: 54-349

54-534 Costume Crafts: Theatrical Footwear

Spring: 5 units
This introductory course serves to instruct the student in the language, materials and processes of designing, creating and adapting footwear for the stage.

54-535 Costume Crafts: Fabric Modification

Spring: 5 units
This course is intended to introduce the student to processes of fabric modification that utilize techniques beyond painting and dyeing. Students will be encouraged to investigate the world of garment decoration and to actively explore a wide variety of processes and materials ranging from old world needle arts to modern crafts which utilize long established techniques in contemporary context.

54-536 Costume Crafts: Mask Making

Spring: 6 units
This course opens the world of mask creation to the adventurous student. A broad range of techniques are touched upon and explored allowing students to pick and choose those processes which appeal to their aesthetic and apply to their needs.

54-539 Fabric Dyeing I

Fall: 9 units
This course is designed to provide the student with an introductory level of instruction for a broad range of fabric dyeing and painting techniques. -Students should gain an understanding of the various dye classes and their safe use in dyeing fabric for the theatre. -The student should gain a full comprehension of the processes of each of these classes, including common terminology, and be able to correctly enumerate steps in the processes. -The student should be able to match the appropriate product to the demands of the project. -The student should gain skills necessary to manipulate the dye process to achieve desired results including exercising their understanding of color theory. -The student should gain a basic understanding of several specialty dye techniques that could excite further exploration.

54-548 Sound Forum

Spring: 1 unit
Twice weekly meeting of all declared sound design majors to discuss production assignments and issues surrounding productions.

54-561 The Films of the Coen Brothers

Fall and Spring: 6 units
Films of the Coen Brothers

54-565 Dance/Light

Fall: 3 units
A practical application of the knowledge and skills learned in Dance Lighting Design 1+2. The class shares the experience of each student creating the lighting for at least one dance performance piece in the Dance/Light Concert.
Prerequisite: 54-524

54-585 Dramaturgy Capstone Thesis

Fall: 9 units
No course description provided.

54-587 Dramaturgy Production

Fall and Spring: 12 units
This course provides dramaturgy students with the opportunity to engage in production dramaturgy on a School of Drama production. Expectations and tasks for these courses will be determined in consultation with the advisor on the production, and may include, but are not limited to: script preparation and analysis, rehearsal dramaturgy, gathering and curating of materials for the director, designers, and actors, lobby display curation and creation, the writing of a program note, audience outreach, facilitation of talkbacks and pre-show discussions, and other dramaturgical tasks/activities as needed for a particular production.

54-588 Dramaturgy Production III

Spring
For Dramaturgy majors.

54-590 The Post Apocalypse on Film

Spring: 6 units
This course will survey cinematic treatments of the end of civilization from a wide variety of filmmakers. We will analyze the cultural, philosophical, mythical and political elements of each film. We will also discuss the technical and artistic aspects in order to better understand the genre and filmmaking in general. The goal is for each student to develop ways to think critically about film.

54-592 Costume Crafts: Theatrical Armor

Fall: 5 units
This mini course introduces the student to the world of armor creation for the stage. Techniques covered range from traditional to revolutionary and provide the student with a breadth of possibilities geared toward solving the general conundrum of successful armor for the theatrical production.
Prerequisite: 54-538

54-593 Stanley Kubrick and His Films

Intermittent: 6 units
Stanley Kubrick and His Films Stanley Kubrick and His Films will explore the amazing diversity in this excellent film director's output from 1967-1999. The course will emphasize the psychological and moral issues raised in his films. And the course will focus on his camera techniques, his use of sound and music, and other remarkable innovative elements. With each film, Kubrick seems to re-invent himself, expanding the dimensions of film art. Films that will be shown in class include: "Paths of Glory" (1957), "Lolita" (1962), "Dr. Strangelove" (1964), "2001: A Space Odyssey" (1968), "A Clockwork Orange" (1971), "Barry Lyndon" (1976), "The Shining" (1980), "Full Metal Jacket" (1987) and "Eyes Wide Shut" (1999).

54-599 Woody Allen and Mel Brooks films

Fall: 6 units
TBA

54-617 Independent Study in Dance

Fall and Spring
Independent Study in Dance with faculty approval.

54-633 The Basics of Self-Producing for Theater Artists

Spring: 6 units
Is self-producing for you, or do you prefer to use other people's resources? Basics of Producing for Theater Artists will introduce the mechanics of getting your work to the spectator while creating a sustainable life as an artist. We'll investigate old models and new platforms to help you find the location and the recipe for your unique mission. We will walk through budgeting, fundraising, marketing, contracts, rights, risks, and the audience of the future. As a final project, you will assemble a package you can hand to a potential funder that explains why your theater is needed to fill a void in the culture, and why no one is better suited to do it.

54-648 And One More Thing

Fall: 3 units
Technical Direction alumni make guest appearances to discuss topics they wish had been covered as part of the program (or even to make the occasional correction).
Prerequisite: 54-777

54-666 Production Audio

Spring
Introduction to the theories and technologies used in sound system design for theater and live entertainment. Sound Majors: Register for Section A, 6 Units Non-Majors: Register for Section B, 4 Units

54-672 Production Prep: TBA 2

Fall and Spring
Production Preparation is a required course and is a core component of the curriculum for all drama directing, dramaturgy, production, and design students. The production experience provides students with experience in the following areas: directing; dramaturgy; production management; stage management; production run work; stage operations; design of scenery, costumes, lighting, sound, and video/media; costume construction; prop construction; scenery construction; sound and video and media technology; and scenic painting. Fully participating in these experiences will facilitate students future success in the School of Drama as well as in the profession.

54-711 The Dye Room in Practice: Exploration in Practical Dyeing for Theatrical Artisan

Spring: 3 units
An Exploration in Practical Dyeing for the Theatrical Artisan

54-714 Costume Rendering

Spring: 9 units
This fast-paced course focuses on techniques and exercises specific to the development of versatile costume renderings enhanced by the mediums used in the creation. A variety of mediums and methods are explored including colored pencil, marker, ink, Doctor Martin's dyes, watercolor and acrylic as well as transfer drawings, resists and the use of a range of techniques. Color, texture, pattern, nude and clothed human models are carefully studied and rendered. Students also apply course techniques to the development of designs for production and portfolio preparation. PRE-REQUISITES: Drawing for the Theatrical Designer, Major in Design Option of School of Drama FOR: Graduate and Undergraduate Design Costume Majors only. Instructor Approval required. Prerequisite: 54-811
Prerequisite: 54-811

54-721 Graduate Directing: Text to Stage

Spring: 9 units
TBD

54-722 Graduate Directing: Text to Stage

Fall: 9 units
Text to Stage is a studio laboratory course for graduate CMU MFA directing students.

54-729 Automated Lighting Workshop

Fall and Spring
In the spring semester of the 2019/2020 academic year the Automated Lighting Workshop course will consist of seven distinct modules. The first will focus on the operation and maintenance of equipment that falls into the category of automated lighting. The second module will focus on the programming of media servers using lighting consoles. This year Eos Family consoles and MBox will be used. The third module will concentrate on the development of previsualization skills using LightConverse software. In the fourth portion of the class students will engineer the automated lighting rig that will be used for the summer and fall of 2020 in the Wells Video Studio. The fifth module will be a continuation of programming on the Hog4 console, concentrating on preparing students for the national Hog Factor competition. Module six will be an introduction to the Vx76 line of control consoles. In the seventh module students who have experience on the GrandMA2 line of consoles may continue the development of skills on that platform.
Prerequisite: 54-771

54-755 Drama Practicum

Summer: 3 units
This course provides 3 units of pass/fail credit for students participating in a drama related internship. The student must be registered for this course during the internship, in order to earn the credit. At the end of the term, the student's supervisor must email the academic advisor with a brief statement describing the student's activities, and an evaluation of the student's performance. Students are required to submit a statement, reflecting on insights gained from the internship experience. Upon receipt of both statements, the academic advisor will assign a grade of either P or N, depending on the outcome.

54-756 Theatre for the Ear

Spring: 6 units
Survey of aural storytelling with technology focusing on forms with no visual component. Topics include the history of radio drama to present day, radio sound art, cut-up and tape manipulation, comedy records and podcast dramas. Prerequisites: 54-767 Graduate Conceptual Sound Design 1 and amp; 54-768 Graduate Conceptual Sound Design 2 OR 54-791 Playwriting I. Restrictions: The course is open to Graduate Sound Design majors, Graduate Dramatic Writers or with permission of the instructor.

54-759 Working with Dramaturgs

Intermittent: 3 units
This mini-2 course enrolls writers with fully drafted dramatic works in progress and pairs them with student dramaturgs to advance the development of those works according to the writers' goals. Students develop collaborative skills and understanding of the role a dramaturg can play in new play development. Required of Dramatic Writing graduate students; open to other writers with instructor permission.

54-760 Grad Leadership Workshop: Ethics & Innovation

Intermittent: 6 units
This course will be an exploration of both innovative strategies and the ethics of leadership within the performing arts. It will build on the management principles covered in foundational courses and is designed to offer the student an approach to leadership development that is tailored to the individuals strengths and needs as well as their role within theatrical organizations. For PTM students only or with permission from the instructor.
Prerequisite: 54-749

54-766 Introduction to Sound Design for Theatre

Spring: 6 units
Students explore the basic principles and theories of sound design from technical, psychological and aesthetic standpoints. Course work includes instruction in the controllable properties of sound, practical planning of sound plots, cue creation, and the design process. Restrictions: Open to all Graduate Drama Majors, CFA graduate students or with permission of instructor.

54-773 Couture Sewing Techniques

Intermittent: 9 units
This course is designed to help the student gain an understanding of and appreciation for high-end sewing and finishing techniques and how these techniques improve the quality of the clothing they are employed in. -The student should gain a comprehension of the terminology commonly used in couture sewing and high-end finishing. -The student should gain a full comprehension of the process of each of these techniques and be able to logically enumerate steps in the full process involved with each technique. -The student should be able to appropriately apply each technique and distinguish between techniques when making choices in the sewing process.

54-780 Fabric Painting

Spring: 9 units
This course is structured as a lecture/demonstration and lab employing the principles of fabric painting/printing techniques, fabric painting/printing materials and the practical use of these techniques and materials. The student should learn the basic concepts behind each of the covered processes, the materials and alternate methods involved with each process, and introductory concepts behind pattern registration. Additionally, the world of breakdown and distressing is covered in an ongoing exercise that spans the duration of the semester.
Prerequisite: 54-845

54-795 Costume Crafts: Mold Making and Casting

Spring: 6 units
This course is designed to introduce the student to a wide variety of molding and casting techniques that might be encountered in the costume crafts area. Upon completion of this course students should understand basic products and processes available to them to enhance either their design work or their production capabilities. By no means is this an exhaustive survey and further study is encouraged.

54-796 The Basics of Self-Producing: How to Put Up Your Show in NYC and Get It Reviewed

Intermittent: 6 units
For any actor/writer/director/theatre artist in New York City, the time between jobs can feel stressful and frustrating. Self-producing is the quickest way to get your work on stage without permission from anyone else or having to adhere to anyone else's restrictions. From blurbs to budgets to rehearsal space to press releases to equity paperwork, this course covers everything you need to know in order to get your work produced and noticed in New York City without breaking the bank. This course will draw from readings on independent theatre, interviews with working independent producers in New York, and the working experience of Anderson Cook, author/producer of The Disembodied Hand That Fisted Everyone to Death - the Musical!, Blatantly Blaine, Pop Punk High, Donny and Kelly Save the Slumber Valley ASPCA, and more - all produced and reviewed in NYC.

54-815 Graduate Negotiation and Conflict Management

Fall: 3 units
This class is a focused exploration of the process of negotiating, both formally and everyday. We will examine interactions on all levels and environments, with an evaluation of tactics, strategies and the measure of success. From there, the class expands into the nature of conflicts and the manager's role in identifying and confronting them. Throughout the class, we hope to find solutions to implement in our lives and work. In-class exercises and role play will be a fundamental part of class activity.

54-819 Figure Drawing

Fall and Spring: 3 units
Costume Majors have priority, then Design Majors. This course explores the realistic and expressive depiction of the human form primarily in two dimensional media. Working primarily from the live model, exercises will be undertaken that address gesture, proportion, movement, anatomy and structure, composition and expressive form. Students will experience a variety of media and formal approaches to the figure, working from nude, draped, and clothed male and female models. A primary goal of the class is to develop the ability to create the human figure from imagination, based on intensive empirical study of the forms and structures of the human body from life.

54-832 Design for Spaces

Spring: 4.5 units
This course focuses on creating design for performance, and for this Mini will focus specifically on designing new work for the stage. Playwrights and designers will work collaboratively towards a shared understanding of each discipline's storytelling and world-building process. This is an opportunity for each writer to workshop the world of their script with designers just as they might workshop the text of the play in a reading with actors. Just as different actors and directors might interpret a text differently, so too will different designers; in this class, each play script will have multiple worlds created by randomly assigned design students. Designer-writer collaboration will encourage exploration of adaptive design and focus on developing design tools in areas such as: research, design conception, rendering model making, and storyboards. Playwrights will likewise explore responsive, collaborative approaches in their script revisions. The shared goal for both playwrights and designers is to conceive a world on stage in four dimensions: length, width, height, and most importantly time.

54-880 Special Topics in Media: Mediated Reality

Spring: 10 units
Mediated Realities is an advanced studio course that investigates the potential applications of mediated-reality technologies and location-based interactivity for storytelling, site-specific art-making, and live performance (broadly defined). Converging trends in cultural production, mobile computation, and media technologies present new affordances for artists and designers to shape location-based experiences. Studio work engages a breadth of strategies in post-media aesthetics, as related to one's experience and understanding of place. Trans-media storytelling, real-time graphics, machine learning, gamification, locative artworks, augmented reality and powerful portable media devices present opportunities for artists and designers to create experiences that heighten multisensory experience by merging live performance and participant interaction with systems for digital information, imagery, and 3D visualization - all ubiquitously available in low-cost and widely distributable formats (e.g. apps, mobile web sites). The course frames technological experimentation in the context of 1970's Land Art, Happenings, Fluxus games, Performance Art, Expanded Cinema, and the unresolved theoretical issues emerging from this rich period in American history - site specificity, competing definitions of "community," the effects of media and representation, audience/performer dynamics, and the nature and limits of the art work. Reading discussions, site visits, and presentations from outside experts (CMU faculty, visiting artists) will expose a range of relevant topics, disciplinary and creative perspectives, and potential avenues for investigation. Specific areas of focus will include Pittsburgh history, local ecological dynamics, labor history and the effects of technology on the landscape and lives of Pittsburgh's population.

54-884 Graduate Digital Narratives

Fall: 5 units
This course combines options from the School of Drama in a unique configuration: through working collaboratively across disciplines, students will investigate innovative approaches to contemporary theater and new ways of storytelling. Contemporary techniques for ensemble creation, devising and media integration will be explored through exercises, readings, and viewing of other artist's work. This Fall the course will explore the wide variety of digitally mediated forms for online, remote and distanced work - techniques of collaboration, creation and experiencing of performance focused work. We will pursue multiple techniques for cross-platform storytelling, drawing from students' lived experiences to engage the current political and social milieu via multiple digital and mediated systems. Experimental and devised processes of theater making have long mined the complex relationship between the form and the content of an artwork - how can we do so in pursuit of a critical/political perspective? Students will become familiar with contemporary and historical companies who work this way and through small group in-class workshops create new narrative experiences and share them with the larger class. Through embracing these tools and forms, we utilize the theatrical conversation to engage in artistic discourse to discover new complexities of meaning. We invite students to come explore these possibilities in a spirit of experimentation and group exploration.

54-905 Ear Training

Spring: 1 unit
Ear Training for sound designers and audio technologists. Introduction and development of skills and techniques for discerning, measuring and expressing the physical qualities of sound with accuracy and sensitivity. Topics include recognizing frequencies (1/3 octave and dual-octave) and analyzing effects and processing (pitch, amplitude, time domain and timbral). This course is open to Drama Sound Design majors/minors, Music Technology major/minors or by permission of the instructor.

54-929 Writing for Television

Spring: 9 units
TBD

54-939 Entertainment Lighting Programming

Fall: 9 units
Students learn and practice programming techniques on the MA2 series of lighting control consoles. Advanced programming techniques are explored, including media server control and user-defined commands for the console. Different applications are introduced, but the primary focus is on programming for live music performance.
Prerequisites: 54-771 or 54-837

54-964 Graduate Scenic Design: Moving the Musical

Fall: 5 units
Designing scenery for a musical presents a number of specific and unique issues, often quite different than designing straight play. Addressing not only the story and the meaning of the piece is of course important but one must pay close attention to the style of the music and the way the songs are incorporated into the text. How do these elements help to tell the story? This course will allow you to explore how scenery moves and the ways in which it can enhance a text.

54-972 PTM Professional Practice

Fall: 3 units
A seminar about issues surrounding a career as a technical manager. In a series of presentations and discussions students will encounter tools and strategies for job seeking and personal promotion. Guest lecturers will present materials on professional obligations like insurance and taxes and non-salary compensation like retirement and health benefits.

54-973 Costume Production Thesis

Fall and Spring: 12 units
TBD

54-997 Sound Design For Interactive Environments

Spring: 9 units
This course will examine the process, execution and implementation of sound design for interactive and non-linear storytelling paradigms. Emerging trends in immersive theater, gaming, installation art and multi-media place unique demands on the sound designer both in terms of content and delivery. The student will explore how these demands effect the fundamental processes of design, development of content and flexible delivery systems. Through a combination of directed readings, exploration of current and amp; emerging trends, and project assignments the student will be encouraged to experiment and explore design modes and methodologies that support this flexible method of storytelling.
Prerequisites: 54-868 or 54-867

54-998 Special Topics in Sound Design

Intermittent: 9 units
A one semester course covering various rotating topics including the history and critical theories of film sound design, the history of sound recording and technology, Foley sound, recording and editing techniques, and 5.1 audio. Prerequisites: 54-867 Conceptual Sound Design. Restrictions: The course is open to Drama sound design majors and minors, Music Technology majors and minors or by permission of the instructor.
Prerequisite: 54-867

School of Music

Ross Garin, Acting Executive Director
Location: Hall of Arts 102
www.cmu.edu/cfa/music (http://www.cmu.edu/cfa/music/)

The School of Music at Carnegie Mellon University offers the best aspects of conservatory training within a great university, combining preparation for a lifetime in performance, composition, electronic music, or music and technology with the advantages of learning in an intense academic environment. Every student in the School of Music is a performance, composition, electronic music, or music and technology major. The School of Music is an accredited institutional member of the National Association of Schools of Music.

Each performance major is challenged to develop through individual instruction with a master teacher. The School's relationship with the renowned Pittsburgh Symphony Orchestra is among the strongest conservatory–symphony orchestra relationships in the United States, and Pittsburgh's uniquely strong sense of musical community fosters close relationships with the Pittsburgh Opera, Pittsburgh Chamber Music Society, and a host of other professional musical organizations.

Regular performing ensembles include the Carnegie Mellon Philharmonic, Wind Ensemble, Bagpipe and Drum Band, Baroque Ensemble, Contemporary Ensemble, Exploded Ensemble, Jazz Orchestra, Jazz Vocal Ensemble, Chorus, and Opera. Some of the School's ensembles are instrument specific: Chamber Music ensembles and the Percussion Ensemble, among others. Opportunities for performance are stressed – undergraduate performance majors perform junior and senior recitals, chamber music is publicly presented, frequent performance opportunities on and off campus are provided, and community outreach is vigorously supported.

The School of Music has an intense commitment to new music, led by composition faculty, conductors who devote fully rehearsed cycles of the Philharmonic to works by student composers, and studio faculty whose own performing careers regularly feature new works, and including performances of student works on Contemporary Ensemble programs, and opportunities with the Wind Ensemble and Chorus and on student recitals. The School's state-of-the-art recording facilities are an especially important resource for composers beginning their public careers.

All teaching is entrusted to professional faculty — there are no assistant studio teachers or doctoral teaching fellows — and specialists in Musicology, Theory, Analysis, Counterpoint, Composition, Computer Music, Electronic Music, Eurhythmics, Solfege, Music Education, Pedagogy, Collaborative Piano and Coaching, Acting and Movement, Diction, Literature and Repertoire, Baroque Music, Chamber Music, Conducting, and Sound Recording and Production provide a broad and rich platform for comprehensive musical preparation. At the same time, the university provides the greatest possible support for students combining their majors with minors in all disciplines, unique joint degree programs, and double major programs. These opportunities significantly increase a student's career options and marketability in the changing professional world of music.

School of music Facilities

The teaching facilities of the School of Music are located on the ground, main, and mezzanine floors of the College of Fine Arts, on the ground, main, and second floors of the Hall of Arts, on the first floor of Margaret Morrison Hall, and in WQED Studio A and B. Teaching, rehearsal, and practice rooms are equipped with Steinway pianos. Music students also have access to a state-of-the-art recording studio and music technology cluster. Performances take place in Alumni Concert Hall, Kresge Recital Hall, Carnegie Music Hall, and other venues. The Hunt Library houses a fine collection of books, records, and scores. Listening and conference rooms are also available in the library.

School of Music Options

The School of Music offers a Bachelor of Fine Arts in the following areas:

- Performance (Instrumental, Organ, Piano, Voice)
- Composition
- Electronic Music

The School of Music jointly with the School of Computer Science and the Carnegie Institute of Technology offers a Bachelor of Science in the following area:

- Music and Technology

To earn a Bachelor's degree in any of these options, a candidate must satisfactorily fulfill all the requirements of the School of Music.

Within the options listed above eligible students may apply for specializations in the following areas:

- Dalcroze Eurhythmics Certificate
- Piano Pedagogy Certificate
- Collaborative Piano Minor
- Conducting Minor
- Music Education Minor
- Music Technology Minor
- Music Theory Minor
- Sonic Arts Minor

Dalcroze Eurhythmics Certificate

This program is designed to prepare teachers in the Dalcroze approach to music learning. The course of study includes eurhythmics, piano improvisation, and Dalcroze pedagogy. Carnegie Mellon undergraduates may enter the Dalcroze Training Program during their junior year. However, the certificate will be granted only upon completion of their undergraduate degree. This program is recommended particularly to students who would like to incorporate Dalcroze principles into their teaching and to those who want to obtain more experience in this field.

Piano Pedagogy Certificate

A two-year program leads to certification in piano pedagogy. Students learn to teach piano in a closely supervised environment of class piano instruction. This program has received national acclaim as a model of excellence, with Carnegie Mellon children consistently capturing prestigious awards in national piano competitions.

Collaborative Piano Minor

The collaborative piano minor consists of a six-semester sequence of courses designed to give the student experience with instrumentalists and vocalists. There are individual coaching sessions as well as practical experience in instrumental and vocal studios.

Conducting Minor

This minor is designed for students who are interested in acquiring conducting skills, in anticipation of either graduate study in conducting or a music education career. It includes required courses in conducting techniques for both choral and instrumental ensembles, orchestration, score reading/keyboard harmony, and elective courses in instrumental and vocal methods, diction, and literature and repertoire.

Music Education Minor

This minor is designed for students who are interested in music education, who may wish to complete the requirements for music education certification. Students who complete the requirements for music education certification and pass the Praxis tests will receive Pennsylvania state certification in music (K-12), which is recognized in almost all other states.

Music Technology Minor

The student will take a series of courses which may include electronic and computer music, recording technology, the physics of musical sound, and computer programming. A rich computer music research environment enables talented students to work as programmers with outstanding faculty researchers, whose current projects are gaining international recognition in the areas of computer music and artificial intelligence.

Music Theory Minor

This minor is designed for students who are interested in advanced theory and analysis skills, in anticipation of either graduate study in theory or graduate study that requires a substantial level of theory knowledge. The student will take advanced theory and analysis courses and also support courses in the physics of musical sound and the psychology of music.

Sonic Arts Minor

Students in this minor will explore the processes and products of digital sound and music. They will receive basic training in key component areas: principles of computer music, hybrid instrument building, concepts in sound design. Combining this training with courses that bring together experts from many disciplines, they will create experimental music or explore new, technology-enabled, applications and markets for sound design, music creation, and performance.

Performances and Activities of the School of Music

The School of Music sponsors performances, master classes, and lectures by outstanding national and international guest artists. Announcements of faculty, student, and guest performances are published for the students and the community.

General Requirements for BFA Candidates

Candidates for the Bachelor of Fine Arts degree in composition are required to complete a composition for orchestra in their senior year.

Candidates for the Bachelor of Fine Arts degree in electronic music are required to complete an ambitious capstone project in their senior year that may take the form of an evening length concert, a multimedia experience, an interactive exhibition or app, or some other project that exhibits the student's research and creative output.

Candidates for the Bachelor of Fine Arts degree in performance are required to give public performances in their junior and senior years. Candidates for the Bachelor of Fine Arts degree in string performance are required to give public performances in their sophomore, junior, and senior years.

Candidates for the Bachelor of Fine Arts degree have opportunities to develop teaching skills, particularly as related to their major area of study, in the classes below.

- Instrumental majors: 57-023 Bassoon Studio Performance Class, 57-448 Brass Pedagogy, 57-022 Clarinet Studio Performance Class, 57-018 Double Bass Studio Performance Class, 57-020 Flute Studio Performance Class, 57-021 Oboe Studio Performance Class, 57-030 Percussion Studio Performance Class, 57-016 Viola Studio Performance Class, 57-015 Violin Studio Performance Class, 57-437 Literature and Repertoire.
- Bagpipe, organ and saxophone majors: 57-522 Major Studio (Bagpipe), 57-502 Major Studio (Organ) and 57-514 Major Studio (Saxophone).
- Piano majors: 57-273 Piano Pedagogy I and 57-274 Piano Pedagogy II.
- Voice majors: 57-010 Voice Studio Performance Class.
- Composition majors: 57-627 Independent Study in Supervised Teaching

Candidates for the Bachelor of Fine Arts degree in applied areas other than piano are required to pass a piano proficiency test.

Candidates for Bachelor of Fine Arts degrees in composition and performance are required to pass a major choral ensemble or a major instrumental ensemble as assigned and to pass Convocation every semester of residence in the School of Music.

Candidates for the Bachelor of Fine Arts degree in electronic music are required to to pass Exploded Ensemble or Contemporary Ensemble as assigned every semester of residence and to pass Convocation four semesters of residence in the School of Music.

BFA Curriculum

The music curriculum is based on the following five building blocks:

1. Studio
2. Theory
3. History
4. Ensemble
5. Academics

1. Studio — This is the heart of the school. Students receive individualized instruction with senior faculty in their major area of study: performance or composition or electronic music.

2. Theory — These courses are designed to help students develop listening skills, to acquire theoretical knowledge, to recognize structural techniques and manipulate technological resources. It includes courses in sight-reading, ear-training, eurhythmics, harmony, contrapuntal techniques, analysis of musical forms, 20th-21st century techniques, orchestration, score reading, and electronic and computer music. One music support course in the piano, organ, and instrumental curricula must be a theory course.

3. History - These courses cover in depth the music of the western world and survey the styles and musical structures of non-western music.

4. Ensemble — This area includes student participation in some of the following ensembles: Carnegie Mellon Philharmonic, Wind Ensemble, Bagpipe and Drum Band, Baroque Ensemble, Contemporary Ensemble, Exploded Ensemble, Jazz Orchestra, Jazz Vocal Ensemble, Chorus, Opera, Chamber Music ensembles, and Percussion Ensemble.

5. Academics — The School of Music requires general studies courses (academic courses outside of the School) and elective courses for graduation. These accumulated credits may be applied to minors or majors in other disciplines. Exceptional students in good academic and musical standing within the School are permitted to take additional courses beyond the number required for graduation. There is no charge for extra credits taken at Carnegie Mellon.

Minimum units required for B.F.A. in Music	
Voice majors	**432**
Electronic Music majors	**406**
Composition majors	**386**
Instrumental, Organ, and Piano majors	**386**

Piano

First Year

Fall		Units
57-100	Convocation	1
57-501	Major Studio (Piano)	9
57-4xx	Major Ensemble	6
57-196	Collaborative Piano Skills I	3
57-152	Harmony I	9
57-161	Eurhythmics I	3
57-181	Solfege I	3
57-189	Introduction to Repertoire and Listening for Musicians	3
57-101	Introduction to Music Technology	6
99-101	Core@CMU	3
76-101	Interpretation and Argument	9
		55

Spring		
57-100	Convocation	1
57-501	Major Studio (Piano)	9
57-4xx	Major Ensemble	6
57-197	Collaborative Piano Skills II	3
57-153	Harmony II	9
57-162	Eurhythmics II	3
57-182	Solfege II	3
57-190	Repertoire and Listening for Musicians I	3
57-283	Music History I	9
xx-xxx	Global, Cultural, and Diverse Perspectives Course	9
		55

Second Year

Fall		Units
57-100	Convocation	1
57-501	Major Studio (Piano)	9
57-4xx	Major Ensemble	6
57-672	Chamber Music: Woodwind and Mixed	3
57-151	Counterpoint in Theory and Application	6
57-163	Eurhythmics III	3

xx-xxx	Creative Movement/Choreography	3

Piano Pedagogy Certificate — 36 units

57-273	Piano Pedagogy I	6
57-274	Piano Pedagogy II	6
57-275	Piano Pedagogy III	6
57-276	Piano Pedagogy IV	6
57-429	Beginning Piano for Children I	6
57-449	Beginning Piano for Children II	6

Bachelor of Science in Music and Technology

The Bachelor of Science in Music and Technology is offered jointly by the School of Music, the School of Computer Science, and the College of Engineering.

This program consists of a set of courses that span both music and technology, as well as a capstone composition/design/performance project. Courses in all three areas of study are stipulated in the music and technology undergraduate curriculum and provide for students coming from any of the three areas. In other words, regardless of a student's entry point — an interest in computer science, electrical engineering, or music — the coursework prescribed will allow the student to gain the requisite knowledge and experience in all three areas. Students will work closely with advisors and will be guided in both course selection and capstone projects.

Curriculum

Minimum units required for B.S. in Music and Technology — 380

General Requirements — 85 units

Seminar

57-570	Music and Technology Seminar (8 semesters for a total of 8 units)	1

University

99-101	Core@CMU	3
76-101	Interpretation and Argument	9
xx-xxx	Global, Cultural, and Diverse Perspectives Course	9

Humanities

xx-xxx	Cognition, Choice and Behavior course	9
xx-xxx	English, History, Modern Languages, Philosophy, or Psychology course	9

Mathematics

21-120	Differential and Integral Calculus	10
21-122	Integration and Approximation	10

Science

33-114	Physics of Musical Sound	9
33-141	Physics I for Engineering Students	12

Electives — 33 or 37 units

Music Core — 81 units

57-152	Harmony I	9
57-153	Harmony II	9
57-408	Form and Analysis	6
57-151	Counterpoint in Theory and Application	6
57-258	20th-21st Century Techniques	6
57-257	Orchestration I	6
57-189	Introduction to Repertoire and Listening for Musicians	3
57-190	Repertoire and Listening for Musicians I	3
57-289	Repertoire and Listening for Musicians II	3
57-290	Repertoire and Listening for Musicians III	3
57-181	Solfege I	3
57-182	Solfege II	3
57-183	Solfege III	3
57-184	Solfege IV	3
57-161	Eurhythmics I	3
57-162	Eurhythmics II	3
57-173	Survey of Western Music History	9

Music and Technology Core — 121 units

15-112	Fundamentals of Programming and Computer Science	12
15-122	Principles of Imperative Computation	12
15-322	Introduction to Computer Music	9
18-100	Introduction to Electrical and Computer Engineering	12
18-202	Mathematical Foundations of Electrical Engineering	12
18-290	Signals and Systems	12
57-101	Introduction to Music Technology	6
57-347	Electronic and Computer Music	6
57-337	Sound Recording	6
57-338	Sound Editing and Mastering	6
57-438	Multitrack Recording	9
57-571	Music and Technology Project	12
57-572	Music and Technology Project	12

Concentration

Students complete either the Music Concentration or the Technical Concentration:

Music Concentration — 60 units

57-5xx	Studio (4 semesters)	36
57-4xx	Major Ensemble (4 semesters)	24

Technical Concentration — 58 or 56 units

21-127	Concepts of Mathematics	12
15/18-213	Introduction to Computer Systems	12

AND EITHER:

18-220	Electronic Devices and Analog Circuits	12
18-240	Structure and Design of Digital Systems	12
15-2xx/18-3xx or above	Electives in ECE or CS	12

OR:

15-210	Parallel and Sequential Data Structures and Algorithms	12
15-323	Computer Music Systems and Information Processing	9
15-2xx/18-3xx or above	Electives in ECE or CS	12

Minors

Minor in Collaborative Piano for Students in the School of Music

Admission Requirements:

The student must apply to enter the program in the office of the Director of Student Services (HOA 141A).

36 unitsRequired Courses

57-381	Collaborative Piano I	6
57-382	Collaborative Piano II	6
57-383	Collaborative Piano III	6
57-384	Collaborative Piano IV	6
57-385	Collaborative Piano V	6
57-386	Collaborative Piano VI	6

18 unitsElectives

(choose from the following courses)

57-220	English Diction	3
57-221	Italian Diction	3
57-222	French Diction	3
57-223	German Diction	3
57-332	Introduction to Conducting	6
57-336	Instrumental/Choral Conducting	6
57-459	Score Reading for Composition Majors and Conducting Minors	6
57-557	Vocal Methods	3

Minimum units required for Collaborative Piano Minor:	54

Minor in Conducting for Students in the School of Music

Admission Requirements:

1. The student must apply to enter the program in the office of the Director of Student Services (HOA 141A).
2. A 3.0 cumulative overall QPA and good academic standing are required.
3. In addition to passing the prerequisite courses listed below, the student must display superior solfege skills, by passing Advanced Solfege I and II with “A” or “B” grades or by passing Solfege I and II with "A" or "B" grades and with the recommendation of the student's solfege instructor; and the student must also pass Introduction to Conducting with an "A" grade or with a "B" grade and with the recommendation of the student's conducting instructor.

ACADEMIC REQUIREMENTS:

1. Immediately after acceptance into the minor in conducting, the student must schedule an advising appointment with the faculty supervisor of the conducting minor.
2. Instrumental/Choral Conducting must be completed before the senior year with an "A" grade or with a "B" grade and with the recommendation of the student's conducting instructor before the student can register for the advanced conducting courses (see #3).
3. Conducting Practicum must be taken during the same semester as Independent Study in Conducting. Both courses must be taken after completing Introduction to Conducting and Instrumental/Choral Conducting.
4. A 3.0 cumulative overall QPA is required for graduation with the minor in conducting.

30 unitsPrerequisite Courses

57-152	Harmony I	9
57-153	Harmony II	9
57-161	Eurhythmics I	3
57-162	Eurhythmics II	3
57-189	Introduction to Repertoire and Listening for Musicians	3
57-191	Keyboard Studies	3

39 unitsRequired Courses

Choose two of the following five courses immediately below as recommended by the faculty supervisor of the conducting minor:

57-360	Brass Methods	3
57-361	Percussion Methods	3
57-362	Woodwind Methods	3
57-363	String Methods	3
57-557	Vocal Methods	3

57-332	Introduction to Conducting	6
57-336	Instrumental/Choral Conducting	6
57-257	Orchestration I	6
57-459	Score Reading for Composition Majors and Conducting Minors	6
57-364	Conducting Practicum	3
57-618	Independent Study in Conducting	6

15 unitsElectives

(choose from the following courses)

57-220	English Diction	3
57-221	Italian Diction	3
57-222	French Diction	3
57-223	German Diction	3
57-258	20th-21st Century Techniques	6
57-337	Sound Recording	6
57-338	Sound Editing and Mastering	6
57-491	Solfege for Conductors I	3
57-492	Solfege for Conductors II	3
57-227	Jazz Instrumental Ensemble	3
57-230	Baroque Ensemble	3
57-420	JIVE - CMU Jazz Choir	3
57-423	Repertoire Orchestra	3
57-675	Chamber Ensemble	3

Minimum units required for Conducting minor:	54

Minor in Music Education for Students in the School of Music

Admission Requirements:

The student must apply to the music education faculty no earlier than spring of the freshman year.

Corequisite General Courses 36 units

76-101	Interpretation and Argument	9
21-xxx	Mathematics Course #1	9
21-xxx	Mathematics Course #2	9
76-xxx	English Literature Course	9

Corequisite Music Courses 18 units

57-391	Keyboard Studies (Music Ed)	3
57-392	Keyboard Studies (Music Ed)	3
57-332	Introduction to Conducting	6
57-336	Instrumental/Choral Conducting	6

General Education Courses		18 units
57-331	Principles of Education	9
57-643	Diverse Populations in Inclusive Settings	9

Music Education Methods Courses		45 units

General Methods Courses

57-375	Music in the Elementary School	6
57-356	Elementary Guided Teaching	3
57-376	Music in the Secondary School	6
57-355	Secondary Guided Teaching	3

Applied Area Methods Courses

57-207	Music Studio	Var.
57-360	Brass Methods	3
57-361	Percussion Methods	3
57-363	String Methods	3
57-362	Woodwind Methods	3
57-557	Vocal Methods	3

Band Methods Courses

Stage Direction is optional.

57-333	Band and Choral Arranging	6
57-334	Fundamentals of Marching Band	3
57-370	Stage Direction	3

Music Education Teaching Courses		12 units
57-603	Practice Teaching (Elementary)	6
57-604	Practice Teaching (Secondary)	6

Minimum units required for Music Education Minor: 129

Minor in Music Technology for Students in the School of Music

Admission Requirements:

The student must apply to enter the program in the office of the Director of Student Services (HOA 141A).

Prerequisite Courses		18 units
57-152	Harmony I	9
57-161	Eurhythmics I	3
57-181	Solfege I	3
57-189	Introduction to Repertoire and Listening for Musicians	3

Sound Recording Courses		21 units
57-337	Sound Recording	6
57-338	Sound Editing and Mastering	6
57-438	Multitrack Recording	9

Music Technology/Sound Courses (choose 3) — 21 units

Choose at least three courses. One of the three courses must be either Introduction to Computer Music or Electronic and Computer Music. (Note that 15-112 is a prerequisite for 15-322; 57-101 or 57-171 is a prerequisite for 57-347.) Other courses may be taken with the permission of the minor in music technology advisor.

15-104	Introduction to Computing for Creative Practice	10
15-322	Introduction to Computer Music	9
33-114	Physics of Musical Sound	9
54-166	Introduction to Sound Design for Theatre	6
54-666	Production Audio	6
57-102	Twisted Signals: Multimedia Processing for the Arts	9
57-344	Experimental Sound Synthesis	9
57-347	Electronic and Computer Music	6
57-421	Exploded Ensemble	6
57-478	Survey of Historical Recording	6

Minimum units required for Music Technology Minor: 60

Minor in Music Theory for Students in the School of Music

Admission Requirements:

The student must apply to enter the program in the office of the Director of Student Services (HOA 141A).

Prerequisite Courses		18 units
57-152	Harmony I	9
57-161	Eurhythmics I	3
57-181	Solfege I	3
57-189	Introduction to Repertoire and Listening for Musicians	3

Upper Level Theory Courses (choose 3) — 21 units

See theory courses on the Music Support Courses Two-Year Rotation list. It is available on the Current Students website (https://www.cmu.edu/cfa/music/current-students/). A graduate course may be taken with the permission of the instructor.

Graduate Theory Courses (choose 1) — 6–9 units

See graduate theory courses on the Music Support Courses Two-Year Rotation list. It is available on the Current Students website (https://www.cmu.edu/cfa/music/current-students/). The course is to be chosen with the approval of the minor in music theory advisor.

General Education Courses		18 units
33-114	Physics of Musical Sound	9
57-377	Psychology of Music	9

Minimum units required for Music Theory Minor: 63

Sonic Arts Minor – IDeATe

Sonic Art is a creative expression that uses sound as its primary medium. Just as visual artists create landscapes, portraits, and narratives through light, color, and form, sonic artists craft transformative experiences through sound, noise, and music.

Students in the *Sonic Arts* minor explore the processes and products of digital sound design and music production. They receive basic training in key component areas: principles of computer music, sound synthesis, spatialization, and core practices in sound design. Combining this training with courses that bring together experts from many disciplines, they create experimental music and explore emerging applications and markets for sound design, music creation, and performance.

Curriculum

One Computing Course - Minimum of 9 Units

		Units
15-104	Introduction to Computing for Creative Practice	10
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
60-212	Intermediate Studio: Creative Coding	12

One IDeATe Portal Course - Minimum of 9 Units

		Units
18-090	Twisted Signals: Multimedia Processing for the Arts Other IDeATe Portal Course by permission only. Consult the IDeATe advisor.	10

IDeATe Sonic Arts Courses - Minimum of 27 Units

		Units
15-322	Introduction to Computer Music	9
33-114	Physics of Musical Sound	9
54-166	Introduction to Sound Design for Theatre	6
54-267	Conceptual Sound Design	9

54-509	Theatrical Sound System Design 2	9
57-337	Sound Recording	6
57-344/60-407	Experimental Sound Synthesis	9
57-347	Electronic and Computer Music	6
57-358	Introduction to Electronic Music portfolio required for registration	9
57-359	Audiovisual Composition	9
57-421	Exploded Ensemble	6
57-458	Business of Music	6

Additional course options as available. Please refer to the IDeATe website for courses for the current and upcoming semester.

Double-Counting

Students may double-count up to two of their *Sonic Arts* minor courses for other requirements.

Part-Time Faculty

FREIDA ABTAN, Assistant Professor of Electronic Music Composition – Ph.D., Brown University; Carnegie Mellon, 2021–

CHRISTOPHER ALLEN, Artist Lecturer in Percussion – M.M. , Temple University; Carnegie Mellon, 2014–

ALBERTO ALMARZA, Associate Professor of Flute – M.F.A., Carnegie Mellon University; Carnegie Mellon, 1991–

DONNA AMATO, Artist Lecturer in Piano and Staff Pianist – B.M., University of Arizona; Carnegie Mellon, 1998–

JENNIFER AYLMER, Assistant Professor of Voice – M.M, Westminster Choir College; Carnegie Mellon, 2012–

NEAL BERNTSEN, Artist Lecturer in Trumpet – M.M., Northwestern University; Carnegie Mellon, 2003–

JOANNA BOSSE, Interim Head and Visiting Professor – Ph.D., University of Illinois; Carnegie Mellon, 2023–

JEREMY BRANSON, Artist Lecturer in Percussion – M.M., Temple University; Carnegie Mellon, 2009–

WILLIAM CABALLERO, Associate Teaching Professor in Horn – B.M., New England Conservatory; Carnegie Mellon, 2007–

ANDREW CARLISLE, Director of Piping

L. MARK CARVER, Associate Teaching Professor in Collaborative Piano – M.M., Carnegie Mellon University; Carnegie Mellon, 1995–

TATJANA CHAMIS, Artist Lecturer in Viola – B.M., Curtis Institute of Music; Carnegie Mellon, 2016–

REBECCA CHERIAN, Artist Lecturer in Trombone – M.M., Yale University; Carnegie Mellon, 1993–

FREDERIC CHIU, Assistant Professor of Piano – M.M., Juilliard; Carnegie Mellon, 2020–

DENIS COLWELL, Associate Professor – M.M., Carnegie Mellon University; Carnegie Mellon, 1980–

MARIANNE CORNETTI, Artist Lecturer in Voice – B.M., Duquesne University; Carnegie Mellon, 2019–

DANIEL CURTIS, Resident Conductor – M.M. , Carnegie Mellon University; Carnegie Mellon, 2015–

MICHELE DE LA REZA, Assistant Teaching Professor of Dance – M.S., University of Pittsburgh; Carnegie Mellon, 2007–

CYNTHIA DEALMEIDA, Associate Teaching Professor in Oboe – M.M., Temple University; Carnegie Mellon, 1991–

JEFF DEE, Artist Lecturer in Bass Trombone – M.M, The Juilliard School; Carnegie Mellon, 2017–

HIRAM DIAZ, Artist Lecturer in EuphoniumCarnegie Mellon, 2024–

MARK DOMENCIC, Artist Lecturer in Music Theory – M.M., Carnegie Mellon University; Carnegie Mellon, 2007–

THOMAS DOUGLAS, Teaching Professor of Voice – M.M., Duquesne University; Carnegie Mellon, 1991–

JOCELYN DUECK, Assistant Professor of Collaborative Piano – D.M.A., University of Minnesota; Carnegie Mellon, 2017–

PAUL EVANS, Artist Lecturer in Percussion – M.M., Temple University; Carnegie Mellon, 1995–

DONNA FOX, Artist Lecturer of Music EducationCarnegie Mellon, 2023-–

NANCY GALBRAITH, Professor of Composition – M.M., West Virginia University; Carnegie Mellon, 1984–

PAUL GERLACH, Artist Lecturer in Music Education – M.F.A., Carnegie Mellon University; Carnegie Mellon, 1982–

JAMES GORTON, Artist Lecturer in Chamber Music – B.M., Eastman School of Music; Carnegie Mellon, 2020-–

SARI GRUBER, Artist Lecturer in Voice – M.M., Juilliard School; Carnegie Mellon, 2018–

PETER GUILD, Artist Lecturer in Double Bass – M.M., University of Michigan; Carnegie Mellon, 2015–

DAVID HARDING, Associate Professor in Viola and Chamber Music – B.M., The Juilliard School; Carnegie Mellon, 2012-–

JAMES HOULIK, Artist Lecturer in Saxophone Eastman School of Music; Carnegie Mellon, 2018–

MICAH HOWARD, Artist Lecturer in Double Bass – M.M., Duquesne University; Carnegie Mellon, 2010–

JACK HOWELL, Artist Lecturer in ClarinetCarnegie Mellon, 2023-–

ANNIE HSIEH, Assistant Teaching Professor of Music Theory – Ph.D., University of California, San Diego; Carnegie Mellon, 2018-–

ROSEANNA IRWIN, Associate Teaching Professor of Coaching and Accompanying – M.M., Duquesne University; Carnegie Mellon, 1990–

JOHN PAUL ITO, Assistant Professor of Music Theory – Ph.D., Columbia University; Carnegie Mellon, 2011–

PAUL JOHNSTON, Artist Lecturer in Music History – B.M.E., Andrews University; Carnegie Mellon, 2005–

KENNETH KEELING, Associate Head and Professor Emeritus of Music – D.M.A., Catholic University of America; Carnegie Mellon, 1996–

ADRIANNE DAVIS KELLY, Artist Lecturer of Music Education Duquesne University; Carnegie Mellon, 2019–

SUNG-IM KIM, Staff Pianist – M.M., Carnegie Mellon University; Carnegie Mellon, 2011–

CRAIG KNOX, Artist Lecturer in Tuba – B.M., Curtis Institute of Music; Carnegie Mellon, 2005–

PETER KOPE, Assistant Teaching Professor of Dance University of Dayton; Carnegie Mellon, 2007–

STEPHEN KOSTYNIAK, Artist Lecturer in French Horn – B.M., The Juilliard School; Carnegie Mellon, 2008–

JASON KUSH, Artist Lecturer in Saxophone – D.M.A., University of Miami; Carnegie Mellon, 2017–

CARLA LAROCCA, Associate Teaching Professor of Keyboard Studies – M.F.A., Carnegie Mellon University; Carnegie Mellon, 1991–

ELIZABETH LAWRENCE, Artist Lecturer in Jazz Voice and Director of Jazz Vocal Ensemble – M.M., Manhattan School of Music; Carnegie Mellon, 1996–

VICTORIA LUPERI, Artist Lecturer in ClarinetCarnegie Mellon, 2024-–

LUZ MANRIQUEZ, Associate Teaching Professor in Collaborative Piano – M.M., Carnegie Mellon University; Carnegie Mellon, 1992–

JOHN MARCINIZYN, Artist Lecturer in Guitar and Composition – Ph.D., University of Pittsburgh; Carnegie Mellon, 1991–

DAVID MCCARROLL, Artist Lecturer in ViolinCarnegie Mellon, 2024-–

LORNA MCGHEE, Artist Lecturer in Flute Royal Scottish Academy of Music and Drama; Carnegie Mellon, 2015–

MONIQUE MEAD, Director of Music Entrepreneurial Studies – M.M., Indiana University-Bloomington; Carnegie Mellon, 2012–

ANNE MOSKAL, Artist Lecturer in Solfege – M.M., Carnegie Mellon University; Carnegie Mellon, 2011–

STEPHEN NEELY, Artist Lecturer in Eurhythmics – M.M., Carnegie Mellon University; Carnegie Mellon, 1998–

RODRIGO OJEDA, Assistant Teaching Professor of Collaborative Piano – M.M., Carnegie Mellon University; Carnegie Mellon, 2011–

JEREMY OLISAR, Artist Lecturer in Music EducationCarnegie Mellon, 2021–

BENJAMIN OPIE, Artist Lecturer in Music Technology – M.M., Duquesne University; Carnegie Mellon, 2005–

PHILIP PANDOLFI, Artist Lecturer in Bassoon – M.M., Temple University; Carnegie Mellon, 2024–

DIMITRI PAPADIMITRIOU, Assistant Teaching Professor of Chamber Music and Piano – D.M.A., Royal Irish Academy of Music; Carnegie Mellon, 2015–

ANGELA PARK, Adjunct InstructorCarnegie Mellon, 2023–

RYAN PRENDERGAST, Assistant Teaching Professor – Ph.D., University of Illinois; Carnegie Mellon, 2022–

KATHERINE PUKINSKIS, Assistant Professor of Composition and Theory – Ph.D., University of Chicago; Carnegie Mellon, 2022–

RICHARD RANDALL, Assistant Professor of Music Theory – Ph.D., Eastman School of Music; Carnegie Mellon, 2008–

SUSAN RAPONI, Assistant Professor of Music – Ph.D., University of Toronto; Carnegie Mellon, 2019–

VAHAN SARGSYAN, Staff Pianist – M.M, Yerevan Komitas State Conservatoire;

SERGEY SCHEPKIN, Associate Professor of Piano – D.M.A., New England Conservatory; Carnegie Mellon, 2003–

STEPHEN SCHULTZ, Associate Teaching Professor of Music History and Flute – M.M., San Francisco State University; Carnegie Mellon, 2002–

RICCARDO SCHULZ, Associate Teaching Professor and Director of Recording Activities – M.A., University of Pittsburgh; Carnegie Mellon, 1988–

FRANCO SCIANNAMEO, Associate Teaching Professor of Film Musicology and CFA Associate Dean – D.M, Conservatorio di Musica, Santa Cecilia; Carnegie Mellon, 2014–

MARK SNYDER, Director of Jazz Orchestra – M.M., Carnegie Mellon University; Carnegie Mellon, 2022–

MARIA SPACAGNA, Associate Professor of Voice – M.M., New England Conservatory; Carnegie Mellon, 2012–

SARAH STERANKA, Woodwind & Mixed Chamber Music Coordinator – M.M., Duquesne University; Carnegie Mellon, 2023–

STEPHEN STORY, Associate Conductor of Wind Ensemble – M.M., Carnegie Mellon University; Carnegie Mellon, 2015–

PETER SULLIVAN, Artist Lecturer in Trombone Aspen School of Music; Carnegie Mellon, 2000–

DANIEL TEADT, Artist Lecturer in Voice – M.M, University of Illinois; Carnegie Mellon, 2011–

KELLY TRUMBULL, Artist Lecturer in Acting – M.A., New York University; Carnegie Mellon, 2015–

WILLIAM VAN DER SLOOT, Assistant Teaching Professor of Violin – Diploma, International Institute for Chamber Music; Carnegie Mellon, 2017–

GRETCHEN VAN HOESEN, Artist Lecturer in Harp – M.M., The Juilliard School; Carnegie Mellon, 1985–

GEORGE VOSBURGH, Artist Lecturer in Trumpet and Co-Director of Wind Ensemble – B.A., University of Rochester; Carnegie Mellon, 2003–

JANE WALL, ArtistLecturer in Elementary Education

JAMES WHIPPLE, Artist Lecturer in Music Theory – B.A., Carnegie Mellon University; Carnegie Mellon, 1995–

ANNE MARTINDALE WILLIAMS, Artist Lecturer in Cello – Diploma, Curtis Institute of Music; Carnegie Mellon, 1987–

ALEXA WOLOSHYN, Assistant Professor of Musicology – Ph.D, University of Toronto; Carnegie Mellon, 2016–

CHRISTOPHER WU, Artist Lecturer in Violin – B.A., Eastman School of Music; Carnegie Mellon, 2009–

LENNY YOUNG, Artist Lecturer in Solfege – M.M., Carnegie Mellon University; Carnegie Mellon, 2015–

MONICA YUNUS, Artist Lecturer in Voice Entrepreneurship – M.M., The Juilliard School; Carnegie Mellon, 2018–

School of Music Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes *(*https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/*) each semester for course offerings and for any necessary pre-requisites or co-requisites.*

57-010 Voice Studio Performance Class

Fall and Spring: 1 unit
Vocal Studio Performance Class is a required class for both undergraduate and graduate voice majors. Each student must participate in two singing rotations each semester and will receive written comments from the voice faculty. Students are also required to attend four studio classes each semester. Grading is pass/fail based on attendance.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-015 Violin Studio Performance Class

Fall and Spring: 1 unit
Once a week throughout the semester a "violin studio performance class" takes place. A studio class is a most important performance opportunity as it is a step between the studio lessons and the concert stage. Students perform the repertoire they are working on in front of the class and Prof. Forough. Along with comments from the class, Prof. Forough works one on one with each student. The repertoire performed can be solo pieces or accompanied pieces. This class is for violin majors who are studying with Prof. Forough. Other students may audit the class.

57-016 Viola Studio Performance Class

Fall and Spring: 1 unit
TBA

57-018 Double Bass Studio Performance Class

Fall and Spring: 1 unit
TBA

57-020 Flute Studio Performance Class

Fall and Spring: 1 unit
TBA

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-021 Oboe Studio Performance Class

Fall and Spring: 1 unit
TBA

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-022 Clarinet Studio Performance Class

Fall and Spring: 1 unit
The purpose of this class is to perform before an audience (studio class members) to ease performance anxiety. The class meets once a week. In addition to playing, the class listens to recordings of various styles of clarinet playing.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-023 Bassoon Studio Performance Class

Fall and Spring: 1 unit
TBA

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-030 Percussion Studio Performance Class

Fall and Spring: 1 unit
TBA

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-100 Convocation

Fall and Spring: 1 unit
A weekly meeting for all music students that features lectures, concerts, and other presentations related to professional development.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-101 Introduction to Music Technology

Fall and Spring: 6 units
This course gives an overview of music technology through practical information and several hands-on projects. Concepts such as MIDI and digital audio are introduced and specific topics are covered in detail including sequencing, music notation, digital recording, mixing, and production. Throughout the course, students are required to complete several projects and create musical compositions in styles of their own choosing. The student is not graded on the "musicality" of these compositions, but instead on how well they meet the stated project goals by correctly using specific equipment and/or computer programs.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-102 Finale

Spring: 6 units
This course provides hands-on and in-depth instruction of the Finale music notation program by Coda Music Software. Students will learn how to efficiently use the various notation tools that Finale has to input, edit, and manipulate music. MIDI input, playback, and transcription will also be covered to allow students to quickly notate and hear their music. The goal is to create professional-looking printed scores and parts in a variety of styles from Classical to Contemporary. Open to music majors only except by instructor permission. Introduction to Music Technology (57801/871) or equivalent experience required.
Prerequisites: 57-171 or 57-101

57-103 Elective Studio (Beginning Piano Class)

Fall and Spring: 3 units
TBA

57-104 Elective Studio (Beginning Piano Class)

Spring: 3 units
To be determined

57-109 Elective Studio (Guitar Class)

Fall and Spring: 3 units
Using classical and jazz guitar methods, this course is designed to provide a basic set of techniques that will allow students to pursue the avenue of guitar playing that most interests them. While emphasis will be on developing skills in playing the guitar, a basic understanding of the principles of music theory as applied to the guitar will also be acquired. While few students will find it possible to master all of the materials presented, an exposure to the many possibilities of musical expression available on the guitar and an understanding of basic music theory will help to broaden the students' perspective and make future musical experiences, such as listening and performing, more rewarding. Each student is expected to have his/her own instrument. A guitar in good working condition is essential. An acoustic classical or steel string is preferred, an electric with a small battery operated amp is acceptable. Students having no previous training on the guitar will find this class most valuable.

57-110 Elective Studio (Voice Class)

Fall and Spring: 3 units
Students enrolled in group voice will gain an understanding of basic vocal technique and a variety of singing styles. Students will learn about proper breathing, tone production and posture. Vocal styles will include pop, jazz, musical theater and classical. Students will also explore harmonization, improvisation and audition techniques for the singer. This class is geared towards the beginning student.

57-111 Movement and Dance I

Fall: 3 units
The CMU School of Music movement curriculum is designed to expose students to various styles and genres of contemporary and traditional forms of dance and movement. Students will increase their technical proficiency and personal artistry in dance in order to expand their physical skills as vocal performance artists. Courses will: Improve students' posture and strength, Increase proficiency in dance vocabulary, Increase ability to recognize, interpret and execute choreography, movement and staging direction, Enhance kinesthetic awareness and physical confidence and Improve overall health. With a focus on creativity and expression in movement, these courses concentrate on using the body as a tool in the creative process. Throughout "Movement and Dance I - IV", courses will include movement fundamentals, modern dance, ballet, partnering, dance composition/improvisation; as well as mini-courses in dance forms which can include stage combat, Flamenco dance, pilates and ballroom dance.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-112 Movement and Dance II

Spring: 3 units
The CMU School of Music movement curriculum is designed to expose students to various styles and genres of contemporary and traditional forms of dance and movement. Students will increase their technical proficiency and personal artistry in dance in order to expand their physical skills as vocal performance artists. Courses will: Improve students' posture and strength, Increase proficiency in dance vocabulary, Increase ability to recognize, interpret and execute choreography, movement and staging direction, Enhance kinesthetic awareness and physical confidence and Improve overall health. With a focus on creativity and expression in movement, these courses concentrate on using the body as a tool in the creative process. Throughout "Movement and Dance I - IV", courses will include movement fundamentals, modern dance, ballet, partnering, dance composition/improvisation; as well as mini-courses in dance forms which can include stage combat, Flamenco dance, pilates and ballroom dance.
Prerequisite: 57-111

57-149 Basic Harmony I

Fall: 9 units
This course deals with common-practice harmony. It includes triads and their inversions, tonality and modality, non-harmonic tones, cadences, and the basic concepts of modulation. Section assignment is determined by a placement test. It includes work on fundamentals for inexperienced students.

Course Website: https://www.andrew.cmu.edu/user/johnito/music_theory/harmony1and2/HarmMain.html

57-150 Basic Harmony II

Spring: 9 units
This course deals with common-practice harmony. It includes triads and their inversions, tonality and modality, non-harmonic tones, cadences, and the basic concepts of modulation. It includes work on fundamentals for inexperienced students.
Prerequisite: 57-149

Course Website: https://www.andrew.cmu.edu/user/johnito/music_theory/harmony1and2/HarmMain.html

57-151 Counterpoint in Theory and Application

Fall: 6 units
In Counterpoint in Theory and Application, students begin by learning the traditional five species of counterpoint in a tonal context. They then build on this foundation, learning to analyze music in terms of the underlying counterpoint and to apply this analysis to performance, and producing original tonal compositions in two voices.
Prerequisites: 57-150 or 57-153

Course Website: https://www.andrew.cmu.edu/user/johnito/music_theory/CTP/CTPMain.html

57-152 Harmony I

Fall: 9 units
This course deals with common-practice harmony. It includes triads and their inversions, tonality and modality, non-harmonic tones, cadences, and the basic concepts of modulation. Section assignment is determined by a placement test.

Course Website: https://www.andrew.cmu.edu/user/johnito/music_theory/harmony1and2/HarmMain.html

57-153 Harmony II

Spring: 9 units
This course is a continuation of the study of common practice harmony, exploring dissonant and chromatic harmony.
Prerequisite: 57-152

Course Website: https://www.andrew.cmu.edu/user/johnito/music_theory/harmony1and2/HarmMain.html

57-161 Eurhythmics I

Fall: 3 units
Dalcroze Eurhythmics is a unique approach to music learning based on the recognition that meaningful rhythmic movement experience, associated with ear-training and improvisation, reinforces understanding of music concepts, enhances musicianship, and focuses awareness on the physical demands of artistic performance. All concepts are experienced in a musical context. Rhythm reading, notation, analysis, and improvisation are integral to the course. Eurhythmics I covers basic binary and ternary metric units and rhythm patterns in relation to these metric units within simple and compound meters.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-162 Eurhythmics II

Spring: 3 units
Eurhythmics II introduces combinations of binary and ternary metric units, mixed meters, changing meters, and notation and performance of cross-rhythms.
Prerequisite: 57-161

57-163 Eurhythmics III

Fall: 3 units
Eurhythmics is a unique approach to music learning developed by the Swiss composer and educator Emile Jaques-Dalcroze (1865-1950). Dalcroze discovered that meaningful rhythmic movement experiences away from their instrument allows students to focus awareness on the physical demands of artistic performance while demonstrating knowledge and understanding of the expressive/interpretive as well as the theoretical aspects of music. Sight reading, conducting, notation, analysis and improvisation are integral to the course. Eurhythmics III Course Content: Divisive vs Additive rhythm, Metric transformation, Irregular subdivisions of metric units, Cross rhythms of 3 against 4, 3 against 5, 4 against 5.
Prerequisite: 57-162

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-164 Eurhythmics IV

Spring: 3 units
Eurhythmics is a unique approach to music learning developed by the Swiss composer and educator Emile Jaques-Dalcroze (1865-1950). It is a process for awakening, developing and refining innate musicality through rhythmic movement, ear training and improvisation. Through rhythmic movement, students demonstrate knowledge and understanding of the expressive/interpretive as well as the metrical/structural aspects of music. Sight reading, conducting, notation, analysis and improvisation are integral to the course. Eurhythmics IV Course Content: More complex rhythmic problems encountered in composed music, Changing meters and changing metric units within a composition, Rhythm reading of patterns using small note values, Messiaen rhythm techniques.
Prerequisite: 57-163

57-171 Introduction to Music Technology (self-paced)

Fall and Spring: 6 units
This course gives an overview of music technology through practical information and several hands-on projects. Concepts such as MIDI and digital audio are introduced and specific topics are covered in detail including sequencing, music notation, digital recording, mixing, and production. Throughout the course, students are required to complete several projects and create musical compositions in styles of their own choosing. The student is not graded on the "musicality" of these compositions, but instead on how well they meet the stated project goals by correctly using specific equipment and/or computer programs. This is a self-paced version of 57-101. Material will be covered during weekly class sessions, though students are expected to make time in the evenings or weekends to work on their projects in either the MTC (MM119A) or some other cluster. Students with prior experience may pass out of certain classes and projects by providing teacher with equivalent work (pending teacher approval). In addition to the required projects, there is a final exam which is administered during the last class session.

57-173 Survey of Western Music History

Fall and Summer: 9 units
This course surveys the development and contexts of European art music and its global adaptation. While keeping in view the chronology from Gregorian chant to the present, this survey emphasizes key personalities and issues, particularly issues relating to period style and interpretive decisions in performance.

Course Website: https://cmu.app.box.com/files/1/f/9350209729/1/f_33705395781 (https://cmu.app.box.com/files/1/f/9350209729/1/f_33705395781/)

57-180 Basic Solfege I

Fall: 3 units
This course improves the student's ability to analyze music aurally and to sing at sight in traditional meters and tonalities using the "fixed do" system. Solfege is the integration of the three cognitive skills: reading music, hearing music, and writing what one hears. Section assignment is determined by a placement test. It includes work on fundamentals for inexperienced students.

57-181 Solfege I

Fall: 3 units
This course improves the student's ability to analyze music aurally and to sing at sight in traditional meters and tonalities using the "fixed do" system. Solfege is the integration of the three cognitive skills: reading music, hearing music, and writing what one hears. Section assignment is determined by a placement test.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-182 Solfege II

Spring: 3 units
Continues 57-181 Solfege I.
Prerequisites: 57-181 or 57-180

57-183 Solfege III

Fall: 3 units
Continues 57-182 Solfege II. Students are given assignments of classical music written in the treble, bass, soprano, alto, and tenor clefs. Writing consists of two-part contrapuntal dictations.
Prerequisite: 57-182

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-184 Solfege IV

Spring: 3 units
Continues 57-183 Solfege III. Students learn to read atonal music and practice three-part contrapuntal dictations as well as harmonic dictations.
Prerequisite: 57-183

57-185 Advanced Solfege I

Fall: 3 units
This course improves the student's ability to analyze music aurally and to sing at sight in traditional meters and tonalities using the "fixed do" system. Solfege is the integration of the three cognitive skills: reading music, hearing music, and writing what one hears. Section assignment is determined by a placement test. It includes advanced work for experienced students and those with perfect pitch.

Course Website: https://cmu.app.box.com/files/0/f/11681158556/1/f_106285566497 (https://cmu.app.box.com/files/0/f/11681158556/1/f_106285566497/)

57-186 Advanced Solfege II

Spring: 3 units
Continues 57-185 Advanced Solfege I.
Prerequisite: 57-185

57-188 Repertoire and Listening for Musicians

Fall and Summer: 1 unit
This course is the required listening component for Survey of Western Music History (57-173). In this course, students listen critically to essential music which has stood the test of time and to superior performances. It features 2-3 hours of listening per week.

57-189 Introduction to Repertoire and Listening for Musicians

Fall: 3 units
One of the most important ways of achieving musical excellence is to listen. In this course, students listen critically to essential music which has stood the test of time and to superior performances. This on-line course features listening and discussion in a virtual coffee shop atmosphere. 2-3 hours of listening per week. Midterm and final listening tests. Proficiency requirement for freshman music majors.

57-190 Repertoire and Listening for Musicians I

Spring: 3 units
One of the most important ways of achieving musical excellence is to listen. In this course, students listen critically to essential music which has stood the test of time and to superior performances. This on-line course features listening and discussion in a virtual coffee shop atmosphere. 2-3 hours of listening per week. This semester introduces full scores for chamber and orchestral music. Midterm and final listening tests. This course contains midterm and final listening tests. Proficiency requirement for freshman music majors. Other students admitted with instructor's permission.

57-191 Keyboard Studies

Fall and Spring: 3 units
All undergraduate music students are required to take four semesters of keyboard studies during their freshman and sophomore years. The emphasis of this course is to develop a practical keyboard facility, which includes keyboard theory and technique, sightreading, solo and ensemble repertoire, transposition, and a variety of creative activities such as harmonization and improvisation.

57-192 Keyboard Studies

Fall and Spring: 3 units
All undergraduate music students are required to take four semesters of keyboard studies during their freshman and sophomore years. The emphasis of this course is to develop a practical keyboard facility, which includes keyboard theory and technique, sightreading, solo and ensemble repertoire, transposition, and a variety of creative activities such as harmonization and improvisation.
Prerequisite: 57-191

57-193 Keyboard Studies

Fall: 3 units
All undergraduate music students are required to take four semesters of keyboard studies during their freshman and sophomore years. The emphasis of this course is to develop a practical keyboard facility, which includes keyboard theory and technique, sightreading, solo and ensemble repertoire, transposition, and a variety of creative activities such as harmonization and improvisation.
Prerequisite: 57-192

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-194 Keyboard Studies

Spring: 3 units
All undergraduate music students are required to take four semesters of keyboard studies during their freshman and sophomore years. The emphasis of this course is to develop a practical keyboard facility, which includes keyboard theory and technique, sightreading, solo and ensemble repertoire, transposition, and a variety of creative activities such as harmonization and improvisation.
Prerequisite: 57-193

57-196 Collaborative Piano Skills I

Fall: 3 units
A required course for first year piano majors. The skills include sightreading, basic keyboard harmony, transposition, and improvised accompaniments for popular or musical theater songs from either a piano reduction or a lead sheet. The students participate in collaborative situations such as juries, recitals, and class presentations. The presentations are critiqued by the instructor and by other students.

57-197 Collaborative Piano Skills II

Spring: 3 units
No course description provided.
Prerequisite: 57-196

57-207 Music Studio

Fall
Provides the opportunity for students to pursue study in a secondary instrument or area. By special permission only.

57-208 Music Studio

Spring
Provides the opportunity for students to pursue study in a secondary instrument or area. By special permission only.

57-209 The Beatles

Intermittent: 6 units
This course will focus on the phenomenon of the Beatles. Their songs will be studied, with analysis of the musical and lyrical content and structural elements. What musical styles do the songs address? What were their musical influences? In what ways did their music change over the years? Also, the music's social context will be studied. Why were the Beatles so popular and influential? What exactly caused Beatlemania? How did the group form, grow, and end? The Beatles are the most famous rock group in history; the reasons for this are as much cultural as musical, and we'll study the two elements simultaneously. Open to all undergraduate students.

Course Website: https://cmu.app.box.com/files/0/f/11681158556/1/f_106285571361 (https://cmu.app.box.com/files/0/f/11681158556/1/f_106285571361/)

57-211 Movement and Dance III

Fall: 3 units
The CMU School of Music movement curriculum is designed to expose students to various styles and genres of contemporary and traditional forms of dance and movement. Students will increase their technical proficiency and personal artistry in dance in order to expand their physical skills as vocal performance artists. Courses will: Improve students' posture and strength, Increase proficiency in dance vocabulary, Increase ability to recognize, interpret and execute choreography, movement and staging direction, Enhance kinesthetic awareness and physical confidence and Improve overall health. With a focus on creativity and expression in movement, these courses concentrate on using the body as a tool in the creative process. Throughout "Movement and Dance I - IV", courses will include movement fundamentals, modern dance, ballet, partnering, dance composition/improvisation; as well as mini-courses in dance forms which can include stage combat, Flamenco dance, pilates and ballroom dance.
Prerequisite: 57-112

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-212 Movement and Dance IV

Spring: 3 units
The CMU School of Music movement curriculum is designed to expose students to various styles and genres of contemporary and traditional forms of dance and movement. Students will increase their technical proficiency and personal artistry in dance in order to expand their physical skills as vocal performance artists. Courses will: Improve students' posture and strength, Increase proficiency in dance vocabulary, Increase ability to recognize, interpret and execute choreography, movement and staging direction, Enhance kinesthetic awareness and physical confidence and Improve overall health. With a focus on creativity and expression in movement, these courses concentrate on using the body as a tool in the creative process. Throughout "Movement and Dance I - IV", courses will include movement fundamentals, modern dance, ballet, partnering, dance composition/improvisation; as well as mini-courses in dance forms which can include stage combat, Flamenco dance, pilates and ballroom dance.
Prerequisite: 57-211

57-213 Let's Dance

Intermittent: 3 units
Whether you have studied dance, are a performer, dance enthusiast or just ready to move, "Let's Dance" is a new course open to the CMU community. Ready to step away from your computer and start your day with physicality, creativity, and new ways of moving? "Let's Dance" offers a joyful approach to a variety of dance styles. Integrating concepts of modern/contemporary, ballet, improvisation, jazz and more; this class is open to all abilities and levels of movers. "Let's Dance" will build strength, flexibility, coordination and creative thinking in a collaborative and approachable learning environment.

57-220 English Diction

Fall: 3 units
This one semester course helps singers sing English songs from the Classical and Musical Theater repertoire with clarity, accuracy, ease, uniformity, and expressiveness; to illuminate meaning; and to improve tonal quality through diction.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-221 Italian Diction

Fall: 3 units
A study of the fundamentals of Italian diction and development of legato vocal style through the analysis of grammatical usage, word construction, vowel colorization, and consonant articulation. Included are in-class performance evaluations, listening assignments, critiques, and private coachings.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-222 French Diction

Fall: 3 units
This course is designed primarily for singers specializing in French Art Songs of the 19th and 20th centuries. It deals with the use of the International Phonetic Alphabet, its application to singing in French, the use of the liason and the preparation of the text of a song or aria. One-third of the course is theory and two-thirds of the course is spent on application by performance with piano accompaniment.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-223 German Diction

Fall: 3 units
In-depth study of German diction - development of legato vocal style in German through the analysis of grammatical usage, word construction, vowel colorization and consonant articulation. Included are in-class German diction evaluations, peer assessment, and emphasis on competency in using the International Phonetic Alphabet.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-226 Jazz Improvisation and Performance

Fall and Spring: 3 units
This course provides students, both music and non-music majors, with the tools and techniques for jazz improvisation that enables them to progress toward an intermediate to advanced level. Analysis of harmonic and melodic materials, extensive listening and performance exercises will assist the student in his/her development as an improvisor. The course will culminate in a performance of small group/combo pieces on the Jazz Orchestra concert. Students need to audition by performing a jazz etude or standard of their choice and demonstrate any improvisational skills they might have. Please contact the jazz orchestra director at ms86@andrew.cmu.edu to set up an audition.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-227 Jazz Instrumental Ensemble

Fall and Spring: 3 units
This ensemble incorporates a comprehensive approach to Big Band performance and study. The music performed is drawn from all eras of big band repertoire with occasional programs of specific composers and genres. The ensemble is carefully coordinated with the Jazz Vocal Ensemble and major ensembles in order to challenge and prepare students for professional music career opportunities. The ensemble performs on the regular School of Music concert series (2-3 shows per semester) and for on-campus events. Admission of undergraduate and graduate students is by competitive audition and placement is by the director. Grading is based on attendance, preparation, and consistent progress.
Prerequisite: 57-227

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-230 Baroque Ensemble

Fall and Spring: 3 units
Carnegie Mellon Baroque is a performing ensemble of 15-25 players consisting of winds, strings and keyboard. Students in this ensemble explore the orchestral and chamber music of the 18th Century. The Ensemble performs on modern instruments, incorporating performance practice ideals of the Baroque era. Throughout the rehearsal process, students are encouraged to study original source materials and arrive at historically informed and musically satisfying performances.

57-232 Chamber Music: Guitar

Fall and Spring: 3 units
Provides an opportunity for students to play in small ensembles, advised by faculty coaches. The performers will develop effective rehearsal techniques, explore chamber music repertoire, deal with issues of intonation and balance, and arrive at interpretive conclusions that are stylistically sound, yet individualistic and creative.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-234 Performance for Composers

Fall: 3 units
This course is for composition majors who choose to fulfill the performance elective requirement in the junior year by completing an independent performance project in the fall semester. Examples of projects can include producing a recital of his/her compositions, or pursuing other performing interests, such as writing music for a School of Drama production. Registration by composition faculty permission only.

57-236 Performance for Composers

Spring: 3 units
This course is for composition majors who choose to fulfill the performance elective requirement in the junior year by completing an independent performance project in the spring semester. Examples of projects can include producing a recital of his/her compositions, or pursuing other performing interests, such as writing music for a School of Drama production. Registration by composition faculty permission only.
Prerequisite: 57-234

57-240 Acting I

Fall: 3 units
The basics of acting will be established throughout the first year following the guideposts described in Audition, by Michael Shurtleff and #237;s. Structured improvisations, monologues, scene work, songs, and arias will provide a platform for the development of stage presence and effective communication. Each semester will finish with a group project that provides an opportunity for the students to begin to work together as a cast.

Course Website: https://cmu.app.box.com/files/0/f/11681158556/1/f_106285564193 (https://cmu.app.box.com/files/0/f/11681158556/1/f_106285564193/)

57-241 Acting II

Spring: 3 units
Continues 57-240 Acting I.
Prerequisite: 57-240

57-257 Orchestration I

Fall: 6 units
This is an introductory course for all music majors and required for sophomore composition majors. The characteristics of each instrument of the orchestra are studied thoroughly. Orchestral textures from the classics to contemporary music are studied and analyzed.
Prerequisites: 57-150 or 57-153

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-258 20th-21st Century Techniques

Spring: 6 units
This course is open to all music majors and required for sophomore composition majors. The most important techniques from Debussy to the present will be reviewed in terms of melody, harmony, and form. Tonality, serialism, and aleatoric devices will be studied. Compositional techniques of the 20th Century are put into perspective and compared with other developments in the arts. The class is conducted as an open forum in which discussions are encouraged.
Prerequisite: 57-151

57-271 Orchestration II

Fall: 6 units
Students will analyze music from the Classical to Avant-Garde and use the knowledge acquired to orchestrate piano scores in the appropriate style. Style, practicality, color, and imagination are encouraged. This course is designed for junior composition majors. Other students may register with instructor permission after an interview.
Prerequisite: 57-257

57-273 Piano Pedagogy I

Fall: 6 units
This course offers an historical overview of piano pedagogy including its significant developments over the past forty years. Topics covered include beginning piano techniques, the sequencing of concepts and materials, common problems among beginning pianists, practicing, motivation, and parental involvement. Current representative beginning piano methods will be surveyed.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-274 Piano Pedagogy II

Spring: 6 units
Beyond the beginning years: this course covers piano pedagogy of intermediate and early advanced level students. Topics include "What is a good piece?" Standard literature and technical development repertoire lists will be studied. The business of piano teaching and the instruction of college keyboard skills for non-piano majors will be discussed.
Prerequisite: 57-273

57-275 Piano Pedagogy III

Fall: 6 units
Continuation of 57-274. Intermediate literature, analysis, teaching, and performance will be covered. Topics include "What is style?"
Prerequisite: 57-274

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-276 Piano Pedagogy IV

Spring: 6 units
Continuation of 57-275. Early advanced literature, analysis, teaching, and performance will be covered.
Prerequisite: 57-275

57-283 Music History I

Spring: 9 units
This class will be an in-depth analytical study of music of the Medieval, Renaissance, and Baroque Periods. It will emphasize selected genres and forms by representative composers in order to trace the evolution of musical style and to clarify the main characteristics of these periods, to set the musical developments in broader cultural contexts, and to apply this knowledge to practical decisions made by today's musician.

57-284 Music History II

Fall: 9 units
This class will be an in-depth analytical study of music of the Classical and Romantic periods. It will emphasize selected genres and forms by representative composers in order to trace the evolution of musical style, to clarify the main characteristics of these periods, to set the musical developments in broader cultural contexts, and to apply this knowledge to practical decisions made by today's musician.
Prerequisite: 57-283

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-285 Music History III

Spring: 9 units
This class will be an in-depth analytical study of music from the 20th and 21st centuries. It will emphasize selected genres and approaches by representative composers in order to trace the various threads of musical style, to clarify the main characteristics of the period's music, to set the musical developments in broader cultural contexts, and to apply this knowledge to the lives and musical practices of musicians today.
Prerequisites: 57-283 and 57-284

57-289 Repertoire and Listening for Musicians II

Fall: 3 units
This is a continuation of the School of Music's four-semester listening curriculum. Students listen critically to essential music which has stood the test of time and to superior performances. This semester's repertoire includes units focusing on contrapuntal masterpieces from the Middle Ages through 20th Century, and further builds score-reading experience. This on-line course features listening and discussion in a virtual coffee shop atmosphere. 2-3 hours of listening per week. Midterm and final listening tests. Proficiency requirement for sophomore music majors. Other students admitted with instructor's permission. Repertoire and Listening for Musicians I and II are not prerequisites.

57-290 Repertoire and Listening for Musicians III

Spring: 3 units
This is the culmination of the School of Music's four-semester listening curriculum. Students listen critically to essential music which has stood the test of time and to superior performances. Highlights of this semester's repertoire include units on Middle and Late Beethoven as well as a decade-by-decade survey of the 20th Century. This on-line course features listening and discussion in a virtual coffee shop atmosphere. 2-3 hours of listening per week. Midterm and final listening tests. Proficiency requirement for sophomore music majors. Other students admitted with instructor's permission. Repertoire and Listening for Musicians I-III are not prerequisites.

57-299 Bagpipe and Drum Band

Fall and Spring
TBD

57-300 Advanced Bagpipe and Drum Band

Fall and Spring: 6 units
The Pipe Band at Carnegie Mellon is a competitive Grade 3 band in the Eastern United States Pipe Band Association. The band competes at various Scottish festivals and Highland Games during the school year. The band also performs at university activities throughout the year. These include Convocation, Homecoming, Spring Carnival, and Commencement. Other engagements are Spring Concert at CMU and the St. Patrick's Day Parade in Pittsburgh. The band has also played as an opening act for the Pittsburgh Steelers and a Rod Stewart concert.
Prerequisite: 57-299

57-301 Bagpipe History

Intermittent: 3 units
This course covers all types of bagpipe music, including Ceol Mor and Ceol Beag, and studies the prominent composers from MacCrimmon to the present day. Students compose their own material in all time signatures commonly used. The course covers Piobaireachd, Marches, Strathspeys, Reels, Hornpipes, and Jigs, as well as harmony and the ability to write out tunes from repetitive listening.

57-303 Bagpipe Literature and Repertoire

Intermittent: 3 units
This course will cover the origins of the bagpipe and Piobaireachd, bagpipe music in competition, military, and dance. We will also cover major piping competitions, famous bagpipe players, and piping today.

57-304 Bagpipe Maintenance

Intermittent: 3 units
All aspects of bagpipe maintenance are covered in this course, from basic hemping and tying in bags to reeds set-up and manipulation. The course includes study of all types of reeds, cane and synthetic, as well as drone and chanter, and recognition of pipemakers' patterns and distinctive hallmarks.

57-305 Bagpipe Reedmaking

Intermittent: 3 units
This is a hands-on course where the student learns how to make pipe chanter reeds by the traditional method of gouging, shaping, and tying up. This course follows 57-304, Bagpipe Maintenance. Further analysis of chanter and drone reeds will be covered also.
Prerequisite: 57-304

57-306 World Music

Intermittent: 9 units
A study of major musical traditions from around the world, including classical music from Asia (broadly defined) and the Middle East, as well as traditional musics in Africa, Europe, and the Americas. This course will examine music in its socio-cultural context, and will demonstrate how learning about music from diverse cultures increases cross-cultural understanding. This course will engage with readings, listening examples, multi-media presentations, in-class discussions, music-making activities, and special guests (virtual and in person).

57-307 Bagpipe Theory

Intermittent: 3 units
This course prepares students for 57-302, Bagpipe Construction. All aspects of Bagpipe Theory are covered, including time signatures, grand staff, musical rudiments, musical terms and definitions, and writing of simple tunes from memory.

57-329 Beginning Piano for Minors

Fall: 3 units
This is a small group lesson for music performance, music composition, music technology, and music theory minors who cannot pass the required beginning piano test.

57-330 Beginning Piano for Minors

Spring: 3 units
This is a small group lesson for music performance, music composition, music technology, and music theory minors who cannot pass the required beginning piano test.

57-331 Principles of Education

Fall: 9 units
This course introduces students to the art and science of being an educator. Content includes views of the academic and social structure of the school, physiological and amp; social characteristics of learners that influence instruction, widely recognized research on learning and amp; teaching, and appropriate and amp; effective class preparation and teaching strategies.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-332 Introduction to Conducting

Fall: 6 units
This course develops the basic skills needed to conduct instrumental ensembles or a small orchestra. It is primarily focused on conducting technique, body language and body coordination and communication. It also deals with learning and translating an instrumental or orchestral score into actual music. The goal is to achieve a clear and communicative technique upon which an artistic interpretation can be built. The student works periodically with a pianist or a small chamber ensemble.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-333 Band and Choral Arranging

Spring: 6 units
The main purpose of the course is to enable students to compose arrangements suitable for public performance for a cappella choir, instrumental chamber groups, and concert band. By the end of the course, students should achieve a satisfactory level of competence in regard to: 1. Effective writing through knowledge of instrumental and vocal performance techniques. 2. Writing homophonic, polyphonic, homorhythmic and monophonic textures for effective ensemble sound and variation. 3. Identifying and creating effective orchestration for instrumental and vocal ensembles. 4. Identifying expected music knowledge, performance ability, and attitudes of middle and high school music ensemble students.
Prerequisites: 57-150 or 57-153

57-334 Fundamentals of Marching Band

Fall: 3 units
A marching band, due to its visibility and high degree of student involvement, is an integral part of secondary school music programs. The well-schooled music education graduate must have knowledge of this unique form of music performance. This course, designed primarily for those seeking a career in teaching, will accommodate students with no experience and others who have participated in marching band. Among the many areas of concentration will be: philosophy, show charting, marching fundamentals and commands, logistical awareness, and budget formulation. Observation of and active assistance with Carnegie Mellon Kiltie Band will be part of the course content.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-336 Instrumental/Choral Conducting

Spring: 6 units
This course is a continuation of Introduction to Conducting. The course offers a more detailed conducting technique, adding those subjects related to choral conducting. This is followed by the study and the analysis of interpretation from the point of view of the conductor and ends stressing a set of important practical items, including the psychological attitude and the leadership a conductor must develop as well as the organization and achievement of a fruitful rehearsal technique. The students work periodically with a pianist, a soloist or a chamber ensemble on traditional works and on their own compositions in the case of composition majors.
Prerequisite: 57-332

57-337 Sound Recording

Fall and Spring: 6 units
Sound Recording is the first (and required) course in the sequence that includes Sound Editing and amp; Mastering and Multitrack Recording. Sound Recording centers around the Vlahakis Recording Studio in the College of Fine Arts: how the studio works, and how to record various types of music. The method of instruction is to learn by doing, and the goal is to achieve professional-sounding results. Equipment includes a complete 24-track Pro-Tools system, professionally designed control room that can accommodate up to 24 people, outboard preamps and other gear, and an interesting array of microphones. All recording is direct to hard disc. Grading is based on recording projects, class attendance, mastering studio hardware and software, and several quizzes. Work outside of class requires about 3 to 5 hours a week to complete projects and take-home quizzes.

57-338 Sound Editing and Mastering

Fall and Spring: 6 units
The raw recording is just the first step in the process of creating a professional finished audio product. "Editing" is the art of piecing together different takes to make one final 'good take.' "Mastering" is the art of polishing the 'good take' to perfection and #8212;balancing all the instruments and tracks, adding special effects, setting final levels. If 'recording' seems like an high-energy activity and #8212;involving engineers, musicians, producers and #8212;'editing and mastering' are the necessary counterparts and #8212;long tedious hours of solitary confinement honing the skills of the mastering engineer. Those taking this course are expected to have significant music skills: actively playing a musical instrument (or composition), and/or the ability to read a piano score at the least, and a full orchestra score from any recent century, including our own, at the most. Class attendance is essential; work outside of class is necessary.
Prerequisites: 57-651 or 57-337 or 57-341 or 57-342

57-339 Acting III

Fall: 6 units
This course will build upon the foundation laid in the first year, with a more concentrated look at scene work, an audition workshop that focuses on cold readings as well as monologues, and a character-development project that works to identify specific issues that inhibit freedom on stage. More in-depth work on songs and arias will lead into a musical scene project. The semester will close with a classical text project in which the students will work with verse.
Prerequisite: 57-241

Course Website: https://cmu.app.box.com/files/0/f/11681158556/1/f_106285564705 (https://cmu.app.box.com/files/0/f/11681158556/1/f_106285564705/)

57-340 Acting IV

Spring: 6 units
Continues 57-339 Acting III.
Prerequisite: 57-339

57-343 Music, Technology, and Culture

Intermittent: 9 units
Music has been a part of our individual and communal lives for 40,000 years. We developed the technology to record and playback music for about 140-years ago. In this seminar we will study the relationship of music, technology and culture from a variety of disciplinary approaches including science and technology studies, musicology and ethnomusicology, neuroscience, sound studies, critical race and ethnicity studies, political economy, cultural studies and media archeology. The course will focus on the impact mediating technologies like vinyl, cassette tapes, mp3s, film and television, the development of music journalism and of course live human performance have had on our social, political and personal interactions with music. We have built the course around case studies that illustrate the intersection of music, technology and culture such as audio analgesia devices, movie soundtracks, streaming services, the rise of internet "listicles" and other crucial moments in twentieth and twenty-first century musical culture. Students in this course will develop critical projects that cross technological, humanistic, and musical boundaries. We hope that students come away from this class with better a host of critical tools to better think about what music means to us and how mediating technologies redefine these meanings.

57-344 Experimental Sound Synthesis

Intermittent: 9 units
This is a course that will guide students into the world of experimental approaches to music and sound production, with particular emphasis in some of the key practices and concepts developed in the 20th and 21st centuries. We will examine a variety of ways in which sound works are made and perceived; understanding the historical perspectives and critical viewpoints of each approach through the application of hands-on practicum. The topics covered in the course are divided into three large areas: the art of sound, the use of technology in the production of sound works, and the creation of interdisciplinary sound installation. Students from different disciplines will work together to collaborate on the designing, prototyping and execution of a series of ambitious projects in response to the topics covered in class.

57-347 Electronic and Computer Music

Fall and Spring: 6 units
This course builds on the concepts learned in Introduction to Music Technology (57-101) and gives added knowledge in the areas of composition using digital and analog devices as well as various computer programs. Building computer models of both analog and digital synthesizers as well as drum machines, loop players and various other sound processing effects will be covered in detail. Students will be required to produce several projects throughout the course demonstrating their understanding of various concepts in electronic music. More emphasis is placed on the overall quality of the end musical product than in 57-101 in order to prepare students for music production in a professional setting.
Prerequisites: 57-101 or 57-171

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-350 Strauss Wind Serenade

Fall and Spring: 3 units
TBA

57-355 Secondary Guided Teaching

Spring: 3 units
This course enables students to apply instructional strategies in local secondary school music classes. School visits provide opportunities to work with band, choral, and amp; orchestral ensembles and general music classes. Seminar discussions with the cooperating teachers familiarize students with both school-wide and classroom management issues that affect teaching, learning, motivation, and the administration of music programs.

57-356 Elementary Guided Teaching

Fall: 3 units
This is the second level of field experience in the public schools. This course provides for observation and closely supervised teaching experiences with elementary age children in a school setting.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-358 Introduction to Electronic Music

Intermittent: 9 units
This course will allow students to produce original works of electronic music composition in response to strategic listening assignments presented within their historical context. Students will learn critical listening and analytical skills, and be assessed on their electronic music production as well as on their ability to articulate context and structure. This course is for undergraduate music students. Other students may register for it with the permission of the instructor.

57-359 Audiovisual Composition

Intermittent: 9 units
TBA
Prerequisite: 57-358

57-360 Brass Methods

Fall: 3 units
This music education course develops basic brass playing and teaching techniques for beginning and intermediate instrument classes. The course includes training in beginning band program design, aural and amp; visual diagnosis of individual and ensemble playing problems, and methods of accelerating music reading independence in young players. The course requires two off-campus field teaching experiences in local schools. Each field teaching experience will require about 3 hours to complete and #8212; students should allow enough time in their schedules to complete this requirement.

Course Website: https://cmu.app.box.com/files/1/f/11681158556/1/f_106285571873 (https://cmu.app.box.com/files/1/f/11681158556/1/f_106285571873/)

57-361 Percussion Methods

Fall: 3 units
This class gives the non-percussion major a background in the fundamentals of teaching percussion. The main focus of the course is snare drum. The students spend most of their time learning the basic concepts of beginning snare drum so they will be prepared to teach beginning students of any grade level. Much time is devoted to proper stance, grip, and stroke in order to insure a good foundation for a beginning student. Also covered are the various mallet instruments, timpani, and all small hand percussion. Students will learn about purchasing proper equipment for the various levels of learning in common school programs.

57-362 Woodwind Methods

Spring: 3 units
This music education course develops basic woodwind playing and teaching techniques for beginning and intermediate instrument classes. The course includes training in beginning band program design, aural and amp; visual diagnosis of individual and ensemble playing problems, and methods of accelerating music reading independence in young players. The course requires two off-campus field teaching experiences in local schools. Each field teaching experience will require about 3 hours to complete and #8212; students should allow enough time in their schedules to complete this requirement.

57-363 String Methods

Spring: 3 units
String Methods prepares music educators for work in the public schools. A major portion of class time will be applied to violin and cello techniques. Upon completion of the course, the student will be expected to demonstrate the technical skills of a second year beginning string student. Students will also be introduced to various method books, string supplies, and repairs.

57-364 Conducting Practicum

Fall and Spring: 3 units
This course provides applied conducting experience for the conducting minor.

57-370 Stage Direction

Spring: 3 units
This course provides an internship working with a middle or high school music theater production. Students may participate in coaching, direction, and choreography. In addition, they keep a journal of their experience and submit a final paper describing what they have learned from working with the teachers or professional directors who were responsible for the production. It is suggested that this course be taken during the spring semester when most music theater productions are scheduled.

57-374 Music in the Urban School

Spring: 9 units
This course will involve workshops with nationally known instructors in eurhythmics, world drumming, contemporary popular music, and classroom management. The course will require attendance at workshops, classroom observations and closely supervised teaching experiences, including up to 12 hours of practicum visitation to be fulfilled scheduled by the Instructor. This course fulfills the Community Engagement requirement in the Master's of Music degree program. Schools involved are all inner city schools with a poverty level of 75% or above. This course is offered as the result of a grant received from the Federal Department of Education by the School of Music, the Pittsburgh Public Schools, and the Wilkinsburg School District.

57-375 Music in the Elementary School

Fall: 6 units
This course is designed to provide a philosophical background for teaching music in the elementary school and to provide a variety of pedagogical techniques, which are essential when teaching music from Preschool through Grade 6.
Prerequisite: 57-331 Min. grade C

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-376 Music in the Secondary School

Spring: 6 units
This course covers a variety of topics related to the development and the management music programs in secondary schools. Emphasis is placed on the leadership, classroom management, general music and amp; performance course content, and routine administrative planning.
Prerequisite: 57-375 Min. grade C

57-377 Psychology of Music

Intermittent: 9 units
Music cognition is an interdisciplinary approach to understanding the mental processes that support musical behaviors, including perception, comprehension, memory, attention, and performance. Like language, music is a uniquely human capacity that arguably played a central role in the origins of human cognition. This course is a survey of current approaches to and theories about the perception and cognition of music. Topics covered include psychoacoustics; the cognitive neuroscience of music; relationships between music and language; the nature of musical knowledge; and debates about aesthetics, evolutionary psychology, and musical universals. At the end of this course a student should be able to identify key theories and hypotheses in music cognition as they relate to memory, emotion, physiology, neurology, acoustics, language, and evolution. They will be able to comparatively evaluate hypotheses and place them in an intellectual context. These objectives will be achieved though critical reading, discussions, and written exercises. There are no prerequisites for this course. It will be helpful for you to know some basic elements of music theory (such as the names for chords, Roman numerals, and so on), but some extra help will be available to cover these topics. Some notational basics will be covered in the first lecture.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-378 Introduction to Music Cognition Research

Intermittent: 9 units
This course explores the roles of cognitive processes in the experience of music with a focus on carrying out a collaborative laboratory project in order to understand first-hand the challenges of the experimental study of music. In readings, lectures, discussions, and demonstrations we will become acquainted with the relevant psychological theories of perception, memory and learning, and review and critically analyze selected experimental findings on the psychology of music. We will examine the use of psychological principles (e.g. Gestalt laws of perception, limitations on working memory, categorical perception, chunking, schemas, modularity) to explain musical phenomena. The emphasis will be on applying an experimental approach to music perception and cognition, but we will also consider ongoing debates about larger issues (such as musics adaptive value to the human species, and the determinants of musical taste). Prerequisite: either Harmony 1 or Intro to Cognitive Psychology.
Prerequisites: 57-149 or 57-152

57-381 Collaborative Piano I

Fall and Spring
These are a series of courses which allow the student the opportunity to accumulate experience in a professional setting with students and faculty. The pianist will be assigned to a voice studio(s) and play for students and their professional mentors, supervised by a Collaborative Piano faculty member. Assignments may include playing voice juries. This course is open to Music Majors and Non-Music Majors, based upon a mandatory audition prior to approval.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-382 Collaborative Piano II

Fall and Spring
These are a series of courses which allow the student the opportunity to accumulate experience in a professional setting with students and faculty. The pianist will be assigned to a voice studio(s) and play for students and their professional mentors, supervised by a Collaborative Piano faculty member. Assignments may include playing voice juries. This course is open to Music Majors and Non-Music Majors, based upon a mandatory audition prior to approval.
Prerequisite: 57-381

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-383 Collaborative Piano III

Fall and Spring
These are a series of courses which allow the student the opportunity to accumulate experience in a professional setting with students and faculty. The pianist will be assigned to a voice studio(s) and play for students and their professional mentors, supervised by a Collaborative Piano faculty member. Assignments may include playing voice juries. This course is open to Music Majors and Non-Music Majors, based upon a mandatory audition prior to approval.
Prerequisite: 57-382

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-384 Collaborative Piano IV

Fall and Spring
These are a series of courses which allow the student the opportunity to accumulate experience in a professional setting with students and faculty. The pianist will be assigned to a voice studio(s) and play for students and their professional mentors, supervised by a Collaborative Piano faculty member. Assignments may include playing voice juries. This course is open to Music Majors and Non-Music Majors, based upon a mandatory audition prior to approval.
Prerequisite: 57-383

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-385 Collaborative Piano V

Fall and Spring
These are a series of courses which allow the student the opportunity to accumulate experience in a professional setting with students and faculty. The pianist will be assigned to a voice studio(s) and play for students and their professional mentors, supervised by a Collaborative Piano faculty member. Assignments may include playing voice juries. This course is open to Music Majors and Non-Music Majors, based upon a mandatory audition prior to approval.
Prerequisite: 57-384

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-386 Collaborative Piano VI

Fall and Spring
These are a series of courses which allow the student the opportunity to accumulate experience in a professional setting with students and faculty. The pianist will be assigned to a voice studio(s) and play for students and their professional mentors, supervised by a Collaborative Piano faculty member. Assignments may include playing voice juries. This course is open to Music Majors and Non-Music Majors, based upon a mandatory audition prior to approval.
Prerequisite: 57-385

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-391 Keyboard Studies (Music Ed)

Fall and Spring: 3 units
This course develops piano skills necessary for work in the elementary and secondary schools. Special emphasis is placed on transposition, score reading, harmonization and sight-reading. This course is required for all music education majors.
Prerequisite: 57-191

57-392 Keyboard Studies (Music Ed)

Fall and Spring: 3 units
Continues 57-391 Keyboard Studies V. This course is required for all music education majors.
Prerequisite: 57-391

57-399 Music-Cinema-Culture

Intermittent: 9 units
The first 100 years of the 20th Century's only original art form, whose advent has brought about tremendous social and cultural changes. Students view selected films, learning first the basics of film theory, cinema's working structures and the function of music. Ultimately, they are able to analyze, in the form of a written essay, the function and value of the music in a particular film and the impact such music has had on society.

57-403 Yoga for Musicians

Fall and Spring: 3 units
TBA

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-404 String Quartet: A Social History

Intermittent: 9 units
The string quartet is at once a medium and a genre, even a form which for more than two hundred years has had a special, unparalleled place in Western music. This course examines the development of the string quartet - from its function as an intimate and conversational social setting for amateurs, to its role as a secret repository of composers' most daring thoughts. The string quartet repertoire under discussion spans the first attempts at string quartet writing in the 17th Century, to serialism and microtonal disintegration in the 1960's, to contemporary Pop-Rock fusion experiments. This course also deals with the social and personal histories of four individuals who freed themselves from hegemonic orchestral rules in favor of an instrumental democratic microcosm.

57-405 Concerto: Virtuosity and Contrast

Intermittent: 9 units
The Concerto, one of the most popular forms of music, is also a dramatic form, a drama of contrast between the strength of one body of sound and another (volume), between one type of sound and another (tonal distinction), between the individual and the masses, and finally, between the "Solo" virtuoso and the less gifted "Tutti" players. The goal of this course is to examine the greatest concerti written for all instruments; from Vivaldi's "Concerto for Two Mandolins" to John Adams's "Grand Pianola Music," and much more, while dealing with the social and personal histories of unforgettable virtuosi and the concerti that became their "Battle Horses." The program analyzes great concerti performed by the world's greatest soloists and orchestras.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-408 Form and Analysis

Spring: 6 units
This course provides a working understanding of all styles and genres of Western classical and contemporary repertoire. Students will explore various aspects of the compositional process, from basic organizational structures to the details of individual musical phrases. They will learn to see and to hear the most important compositional features of a piece of music and will develop a deeper understanding of the music they perform, conduct, and compose.
Prerequisites: 57-150 or 57-153

57-409 Puccini's Operas

Intermittent: 9 units
Standing between the 19th and 20th Centuries, Puccini witnessed extraordinary socio-political and cultural shifts sweeping across Europe. His operas reflect such changes through their gradual stylistic adherence to modernity. From theatrical and literary plots to complex relationships with poets, publishers, impresarios, singers, conductors, and political censors, Puccini's operas offer excellent grounds for interdisciplinary dialogue and cultural analysis.

57-411 Musical Theatre on Stage and Screen

Intermittent: 9 units
Defining what musical theater "is" is no easy task. The genre/form/phenomenon as we know it today represents an evolution of embodied practices and interdisciplinary creativity spanning cultures, geographies, traditions, media, and time. Similarly, the history of musical theateror, more appropriately, the histories of musical theatershould not be reduced to simple narratives or linear chronologies. Following this idea, this course offers a topical exploration of musicals on stage and screen, focusing on historical developments, production practices, and artistic agency from the mid-nineteenth century to the present. We will not offer a conventional "survey" of musicals starting from an arbitrary point "way back when" and ending with the state of things in 2022. Like the "concept musicals" of the mid-twentieth century, a non-linear structure allows us to consider broader connections across our subject(s). In addition to repertoire case studies, we will explore the historiography of musical theater; the process of developing musicals from page to stage; the function and labor of performers, administrators, stage directors, stage designers, and technical personnel in making musicals happen; musicals in various media; musicals in the time of the coronavirus pandemic; and concerns of social justice in reviving established works and producing new works. Assignments will include short analysis presentations and written responses. There is no performance component with this course.

57-412 The Operas of Richard Strauss

Intermittent: 9 units
Across a lifetime that spanned the nineteenth and twentieth centuries, Richard Strauss blazed a trail as a composer for the dramatic stage that was aesthetically eclectic, commercially successful, and critically divisive. His operas were "modernist" creations that presented musical, thematic, dramaturgical, and production challenges to the artists and audiences of his time. They still test the ingenuity of those who approach them today worldwide. This course offers students a survey of all fifteen of Strauss's completed operas as both musical and theatrical texts, working through at least one example per week. The emphasis on the composer's entire oeuvre corrects the familiar neglect of the middle and late works and views them all through a range of aesthetic and critical lenses. Though the primary emphasis of the course is musicological in nature and not musical theory, we will still examine Strauss's evolving stylistic approaches to form, harmony, orchestration, and vocal writing. Listening to complete recordings and viewing streaming productions will be important requirements. Assignments will include response papers, two short presentations presented in small groups, a take-home midterm exam, and a final exam.

57-417 Major Vocal Performance Ensemble

Fall and Spring: 6 units
There are two choral ensembles. Concert Choir is a select ensemble of approximately 40 voices of superior vocal/musical talent and experience in the choral idiom. Performance requirements are more stringent than those of the Repertory Chorus. Repertory Chorus is an ensemble of undetermined size. Emphasis is placed on vocal technique and development, musical skills in the rehearsal with minimum performance requirements. Audition required.

57-418 Major Instrumental Ensemble

Fall and Spring: 6 units
There are two instrumental ensembles: Orchestra and Wind Ensemble. Rotating seating plans, within and between ensembles, will prevail at the discretion of the Director of Orchestral Studies and the Director of the Wind Ensemble. The instrumental faculty will be consulted. All music majors who are required to enroll in an instrumental ensemble must audition for placement and enroll in Major Instrumental Ensemble. Audition required.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-420 JIVE - CMU Jazz Choir

Fall and Spring: 3 units
A highly selective group of mixed voices who perform contemporary jazz and pop vocal arrangements. Open to all CMU students. Previous registration or a successful audition for Jazz Vocal Ensemble will meet the prerequisite requirement. Contact the director, Betsy Lawrence and lt;blawrenc@andrew.cmu.edu and gt;, to schedule an audition.
Prerequisite: 57-420

57-421 Exploded Ensemble

Fall and Spring: 6 units
Exploded Ensemble is a group dedicated to the performance of music that pushes the boundaries of traditional performance and composition. The ensemble has a strong emphasis on electro-acoustic performance technique, experimental approaches to staging and amplification, and visuals (live video, computer controlled lighting, wearable technology, etc.). The group will perform works by new/experimental/electro-acoustic composers and will create new arrangements of works for which scores may not currently exist - for example, music by rock bands, electronic musicians, and sound artists. The overall goal of the ensemble is to explode the idea of traditional concert music performance. In so doing we shall advance student skills in music performance, music appreciation, and to advance the very important conversation on the future of concert music. Students interested in this course who have not had the prerequisite should contact the instructors.

Course Website: https://courses.ideate.cmu.edu/57-421 (https://courses.ideate.cmu.edu/57-421/)

57-423 Repertoire Orchestra

Fall and Spring: 3 units
This course thoroughly acquaints participants with the standard works one would expect to encounter as part of a career as an orchestral player. Assigned repertoire will be read each class session. All students are eligible to register for this course by special permission. Students who are not placed in the Carnegie Mellon Philharmonic are given priority for registration.

57-424 Percussion Ensemble

Fall and Spring: 3 units
This ensemble is open to all percussion majors.

57-427 Advanced Seminar in Film Musicology

Intermittent: 9 units
This course has been designed primarily for advanced students wishing to apply to film scores analytical methodologies pertaining to historical musicology, cultural studies, and genetic criticism. The films screened and the music analyzed in this course follow at first the historical development of cinema. Then, the syllabus focuses on the film music of Ennio Morricone in honor of his 90th birthday and on final presentations of film soundtracks selected by the students. Prerequisites include some knowledge of music history, theory, practice, or the instructor's permission.

57-429 Beginning Piano for Children I

Fall and Spring: 6 units
This course is the first of two courses in a year-long internship in the piano teaching of young children, combining class and private instruction: a study of the basic teaching/learning process as applied to piano teaching, covering comprehensive step-by-step presentation in reading, rhythm, ear training, sight reading, technique, and musicianship. Under supervision, students will teach the weekly group class and private lessons. Weekly conferences will be held for learning the presentation of materials for class teaching, analyzing pedagogical problems, and developing communication skills with both young pupils and their parents.
Prerequisite: 57-273

57-433 Musical Theatre Literature and Repertoire

Intermittent: 3 units
If you enjoyed participating in your high school musicals, this class is for you! Learn and perform songs from the musical theater repertoire, beginning with operetta to present day contemporary pieces. PDFs and practice tracks will be provided. Class performances will be live with a pianist.

57-434 Musical Theatre Literature and Repertoire

Intermittent: 3 units
Continues 57-433 Musical Theatre Literature and Repertoire.
Prerequisite: 57-433

57-436 English/Contemporary Literature and Repertoire

Intermittent: 3 units
The course provides a bibliography of repertoire in the English language. Material will be limited to art songs and will be presented via individual student or group performances in class, and recorded performances. Research assignments will be required for selected anthologies or for works by specific composers. Repertoire will be examined according to vocal requirements, musical style, and programmatic function. The repertoire will consist primarily of works by British and American composers, but works by Russian and Spanish composers will also be included.

57-437 Literature and Repertoire

Fall and Spring
This course deals with literature and repertoire for instruments. There are multiple sections organized by instrument categories or specific instruments. Section D - Woodwind Literature and Repertoire, open to undergraduate and graduate woodwind students, focus on standard orchestral repertoire. Each session covers at least one symphony, overture, tone poem, or concerto accompaniment. Special consideration is given to orchestra audition material generally required for flute, oboe, clarinet, and bassoon. Students are encouraged to request repertoire they wish to cover. Non woodwind students and non-registered students may request to participate if there is particular interest in a class or classes. Following are examples of repertoire from 2023-2024 classes: Brahms - Symphonies 2 and amp; 3; Academic Festival Overture Berlioz - Roman Carnival Overture Strauss - Don Juan Rimsky-Korsakov - Scheherezade Mozart - Marriage of Figaro Overture Tchaikovsky - Romeo and Juliet Overture Fantasy Rossini - La Gazza Ladra and amp; Barber of Seville Overtures Stravinsky - Firebird Suite Ravel - Daphnis and Chloe Suite No. 2

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-438 Multitrack Recording

Fall and Spring: 9 units
This course builds upon the ideas learned in Sound Recording (57-337), but with an emphasis on close microphone techniques and popular music styles. Students will work in small groups and complete at least two recording projects. $10.00 materials fee.
Prerequisites: 57-341 or 57-342 or 57-651 or 57-337

57-441 Analysis of 19th Century Music

Intermittent: 9 units
This course will provide students with a variety of tools for the analysis of music from Schubert to Mahler and early Schoenberg. The primary emphases will be on small-scale (chord-to-chord) harmonic organization, on the larger-scale organization of tonal centers, and on form, but other issues will also be explored (e.g. rhythm and meter, text/music relations). The course will sample a wide range of repertoires, including solo piano music, orchestral music, and opera, and it will have a special emphasis on chamber music including the German Lied.

57-442 Analytical Techniques

Fall: 9 units
What is music analysis and why is it important? How do we talk about our experiences with music? If I can analyze music, will it help get a job? An analytical technique is a way to perceive or embody music with someone else: to find resonance or even difference without presenting one's perception as objective and universal. We use analytical technics all the time in explicit ways and implicit ways when we make and listen to music. In this course, we will study western analytical techniques in their application to western classical, jazz, popular, and non-western musics. When appropriate, we will discuss non-western techniques, but they will not be a focus. We will learn traditional analytic methodologies and explore philosophical and cultural relationships between value, culture, identity, and analysis. There will be weekly readings, listening, and analysis assignments. In the first seven weeks we will focus on the analysis of western classical tonal music. In the second half of the semester we will focus on transcription and improvisation in diverse musical contexts. Students will complete a project in each of these three areas. This course utilizes in-class discussion and performance by all participants. The goal of this course is to improve your ability to conceptualize and perform new music and to enhance your engagement with your current repertoire.
Prerequisite: 57-408

Course Website: https://cmu.app.box.com/files/0/f/11681158556/1/f_106285568801 (https://cmu.app.box.com/files/0/f/11681158556/1/f_106285568801/)

57-444 Principles of Counterpoint

Intermittent: 9 units
This course explores the development of Western music composed with multiple independent parts. The first half of the course traces the history of part-writing from medieval organum to the twenty-first century. Emphasis is given to study of pre-Baroque and twentieth-century music, and to the conceptual shifts that occurred moving in and out of the common-practice period. The second half of the course examines, across multiple musical styles, specific contrapuntal techniques such as imitation and ground bass forms. Assignments include both writing exercises and analysis, culminating in a term project on a topic selected by the student.
Prerequisites: 57-152 or 57-149

57-445 Counterpoint in 18th Century Composition

Intermittent: 6 units
In this course the student will study how to write two-part counterpoint within the harmonic framework of 18th-century instrumental music. The focus of study will be J.S. Bach's inventions, and writing will be directed towards composing several complete inventions in that style. Prerequisites: Harmony I and Harmony II or permission of the instructor. This course is designed for composers, theory minors, Bach lovers, keyboard majors, and anyone who wants to seriously sharpen their tonal writing skills.
Prerequisite: 57-408

57-446 Renaissance Counterpoint

Intermittent: 6 units
In this course the student will study how to write vocal counterpoint using the classic "species" approach, based on the style of Renaissance masters Palestrina, Lassus, and Victoria. The latter part of the course will extend the study to instrumental music of the 16th century, and explore the development of chromaticism in avant-garde composers of the time. Reading about and listening to Renaissance music and composers will be included as background context for the theory work. Daily writing exercises in the first part of the course will lead to a term project producing a performable piece of music by the end of the semester. This course is designed for composers (both for writing technique and college teaching preparation), theory minors, early music lovers, choral singers and conductors, church musicians, and anyone who wants to sharpen their writing skills. Prerequisite: Harmony I or permission of the instructor (demonstrated competence in reading treble and bass clef, and intervals).
Prerequisite: 57-408

57-447 Harp Pedagogy

Fall and Spring: 3 units
TBA

57-448 Brass Pedagogy

Fall: 3 units
In this course we introduce the "Art of Teaching". In this case, to teach, develop and encourage young brass players just starting an instrument or who are in their early stages of development. Concepts of basic brass pedagogy will involve the following topics: Music as Metaphor; Teaching young students; Listening; Developing a Concept of Sound; Posture; Breathing; Embouchure; Articulation: Single Tonguing, Multiple Tonguing; Mouthpiece playing; The Warm-up; Slurring; Intonation; The Upper Register; Endurance; Vibrato; Dental Braces; Orchestral Playing; Performance Preparation; Taking Auditions Brass students will leave CMU with a basic understanding of the pedagogical needs and requirements of beginning and inexperienced students, so that they may begin private teaching studio upon graduation.

57-449 Beginning Piano for Children II

Fall and Spring: 6 units
This course is the second of two courses in a year-long internship in the piano teaching of young children, combining class and private instruction: a study of the basic teaching/learning process as applied to piano teaching, covering comprehensive step-by-step presentation in reading, rhythm, ear training, sight reading, technique, and musicianship. Under supervision, students will teach the weekly group class and private lessons. Weekly conferences will be held for learning the presentation of materials for class teaching, analyzing pedagogical problems, and developing communication skills with both young pupils and their parents.
Prerequisite: 57-429

57-450 Audience Development

Intermittent: 6 units
TBA

57-451 The Citizen Artist

Intermittent: 6 units
This course celebrates the intersection of artistry and citizenship by engaging in conversation around social justice and exploring ways in which music can uplift our Pittsburgh community. We will collaborate with Autism Pittsburgh and the Lullaby Project to create artful musical experiences that engage families with autism and foster connection between parents and babies. Musicians, artists, and social advocates across campus are invited to participate.

57-452 Collaborative Project in Music Entrepreneurship: innovation in music & wellness

Intermittent: 6 units
The project for Fall 2024 is to develop a new performance modality at the intersection of music and wellness for CMU's new Highmark Wellness Center. Students will explore the effects of music on mental health in order to create musical experiences that appeal to new audiences and enhance well-being in the community. Students with skills in project management, social media, business, music technology, lighting design, and experience design are encouraged to join. Music performance is not required. A high level of personal initiative and professionalism is expected. Deliverables are: beta-version of innovative music and amp; wellness experience, documentation of the process, budget, and panel presentation to faculty.

57-454 The Freelance Musician

Intermittent: 6 units
This course will put you in touch with innovative artists, managers, web designers, career consultants, and other professionals who want to help you succeed. There is nothing theoretical about this course: you'll perform "real gigs for real clients" who will offer feedback on your professionalism. You'll build a website with expert support and gain clarity on how music fits into your higher purpose. The objective of this course is to make you "roadworthy" as a professional musician, equipping you with the tools, skills, and mindset that would make people want to work with you again and again. You can think of it in three stages: "building the car" (professional portfolio), "tuning the engine" (communication); and "mapping the route" (strategy) to put you on the road to success. No prior knowledge or experience is required to take this course. You have already spent thousands of hours practicing to become a fine musician. Turning your artistry into a livelihood requires an entirely different skillset, which can be jumpstarted (in only about 50 hours) so let's get going!

57-455 Shaping Time in Performance

Intermittent: 9 units
This course will look at basic questions that performers face: Which level of pulse do I want to feel as the main one? How can I shape a pulse expressively? Which measure in a phrase is felt as a main goal, especially when the phrase contains an unusual number of measures? How can multiple tempi be meaningfully related? Among many important formal arrival points, which are the most important? In addition to these questions, we will also look at recent work on ways in which 18th-century musicians may have understood meter very differently from most musicians today. These alternate perspectives open new possibilities for hearing and shaping the flow of musical time in baroque and classical music. These issues will be pursued from two directions. We will develop simple theoretical tools that can make score analysis a helpful input to the decisions that performers make about such questions. We will also examine audio and video recordings by famous artists to see both how they dealt with these issues and what new questions are raised. Week-to-week work will include reading, listening, and score analysis. Students will write term papers that either use one of the main perspectives developed in class (starting from scores or starting from recordings) or else combine the two. They will also give presentations about their projects to the class.

57-456 Marketing for Musicians

Intermittent: 6 units
What is your message? Who is your audience? How do you reach them? These are among the topics we'll explore in this course. Group projects and case studies help us identify the key aspects of one of the most important aspects of any music career. Being a great musician won't do you any good if no one knows you exist! By the end of the semester, students should be able to understand such concepts as branding, marketing, reach and advertising; identify audience segments and target messages to those segments; create compelling marketing materials, including bios, group and program descriptions, websites and flyers; work with teams to try out a variety of marketing strategies in real-world circumstances; learn to capitalize on social media and use it to effectively build and communicate to an audience; learn to write effective and powerful marketing copy (bios, sales pieces, etc.); examine competitors and market leaders to look for opportunities and best practices.

57-457 Mental training for peak performance

Intermittent: 6 units
Perform in Kresge Theatre regularly and gain tools for overcoming performance anxiety to own the stage and play your best. Everyone gets nervous, but it doesn't need to be debilitating. Learn how to calm your mind and turn nervous energy into mental focus. Guest faculty, PSO musicians, and visiting artists share their challenges and offer strategies for audition preparation, effective practicing, self-care, conflict resolution, and other mind-body topics.

57-458 Business of Music

Intermittent: 6 units
This class will teach you the fundamentals of how to survive in the music industry. A diverse set of speakers, hands-on projects tailored to your interests and needs and group activities will introduce you to the challenges you'll face during your career. How to manage your money, what you need to know about copyright, whom do you need on your side? We'll cover all of these and more!

Course Website: https://cmu.app.box.com/files/1/f/11681158556/1/f_106285572641 (https://cmu.app.box.com/files/1/f/11681158556/1/f_106285572641/)

57-459 Score Reading for Composition Majors and Conducting Minors

Spring: 6 units
This course is a practical, hands-on learning experience. Students learn by doing and observing other students. All work is done at the keyboard. It is for graduate collaborative piano majors, junior and senior composition majors, and junior and senior conducting minors with good keyboard skills who have completed Keyboard Studies or have otherwise satisfied the requirement. Other music majors with good keyboard skills who have completed Keyboard Studies or have otherwise satisfied the requirement can take this course with instructor permission.
Prerequisites: 57-194 or 57-192 or 57-191 or 57-193

57-461 Aural Analysis and Basic Improvisation

Intermittent: 9 units
Where are we now? Musicians often face analytical questions in performing situations. What scale degree is the trumpet playing? What chord are we playing now? What countermelody are the altos singing? What is the form, and where are we in it? The purpose of this course is to enhance students' abilities to answer these kinds of questions in real-time, real-world performance situations, apart from the score. The primary skills developed in the course will be hearing melodic scale degrees, hearing harmonies, memorizing short melodic fragments, identifying short harmonic idioms by ear, hearing two-voice contrapuntal music, and improvising over repeated chord progressions. A variety of conventional and unconventional games and exercises will be employed, involving notating, singing, and using the students' main instruments. We will also put these skills to use in doing larger-scale analysis by ear of longer passages, focusing especially on form, including entire movements. Improvisation comes into the course because perception and production are deeply intertwined; fun improvisation exercises, mostly using the idioms of popular music, will strengthen aural abilities much more than passive identification and dictation exercises could alone.
Prerequisite: 57-408

57-463 Consumer Driven Composition for Contemporary Media

Intermittent: 3 units
This course aims to augment each student's compositional skill set with technological skills and industry-specific knowledge that will provide them the flexibility and confidence to interface with consumers and more readily monetize their music. This course is intended to be part lecture to allow for quick and concise transfer of information, and part seminar to allow all class participants the ability to learn from each other as they pitch ideas, receive feedback, and evaluate the success of their peers' work. The course is for Sophomore, Junior, Senior, and Graduate Composition Majors. For undergraduate students, the only required prerequisite is 57-101 Introduction to Music Technology.

57-464 Music & Money

Intermittent: 6 units
This course is intended to develop in the student a broad knowledge of the music business, an entrepreneurial mindset applicable to it, and to encourage curiosity about future possibilities in the field. Students will examine the musical groups, ensembles, and institutions from the standpoint of economic, business and marketplace realities. Musical entities will be considered and studied not for their inherent artistic merit but as commodities affected by the same forces as any other consumable. Students will acquire a basic understanding of the forces - economic, financial, psychological, societal - that affect entities in the music field. They will also be called upon to think creatively and entrepreneurially about possible directions for existing musical entities. Students will become familiar with current methods of musical content creation, delivery platforms, advertising and marketing avenues, and revenue streams. Students will consider the history, economic structure, opportunities, and the challenges faced by each. Students will encounter and react to case studies taken from the music field about individuals and groups and the decision-making mechanisms at work in each, and the outcomes of the decisions taken by these individuals and groups.

57-465 Eurhythmics Applications for Performing and Teaching

Fall: 6 units
Rhythm is about time and timing. Dalcroze Eurhythmics is an exploration of the rhythm inside us. Experiencing rhythm through music and movement brings awareness and understanding of our own inner rhythm as well as rhythm in all the arts and beyond. For musicians, meaningingful rhythmic movement reinforces understanding of music concepts while focusing awareness on the physical demands of artistic performance. This approach to musical problem solving is applicable also to studio and classroom teaching.
Prerequisite: 57-164

57-467 Production: Crew

Fall: 3 units
Technical crew learning backstage operations for the fully staged productions presented by the Production: Performance class. Class participants serve as install, strike and run crew for the production.

Course Website: https://canvas.cmu.edu/courses/36963 (https://canvas.cmu.edu/courses/36963/)

57-468 Production: Crew

Spring: 3 units
Technical crew learning backstage operations for the fully staged productions presented by the 57-471 Production: Performance class. Class participants serve as install, strike and run crew for the production.

Course Website: https://canvas.cmu.edu/courses/36963 (https://canvas.cmu.edu/courses/36963/)

57-471 Production: Performance

Fall: 6 units
Preparation of an operatic or musical theatre production with a fully staged public performance of the production at the end of the class.
Prerequisites: 57-212 and 57-340

57-472 Production: Performance

Spring: 6 units
Preparation of an operatic or musical theatre production with a fully staged public performance of the production at the end of the class.
Prerequisites: 57-212 and 57-340

57-473 Production: Performance

Fall and Spring: 3 units
TBA

57-476 How Music Works: An Affective History

Intermittent: 6 units
This is an historical survey of (a) aesthetic theories about music and human agency and #8212;music's affects and effects, thus its significance and even its very existence and #8212;and of (b) actual utilizations of music. Theories range from Aristotle's catharsis to trauma theory and neuromusicology in our time. The applications range from the biblical David's therapeutic harp playing in the court of King Saul (11th C. BCE) to U.S. interrogators in Iraq (21st C. CE); from Vodun and exorcisms in other cultures to MUZAK in our own. In short, it's a chronological survey of what peoples have believed about music's powers and, consequently, how music has been used and abused. The dialectic between theory and applications is reflected in the assignments. This seminar is heavily focused on reading, as well as written and verbal discussion. There is also a long-term field project.

57-477 Music of the Spirit

Intermittent: 6 units
This guided listening course is a musical exploration of spirituality, a musicological and ethnomusicological survey organized around comparative religions. While the majority of repertoire will be from the Western Classical tradition, musics of a variety of cultures will be included. The music will be organized by particular religious traditions and by universal themes, such as community, death/afterlife, birth/new birth, martyrs/heroes, transcendence / immanence, meditation/contemplation/trance, etc. Most course materials, including streaming audio, are online, with one meeting per week in the classroom. Will include participatory introductions to numerous forms of chant. Requires oral and written reports.

57-478 Survey of Historical Recording

Intermittent: 6 units
The histories of music and technology have long been intertwined. Their symbiosis intensified with the harnessing of electricity in the third wave of the Industrial Revolution. This course will expose you to many of the best practitioners of music. But it will do so with an eye and #8212;an ear and #8212;towards the media by which we have known them. In short ... The music. The personalities. The media. This seminar is heavy on listening (guided playlists online via Canvas). Writing includes reviews and a researched feature article.

57-480 History of Black American Music

Fall and Spring: 6 units
Come and explore the rich musical heritage of Black America. This course will survey the music of Black America beginning with the African legacy and continuing through the music of the Twentieth Century. Class sessions will involve discussions, listening, viewing of films, and reports by students on topics of individual interest. Discussions will involve, historical, cultural and political perspective, as well as the music and composers themselves. Lecturing will be at a minimum. Innovative testing in quiz show format will be used. No prerequisites required. Open to all upper level undergraduate students.

57-485 History of the Symphony

Intermittent: 9 units
This course is a study of major symphonic works from 1750 to the modern period. For reasons we will examine, symphonic literature, and the symphony in particular, has long been considered Western art music's greatest monument to its history. Composers have agonized over its composition, conductors have devoted careers to it, and audiences have deeply and zealously expressed their admiration for it. We want to understand why this music is so revered and long-lasting. And we want to understand how the aesthetics of these works have been shaped by their historical, socio-cultural contexts, and how their meaning and value continue to change. Over the course of the term, we will analyze some of the great examples of this genre. We will place them in their historical, socio-cultural contexts with primary sources and insightful academic scholarship. Your critical listening, reading, and thinking skills will be expanded as we delve into almost three centuries of music and writings.

57-487 Advanced Solfege III

Fall: 3 units
Covers the same concepts as Solfege IV in more challenging material, from Bach chorales in open score to excerpts by Bartok, Honegger, Stockhausen, or Boulez. Dictations are three-part contrapuntal and difficult harmonic three and four parts.
Prerequisite: 57-186

Course Website: https://cmu.app.box.com/files/0/f/11681158556/1/f_106285567265 (https://cmu.app.box.com/files/0/f/11681158556/1/f_106285567265/)

57-488 Advanced Solfege IV

Spring: 3 units
Continues 57-487 Advanced Solfege III.
Prerequisite: 57-487

57-489 Practice Teaching (Elementary)

Fall and Spring
Experience in working with elementary students in a public school setting. The teaching is supervised by an experienced public school teacher and members of the CMU music education faculty.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-490 Practice Teaching (Secondary)

Fall and Spring
Experience in working with secondary students in a public school setting. The teaching is supervised by an experienced public school teacher and members of the CMU music education faculty. Students may choose a vocal or instrumental emphasis in the secondary placement.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-491 Solfege for Conductors I

Intermittent: 3 units
TBA
Prerequisites: 57-184 or 57-488

57-492 Solfege for Conductors II

Intermittent: 3 units
TBA
Prerequisites: 57-491 or 57-488

57-496 BXA Studio (1st semester)

Fall and Spring: 9 units
TBA

57-497 BXA Studio (2nd semester)

Fall and Spring: 9 units
TBA
Prerequisite: 57-496

57-498 BXA Studio (3rd semester)

Fall and Spring: 9 units
TBA
Prerequisite: 57-497

57-499 BXA Studio (4th semester)

Fall and Spring: 9 units
TBA
Prerequisite: 57-498

57-500 Major Studio (Voice)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

57-501 Major Studio (Piano)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-502 Major Studio (Organ)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

57-503 Major Studio (Harp)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-505 Major Studio (Violin)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

57-506 Major Studio (Viola)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

57-507 Major Studio (Cello)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

57-508 Major Studio (Double Bass)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

57-509 Major Studio (Guitar)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: http://www.music.cmu.edu/pages/insidemusic-coursesyllabi (http://www.music.cmu.edu/pages/insidemusic-coursesyllabi/)

57-510 Major Studio (Flute)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-511 Major Studio (Oboe)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-512 Major Studio (Clarinet)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-513 Major Studio (Bassoon)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

57-514 Major Studio (Saxophone)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-515 Major Studio (Horn)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-516 Major Studio (Trumpet)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-517 Major Studio (Trombone)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

57-518 Major Studio (Euphonium/Baritone)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-519 Major Studio (Tuba)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-520 Major Studio (Percussion)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

57-521 Major Studio (Composition)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-522 Major Studio (Bagpipe)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-523 Major Studio (Electronic Music)

Fall and Spring: 9 units
A one hour private lesson per week for all music majors.

57-557 Vocal Methods

Spring: 3 units
This course enables each student to develop a pleasant, healthy, and musically expressive voice and effective vocal pedagogy.

57-559 Music and Triads: Before/Beyond Roman Numerals in Western Music

Intermittent: 9 units
In many western traditions, the triad is a foundational element for musical construction. Though the ingredient is consistent across many styles, how it is used changes according to time, place, and even for the individual piece. This course is a deep dive into the ways in which triads are used in a variety of western traditions. We will track common practices and notable manipulations across diatonic music, modal, non- and poly- and pan-tonal repertories, and use different methods of notation, annotation, and engagement to better understand how the triad is used in music. Through listening, annotation, performance, and discussion, students will develop methods to identify triad and triad-expanding material, and to build usable analytical practices that are sensitive to the unique sonic footprints of specific musical styles. They will hone skills to communicate their findings, and transfer their interpretation into performance and creative practice. Students will be assessed through regular listening, analytical, and creative assignments, as well as in-class discussion and a final project or paper.

57-560 Electronic Music Seminar

Fall and Spring: 3 units
tba

57-570 Music and Technology Seminar

Fall and Spring: 1 unit
The Music and Technology Seminar is a weekly meeting to discuss topics in the areas of computer music, electronic music, musical acoustics, music perception, music technology, music information retrieval, music interfaces, music systems and software, and music theory. Presentations on these various topics are made by graduate students and faculty. The seminar is open to the University and broader community, but students should only enroll if the seminar is part of their degree requirements.

57-571 Music and Technology Project

Fall and Spring: 12 units
TBA

57-572 Music and Technology Project

Fall and Spring: 12 units
TBA

57-587 Sophomore Review

Fall and Spring: 1 unit
TBA

57-588 Junior Recital Voice

Fall: 1 unit
tba

57-589 Senior Recital Voice

Fall: 1 unit
tba

57-590 Internship

All Semesters
TBA

57-591 Dalcroze Pedagogy/Practice Teaching

Fall: 3 units
This course gives hands-on experience in applying Dalcroze principles in teaching situations. It is designed for students interested in learning about the teaching of Eurhythmics, general Music Education, and for those considering the Dalcroze Certificate. The class will meet in a three week rotation of two Thursday evenings followed by a Saturday morning with the Preparatory School children's classes.

57-593 Vocal Coaching

Fall and Spring: 1 unit
TBA

57-595 Senior Electronic Music Project

Fall and Spring: 1 unit
TBA

57-597 Senior Composition Project

Fall and Spring: 1 unit
A composition for orchestra required of all senior composition majors.

57-598 Junior Recital

Fall and Spring: 1 unit
A half recital required of all junior performance majors.

57-599 Senior Recital

Fall and Spring: 1 unit
A full recital required of all senior performance majors.

57-603 Practice Teaching (Elementary)

Fall and Spring
Experience in working with elementary students in a public school setting. The teaching is supervised by an experienced public school teacher and members of the CMU music education faculty.
Prerequisites: 57-355 and 57-393

57-604 Practice Teaching (Secondary)

Fall and Spring
Experience in working with secondary students in a public school setting. The teaching is supervised by an experienced public school teacher and members of the CMU music education faculty. Students may choose a vocal or instrumental emphasis in the secondary placement.
Prerequisites: 57-355 and 57-393

57-610 Internship

Fall and Spring
A student can receive credit for an unpaid internship in a music related field. The amount of credit is determined by the number of internship hours.

57-611 Independent Study in History

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-612 Independent Study in Theory

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-613 Independent Study in Research

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-614 Independent Study in Performance

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-615 Independent Study in Literature and Repertoire

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-616 Independent Study in Sound Studies

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-617 Independent Study in Electronic and Experimental Music

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-618 Independent Study in Conducting

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-619 Independent Study in Opera

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-620 Independent Study in Solfege

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-621 Independent Study in Eurhythmics

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-622 Independent Study in Sound Recording Production

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-623 Independent Study in Studio Recording Project

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-624 Independent Study in Special Music Project

Fall and Spring
Students undertake a critical examination of some aspects of music on an independent basis under the supervision of a full-time faculty member. They choose their topic and contract with the Project Director (faculty sponsor) as to when and how the project will be completed. Open to upperclassmen.

57-627 Independent Study in Supervised Teaching

Fall and Spring
TBA

57-643 Diverse Populations in Inclusive Settings

Fall: 9 units
tba

57-670 Chamber Music: Brass

Fall and Spring: 3 units
Provides an opportunity for students to play in small ensembles, advised by faculty coaches. The performers will develop effective rehearsal techniques, explore chamber music repertoire, deal with issues of intonation and balance, and arrive at interpretive conclusions that are stylistically sound, yet individualistic and creative. A performance is required each semester.

57-671 Chamber Music: String Quartet

Fall and Spring: 3 units
Provides an opportunity for students to play in small ensembles, advised by faculty coaches. The performers will develop effective rehearsal techniques, explore chamber music repertoire, deal with issues of intonation and balance, and arrive at interpretive conclusions that are stylistically sound, yet individualistic and creative. A performance is required each semester.

57-672 Chamber Music: Woodwind and Mixed

Fall: 3 units
Provides an opportunity for students to play in small ensembles, advised by faculty coaches. The performers will develop effective rehearsal techniques, explore chamber music repertoire, deal with issues of intonation and balance, and arrive at interpretive conclusions that are stylistically sound, yet individualistic and creative. A performance is required each semester.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

57-675 Chamber Ensemble

Fall and Spring: 3 units
Provides an opportunity for students to play in small ensembles, advised by faculty coaches. The performers will develop effective rehearsal techniques, explore chamber music repertoire, deal with issues of intonation and balance, and arrive at interpretive conclusions that are stylistically sound, yet individualistic and creative. Low Brass Ensemble: The low brass ensemble pushes the boundaries of what is "supposed" to be played by an ensemble of this type. Players will be involved in the programming, arranging and planning pf performances and will learn valuable musical, creative, promotional and organizational skills.

57-874 Music in the Urban School

Spring: 9 units
This course will involve workshops with nationally known instructors in eurhythmics, world drumming, contemporary popular music, and classroom management. The course will require attendance at workshops, classroom observations and closely supervised teaching experiences, including up to 12 hours of practicum visitation to be fulfilled scheduled by the Instructor. This course fulfills the Community Engagement requirement in the Master's of Music degree program. Schools involved are all inner city schools with a poverty level of 75% or above. This course is offered as the result of a grant received from the Federal Department of Education by the School of Music, the Pittsburgh Public Schools, and the Wilkinsburg School District.
Prerequisite: 57-831

57-911 Music Since 1945

Intermittent: 9 units
A survey of Western art music from WWII to the present, with a focus on compositional techniques, influential trends, and experimental approaches. This course will address total serialism, aleatory music, the rise of technology, minimalism, and soundscape composition, among others. Students will engage with primary sources, close listening, multi-media resources, and secondary sources, and demonstrate competency through varied assessments, including in-class performance activities and presentations.

Course Website: https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2 (https://cmu.box.com/s/8e23hqzsk3e6bj1s7fhhj49to2lilzk2/)

The Marianna Brown Dietrich College of Humanities and Social Sciences

Richard Scheines, Bess Family Dean

Sharon Carver, Associate Dean for Educational Affairs

Joseph E. Devine, Associate Dean for Undergraduate Studies

Kelli Maxwell, Associate Dean for Student Success
www.cmu.edu/dietrich/ (http://www.cmu.edu/dietrich/)

The Dietrich College of Humanities and Social Sciences consists of undergraduate programs in English, History, Information Systems, Languages, Cultures, and Applied Linguistics, Philosophy, Psychology, Social and Decision Sciences, and Statistics & Data Science, as well as those offered by the Carnegie Mellon Institute for Strategy and Technology. Dietrich College also offers a student-defined major option, numerous interdepartmental majors, the intercollege Bachelor of Humanities and Arts program, and honors and pre-professional programs.

The college embodies one of the most varied groups of students, faculty, staff and alumni in the Carnegie Mellon University community, all united by a common goal: confronting and solving society's most complex problems. We learn through experience, and we work without silos or walls. Our students and faculty work across traditional boundaries, collaborating with other disciplines to pursue the thrill of discovery. Dietrich College is a place to explore different points of view. And a place to do work that matters.

At Dietrich College, we approach education differently. We mash up the traditional liberal arts with analytical and computational approaches. Beginning in their first year, our undergraduates confront real-world problems like democracy and data, racism or environmental justice through Grand Challenge Seminars (https://www.cmu.edu/dietrich/students/undergraduate/programs/grand-challenge/) that are co-taught by faculty from disciplines across the college and university. In addition, students are required to take General Education (https://www.cmu.edu/dietrich/gened/) courses tied to specific learning goals. These courses help students to acquire and apply new knowledge and skills that are essential to their careers, citizenship and life. In addition to the required courses, students' schedules also allow for broad exploration of our majors and minors (https://cms-staging.andrew.cmu.edu/dietrich-2/academics/degrees-majors-minors/). Experiential learning programs (https://www.cmu.edu/dietrich/students/prospective/undergraduate/experiential-learning.html) – like internships, undergraduate research, study abroad and community service – enhance our students' undergraduate education.

Dietrich College students develop deep disciplinary knowledge — but that's just the beginning. Students learn how to work on teams involving many disciplines. The knowledge landscape changes rapidly, and what students learn today may be outdated tomorrow. At Dietrich, students "learn how to learn," discovering how to communicate, think and understand the world in ways that will benefit them for the rest of their lives.

Dietrich College alumni report that the skills they learned while in college have helped them land opportunities in a highly competitive job market. Just as importantly, those skills helped graduates follow their passion and succeed in new endeavors outside a more traditional career path. Among the 90% of the Dietrich College class of 2022 (https://www.cmu.edu/career/outcomes/post-grad-dashboard.html) reporting, 94% found employment, entered graduate school or pursued other interests, like volunteering or military service.

Degree and Program Options

Dietrich College offers a wide range of majors and minors. In addition, there are a number of special programs which add breadth and enhance a student's overall experience.

Dietrich College Majors

Department	Name of Major (Degree Options)
Carnegie Mellon Institute for Strategy and Technology	**International Relations and Political Science (B.S.)**
Carnegie Mellon Institute for Strategy and Technology	**Political Science, Security, and Technology (B.S.)**

[4] Offered jointly by the Departments of History and Philosophy
[5] Offered jointly by the Departments of English, Languages, Cultures, and Applied Linguistics and Philosophy
[6] Offered jointly by the Department of Biological Sciences and the Center

Additional Majors

Dietrich College students may pursue additional majors and/or minors in the college, as well as in other Carnegie Mellon colleges. An additional major refers to the completion of the requirements for a second major while also completing the requirements for the primary major and degree.

Most Dietrich College majors are also available as additional majors; two (Environmental and Sustainability Studies and Health Humanities) are available **only** as additional majors. Students from outside Dietrich College can pursue additional majors offered by the college, and would be required to complete only those courses in the college's general education program that are prerequisites to courses required for the Dietrich College major in question.

Minors

Minors are like majors in that they consist of coherent programs of study in a department, or across departments. Minors differ from majors in the number of the courses required and in the breadth and depth of the curriculum in the minor's area(s) of study. Dietrich College students can also pursue minors offered and made available by other Carnegie Mellon colleges and departments.

There are two types of minors in Dietrich College: departmental minors, which are housed in a single Dietrich College academic department; and interdepartmental minors, which are sponsored by more than one academic department and administered through the faculty advisor's academic department. The college's minors are available to students from all colleges in the university.

Multiple Degrees

"Multiple degrees" is defined as more than one undergraduate degree granted by the university (whether simultaneous or sequential). One diploma is awarded for each degree; each degree has one primary major associated with it, and the possibility of an additional major and/or minor.

Dietrich College undergraduate students who wish to earn an additional undergraduate degree with a primary major also from Dietrich College must:

- Satisfy all requirements for the primary major to be linked to the additional degree.
- Complete at least 90 units beyond the total number of units required for the first degree. If the major associated with the additional degree requires less than 90 units, the student would earn additional elective units to reach the 90-unit minimum. If the major associated with the additional degree requires more than 90 units, the student would perforce exceed the 90-unit minimum in order to fulfill all of the requirements for the additional degree’s primary major.
- Comply with Carnegie Mellon's Statute of Limitations Policy: All units required for an undergraduate degree, whether earned in residence, transferred from another institution or granted via advanced placement, must have been earned within eight (8) years prior to the date on which the degree is granted.

Non-Dietrich College undergraduate students at Carnegie Mellon who wish to earn an additional undergraduate degree with a Dietrich College primary major must complete all of the requirements listed above, plus any portion of the Dietrich College general education program not already fulfilled by prior undergraduate course work.

Bachelor of Arts & Bachelor of Science

Some Dietrich College majors lead to a Bachelor of Arts (B.A.) degree and others lead to a Bachelor of Science (B.S.) degree option. In some majors students may choose between a B.A. and a B.S. degree. B.A. degree programs usually require less course work in technical and/or quantitative disciplines, and more depth and breadth in various humanities and social science fields, and (in some cases) the arts. In contrast, B.S. degrees are offered in majors requiring more technical, quantitative or scientific competencies.

Dietrich College General Education Program

*For students entering prior to Fall 2021, click here (https://www.cmu.edu/dietrich/gened/previous-curriculum/) for the catalog description of the General Education Requirements.

For students entering Fall 2021 and later*

www.cmu.edu/dietrich/gened (https://www.cmu.edu/dietrich/gened/)

The Dietrich College General Education curriculum (GenEd) provides robust training and knowledge that complements and strengthens the skills learned in a student’s primary major. The GenEd program contains several unique features including: 1) the anchoring of the curriculum on an explicit set of measurable learning outcomes; 2) a focus on creative multi and interdisciplinary approaches to complex problems; 3) the integration of instruction in core competencies like writing and data science across the entire four-year curriculum; 4) ensuring holistic advising is available to every Dietrich student; 5) the expansion of experiential learning opportunities through research and creative inquiry, paid internships opportunities, study abroad, and community engagement; and 6) the commitment to iterative program-level assessment that includes direct measures of student learning.

The GenEd is built on the foundation of 15 high level learning areas and nearly 50 specific student learning outcomes that guide the program. More information about the learning areas can be found on our GenEd website.

Curriculum Requirements

The GenEd curriculum requirements total just above one third of a student's overall degree requirements:

Category Type	Units Required
Foundations	54
Disciplinary Perspectives	42
Special Seminars	18
Experiential Learning Activity	1
TOTAL GENERAL EDUCATION	**115**

Course Categories

1. **Foundations (54 units total)**

There are six (6) foundations requirements, designed to teach both competencies that transcend disciplinary boundaries and the foundational knowledge and skills particularly important for Dietrich College students to acquire.

Required in Year 1	Units Required
Communication	9 units
Data Analysis	9 units

The Communication requirement may be satisfied through one of the following options:

1. 76-101 (Interpretation and Argument) or 76-102 (Advanced First-Year Writing)
2. Choose 2 mini courses: 76-106 (Writing about Literature, Art, and Culture), 76-107 (Writing about Data), or 76-108 (Writing about Public Problems).

The Data Analysis requirement must be satisfied through the completion of 36-200 (Reasoning with Data). Advanced Standing (AP, IB, Cambridge, Transfer) credit will be accepted for this requirement.

Required in Years 1-4	Units Required
Computational Thinking	9 units
Contextual Thinking	9 units
Intercultural and Global Inquiry	9 units
Scientific Inquiry	9 units

A list of courses for each of the above requirements can be found on the GenEd website.

2. Disciplinary Perspectives (42 units total)

There are five (5) disciplinary perspectives requirements, designed to provide a broad reflective understanding of disciplines both within and outside of the College.

Required in Year 1	Units Required
Humanities	9 units
Social Sciences	9 units

Required in Years 1-4	Units Required
The Arts	9 units
Logic/Mathematical Reasoning	9 units

Required in Years 1-4 (6 units in one of the following three disciplines):
Design
Business
Engineering

A list of courses for each of the above requirements can be found on the GenEd website.

3. Special Seminars (18 units total)

The Special Seminars and Topics offer opportunities for students to engage in high impact learning practices to ensure transformative and integrative learning.

Required in Year 1	Units Required
Grand Challenge Seminar	9 units

Required in Years 1-3	Units Required
Perspectives on Justice and Injustice	9 units

4. Experiential Learning Activity (1 unit total)

The Experiential Learning Activity provides students with the opportunity to extend their learning beyond the classroom. This may include completing an internship, undergraduate research, community engaged learning, work-based learning or study abroad. This requirement can be fulfilled anytime after the first semester. Several existing courses fulfill this requirement. The experience must be approved in advance by the Experiential Learning team.

A list of courses for each of the above requirements can be found on the GenEd website.

College Services and Programs

The educational programs in Dietrich College are complemented by a number of services, special programs, centers, and computing facilities.

Dietrich College Senior Honors Program

Joseph E. Devine, *Director and Associate Dean for Undergraduate Studies*
Location: Baker Hall 154F

From its inception in 1982, the Dietrich College senior honors program (http://www.cmu.edu/dietrich/undergraduate/programs/shp/) has provided outstanding undergraduate seniors with the opportunity to work individually with faculty members throughout the university on original research and creative projects. Admission is based on achievement of a cumulative QPA of at least 3.50 in one's major and 3.25 overall, endorsement of a thesis proposal by the faculty member who will serve as thesis advisor, and department head approval. Honors students enroll in an honors thesis course sequence for both semesters of the senior year (9 units per semester). Upon successful completion of the honors thesis, a student qualifies for graduation with Dietrich College Honors, and will have this designation as well as the thesis title noted on the final transcript.

The Honors Research Scholarship Program (https://www.cmu.edu/dietrich/students/undergraduate/funding/dietrich-honors-fellowship/) is an optional component for students who have applied and been accepted into the college's Senior Honors Program. Financial support through a stipend and related funds for research-related expenses allows scholars to spend the summer before their senior year undertaking early-stage research and development of their thesis topics. Students apply for this scholarship program in the spring of the junior year, simultaneous with submission of an application and thesis project proposal for the Dietrich College Senior Honors Program.

Community Engagement Fellowship

Kimberly Piatt, *Director of Experiential Learning*
Location: Baker Hall 160
https://www.cmu.edu/dietrich/students/undergraduate/programs/community-engagement-fellowship/index.html (https://www.cmu.edu/dietrich/students/undergraduate/programs/community-engagement-fellowship/)

The Dietrich College Community Engagement Fellowship was launched in Fall 2022 and provides students with the opportunity to develop their leadership skills while also learning how to create positive change in their communities. The program spans 5 semesters - Fall, Spring, Summer, Fall, Spring during which students complete a combination of coursework and experiential learning activities. The program curriculum includes:

- 66-148 (3 Units): Fall Semester: Introduction to Community Engagement
- 66-214 (6 Units): Spring Semester: Connecting with the Pittsburgh Community
- 66-300 (6 Units): Fall Semester: Using Collective Leadership to Pursue Community Goals
- 66-403 (6-9 Units): Spring Semester: Community Engagement Fellowship Capstone Course

At the end of the fellowship, students will engage in a capstone project during which they connect their specific area of passion to what they have learned through the fellowship. This project is flexible and will depend on the student. Students will be expected to present their capstone project to a panel of stakeholders.

Students in the fellowship receive exclusive access to courses and are able to build fruitful relationships with a cohort of peers and community leaders. Students also receive $3,000 to support their involvement in the community. Additional opportunities, like board membership, conference attendance and others are also offered as part of the experience.

The application process for each 12-student cohort occurs in the Spring. Any student with a primary major in Dietrich or those pursuing a BHA degree may apply. Students should be in good academic standing but students may request an exception by speaking with the Director of Experiential Learning. Students interested in applying must have at least 2 years as an undergraduate student remaining so that they are able to complete the full sequence of courses.

Humanities Scholars Program

Therese Tardio, *Director*
Location: Posner Hall 252
www.cmu.edu/dietrich/hsp (https://www.cmu.edu/dietrich/hsp/)

The Humanities Scholars Program invites a small cohort of students – usually no more than twenty – to work together to investigate the issues that confront contemporary society. Students are invited to join the program at the time of admission based on the strength of their interest and background in one or more of the humanities. Students participate in a living-learning community during their first year and take a series of academic seminars that draw upon the expertise of humanities faculty and the broader intellectual depth of the campus throughout their time at CMU. The Humanities Scholars Program sponsors campus-wide programs, often in collaboration with other programs, such as the Center for Diversity and Inclusion, the College of Fine Arts, and the Institute for Politics and Strategy. The Humanities Scholars experience culminates in a student’s senior year with a capstone project. Students have the ability to use the resources of the program to further their own research, engage with the community, and develop their own areas of expertise. The program is supported by endowment funding from the university as well as from the Arthur Vining Davis Foundations in order to support outstanding undergraduate research in the humanities at the university. For further information, students should contact the Director, Therese Tardio tardio@andrew.cmu.edu

Quantitative Social Science Scholars Program

Mark Patterson, PhD *Director*
Location: Porter Hall 223 B
www.cmu.edu/dietrich/qsss (https://www.cmu.edu/dietrich/qsss/)

The Quantitative Social Science Scholars Program (QSSS) is designed to help outstanding undergraduates impact society through the use of these advanced quantitative methods. It does so by laying out a structured program of training in advanced quantitative techniques that can be broadly applied across a range of social science disciplines and topics.

In addition to two seminars completed in the sophomore year, students complete coursework in a concentration area of their choice, selecting specialization in econometrics, statistics and regression, choice modeling, quantitative policy analysis, computational modeling, or psychometrics and measurement. Concentration areas typically consist of 3-4 courses each. The program equips students to undertake sophisticated analysis of their own, and features an integrative senior thesis project that applies their methodological training to a research question of their own choosing in collaboration with a faculty member of their choice.

The program recruits students with a range of interests across the social sciences to create a cohesive interdisciplinary learning community. Majors that could fit well with this program include (but are not limited to) economics; behavioral economics, policy and organizations; decision science; policy and management; international relations and politics; statistics; statistics and machine learning. Students may apply for entry to the QSSS program during the spring of the first year. Applications consist of a student transcript, and statement of interest.

Student-Defined Program

Joseph E. Devine, *Director and Associate Dean for Undergraduate Studies*
Location: Baker Hall 154
www.cmu.edu/dietrich/undergraduate/student-defined-majors.html (http://www.cmu.edu/dietrich/undergraduate/student-defined-majors.html)

For students whose educational goals cannot be as adequately served by the curricula of existing programs, the college provides the opportunity to self-define a major or minor. The procedure for establishing such a major centers on a written proposal, submitted to the college dean's office. This proposal consists of two parts:

Program description and rationale: A description of the components of the proposed program of study; a presentation of the objectives of the program of study, why it represents a coherent and (given available faculty, courses, and other resources) viable course of study, and the reason(s) why these objectives cannot be accomplished within one or more of the college's existing programs.

The curriculum: Presentation of a complete outline of all courses that will comprise the requirements for the major or minor, categorized according to that component of the major program to which each belongs (e.g., mathematics prerequisites; research methods; theoretical perspectives; etc.), and second, a semester-by-semester outline that indicates when each course is to be taken (or, for any already taken, when taken). The minimum requirement for graduation is, as with all majors in the college, 360 units of credit.

Proposals and curricula are evaluated for clarity of focus, coherence and depth in related areas, and viability within the context of the college and university offerings. Proposals should generally be developed no later than the sophomore year, and approved majors begin their program generally no later than the junior year.

As with all other Dietrich College majors, Dietrich College student-defined primary majors must fulfill all of the college's general education requirements.

Academic Standards, Regulations and Protocols

Graduation Requirements

Eligibility for graduation in Dietrich College requires that a student:

1. satisfy all Dietrich College general education requirements,
2. satisfy all course requirements in a Dietrich College primary major,
3. achieve a cumulative quality point average of at least 2.00 for all courses taken (or, alternatively, for all courses taken after the 1st year),
4. earn at least 360 units with a minimum of 180 units taken

Graduation with College Honors

Students who successfully complete a senior honors thesis under the auspices of the Dietrich College Senior Honors Program qualify for graduation with Dietrich College Honors.

Double-Counting Courses

Double-counting refers to instances when a course taken to fulfill one requirement counts simultaneously toward a requirement in another major or minor program. While the college encourages study in complementary areas where majors and minors frequently share requirements in common, it also wants to keep clear the meaning and integrity of the labels “major” and “minor.” To preserve the integrity of these definitions, double-counting is permitted in Dietrich College on a very limited basis, and only in those instances when the course(s) in question represent only a small portion of the second program.

The college and its departments have developed program-specific guidelines for this practice that appear throughout the Dietrich College section of this catalog, and particularly in the case of major and minor programs that students frequently pursue in combination.

Dietrich College Credit Policy for Non-Carnegie Mellon Courses

The following policies govern the practice of Dietrich College undergraduates taking courses elsewhere and requesting that credits for these courses transfer to their Carnegie Mellon University academic record. Courses taken elsewhere will be considered for transfer credit if the institution offering them is fully accredited, and if the courses in question are judged to be acceptable for the purposes proposed by the student.

Approval

Dietrich College undergraduates who wish to take courses at another institution and request that credits for these courses transfer to their Carnegie Mellon University record should familiarize themselves with Dietrich's transfer credit policies (http://www.cmu.edu/dietrich/advisory-center/transferring/cmu-course-credit.html) . Students must receive approval before taking any courses at another institution in order to guarantee that they will receive transfer credit upon successful completion of the course(s).

Limits

Undergraduate students may take a maximum of 180 units and transfer these back for credit toward the Carnegie Mellon degree.

Exceptions

These limits do not apply to courses and credits taken through cross-registration via the Pittsburgh Consortium for Higher Education (PCHE), and approved study abroad or exchange programs. Exceptions to these restrictions may be made only by way of written petition to the Dietrich College Office of Undergraduate Studies.

In general, approved courses taken elsewhere will transfer as elective credit, unless otherwise approved by the college or relevant academic department.

Grades

Courses taken elsewhere must be taken for a regular letter grade (not pass/no credit or pass/fail) in order to be granted transfer credit. As a matter of college policy, Dietrich College students must earn a final grade of at least "C" in order for the credit to transfer. A “C-” grade is not transferable when its equivalency is below a 2.00 on a 4.00 scale, or 70%. In cases when courses proposed for transfer credit are to apply to requirements in a Dietrich major or minor program, the program's department may set a higher minimum final grade in order for credit to transfer. Only units, not grades, transfer for courses taken elsewhere, and thus do not affect a student's Carnegie Mellon QPA. Ungraded or pass/fail courses may receive credit if the transcript key indicates that the mark represents a grade of C or better. Students should consult their academic advisor before taking courses at another institution for which they want to receive transfer credit.

External Transfer Students

A candidate for the bachelor's degree must complete a minimum of 180 units of coursework at Carnegie Mellon. If a bachelor's degree has already been obtained at another institution, courses that count toward that degree may not be used again as transfer credit toward a Carnegie Mellon University undergraduate degree.

Internal Transfer Students

This policy applies retroactively to students who enter Dietrich College through internal transfer. Courses previously approved for transfer credit may be re-evaluated for consistency with relevant Dietrich College or program policies and standards.

Course Overloads

Overloading is defined as taking more than the equivalent of five full-semester courses in one semester; for Dietrich College students, overload means registering for more than 52 units in one semester.

Eligibility to overload is defined as having a QPA of at least 3.25 in the last completed semester, based on a course load of at least 45 factorable units, and a current cumulative QPA of at least 3.00. Students new to the college and university (i.e., first-year students and new external transfer students) may not overload during their first Carnegie Mellon semester.

Eligibility to overload based on QPA does not automatically allow the student to register for an overload. Rather, students must complete an overload petition, and meet with their primary academic advisor to discuss the proposed overload. If approved, the academic advisor will increase the student's unit maximum for the relevant semester.

The first opportunity to register for a course overload is after registration week for the proposed overload semester. Registration week for the spring semester is usually the third week in November; for the fall semester, it is usually the third week in April. Consult the official university academic calendar for the exact dates.

If as a result of final grades for the current semester a student approved to overload for the next semester falls below the QPA overload eligibility criteria, the academic advisor may withdraw the overload permission. Students thus affected are responsible for resolving this in consultation with their academic advisor.

Physical Education and Stuco* Courses

A maximum of nine units of credit for any combination of Physical Education (69-xxx) and StuCo (98-xxx) courses may be counted as credit toward graduation requirements. Physical Education and StuCo courses are not included when calculating a student's QPA or when calculating units to determine eligibility to carry a course overload.

*StuCo (http://www.cmu.edu/stuco/) refers to "student-led courses" — i.e., courses designed by students, and approved to be offered for academic credit.

Internships-for-Credit

An internship-for-credit is a supervised, professional work experience with clear links to a student's academic program, performed primarily or totally outside of a regular course structure, and for which a student earns academic credit. Students doing an internship for academic credit must be registered through the academic department of the faculty member supervising the internship, and must register for the internship course during the term (including the summer) when the internship work is being performed. There is no additional tuition charge for credit-bearing internships that are taken during the academic year as part of a normal, full-time course load. Students registered for internships during the summer will be billed for tuition at the per-unit rate set by the university.

To receive academic credit, the internship:

- must conform to the criteria for internships-for-credit (https://www.naceweb.org/about-us/advocacy/position-statements/position-statement-us-internships/)set by the National Association of Colleges and Employers and the U.S. Department of Labor
- requires the involvement of a Carnegie Mellon faculty sponsor and an on-site supervisor in the design, oversight and evaluation of the internship;
- must include regular or periodic meetings between the student, the faculty sponsor, and/or the internship site supervisor to monitor progress and offer feedback on student performance;
- requires an end-product for submission to the faculty sponsor. This usually takes the form of a paper, but may also include a presentation, or some other approved form;
- may be taken for a regular letter grade or pass/no credit as per the policy of the department through which the internship course is taken. With department approval, the internship may be counted toward program requirements.
- can vary from 3-18 units in any one semester, and is limited only by the college rule of a maximum of 27 units of internship credit that can be applied to graduation requirements.

Additional policies and practices regarding internships-for-credit vary among the college's academic departments. Departments are not obligated to allow internship credit for its majors, and are free to determine whether an internship may be used to fulfill requirements or serve only as an elective. An internship-for-credit is a graded experience. Each department will determine appropriate criteria for the grade if an internship is approved for credit.

Credits for internships are generally earned according to the following scale:

- 9 units = the equivalent of 1 day (9-12 hours) per week during a full semester
- 18 units = the equivalent of 2 days (12-20 hours) per week during a full semester

A Dietrich College student may not earn more than 18 units of internship credit during a single semester or count more than 27 units of internship credit toward fulfillment of graduation requirements.

In instances when the internship sponsor requires that a student receive academic credit from the home institution, the student should contact the Dietrich College Associate Dean for Undergraduate Studies for information and advice about available options.

Dietrich College Dean's Honor List

Each semester the college recognizes those students who have attained outstanding semester quality point averages by naming them to the Dietrich College dean’s honor list.

Students who complete at least 45 factorable units and attain a semester QPA from 3.50 through 3.74 are named to the Dean’s List, with Honors; if the semester QPA is 3.75 or higher, students are named to the Dean’s List, with High Honors.

Students who complete at least 36 or up to 44 factorable units and attain a semester QPA of 3.75 or higher are named to the Dean’s List, with Honors.

In addition, it is generally the case that students are not eligible for the dean's list who receive one or more "Incomplete" grades at the time when final semester grades are recorded.

Transferring into Dietrich College

Students exploring the possibility of transferring to the Dietrich College of Humanities and Social Sciences must first have satisfied all the appropriate transfer criteria (https://docs.google.com/document/d/1GBIMIbGvOHizq42NgGMJx0lFbYLAkP95/edit/?usp=sharing&ouid=111780354501420821086&rtpof=true&sd=true) and met with the relevant academic advisor (https://www.cmu.edu/dietrich/gened/fall-2021-and-beyond/meet-the-advisors/) before applying.

Students may then submit an application to transfer (https://docs.google.com/document/d/1HuvbnnXQ5F-nl1jy_ColFkZHk3MrV9iqn_wUo4UZ-N0/edit/?usp=sharing) into Dietrich College, which will be reviewed by the Director of Advising in consultation with the relevant academic department. Decisions regarding transfer requests will be based on evidence of adequate prior academic performance and on the applicant's prospects for success in the college and intended major.

Upperclass students can submit an application for transfer at any time. However, first-year students can submit an application for transfer to Dietrich College only after mid-semester grades have been posted in the second semester of their first year.

Course Failures and Course Repetitions

Students who fail a required course must repeat and pass it (or take and successfully complete another approved course that fulfills the requirement). If a failed course is a prerequisite to more advanced course work within a particular course sequence, the failed course must be repeated before moving on to the higher level course.

Failed courses that are repeated and passed, or courses that are passed but repeated in order to obtain a higher grade, remain on the student's record and are included in calculating the student's QPA. Students who repeat a course that they have already passed will not be able to apply the second set of units for the course toward graduation requirements.

Academic Actions

Dietrich College is committed to ensuring that students are able to identify their personal, academic and professional goals; seek out and utilize resources to achieve those goals; and reflect on and refine those goals from matriculation to graduation. At the end of each semester, a student's academic progress and performance is reviewed to determine standing in the next academic semester. Academic actions are designed to support student success and create opportunities for students to reflect and utilize additional campus resources.

In order to maintain good academic standing, Dietrich College students must attain at least a 2.0 minimum quality point average for each semester (as well as cumulatively), and also make and maintain adequate progress toward completing their degree requirements. For purposes of academic standing, default grades for incomplete grades are considered in QPA calculations. Adequate progress towards graduation means that students are successfully completing at least 80% of attempted units in a semester. Grades of N, W, or R grade do not count as completed units.

Academic Concerns

Academic concerns serve to alert the student that the college is concerned about their academic progress and/or one or more actions they have taken or failed to take. A student will receive a notice of academic concern when their academic performance does not meet the minimum standard of 2.0 or they are not making adequate progress toward completing their degree requirements. In addition, a student may receive a notice of academic concern for matters such as repeatedly failing required courses or repeatedly failing to attain minimum-level passing grades in prerequisite courses; failing to complete C@CM by the end of the first semester; failing to make sufficient progress through their declared primary major or the general education program; or receiving multiple incomplete grades over two consecutive semesters. Students who receive a notice of academic concern must meet with their advisor to discuss support resources, review their progress, and plan adjustments as needed.

Academic Warning

A student who has been issued an academic concern in the previous semester is placed on academic warning when their academic performance does not meet the minimum standard of 2.0 or adequate progress toward completing their degree requirements is not being made. All Dietrich students have the potential to be successful and academic warning is meant to signify to the student the college's desire to help them get back on track so they can achieve their goals. The term of academic warning is at least one semester and students with an academic warning are not permitted to overload. The Student Success Plan process outlined in the academic warning letter has been designed to notify students of specific academic requirements and identify avenues of support to help students succeed.

A student is removed from academic warning and returned to good academic standing when both the semester and cumulative quality point averages meet at least the stated minimum, and when adequate progress toward completing degree requirements is being made. A student who has had one semester on warning and is not yet meeting minimum requirements but is making significant progress may be continued on academic warning.

Academic Suspension

Academic suspension is the usual action taken when a student already on academic warning fails to meet the minimum semester or cumulative requirements. The minimum period of academic suspension is at least one and typically two semesters (not including summer). During their academic suspension, a student will work with their advisor to reflect on the circumstances leading up to the suspension, identify the issues that prevented them from achieving academic success, and take actions to address these issues to ensure a successful return and sustained recovery during their CMU career. Such actions could include a work or internship experience, academic coursework at another college or university, and/or other supportive services as appropriate.

Midway through the semester before a suspended student is eligible to return to the university, the student will be contacted via email by the Associate Dean for Student Success or designee with detailed instructions about the process for requesting approval to return and re-enrollment.

Once cleared to return from academic suspension, the Enrollment Services office will be notified and the student will be eligible to enroll. While on academic suspension, students are considered to be on a mandatory “leave of absence,” and are governed by college and university policies concerning such leaves. See subsequent discussions of “Leave of Absence and Withdrawal from the College.”

Students returning from academic suspension do so on final academic warning. Students on final academic warning must achieve a term QPA of at least 2.0 in the two semesters following their suspension. The final warning process ends and students return to good academic standing after receiving semester QPAs of 2.0 or higher for two consecutive semesters and a cumulative QPA of 2.0 or higher. Failure to achieve two consecutive semesters of 2.0 QPAs may result in being dropped from Carnegie Mellon University.

Students who return to good standing after having been academically suspended will return to final warning for one semester if their term QPA does not meet or exceed a 2.0 during their remaining semesters enrolled at Carnegie Mellon.

Academic Drop

A student is dropped for academic reasons from the university and is not permitted to re-enroll when they continue to perform at levels below the minimum set by the college despite the academic warning intervention, and show no indication of being able to reach an acceptable level of performance or maintain steady progress toward completing graduation requirements.

Appeals

Students have the right to appeal Academic Actions decisions to the Dietrich College Dean or appointed designee. All appeals must be received in writing by the deadline printed in the academic standing notification. Additional information about appealing an academic action decision can be found in The Word: Student Handbook (https://www.cmu.edu/student-affairs/theword/academic/appeal-of-grades-and-academic-actions.html).

Student Success & Experiential Learning

Dietrich College Student Success Center

Kelli Lammie Maxwell, *Associate Dean for Student Success*
Location: Baker Hall 160

Dietrich College is committed to ensuring students have the programs, opportunities, and resources necessary to reach their personal and academic goals. We view a college education as more than a major or job training, but as an opportunity for a broad-based development of mind and character, and as an opportunity to build a strong foundation for students’ lives and careers. We work to ensure equitable and transparent policies and procedures for students as well as opportunities for students to connect with faculty and staff throughout the College. Through the Dietrich College Student Success Center and major departments, we provide four-year holistic advising that assists students with academic choices, career development, opportunities outside of the classroom, as well as physical and mental well-being; and through Experiential Learning, we also offer a number of Dietrich College-specific and university-wide opportunities and programs to ensure students have access to high-impact experiences outside of the classroom, like internships, community service, undergraduate research, and study abroad.

Advising

Andrew Ramey, *Director of Advising*
Location: Baker Hall 160
https://www.cmu.edu/dietrich/advisory-center/

The Dietrich College for Humanities and Social Sciences is committed to providing holistic advising for all students. Dietrich College advisors provide individualized support for students on their academic, professional, and personal journeys by connecting them with resources across campus, explaining major, minor, and general education requirements, and challenging students to venture outside their comfort zones to explore new learning opportunities at Carnegie Mellon and beyond. Undeclared first year students are assigned an academic advisor from the Dietrich College Student Success Center upon matriculation. Advisors in the Student Success Center are experts at supporting students, beginning with summer onboarding to prepare students for the transition from high school to college and continuing to provide guidance through to major declaration. After major declaration, students are assigned to an advisor in a department who can assist students in identifying additional opportunities in their major, facilitate connections with faculty, and ensure graduation requirements are met.

Experiential Learning

Kimberly Piatt, Director of Experiential Learning
Location: Baker Hall 160

https://www.cmu.edu/dietrich/gened/fall-2021-and-beyond/experiential-learning/index.html (https://www.cmu.edu/dietrich/gened/fall-2021-and-beyond/experiential-learning/)

Experiential Learning occurs when a student participates in an opportunity that allows them to apply what they are learning in the classroom to a real-world context. This may include internships, undergraduate research with a faculty member, community engaged learning, study abroad or work-based learning through structured consulting projects. Beginning with the class of 2028, all Dietrich College students are required to complete at least one high-quality Experiential Learning activity during their time at Carnegie Mellon University. To support these efforts, the college has a variety of resources available which can be found online (https://www.cmu.edu/dietrich/gened/fall-2021-and-beyond/experiential-learning/), by talking to an academic advisor or by connecting with the Director of Experiential Learning.

Study Abroad

https://www.cmu.edu/dietrich/gened/fall-2021-and-beyond/experiential-learning/study-abroad.html

Opportunities and funding support for study and travel abroad is available through several sources, many administered by the university, and many others available externally. The Office of International Education is the first place to look for information about study or travel abroad, including funding. Two programs housed in Dietrich College are part of this portfolio of study/travel abroad funding programs:

The Department of Languages, Cultures and Linguistics Study Abroad Scholarship Program (https://www.cmu.edu/dietrich/lcal/academics/study-abroad/) offers scholarships to undergraduate students for accredited study abroad programs, limited in some instances to students who are majoring or minoring in a modern language and in other instances to students studying a particular language. Scholarship funds can be applied to tuition, room, board, airfare to the host country and book expenses.

The Dietrich College Study/Travel Abroad Grant Program (https://www.cmu.edu/dietrich/students/undergraduate/funding/study-abroad/) provides support for both traditional study abroad programs, and for non-study abroad experiences such as service learning opportunities, internships, research, or conference travel. The program uses a rolling application schedule for its grant funds, and works closely with the University's Office of International Education in advising students about eligible programs and potential funding sources, completing applications, and preparing for the intended program abroad experience.

Undergraduate Research

https://www.cmu.edu/dietrich/gened/fall-2021-and-beyond/experiential-learning/research.html

Students are strongly encouraged to engage in research under support of a faculty member. Numerous opportunities are available for research positions that are paid or eligible for credit. Students may also explore options from the Office of Undergraduate Research and Scholar Development. Questions about undergraduate research can be directed to an academic advisor or to the director of experiential learning.

Research Training Program

https://www.cmu.edu/dietrich/students/undergraduate/programs/research-training-program.html

The Research Training Program provides students with the opportunity to explore undergraduate research under the mentorship of a faculty member. These occur as one semester, nine-unit courses. The program is open to second-semester first-year students and sophomores with a 3.0 QPA or by petition.

Dietrich College Internship Opportunity Grants

www.cmu.edu/dietrich/students/undergraduate/resources/internship-opportunity-grants.html (https://www.cmu.edu/dietrich/students/undergraduate/resources/internship-opportunity-grants.html)

Dietrich College encourages students to pursue interesting and professionally relevant internship opportunities. Often, however, the very positions that provide students with the most challenging and high-quality work experiences are either unpaid or modestly paid. To help compensate students for taking on work experiences that will be invaluable in helping them define and move toward their career goals, the Dietrich College Internship Opportunity Grant Program seeks to make it more financially possible for students to take advantage of such worthwhile internship opportunities.

Undergraduates with primary majors in Dietrich College, as well as BHA students, are eligible and encouraged to apply. Current sophomores and juniors receive preference. NOTE: Graduating seniors are not eligible.

Students are expected to find their own internships. There are many resources available to help in finding internships, including the Career and Professional Development Center's internship database. Preference for grants is given to students who find positions in the public sector or non-profit agencies.

Dietrich College Pittsburgh Summer Internship Program

https://www.cmu.edu/dietrich/students/undergraduate/experiential-learning/internships/summer-internship-program/info-for-students.html

The Dietrich College Pittsburgh Summer Internship Program is designed for undergraduates who have not yet had a meaningful internship and are seeking to engage and connect with non-profit organizations and start-ups in Pittsburgh. Pittsburgh-area companies and organizations host Dietrich College students for a 10-12 week summer internship, working around 20 hours per week. Students that secure an internship through the program receive a $3,300 stipend provided by the college

Because of the program's strong local focus, all interns are required to work in the City of Pittsburgh during the summer, not remotely, so as to ensure that they get the most out of this experience. Participants are also required to attend professional development workshops hosted by the program and focused on a variety of topics including communication, professional etiquette, giving/receiving feedback, and networking.

Carnegie Mellon University Washington Semester Program

The Carnegie Mellon University Washington Semester Program (p.) (CMU/WSP), sponsored by the Carnegie Mellon Institute for Strategy and Technology (CMIST) (https://www.cmu.edu/cmist/), is a semester-long program in which students live, intern, and take CMU classes in Washington, DC. Full-time undergraduates from any course of study at the university may participate in the program. Students earn forty-eight units for the Carnegie Mellon University Washington Semester Program, interning about twenty-four hours per week in any sector or field of interest within Washington, DC, while taking classes taught by Carnegie Mellon faculty.

Applications (https://www.cmu.edu/ips/washington-dc-semester-program/application.html) are accepted on a rolling admission basis with a final deadline of October 1, for spring semester participation, and March 1, for fall semester participation. Students should contact the Washington Program Manager to discuss the specifics of the program and the deputy director to discuss how the CMU/WSP may fit into their curriculum. Students who participate in the CMU/WSP may qualify for a minor in Politics and Public Policy (https://www.cmu.edu/cmist/academics/undergraduate-programs/minors.html#minor-ppp).

Internships-for-Credit

An internship-for-credit is a supervised, professional work experience with clear links to a student's academic program, performed primarily or totally outside of a regular course structure, and for which a student earns academic credit. Students doing an internship for academic credit must be registered through the academic department of the faculty member supervising the internship, and must register for the internship course during the term (including the summer) when the internship work is being performed. There is no additional tuition charge for credit-bearing internships that are taken during the academic year as part of a normal, full-time course load. Students registered for internships during the summer will be billed for tuition at the per-unit rate set by the university.

To receive academic credit, the internship:

- must conform to the criteria for internships-for-credit (https://www.naceweb.org/internships/)set by the National Association of Colleges and Employers and the U.S. Department of Labor
- requires the involvement of a Carnegie Mellon faculty sponsor and an on-site supervisor in the design, oversight and evaluation of the internship;
- must include regular or periodic meetings between the student, the faculty sponsor, and/or the internship site supervisor to monitor progress and offer feedback on student performance;

- requires an end-product for submission to the faculty sponsor. This usually takes the form of a paper, but may also include a presentation, or some other approved form;
- may be taken for a regular letter grade or pass/no credit as per the policy of the department through which the internship course is taken. With department approval, the internship may be counted toward program requirements.
- can vary from 3-18 units in any one semester, and is limited only by the college rule of a maximum of 27 units of internship credit that can be applied to graduation requirements.

Additional policies and practices regarding internships-for-credit vary among the college's academic departments. Departments are not obligated to allow internship credit for its majors, and are free to determine whether an internship may be used to fulfill requirements or serve only as an elective. An internship-for-credit is a graded experience. Each department will determine appropriate criteria for the grade if an internship is approved for credit.

Credits for internships are generally earned according to the following scale:

- 9 units = the equivalent of 1 day (9-12 hours) per week during a full semester
- 18 units = the equivalent of 2 days (12-20 hours) per week during a full semester

A Dietrich College student may not earn more than 18 units of internship credit during a single semester or count more than 27 units of internship credit toward fulfillment of graduation requirements.

Additionally, the Office of the Vice Provost for Education has options available to students seeking credit for internships. Students may take 99410 in the Fall or Spring or 99411 or 99412 during the summer.

Students seeking to use an internship to meet their experiential learning requirement, or those for whom the internship sponsor requires that a student receive academic credit from the home institution, the student should contact the Dietrich College Director of Experiential Learning for information and advice about available options.

Undergraduate Economics Program Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

73-003 Transfer Credit

All Semesters
This number "holds" a place for an economics transfer credit courses so that these courses can be used in the academic audit system. Student receiving 73-003 credit have met the requirement of earning the equivalent of a "C" in their non-CMU economics course; however, have not earned the equivalent of a "B" which would provide credit for a CMU economics course equivalency.

73-060 Economics: BaseCamp

Fall: 3 units
This short course will launch you into the economics intellectual space and get you thinking like an economist. Through a series of presentations by some of CMU's great economics thinkers you will learn how economic reasoning harnessed to data can lead to better policy design and better business decision making. Presentations may cover the economics of bitcoin and crypto-currency, online market design, financial crises, the future of work, how to become involved in economics research, healthcare, the environment, and other topics. The presentations will be curated by one of CMU's research economists and there will be plenty of opportunities for discussion and debate. The course will also introduce you to the CMU approach to economics and map out the CMU economics major landscape.

73-065 Nudging Behavior in Business and Public Policy

Spring: 3 units
This course applies the insights of Behavioral Economics to inform business and policy decisions. A nudge encourages desired behavior by framing the decision or environment such that various cognitive processes and heuristics are engaged in favor of the desired outcome. The use of this branch of social science has been used successfully by the UK and US governments by the Behavioural Insights Team and Social and Behavioral Sciences Team, respectively. Nudges have also been used effectively by the United Nations, via UNICEF, to address and change a variety of behaviors such as gender violence and sanitation practices. In 2016 the Supreme Committee for Delivery and Legacy founded the Qatar Behavioral Insights Unit (QBIU) and it was incorporated as a foundation under the Qatar Financial Center in 2019. This foundation is known as B4Development (B4D) and would be of interest and importance to CMUQ students. One of the partners of B4D is the Qatar Foundation.

73-102 Principles of Microeconomics

Fall and Spring: 9 units
The course is an introduction to microeconomic principles and how to think like an economist. Market and policy outcomes are largely a function of individual decisions. These questions typically take the form: how much and what combination of things should I buy? When do we want businesses to go bust? Should the government fund student tuition? It's my hope that you'll also start to think about everyday questions from an economic lens: why were bicycles so hard to find this past summer? Is Uber surge pricing just a rip-off? Is illegal streaming bad for consumers? Throughout the semester, we will build a toolkit to allow us to understand how these decisions interact and explain market successes, market failures, and the role of government in the marketplace. Toward the end of the semester, we'll change a few underlying assumptions and address a variety of questions related to strategic interaction. Some of the topics we will begin to introduce include credible threats, commitment problems, and the strategic use of information. Not open to students who have received credit for 73-100. While there are no calculus pre-requisites for this course, students are encouraged to enroll in 73-102 after they've passed 21-111. (Lecture, 2 hours; Recitation, 1 hour).

73-103 Principles of Macroeconomics

All Semesters: 9 units
A one-semester course that teaches the fundamentals of macroeconomics. Students will learn how macroeconomic analysis can explain national economic activity and how government intervention might stabilize an economy. Topics include: defining and measuring national wealth, economic growth, credit markets, unemployment, interest rates, inflation, and the monetary system. Additional emphasis will be paid to: long-term economic development, political economy, financial crises and topics that are central to contemporary macroeconomic debates such as the impact of technological change, migration, and trade on the macroeconomy. Students will access macroeconomic databases, and then use basic statistics to describe and isolate empirical patterns in macro-data. Not open to students who have received credit for 73-100. (Lecture, 2 hours; Recitation, 1 hour).
Prerequisites: 73-104 or 73-102

73-104 Principles of Microeconomics Accelerated

Intermittent: 9 units
This course is a rigorous introduction to microeconomic principles and how to think like an economist. The students are expected to have a successful, prior exposure to fundamental concepts and therefore, the course is at a faster pace than its sister course, 73102, and covers additional topics. The questions typically take the form: What is the optimal consumption pattern for me as an individual? What is the profit maximizing pattern of labor and capital goods for a firm? When do we want businesses to go bust? Should the government fund student tuition? How can firms hire the best match for them? Whay kind of informational asymmetries exist in double-sided markets? It's my hope that the students start to think about everyday questions from an economic lens: Why were cars so hard to find during the pandemic? Is Uber surge pricing just a rip-off? Is illegal streaming bad for consumers? Throughout the semester, we will build a toolkit to allow us to understand how these decisions interact and explain market successes, market failures, and the role of the third parties in the marketplace. Some later topics include credible threats, commitment problems, and the strategic use of information. Knowledge of basic calculus as covered in 21-111 would be helpful for the students. Only students with an AP Microeconomics Exam score of 4 or 5 and qualifying IB/Cambridge Economics exam scores are eligible to enroll in this course. Students without exam credit should enroll in 73-102 Principles of Microeconomics.

73-111 Internship I

All Semesters
By permission of the Undergraduate Economics Program.

73-112 Internship II

All Semesters: 3 units
The goal of this course is for you to reflect critically and constructively on your internship and to help you identify a path that will allow you to build on your internship experiences. By permission of the Undergraduate Economics Program. Open only to declared Economics, Economics and Mathematical Sciences, Economics and Politics, and Economics and Statistics majors.

73-113 Internship III

All Semesters: 3 units
The goal of this course is for you to reflect critically and constructively on your internship and to help you identify a path that will allow you to build on your internship experiences. By permission of the Undergraduate Economics Program. Open only to declared Economics, Economics and Mathematical Sciences, Economics and Politics, and Economics and Statistics majors.

73-153 Economics and Society

Intermittent: 9 units
Our society faces several challenges. Climate change, inequality, social justice, AI and technology are among some of the big ones. In this class, we show how economics or the science of incentives can be used to tackle these challenges. We will talk about the tools needed to approach any challenge and talk about unintended consequences of policies that might seem like they should work. We describe the limits and benefits of markets and use these foundations to talk about the main challenges facing our society and how to address them.
Prerequisites: 21-120 or 21-111

73-155 Models, Math, and Markets

Spring: 9 units
The Markets, Models and Math (M3) course is designed to allow students to reflect on the thought processes that drive science, viewed through the lens of economics. While the economics focus will highlight the way economists use data and models to understand the economic phenomena we see in the real world, the course is also designed to add depth of understanding for students who major in some other discipline, for the simple reason that the things economists study touch on all aspects of human existence, whether it is understanding the cost-benefit trade-offs in architectural design, in the engineering of new products or production technologies, or understanding the grand arc of political discourse in history or the way it has shaped our laws.

73-158 Markets, Models, and Math

Spring: 9 units
The Markets, Models and Math (M3) course is designed to allow students to reflect on the thought processes that drive science, viewed through the lens of economics. While the economics focus will highlight the way economists use data and models to understand the economic phenomena we see in the real world, the course is also designed to add depth of understanding for students who major in some other discipline, for the simple reason that the things economists study touch on all aspects of human existence, whether it is understanding the cost-benefit trade-offs in architectural design, in the engineering of new products or production technologies, or understanding the grand arc of political discourse in history or the way it has shaped our laws. The course is also meant to introduce, in an intuitive way, the kinds of mathematical tools and reasoning that economists use, what the economic historian Philip Mirowski has called "the unreasonable efficacy of mathematics in economic analysis".
Prerequisites: 21-111 and 73-102 Min. grade C

73-199 Experiential Learning in Business and Economics

All Semesters: 3 units
Students will collaborate to create an economic newsletter called "Southwestern PA Economy in a Snapshot," a regional version of the well-known national version produced by the New York Fed (https://www.newyorkfed.org/ medialibrary/media/research/snapshot/snapshot_january2021.pdf?la=en). The newsletter will lay the groundwork for a regular online publication produced by Carnegie Mellon Economics, a combination of data analysis/visualization and economic commentary. The ultimate goal is for the newsletter to be a to-go economics document for policy makers and business leaders in Pittsburgh and the surrounding region. Students will use a combination of data science skills, computer programming skills, and a basic knowledge of the relevant economic data. They will produce a professional, co-authored report that will serve as a valuable resume item for future career prospects. They will form small teams, each of which will create an Economic Commentary that uses the newsletter's data to provide analysis of a contemporary economic issue that is important for the Pittsburgh region. During the tenure of the course, students will also acquire new skills in computer programming, data analysis and economics. The course will "contribute. to a broader body of knowledge" by obtaining, organizing and publicizing regional economic data where no such product currently exists. It will "identify and develop skills needed to approach and tackle a practical problem or issue." That is, students will take skills obtained in the single pre-req course (Principles of Macroeconomics) and combine them with skills that almost all 1st year students take in data analysis and produce a professional piece of economic analysis. They will see how their academic education can be applied in way that this useful to business people and policy makers.
Prerequisite: 73-102 Min. grade C

73-230 Intermediate Microeconomics

Fall and Spring: 9 units
This course builds on the Principles of Economics course. It focuses on the following topics: theory of the consumer, theory of the producer, perfectly competitive market equilibrium, imperfect competition, and market failures due to asymmetric information such as adverse selection and moral hazard. (Lecture, 3 hours; Recitation, 1 hour).
Prerequisites: (21-256 or 21-269 or 21-259 or 21-268 or 21-254) and (73-100 or 73-102 or 73-104)

73-240 Intermediate Macroeconomics

Fall and Spring: 9 units
Through macroeconomic models built upon microeconomic foundations, insights are developed into economic growth processes and business cycles. Topics include aggregation and measurement, national income, business cycle measurement, economic welfare theorems and social inefficiencies, the effect of government fiscal policy upon employment and productivity, and the relationship between investment, interest rates and economic growth. (Lecture, 3 hours; Recitation, 1 hour). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (73-100 or 73-102 or 73-104) and 73-103 and (21-259 or 21-254 or 21-256)

73-255 Independent Study in Economics

Fall and Spring
The Independent Study course in economics allows students to pursue their own research interests in any of a variety of topics in economics. A typical independent study course involves a semester long project under the supervision of an appropriate faculty advisor. The nature and scope of the project are determined by the student and faculty advisor; the project proposal must be approved by an Undergraduate Economics Program staff member. Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: 21-120 and 73-160 Min. grade C

73-258 Developing Blockchain Use Case

Intermittent: 6 units
Blockchains, or distributed ledger and consensus technologies, hold tremendous promise for improving markets and organically handling private, secure data. As CMU develops its own blockchain and token and #8212;-CMU Coin and #8212;-a central concern is to determine the set of applications that such technology would be most useful for. This course is designed for students to propose and, potentially, develop applications or use cases for a campus blockchain. http://tinyurl.com/cmucoincourse (http://tinyurl.com/cmucoincourse/) The course begins with a brief introduction to blockchain using Bitcoin as an example of a blockchain protocol. We will examine the market failure Bitcoin was intended to resolve as well as the role of cryptography and distributed systems in enabling this new technology to create societal value. The course will go on to discuss the boundaries of the role of cryptography in blockchain. Next, we will use these tools to evaluate existing, real-world blockchain use cases with an eye towards developing our own applications of these emerging technologies. Along the way, we will learn practical development skills in distributed ledger technologies to understand blockchain programming and application development. Finally, students will propose their own blockchain use cases for CMU's own proprietary blockchain. No formal prerequisites, but familiarity with programming is highly recommended.

73-265 Economics and Data Science

All Semesters: 9 units
This course is at the intersection of economic analysis, computing and statistics. It develops foundational skills in these areas and provides students with hands-on experience in identifying, analyzing and solving real-world data challenges in economics and business. Students will learn the basics of database and data manipulation, how to visualize, present and interpret data related to economic and business activity by employing statistics and statistical analysis, machine learning, visualization techniques. Students will also be taught a programming language suitable for data science/analysis. Databases will include leading economic indicators; emerging market country indicators; bond and equity returns; exchange rates; stock options; education and income by zip code; sales data; innovation diffusion; experimental and survey data and many others. Applications will include analyzing the effectiveness of different Internet pricing strategies on firm sales, the impact of taking online classes on a worker's earnings, the relationship between regional employment and trade policies; constructing investment risk indices for emerging markets; predicting employee productivity with machine learning tools; assessing health (sleep and exercise) improvements associated with wearable technologies (e.g. FitBit). Additionally, the course will provide students with communication skills to effectively describe their findings for technical and non-technical audiences. Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (15-259 or 36-219 or 36-200 or 36-247 or 36-225 or 36-220 or 21-325 or 36-218 or 36-217 or 36-207 or 36-202 or 70-207 or 36-201) and (73-102 or 73-104)

73-274 Econometrics I

Spring: 9 units
Data tools are important in guiding decisions and strategies for individuals, businesses, and policymakers. This course will prepare you for data-driven decision making, providing both theoretical backgrounds and empirical illustrations of the techniques that are necessary to cope with real-world (imperfect) data. Specifically, the course covers tools and methods for estimating economic relationships, testing economic theories, and evaluating business and government policy. This course builds on either of the two Statistical Reasoning courses (36-200/201) and the Economics and Data Science course (73-265), and it sets underpinnings for Econometrics II (73-275) for more advanced tools and insights for business and economics data analyses. Students pursuing the ECOMTH or MTHECO degrees may enroll in 73-274 after the completion of 36-225. Minimum grade of "C" required in all economics and statistics pre-requisite courses.
Prerequisites: (21-254 or 21-256 or 21-259 or 21-269 or 21-268) and 73-265 Min. grade C and (73-230 Min. grade C or 73-240 Min. grade C)

73-315 Market Design

Intermittent: 9 units
In this course, we consider the design of various market mechanisms. We learn the typical causes of market failures and why we need to design new markets. For each topic, we start with a case study of a problem, develop a theory to address it, and consider its possible solutions. The class is roughly divided into three parts: matching, auctions, and further topics. In the first part, we study markets where there is no money and no prices (matching markets). Instead, we have people preferences over possible matching outcomes. Examples include placing doctors in residency positions, assigning students to schools, and assigning kidneys to transplant patients. We will learn algorithms that have desirable theoretical properties and are often used in practice. In the second part, we consider the problem of allocating of single or multiple goods (a house, a painting, or the rights to a natural resource such as oil or timber) using auctions. We discuss how different types of auctions work in theory and practice. We will look at the auctions used in financial markets to sell treasury bills, the auctions used by Google, Microsoft and Facebook to sell advertising, and the auctions used by governments to sell radio spectrum licenses. In the third part, we consider further important topics of market design. We will look into problems of high-frequency trading, digital markets, the allocation of refugees among European countries, and proposals to fix market for carbon pollution permits. An important goal of the course is to show how recent achievements of game theory and mechanism design lead to important practical applications and to inspire you to use these ideas in your life and workplace. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-254 or 21-259 or 21-256 or 21-269 or 21-268) and 73-230 Min. grade C

73-327 Advanced Topics In Macroeconomics And Real Business Cycles

Intermittent: 9 units
For analysts and decision makers in a variety of positions, such as business managers and government policy makers, a thorough understanding of the economy as a whole helps to make well-informed decisions. Examples of important knowledge about the economy are its sources of growth, the main impulses that cause the economy to fluctuate over time and enter into booms and recessions, the way in which these impulses propagate over time, and the state of the economy in general. The main objective of this course is to lay the foundation for such an understanding and present a framework within which we can (and will) evaluate a variety of aggregate phenomena. Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-269 or 21-259 or 21-256) and 73-240 Min. grade C

73-328 Health Economics

Fall: 12 units
This course will teach the student to use economic analysis to understand critical issues in health care and and health policy. We will address issues such as the following: 1. What factors best explain the level and rate of growth of U.S. health expenditures? 2. Does the recent high rate of growth of U.S. health care expenditures make U.S. firms less competitive in international markets? 3. What are some of the likely consequences (intended and unintended) of the proposed reforms to Medicare? 4. Can physicians induce demand for their services? 5. What are the impacts of managed care on the health care system? 6. Do strong affiliations between physicians and health plans hurt competition? (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses. Junior standing required.
Prerequisites: 21-120 and (73-102 or 73-104)

73-332 Political Economy

Spring: 9 units
The Political Economy course looks at how groups within society organize for self-governance. The course will begin with an overview of the ways groups of individuals organize for collective action by examining different types of political institutions, the role these institutions play in different contexts, and the economic and strategic micro-foundations that give rise to these institutions. We will then examine the empirical evidence supporting this taxonomy, leading to a more detailed consideration of institutions that moderate social conflicts. The next part of the course examines basic results in social choice theory: the Condorcet paradox, Arrow's Impossibility Theorem, majority rule, median voter theories, and modern treatments of probabilistic voting models that allow for strategic behavior, misrepresentation of preferences, and policy manipulation. From this basis for understanding collective choice mechanisms, we will then examine how institutions foster cooperation, looking in detail at problems of public goods allocation, redistribution of income, the organization of clubs - interest groups and lobbying associations and #8212;in the private sector, and the organization of legislative activities in the public sector. In our examination of voting and electoral mechanisms, we will look at practical applications of the theory to problems of gerrymandering, voter suppression, and propaganda that feature prominently in contemporary political discourse.
Prerequisites: (73-160 Min. grade C or 73-230 Min. grade C) and (70-207 or 36-201 or 36-200)

73-336 International Energy Market and Sustainable Development

Intermittent: 3 units
This course teaches you about economics of the energy industry by looking at various energy markets. The global energy industry is now more than ever is pressured to be transformed by geopolitical tensions, concerns about climate change, and the mounting pressure for decarbonization. In this course we will discuss how economic decisions in the energy sector can align with principles of sustainability, ensuring that the industry's growth and practices do not compromise the well-being of future generations or harm the planet.

73-337 Business of Blockchain

Intermittent: 9 units
Economics and business strategy is fundamental for the design and development of blockchain use cases. This course will introduce students to foundational economic concepts to help them understand the role cryptocurrencies play in securing blockchains, how different ``tokenomics'' models impact cryptocurrency prices, the different means to create liquidity or resolve illiquidity in decentralized finance (DeFi) applications such as stablecoins, collateralized-lending, yield farming, or automated market making, the roles of Central Bank Digital Currencies, as well as models to evaluate the value-added of blockchain-based versus traditional business propositions. This course may use third-party course material that is not available for individual purchase from the publisher. If so, the third-party course material will be secured and provided by the Tepper School to students enrolled in the course, and students enrolled in the course will be required to pay to the University the associated additional course materials fee for the third-party course material provided. The amount of the course materials fee is dependent on the University's cost of the particular materials provided, and typically ranges from $13 to $75.
Prerequisites: (73-104 or 73-102) and 73-103

73-338 Financial Crises and Risk

Fall: 9 units
This course provides an in-depth examination of the causes of financial crises as well as what governments can do to prevent them or at least reduce their cost. The course is designed to to provide an understanding of individual attitudes towards risk and individual decision making about savings and investment under uncertainty, and to use this understanding to evaluate the various economic roles played by financial institutions in helping individuals manage risk, especially those roles which may lead to economic instability and crises. In addition, the course may cover bubbles and swindles, especially when these spillover to the broader macroeconomy; the role of information in banking in normal times and in bank runs; crisis resolution techniques; and the extensive history of attempts to improve regulation so as to reduce the frequency and cost of crises. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-269 or 21-268 or 21-254 or 21-256 or 21-259) and (73-102 Min. grade C or 73-104 Min. grade C) and 73-240 Min. grade C

73-341 Managing through Incentives

Intermittent: 9 units
We live in an exciting age of information and knowledge when inspiring employees within a firm becomes increasing important. Aligning the objectives of workers, managers, and owners by providing them with appropriate incentives becomes an emerging paradigm in the modern business world. In this course, we learn how to reason about incentives between managers and employees, between managers and owners, and within a team of co-workers. We cover a broad range of topics including objective and subjective performance measurements, relative performance evaluations, relational contracts, and executive compensation. The course relies on business case discussions, rigorous theoretical material, and numerous class activities. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-254 or 21-269 or 21-268 or 21-259 or 21-256) and (36-220 or 36-219 or 36-218 or 36-225 or 36-217 or 36-200 or 36-207 or 36-201 or 36-202 or 70-207) and 73-230 Min. grade C

73-347 Game Theory Applications for Economics and Business

Fall: 9 units
An introduction to the theory of non-cooperative games with an emphasis on economic applications. After an initial examination of two-person, zero-sum games, the notion of a Nash equilibrium in an n-person, non-cooperative game is considered. Existence of and refinements to the equilibrium concept are discussed in the context of both normal and extensive form games. Economic applications may include various topics, including Cournot and Bertrand oligopoly models, general competitive exchange equilibrium, and free rider problems. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.

73-348 Behavioral Economics

Spring: 9 units
This course introduces students to behavioral economics which is a subfield of economics that incorporates insights from other social sciences, such as psychology, into economic models and aims to explain the anomalies challenging some of the classical economic models. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (36-200 or 36-225 or 36-207 or 36-217 or 70-207) and 21-120 and (73-104 Min. grade C or 73-100 Min. grade C or 73-102 Min. grade C)

73-352 Public Economics

Fall: 9 units
In this course, students analyze the role of governments in market economies and their impact on the behavior and welfare of citizens. Reasons for government intervention in markets are examined in light of some of the economic challenges faced by modern societies in an increasingly globalized marketplace. Topics include: taxation and expenditure policies, externalities and market failure, social security, public assistance and income redistribution programs. There will also be some coverage of the role of local governments in the economy with respect to such issues as crime, urban development and education. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-254 or 21-256 or 21-259 or 21-269) and 73-230

73-353 Financial Regulation in the Digital Age

Spring: 9 units
The financial crisis and the digitalization of the financial markets have focused attention on the role of regulation for our financial system and the broader economy in recent years. Among the settings that are especially important in the digital economy are electronic trading, big data, algorithms, robo investing, winner-take-all economics, securities offerings, property rights and cyber assets. The course will address the foundations of regulation ("why regulate?") from various perspectives within a market economy, highlighting the sources of "market failure" (such as externalities, adverse selection, and natural monopoly) and potential remedies (such as disclosure, taxes and fees, antitrust prohibitions, privacy requirements, price regulation and guarantees). The conflicting goals among regulators (and why we have multiple regulators) and their impact on the meaning of regulation will be considered along with regulatory competition/arbitrage. Portions of the course will tackle relatively broad questions such as: Why regulate? Why could it be beneficial to restrict permitted algorithms? Are our markets rigged? How suitable are antitrust remedies in the digital era? What is the law of unintended consequences? What is the objective of a policy advocate? Are regulators and regulatory policies a systemic risk? How can regulators enhance the predictability and credibility of their policies? Should we bar insider trading? Should regulations be determined and motivated based upon cost-benefit analysis? How can we evaluate the success or failure of particular regulations and whether they have achieved their objectives? To what extent did the Dodd-Frank Act ensure financial stability?(Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-254 or 21-259 or 21-269 or 21-268 or 21-256) and 73-230 Min. grade C

73-359 Benefit-Cost Analysis

Intermittent: 9 units
The evaluation of public private sector projects. The theory of benefit-cost analysis and related techniques, such as cost-effectiveness analysis. Attention is given to such issues as valuing goods and services that are not normally traded in the marketplace (e.g., the value of an individuals life) and the social rate of discount. Applications are considered in detail. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (73-104 Min. grade C or 73-102 Min. grade C or 73-100 Min. grade C) and (36-225 or 36-220 or 36-217 or 36-207 or 36-200 or 36-202 or 70-207)

73-365 Firms, Market Structures, and Strategy

Fall: 9 units
This course is concerned with the economic analysis of industrial markets that are not perfectly competitive. The effects of imperfect competition on firms' decisions (pricing, location, advertising, research and development, among others) are reviewed. Implications of these effects in terms of public policy are also discussed from a variety of perspectives. Finally, applications to actual markets are considered. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-259 or 21-254 or 21-268 or 21-269 or 21-256) and 73-230 Min. grade C

73-366 Designing the Digital Economy

Spring: 9 units
This class analyzes the economics of e-commerce and technology. It will identify the critical features that differentiate the technology firms from traditional industries, and examine the implications for business strategy. The class will discuss topics such as network effects, switching costs, and platform markets. To complement the economic theory, we will also consider a case study of a firm each week. These have three aims: to provide applications for the concepts developed in the lectures; to inform you about different industries; and to help develop your written, rhetorical and presentation skills. Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-254 or 21-256 or 21-259 or 21-269 or 21-268) and 73-230 Min. grade C and (73-407 Min. grade C or 73-265 Min. grade C or 73-274 Min. grade C or 73-374 Min. grade C or 70-208 or 36-226 or 36-220 or 36-208 or 36-202)

73-369 Islamic Economics

Intermittent: 9 units
This course is designed to introduce students to the basics of Islamic Finance. The course will start with an analysis of the Shariah rules that define Islamic Finance. Students will then look at the main investment structures and map these against the traditional conventional banking products. The course wraps up with a critique of complex project finance structures through a Shariah compliance lens to identify the gaps between theory and practice.

73-374 Econometrics II

Fall: 9 units
The material covered in this course extends from the material covered in Econometrics I (73-274). The course will include both the theory behind the methods and a hands-on analysis of actual data, providing students the tools for both research and industry jobs. Theories and methodologies covered will include: nonlinear regression models, qualitative response regression models, panel data estimators, simultaneous-equation models, and time series. (Lecture, 3 hours; Recitation, 1 hour). Minimum grade of "C" required in all economics and statistics pre-requisite courses.
Prerequisites: (21-256 or 21-259 or 21-268 or 21-269 or 21-254) and 73-230 and 73-274

73-408 Law and Economics

Intermittent: 9 units
This course will provide a broad overview of the scholarly field known as "law and economics." The focus will be on how legal rules and institutions can correct market failures. We will discuss the economic function of contracts and, when contracts fail or are not feasible, the role of legal remedies to resolve disputes. We will also discuss at some length the choice between encouraging private parties to initiate legal actions to correct externalities and governmental actors, such aas regulatory authorities. Extensive attention will be given to the economics of litigation, and to how private incentives to bring lawsuits differ from the social value of litigation. The economic motive to commit crimes, and the optimal governmental response to crime, will be studied in depth. Specific topics within the preceding broad themes include: the Coase Theorem; the tradeoff between the certainty and severity of punishment; the choice between ex ante and ex post sanctions; negligence versus strict liability; property rules; remedies for breach of contract; and the American rule versus the English rule for allocating litigation costs. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: 21-120 and (73-102 Min. grade C or 73-104 Min. grade C)

73-415 Data Driven Business and Public Policy Decision Making

Intermittent: 9 units
In this course students will learn to leverage data to inform business and policy decisions. The course will teach students various methods for data description, including techniques of data visualization and statistical techniques. Students will learn how to assess the precision of estimation techniques. The final part of the course covers examples taken from epidemiology, economics, business and public policy. (Lecture, 3 hours: Recitation: 1 hour). Minimum grade of "C" required in all economics and statistics pre-requisite courses.
Prerequisites: (21-269 or 21-259 or 21-268 or 21-256) and 73-230 Min. grade C and 73-265 Min. grade C

73-421 Emerging Markets

Fall: 9 units
The goal of the course is to study the economic and institutional forces that spur or hinder business activity and growth in emerging economies. The course is designed to provide both quantitative and theoretical foundations for the study of emerging markets. On the quantitative side, the course will introduce students to the empirical analysis of the growth forces and obstacles facing emerging markets by providing numerous hands-on opportunities using real-world data. On the theory side, the course will provide an overview of fiscal, trade and exchange rate policies adopted in emerging economies. The course will focus on successful emerging economies such as India, China, S. Korea and Ireland with broader lessons and comparisons drawn from developed countries. The course will also look at distressed economies, such as North Korea and Venezuela analyzing the challenges and opportunities faced by these developing nations today. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (36-207 or 70-207 or 36-200 or 36-202 or 15-259) and (73-104 or 73-102) and 73-103

73-423 Forecasting for Economics and Business

Spring: 9 units
Governments forecast economic indicators (e.g., GDP, job growth, etc.); businesses forecast sales; portfolio managers forecast asset return; the list goes on. Accurate forecasts are critical to robust organizational decision-making. This course will introduce students to modern methods for forecasting in economic and business applications. Topics covered include Bayesian, statistical, and online learning approaches to forecast construction and assessment, univariate and multivariate time series models and algorithms, and principled combination of multiple methods and data sources along with subject matter expertise to improve performance. Methods will be motivated by applications in macroeconomics, technology, marketing, and finance, with cases drawn from forecasting processes in a variety of business and government organizations. Students will implement forecasting methods in R, including in a real data forecasting competition.
Prerequisites: (21-268 or 21-259 or 21-269 or 21-254 or 21-256) and (73-230 Min. grade C or 73-240 Min. grade C or 73-274 Min. grade C)

73-427 Sustainability, Energy, and Environmental Economics

Fall: 9 units
Topics related to sustainability and the environment are increasingly important to businesses, policymakers, and the general public. This course applies the tools of economic analysis to the problems of environmental protection, natural resource management, and energy production and use. The course will begin by introducing students to how an economist approaches problems of market failure commonly found in environmental contexts. Next, we will explore models that characterize solutions to such environmental issues. We will then address questions regarding measurement, policy design, and, finally, we will apply the tools that we have developed during the semester to the problems of climate change, and the optimal management of non-renewable resources. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (73-100 or 73-104 or 73-102) and (36-200 or 36-225 or 36-220 or 36-202 or 36-217 or 70-207 or 36-207)

73-436 Applied Projects for Business and Economics

Intermittent: 9 units
The Jewish Healthcare Foundation strives to make aging a joyful experience. With this vision in mind, a team of students will aim to conduct a market analysis in order to provide a report and presentation to the Foundation on areas such as policy, technology and/or infrastructure that counter aging mobility as a limiting factor. This exercise may cover a review of what exists in the aging space globally and/or specifically in the Pittsburgh community. Of note, in this project mobility may be defined broadly including areas such as transportation, physical limitations, use of technology etc.

73-469 Global Electronic Markets: Economics and the Internet

Fall: 9 units
The information revolution brought about by the Internet is having a dramatic impact on the organization of economic activity. Long-term contractual relationships that once governed corporate procurement are being dismantled as manufacturers use the Internet to market directly to the public. New transportation networks that used to simply move goods from point A to point B are evolving into dynamic inventory pipelines that allow manufacturers to track and even reroute shipments in real time. At the same time, individuals are making use of sophisticated search engines to comparison shop at a scale that would have been physically exhausting even five years ago. We will use the basic tools of economic analysis to understand how and why the changes in information technology are reshaping the economic landscape. (Lecture, 3 hours). Minimum grade standard of "C" applies only to economics courses.
Prerequisites: (21-268 or 21-256 or 21-259 or 21-269) and (73-230 Min. grade C or 73-160 Min. grade C)

73-476 American Economic History

Fall: 9 units
The study of economic history provides important perspective on current economic institutions and policies. A failure to understand the historical evolution of economic institutions or the variety of past economic experience is perhaps the worst shortcoming of many economists. The study of economic history provides an opportunity to test currently fashionable theories against data different from those used in their construction. In fact, this is a course in applied economics. The theories developed in the intermediate courses will be applied to episodes from the past in ways that increase understanding both of the specific historical episodes considered and the economic theories employed. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: 21-120 and (73-230 Min. grade C or 73-160 Min. grade C)

73-495 Advanced Independent Study in Economics

All Semesters
The Independent Study course in economics allows the student to pursue his or her own research interests in any of a variety of topics in economics. A typical independent study course involves a semester long project under the supervision of an appropriate faculty advisor. The nature and scope of the project are determined by the student and faculty advisor. Minimum grade standard of "C" applies only to economics courses.
Prerequisites: (21-259 or 21-269 or 21-256 or 21-268) and (73-230 Min. grade C or 73-240 Min. grade C)

Course Website: http://tepper.cmu.edu/prospective-students/course-page/73495/advanced-independent-study-in-economics (http://tepper.cmu.edu/prospective-students/course-page/73495/advanced-independent-study-in-economics/)

73-497 Senior Project

Fall: 12 units
A fourth-year project course, open only to Economics primary and additional majors with Senior standing. The senior project is a capstone course in economics. The purpose of the course is to showcase the analytical and quantitative skills that you have acquired as an undergraduate at Carnegie Mellon. The course project should reflect some independent applied research that is genuinely your own work. Thus a "book report" or a "literature review" are not sufficient exercises to satisfy this requirement. The following research approaches are acceptable for the research project: an empirical study based on a data set that you put together, an experimental study based on an experiment that you conducted, an analysis of survey data based on a survey that you conducted, a theoretical analysis based on a model that you have developed, based on your own algorithm. Students who write an honor thesis are exempted from this class. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-259 or 21-256 or 21-269 or 21-254) and (73-274 or 73-265 or 73-407 or 73-374 or 36-303 or 36-226) and 73-230 and 73-240

73-500 Tepper College Honors Thesis I

Fall and Spring
Economics majors with outstanding academic records and intellectual promise will be given the opportunity to undertake original research under the direction of individual faculty members. Research topics are selected by students and approved by faculty. Prerequisites: Senior standing in the Economics Program and permission of the Economics faculty. Minimum grade of "C" required in all economics and statistics pre-requisite courses.
Prerequisites: (21-254 or 21-269 or 21-259 or 21-268 or 21-256) and (73-265 or 73-274 or 36-226) and 73-230 and 73-240

73-501 Tepper College Honors Thesis II

Fall and Spring
Economics majors with outstanding academic records and intellectual promise will be given the opportunity to undertake original research under the direction of individual faculty members. Research topics are selected by students and approved by faculty. Prerequisites include: Senior standing in the Economics Program and permission of the Economics faculty. Minimum grade of "C" required in all economics and statistics pre-requisite courses, and a minimum grade of "B" required in Tepper College Honors Thesis I.
Prerequisites: (21-254 or 21-269 or 21-259 or 21-268 or 21-256) and 73-230 and 73-240 and 73-500 Min. grade B and (73-374 or 73-265)

Department of English

Andreea Ritivoi, Department Head
Location: Baker Hall 259
https://www.cmu.edu/dietrich/english/

The Department of English at Carnegie Mellon engages students in the important study of reading and writing as intellectual activities embedded in historical, cultural, professional, technological, and literary practices. Working with experts in their areas, students become effective writers and analysts of various kinds of texts in a range of media, from traditional print documents to film, multimedia, and on-line texts. Faculty use distinctive methods of studying texts, but all share a deep commitment to working in small and intense workshops and seminars to help students learn to become experts in analyzing existing texts, and in producing original and distinctive work of their own.

The English Department offers the following degree programs:

- B.A. in Creative Writing
- B.A. in Film & Visual Media
- B.A. in Literature & Culture
- B.A. in Professional Writing
- B.S. in Technical Writing

All five majors are structured to allow students to balance liberal and professional interests. Students in the **Creative Writing program** focus on analyzing and learning to produce poetic and narrative forms. Students in the **Film & Visual Media program** focus on cultural analysis, writing, production, and digital media. Students in the **Literature & Culture program** focus on the production and interpretation of print texts and other media in their social and cultural contexts. Students in the **Professional Writing program** focus on analyzing and producing non-fiction for a variety of professional contexts. Students in the **Technical Writing program** focus on integrating writing with technical expertise in a chosen area of concentration (*Technical Communication* or *Science & Medical Communication*). In addition to the five majors, we offer five departmental minors as well as two interdisciplinary minors, and we strongly encourage non-majors in the campus community to join us in English courses, beginning with offerings at the 200-level.

Students also get involved in a range of complementary activities, including a reading series of distinguished writers of poetry, fiction, and non-fiction; publishing, editing, and marketing through involvement with *The Oakland Review* and The Carnegie Mellon University Press; writing and editorial positions on the student newspaper, *The Tartan*, and other campus publications. We also offer a strong internship program that places student writers in media, non-profit, arts, corporate, and technical internships before they graduate. The end of every year culminates in a gala event to celebrate our students and their writing achievements in literary, academic, and professional writing. For this event, known as the Pauline Adamson Awards, we invite a well-known writer to do a public reading and then present and celebrate student writing awards in over a dozen categories, all judged anonymously by writing professionals from outside the university.

Majoring in English: The Five English Degree Options

The department of English offers students five degree options:

- The B.A. in Creative Writing
- The B.A. in Film & Visual Media
- The B.A. in Literature & Culture
- The B.A. in Professional Writing
- The B.S. in Technical Writing

Students who wish to broaden their experience with English courses may do so by taking more than the minimum requirements for each major or by combining two of the majors within the department for an additional major in English. Common combinations include, but are not limited to, a B.A. in Professional Writing with an additional major in Creative Writing; a B.A. in Creative Writing with an additional major in Literature & Culture; or a B.A. in Literature & Culture with an additional major in Professional Writing. Due to significant course overlap, students are not permitted to major in both Professional Writing and Technical Writing together. Consult the English Department and the section on “Completing an Additional Major in English” (p. 375) for further detail.

All of the English majors may be combined with majors and minors from other Carnegie Mellon departments and colleges. The English Department advisor can help you explore the available options so that you can choose a major or combination of programs that is appropriate for your interests and goals.

How the Curriculum is Structured

In addition to Dietrich College requirements, English majors complete 11 to 13 courses (99 to 117 units) specifically related to their chosen major within English and structured as indicated below. Please note that courses between majors/minors in the Department of English may not double count, with the exception of the Film & Visual Media major, due to its courses being pulled from multiple programs within English. A maximum of two courses may double count between Film & Visual Media and programs inside the Department of English. A maximum of two courses may double count for programs outside of the Department of English.

Core Requirements for the Specific Major (7 to 10 courses, 63 to 84 units)

Complete seven to ten courses.

The Core Requirements differ for each major and are designed explicitly to provide both breadth and depth within the specific major the student has chosen.

English Electives (3 to 4 courses, 27 to 36 units)

Complete three to four elective courses.

Elective Electives for the majors are designed to add breadth to each student’s study within English and to provide experience with the range of approaches to reading and writing available within the department. Students in all English majors are encouraged to sample widely from the Department’s offerings.

The B.A. in Creative Writing

Carnegie Mellon is one of only a few English departments in the country where undergraduates can major in Creative Writing (CW). In the CW major, students develop their talents in writing fiction, poetry, screenwriting, and creative nonfiction. While studying with faculty members who are writers, CW majors read widely in literature, explore the resources of their imaginations, sharpen their critical and verbal skills, and develop a professional attitude toward their writing. The extracurricular writing activities and a variety of writing internships available on and off campus provide Creative Writing majors with valuable experiences for planning their future. After graduation, our Creative Writing majors go on to graduate writing programs and to careers in teaching, publishing, public relations, advertising, TV and film, freelance writing, and editing.

Students in the CW major are required to take two of the introductory genre writing courses: one in the spring of their first year, and one in the fall of their sophomore year. Choices include: 76-260 Introduction to Writing Fiction, 76-261 Introduction to Writing Creative Nonfiction, 76-265 Introduction to Writing Poetry, and 76-269 Introduction to Screenwriting. In order to proceed into the workshop courses, students must do well in these introductory courses (earn a grade of A or B). Creative Writing majors take four workshops in fiction, poetry, screenwriting, or nonfiction where the students’ work is critiqued and evaluated by peers and the faculty. They also take courses in literature, including a Readings in Forms course where they spend a semester reading extensively in one genre.

Opportunities

During their senior year, students may write a Senior Project or Honors Thesis (if they qualify for Dietrich College honors) under the supervision of a faculty member.

Carnegie Mellon also offers CW majors various extracurricular opportunities for professional development, including internships both on- and off-campus. For example, they may work as interns with the Carnegie Mellon University Press, which is housed in the English Department. The Press publishes scholarly works, as well as books of poetry and short stories by both new and established American writers.

Students may help edit and submit their work for publication to The Oakland Review, a Carnegie Mellon University sponsored and student-run annual journal.

Students also have opportunities to read their works in a series of readings by student writers held in the Gladys Schmitt Creative Writing Center (also known as The Glad) and to hear nationally known authors as part of the Carnegie Mellon Visiting Writers series. Additionally, the English Department offers prizes for students each year in the writing of fiction, non-fiction, poetry and screenwriting. Student writers are celebrated during The Adamson Awards ceremony.

Curriculum

In addition to satisfying all of the Dietrich College degree requirements for B.A. candidates, Creative Writing majors must complete 11 courses in the following areas:

Creative Writing Core (7 courses, 63 units)

Introductory Genre Writing Courses* (2 courses, 18 units):

		Units
76-260	Introduction to Writing Fiction	9
76-261	Intro to Writing Creative Nonfiction	9
76-265	Introduction to Writing Poetry	9
76-269	Introduction to Screenwriting	9

* * A student must earn a grade of A or B in the introductory genre writing class in order to be eligible to enroll in a workshop of that same genre. A student who earns a grade of C in an introductory genre writing course may enroll in a related workshop only with the permission of the workshop professor. A student who earns a D or R in Survey of Forms may not take a workshop in that genre.

Reading in Forms (1 course, 9 units):

		Units
76-362	Reading in Forms: Nonfiction	9
76-363	Reading in Forms: Poetry (or Reading in Forms: Poetry)	9
76-364	Reading in Forms: Fiction	9

Four Creative Writing Workshops (4 courses, 36 units)

Complete four Creative Writing workshops, at least two in a single genre. Workshops in all genres may be taken more than once for credit, except for Literary Journalism. Additionally, if a student has been accepted into the Dietrich College Senior Honors Program and is completing their thesis in the field of Creative Writing, they may use one semester of thesis credit (66-501 Dietrich College Senior Honors Thesis I or 66-502 Dietrich College Senior Honors Thesis II) to fulfill a workshop requirement.

		Units
76-360	Literary Journalism Workshop	9
76-365	Beginning Poetry Workshop	9
76-460	Beginning Fiction Workshop	9
76-462	Advanced Fiction Workshop	9
76-465	Advanced Poetry Workshop	9
76-464	Creative Nonfiction Workshop	9
76-469	Screenwriting Workshop	9

English Electives (4 courses, 36 units)

Complete four additional courses from the English Department's offerings. Two of the four English Electives must be courses that are designated as fulfilling the literature requirement and focus on close reading of literary texts. Please consult the list of courses published each semester by the Department for current offerings. English Electives may include any course offered by the Department at the 200 level or above. Additionally, English Electives can include no more than one course at the 200 level. The remaining English Electives must be at the 300 or 400 level. In choosing Electives, students are encouraged to sample courses from across the Department.

Double Counting

Students may double count up to two courses with other programs outside of the Department of English. **NOTE:** courses being used for the Dietrich General Education requirements do not have a double-counting limit.

Transfer Courses

Students may transfer up to two courses from other non-CMU programs/institutions toward the primary or additional major in Creative Writing or the BHA in Creative Writing, with the exception of one of the two required Introductory Genre Writing courses. If the two-course maximum is met, other related transfer courses will be considered for general education requirements and free electives for graduation. Please see the Dietrich College Advanced Standing and Transfer Credit Policy (https://www.cmu.edu/dietrich/advisory-center/scheduling-classes/ap-and-transfer-credit.html) for more information.

Recommended Curriculum Pathway: B.A. in Creative Writing

This plan is the recommended pathway for completing the B.A. in Creative Writing in four years. While it is not required for students to follow this pathway precisely, it is highly recommended for students to do so, and we recommend students begin the major's courses as early as possible. Students in Dietrich College may declare their primary major as early February 1. Students who have not declared their major in the Department of English may still take courses with us.

Students may also view the four-year plan (also known as a Pathway) for the B.A. in Creative Writing via the Stellic Degree Audit Application (https://www.cmu.edu/es/stellic/).

The B.A. in Film & Visual Media

The Film & Visual Media major trains students through a combination of coursework in:

- visual media,
- film history and analysis,
- screenwriting,
- and production of film and other visual media.

This major offers a comprehensive education in film and visual media, from theoretical framing and historical-cultural contextualization to training skills in both creating and analyzing film, as well as the development of a complex blend of creative, professional and technical competencies.

CMU's Department of English is an ideal home for the Film & Visual Media major due to the department's combination of creative writers, film and media studies scholars, film makers, digital humanities and visual communication researchers.

Curriculum

In additional to satisfying all of the Dietrich College degree requirements for B.A. candidates, Film & Visual Media majors must complete 12 courses in the following areas. **Note:** courses cannot double count between areas. For example, if you take 76-429 Introduction to Digital Humanities for the Digital Media area, you cannot also count that course for your Literature & Culture area.

Required introductory courses (2 courses, 18 units)

Course		Units
76-239	Introduction to Film Studies	9
76-259	Film History	9

Production Courses (2 courses, 18-21 units)

Required Course		Units
76-292	Introduction to Film Production *	9

* Students who have completed 76-239 Introduction to Film Studies and/or 76-269 Introduction to Screenwriting will be given registration preference.

Additional Production Course (options include but are not limited to:)		Units
54-191	Acting for Non-Majors	9
60-110	Foundations: Time-Based Media	10
60-125	IDeATe: Introduction to 3D Animation Pipeline	12
60-141	Black and White Photography I	10
60-218	IDeATe Portal: Real-Time Animation	10
60-220	IDeATe: Technical Character Animation	10
60-245	Portrait Photography	10
60-333	IDeATe: Animation Rigging	10
60-415	Advanced ETB: Animation Studio	10
60-416	Advanced ETB: Documentary Storytelling	10
76-374	Mediated Narrative	9
76-481	Introduction to Multimedia Design	12

Screenwriting Courses (2 courses, 18 units)

Required Courses		Units
76-269	Introduction to Screenwriting	9
76-469	Screenwriting Workshop	9

Digital Media Courses (2 courses, 18-20 units)

Options include but are not limited to:		Units
15-104	Introduction to Computing for Creative Practice	10
60-125	IDeATe: Introduction to 3D Animation Pipeline	12
60-142	Digital Photography I	10
60-242	Digital Photography II	10
62-150	IDeATe Portal: Introduction to Media Synthesis and Analysis	10
76-314	Data Stories	9
76-388	Coding for Humanists	9
76-429	Introduction to Digital Humanities	9

Literature & Cultural Studies Courses (2 courses, 18 units)

Course options include but are not limited to the following:

Course		Units
76-203	Literature & Culture in the 18th Century	9
76-207	Special Topics in Literature & Culture	9
76-210	Banned Books	9
76-221	Books You Should Have Read By Now	9
76-232	Introduction to Black Literature	9
76-245	Shakespeare: Tragedies & Histories	9
76-247	Shakespeare: Comedies and Romances	9
76-310	Advanced Studies in Film and Media	9
76-313	Creative Visual Storytelling in Film Production	9
76-314	Data Stories	9
76-337	Intersectional Feminism	9
76-353	Transnational Feminisms: Fiction and Film	9
76-429	Introduction to Digital Humanities	9
76-439	Seminar in Film and Media Studies	9
76-440	Postcolonial Theory: Diaspora and Transnationalism	9
76-448	Shakespeare on Film	9

Topics in Film & Visual Media Studies Courses (2 courses, 18 units)

Course options include but are not limited to the following:

Course		Units
76-312	Crime and Justice in American Film	9
76-339	Topics in Film and Media (Can be taken more than once for credit, provided the course topic is new each time).	9
76-353	Transnational Feminisms: Fiction and Film	9
76-367	Fact Into Film: Translating History into Cinema	9
76-448	Shakespeare on Film	9
76-439	Seminar in Film and Media Studies	9
79-225	West African History in Film	9
79-306	Fact into Film: Translating History into Cinema	9
79-308	Crime and Justice in American Film	9
79-309	The Chinese Revolution Through Film (1949-2000)	9
79-319	India Through Film	6
79-326	Shall We Dance? Culture, Politics, and Movement in the 20th Century	6
79-339	History of Juvenile Delinquency & Juvenile Justice	9
82-215	Arab Culture Through Dialogues, Film, and Literature	9
82-278	Japanese Film and Literature: The Art of Storytelling	9
82-284	Multicultural Pittsburgh: VR Storytelling	6
82-296	From Augustine to Avatars: Personal Narratives Across Media	Var.
82-355	Tpcs in Hispanic Std: Beyond the Film Screen: The Hispanic World Through Film	9

Recommended Courses

While not required, a few courses are recommended as a part of the curriculum. They include:

76-310	Advanced Studies in Film and Media	9
76-323	Text to Screen	9
76-374	Mediated Narrative	9

Double Counting

Students may double count up to two courses with other programs outside of the Department of English. **NOTE:** courses being used for the Dietrich General Education requirements do not have a double-counting limit.

Transfer Courses

Students may transfer up to two advisor-approved courses from other programs outside of Carnegie Mellon University toward the primary or additional major in Film & Visual Media Studies, with the exception of 76-239 Introduction to Film Studies and 76-259 Film History. If the two-course maximum is met, other related transfer courses will be considered for general education requirements and free electives for graduation. Please see the Dietrich College Advanced Standing and Transfer Credit Policy (https://www.cmu.edu/dietrich/advisory-center/scheduling-classes/ap-and-transfer-credit.html) for more information.

Recommended Curriculum Pathway: B.A. in Film & Visual Media

This plan is the recommended pathway for completing the B.A. in Film & Visual Media in four years. While it is not required for students to follow this pathway precisely, it is highly recommended for students to do so, and we recommend students begin the major's courses as early as possible. Students in Dietrich College may declare their primary major as early as February 1. Students who have not declared their major in the Department of English may still take courses with us.

Students may also view the four-year plan (also known as a Pathway) for the B.A. in Film & Visual Media via the Stellic Degree Audit Application (https://www.cmu.edu/es/stellic/).

The B.A. in Literature & Culture

The Literature & Culture Major teaches students how to read, interpret and write persuasively about novels, poems, plays and other imaginative works across a variety of genres and media forms. Along with teaching students the analytical skills and methodological tools to interpret these works, this major teaches the importance of understanding imaginative works within their cultural and historical contexts. In addition, the major is designed to train students in strong professional and academic skills like critical thinking, inductive reasoning and persuasive argumentation that are applicable to other fields of study and a variety of career paths.

Curriculum

In additional to satisfying all of the Dietrich College degree requirements for B.A. candidates, Literature & Culture majors must complete 13 courses in the following areas:

Requirements

13 courses, 117.0 units total

Required Introductory Courses (3 courses, 27 units)

Course		Units
76-26X	Introductory Genre Writing Course (Fiction, Creative Nonfiction, Poetry, or Screenwriting)	9
76-245	Shakespeare: Tragedies & Histories	9
or 76-247	Shakespeare: Comedies and Romances	
76-275	Introduction to Critical Writing	9

200-Level Literature & Culture Courses (2 courses, 18 units)

One course must cover the period of 1830 or before. **NOTE:** a single course cannot double count for both the Required Introductory Courses and the 200-Level Literature & Culture Courses. For example, you cannot count 76-245 Shakespeare: Tragedies & Histories as a *Required Introductory Course* as well as for the *200-Level Literature & Culture Course* for the *1830 or Before* requirement.

Options include but are not limited to:

Courses 1830 or Before		
76-203	Literature & Culture in the 18th Century	9
76-230	Literature & Culture in the 19th Century	9
76-233	Literature and Culture in the Renaissance	9
76-245	Shakespeare: Tragedies & Histories (if not taken as one of the required introductory courses)	9
76-247	Shakespeare: Comedies and Romances (if not taken as one of the required introductory courses)	9

Additonal 200-Level Courses		Units
76-207	Special Topics in Literature & Culture	9
76-236	Major Fiction Then and Now	9
76-278	Japanese Film and Literature: The Art of Storytelling	9
76-282	Disability in Pop Culture	9
76-210	Banned Books	9
76-217	Literature & Culture of the 20th and 21st Century	9
76-221	Books You Should Have Read By Now	9
76-239	Introduction to Film Studies	9
76-241	Introduction to Gender Studies	9
76-242	American Woman Writers	9
76-245	Shakespeare: Tragedies & Histories	9
76-244	Immigrant Fictions	9
76-247	Shakespeare: Comedies and Romances	9
76-259	Film History	9
76-287	Sex & Texts	9

300-Level Literature & Culture Courses (2 Courses, 18 units)

Course options include but are not limited to the following:

Course		Units
76-310	Advanced Studies in Film and Media	9
76-312	Crime and Justice in American Film	9
76-313	Creative Visual Storytelling in Film Production	9
76-314	Data Stories	9
76-317	Contemporary American Fiction	9
76-326	Contemporary Global Literature	9
76-329	Performing Race in Early Modernity	9
76-337	Intersectional Feminism	9
76-339	Topics in Film and Media	9
76-341	Race & Gender in the Age of Jane Austen	9
76-343	Rise of the American Novel	9
76-349	Climate Fictions	9
76-367	Fact Into Film: Translating History into Cinema	9
76-392	Special Topics in Literature & Culture	9

Theory Course (1 course, 9 units)

Course options include but are not limited to the following:

Course		Units
76-337	Intersectional Feminism	9

76-350	Critical Theories about Literature	9
76-376	History of Critical Ideas	9

Rhetoric Course (1 course, 9 units)

Course options include but are not limited to the following:

Course		Units
76-325	Intertextuality	9
76-327	Equity & Communication: Strategies for Institutional Change	9
76-351	Rhetorical Invention	9
76-373	Argument	9
76-384	Race, Nation, and the Enemy	9
76-388	Coding for Humanists	9
76-389	Rhetorical Grammar	9
76-415	Mediated Power and Propaganda	9
76-418	Rhetoric and the Body	9
76-425	Rhetoric, Science, and the Public Sphere	9
76-457	Rhetorical Invention	9
76-473	Rhetoric & the Construction of Race	9
76-476	Rhetoric of Science	9
76-483	Research Methods in Technical & Professional Communication	9
76-492	Rhetoric of Public Policy	9

400-Level Capstone Seminar Course (1 course, 9 units)

Each semester, a 400-level course is designated as the Capstone Seminar. Literature & Culture majors are required to take this course in their final semester. Course options may include but are not limited to the following:

Course		Units
76-408	Culture and Globalization	9
76-410	The Long Eighteenth Century	9
76-423	Transnational Feminisms	9
76-424	Theories of Social Class	9
76-429	Introduction to Digital Humanities	9
76-431	Gender Play in Early Modern Drama	9
76-439	Seminar in Film and Media Studies	9
76-440	Postcolonial Theory: Diaspora and Transnationalism	9
76-445	Milton	9
76-446	Revenge Tragedy	9
76-448	Shakespeare on Film	9
76-450	Law, Culture, and the Humanities	9
76-452	Generations and Culture	9
76-453	Literature of Empire	9
76-467	Crime Fiction and Film	9
76-468	Space and Mobilities	9
76-495	Other People's Words: The History, Theory, and Practice of Interviews	9

English Elective Courses (3 courses, 27 units)

Courses for the English Elective requirement can be fulfilled by choosing any of our 200- to 400-level courses. Students are encouraged to sample courses across our programs.

Double Counting

Students may double count up to two courses with other programs outside of the Department of English. **NOTE:** courses being used for the Dietrich General Education requirements do not have a double-counting limit.

Transfer Courses

Students may transfer up to two advisor-approved courses from other non-CMU programs/institutions toward the primary or additional major in Literature & Culture or the BHA in Literature & Culture, with the exception of the Required Introductory Courses. If the two-course maximum is met, other related transfer courses will be considered for general education requirements and free electives for graduation. Please see the Dietrich College Advanced Standing and Transfer Credit Policy (https://www.cmu.edu/dietrich/advisory-center/scheduling-classes/ap-and-transfer-credit.html) for more information.

Recommended Curriculum Pathway: B.A. in Literature & Culture

This plan is the recommended pathway for completing the B.A. in Literature & Culture in four years. While it is not required for students to follow this pathway precisely, it is highly recommended for students to do so, and we recommend students begin the major's courses as early as possible. Students in Dietrich College may declare their primary major as early as February 1. Students who have not declared their major in the Department of English may still take courses with us.

The B.A. in Professional Writing

Professional Writing (PW) combines a professional education with a strong foundation in rhetorical studies. The major prepares students for successful careers as writers and communications specialists in a range of fields, including but not limited to: editing and publishing, government, law, journalism, the non-profit sector, education, public and media relations, corporate communications, advocacy writing, and the arts.

The PW major includes 13 courses: 10 PW Core Requirements + 3 English Electives. The 10 Core Requirements include foundations courses in genre studies, editing, and argument, a professional seminar, plus a cluster of advanced rhetoric and specialized writing courses, all designed to closely integrate analysis and production. Through special topics courses — journalism, web design, advocacy writing, document design for print, science writing, public relations and corporate communications, writing for multimedia — students can pursue specializations while working with faculty who are both experts and practicing professionals in these fields. The 3-unit professional seminar, 76-300 Professional Seminar, which meets weekly during the fall term, provides majors with the opportunity to meet and network with practicing professionals in a range of communications fields. PW majors also gain experience in working on team- and client-based projects and receive focused support to develop a portfolio of polished writing samples to use in applying for internships and employment. Through English Electives in Rhetoric, Creative Writing, and Literary and Cultural Studies, students gain additional practice in the careful reading, writing, and analysis of both literary and non-fictional texts and important insights into how texts function in their historical and contemporary contexts. As a capstone experience, senior PW majors have the opportunity to complete a Senior Project or, upon invitation from the college, a Senior Honors Thesis in Rhetoric or Professional Writing. PW students can also apply for research grants through the Undergraduate Research Office to work on independent research projects with faculty.

While the major appeals to students with strong professional interests, both core and elective requirements develop the broad intellectual background one expects from a university education and prepare students to either enter the workplace or pursue graduate study in fields as diverse as communications, law, business, and education. PW majors also have the opportunity to apply for the Department's accelerated MA in Professional Writing, the MAPW 4+1, which allows them to complete the degree in 2 semesters instead of the usual 3. Because the major in Professional Writing is deliberately structured as a flexible degree that allows a broad range of options, PW majors should consult closely with their English Department advisors on choosing both elective and required courses and in planning for internships and summer employment.Various opportunities for writers to gain professional experience and accumulate material for their writing portfolios are available through campus publications, department-sponsored internships for academic credit, and writing-related employment on and off campus.

PW majors also have the option of taking writing internships for academic credit during their junior or senior year and are also strongly encouraged to seek professional internships throughout their undergraduate years and during their summers. Opportunities in public and media relations, newspaper and magazine writing, healthcare communication, publishing, technical writing, public service organizations, and writing for the web and new media illustrate both internship possibilities and the kinds of employment that Professional Writing majors have taken after graduation.

Curriculum

In addition to satisfying all of the Dietrich College degree requirements for B.A. candidates, Professional Writing majors must fulfill 13 requirements in the following areas:

Professional Writing Core (10 courses, 84 units)

Departmental Core Requirement (1 courses, 9 units):

Introductory Genre Writing Course		
76-260	Introduction to Writing Fiction	9
76-261	Intro to Writing Creative Nonfiction	9
76-265	Introduction to Writing Poetry	9
76-269	Introduction to Screenwriting	9

Professional Writing Core Requirements (4 courses, 30 units):

76-271	Introduction to Professional and Technical Writing	9
76-300	Professional Seminar	3
76-373	Argument	9
76-390	Style	9

Rhetoric/Language Studies Requirement (1 course, 9 units):

Complete one course from a set of varied offerings in Rhetoric/Language Studies as designated each term by the English Department. These courses focus explicitly on language and discourse as objects of study and emphasize the relationships of language, text structure, and meaning within specific contexts. Courses include but are not limited to the following:

Course		Units
76-301	Internship	Var.
76-319	Environmental Rhetoric	9
76-325	Intertextuality	9
76-327	Equity & Communication: Strategies for Institutional Change	9
76-351	Rhetorical Invention	9
76-360	Literary Journalism Workshop	9
76-384	Race, Nation, and the Enemy	9
76-389	Rhetorical Grammar	9
76-415	Mediated Power and Propaganda	9
76-476	Rhetoric of Science	9

Advanced Writing/Rhetoric Courses (4 courses, 36-42 units):

Complete four courses from a set of varied offerings in Advanced Writing/ Rhetoric as designated each term by the English Department. Options include all courses that fulfill the Rhetoric requirement, plus additional courses in specialized areas of professional writing. Students should select courses in consultation with their English Department advisor or the Director of Professional Writing. Courses include but are not limited to the following:

		Units
76-301	Internship	Var.
76-302	Communication Support Tutoring Practicum	6
76-314	Data Stories	9
76-319	Environmental Rhetoric	9
76-351	Rhetorical Invention	9
76-354	Watchdog Journalism	9
76-360	Literary Journalism Workshop	9
76-372	News Writing	9
76-380	Methods in Humanities Analytics	9
76-388	Coding for Humanists	9
76-389	Rhetorical Grammar	9
76-391	Document & Information Design	9
76-395	Science Writing	9
76-415	Mediated Power and Propaganda	9
76-418	Rhetoric and the Body	9
76-425	Rhetoric, Science, and the Public Sphere	9
76-457	Rhetorical Invention	9
76-464	Creative Nonfiction Workshop	9
76-474	Software Documentation	9
76-475	Law, Performance, and Identity	9
76-476	Rhetoric of Science	9
76-481	Introduction to Multimedia Design	12
76-484	Discourse Analysis	9
76-492	Rhetoric of Public Policy	9
76-487	Information Architecture & Content Design (formerly titled Web Design)	
76-494	Healthcare Communications	9
76-496	Research Methods in Rhetoric & Writing Studies (instructor permission required)	9

English Electives (3 Courses, 27 Units)

Complete three courses from any of English Department's offerings (exceptions include 76-270, which is designed for non-majors). One may be at the 200-level or above; the remaining two must be at the 300- or 400-level. Two must be courses designated as Text/Context Electives, which focus on the relationship between texts and their cultural and historical contexts.

Double Counting

Students may double count up to two courses with other programs outside of the Department of English. **Note:** courses being used for the Dietrich General Education requirements do not have a double-counting limit.

Transfer Courses

Students may transfer up to two advisor-approved courses from other non-CMU programs/institutions toward the primary or additional major in Professional Writing or the BHA in Professional Writing, with the exception of the *Departmental Core Requirement* course and the *Professional Writing Core Requirement* courses. If the two-course maximum is met, other related transfer courses will be considered for general education requirements and free electives for graduation.. Please see the Dietrich College Advanced Standing and Transfer Credit Policy (https://www.cmu.edu/dietrich/advisory-center/scheduling-classes/ap-and-transfer-credit.html) for more information.

Recommended Curriculum Pathway: B.A. in Professional Writing

This plan is the recommended pathway for completing the B.A. in Professional Writing in four years. While it is not required for students to follow this pathway precisely, it is highly recommended for students to do so, and we recommend students begin the major's courses as early as possible. Students in Dietrich College may declare their primary major as early as February 1. Students who have not declared their major in the Department of English may still take courses with us.

Students may also view the four-year plan (also known as a Pathway) for the B.A. in Professional Writing via the Stellic Degree Audit Application (https://www.cmu.edu/es/stellic/).

The B.S. in Technical Writing

The B.S. in Technical Writing (TW) is one of the oldest undergraduate technical communication degrees in the country with a history that stretches back to 1958. The degree is specifically designed to prepare students for successful careers involving scientific, technical, and computer-related communication, including writing and designing for digital media.

Today's technical communicators have the strong backgrounds in technology, communication, and design needed to enter a broad range of information-based fields, and do work that both includes and goes well beyond writing documents for print distribution. The expanding range of options includes positions that involve organizing, managing, communicating, and facilitating the use of both technical and non-technical information in a range of fields and media.

Technical communicators develop and design web sites, explain science and technology to the public, develop print and multimedia materials, develop information management systems, design and deliver corporate training, and develop support systems for consumer products ranging from software for word processing or personal finances to complex data management systems.

The B.S. in TW recognizes the important changes taking place in communication-based careers and includes two distinctive “tracks,” one in Technical Communication (TC) and one in Scientific and Medical Communication (SMC). Both tracks begin with a common core of foundation courses in print and on-line communication as well as a shared set of prerequisites in math, statistics, and computer programming. The two tracks differ in the set of theory/specialization courses beyond the core, with each track including a specialized set appropriate to its focus.

In both tracks, TW students work on real projects for actual clients, learn group interaction and management skills, and develop a flexible repertoire of skills and strategies to keep up with advances in software and technology. Above all, they focus on developing structures and information strategies to solve a broad range of communication and information design problems.

TW students are able to draw on exceptional resources on and off campus to enhance their education. Most obvious are the course offerings of Carnegie Institute of Technology, the Mellon College of Science, and the School of Computer Science. Additional course offerings in business, organizational behavior, policy and management, psychology, history, and design are also encouraged. As a capstone experience, Seniors have the opportunity to complete a Senior Project or, upon invitation from the college, a Senior Honors Thesis. TW students can also apply for grants and fellowship through the Undergraduate Research Office to work on independent research projects with faculty.

While the major appeals to students with strong professional interests, both core and elective requirements develop the broad intellectual background one expects from a university education and prepare students to either enter the workplace upon graduation or pursue graduate study in fields as diverse as communications, business, instructional design, information design, education, and science and healthcare writing.

Various opportunities for writers to gain professional experience are available through campus publications, department-sponsored internships for academic credit, and writing-related employment on and off campus. TW students have the option of doing internships for academic credit during their junior or senior year and are encouraged to pursue a series of internships throughout their 4 years and during their summers.

All TW students are required to enroll in the English Department's 3-unit course, Professional Seminar (76-300), which meets once a week during the fall term and provides majors with the opportunity to meet and network with practicing professionals in a range of communications fields.

The Technical Communication (TC) Track

The Technical Communication track (TC) prepares students for careers in the rapidly changing areas of software and digital media. Students learn the fundamentals of visual, verbal, and on-line communication as well as the technical skills needed to design, communicate, and evaluate complex communication systems and to manage the interdisciplinary teams needed to develop them. Students become fluent in both print-based and electronic media across a variety of information genres and learn to design information for a range of specialist and non-expert audiences. The TW/TC major can be pursued as a primary major within Dietrich College or as an additional major for students in other Colleges with an interest in combining their specialized subject matter knowledge with strong writing and communications skills. Graduates of this track are likely to follow in the footsteps of previous TW students from Carnegie Mellon who are currently employed as web designers, information specialists, technical writers, and information consultants in a range of technology and communication-based organizations including Salesforce, IBM, Oracle, Microsoft, Apple, and HP Vertica.

The Scientific and Medical Communication (SMC) Track

The Scientific and Medical Communication track (SMC) is designed for students who seek careers that focus on communication and information design problems in health, science, and medicine. It should appeal to students with interests in the health care professions, science and public policy, patient education, scientific journalism and related fields. Like the TC track, the SMC track is designed to provide both the technical and the communication skills needed to analyze and solve complex communication problems. Students learn the fundamentals of visual, verbal, and on-line communication as well as the technical skills needed to design, communicate, and evaluate complex information systems and to manage the interdisciplinary teams needed to develop them. Students become fluent in both print-based and electronic media across a variety of information genres and learn to design information for a range of specialist and non-expert audiences The TW/SMC major can be pursued as a primary major within Dietrich College or as a secondary major for students in other Colleges, such as MCS, with an interest in science or medicine.

Curriculum

All Technical Writing majors must satisfy the Dietrich College requirements for the B.S. degree, and a set of 3 to 4 prerequisite courses in calculus, statistics, and computer science. All prerequisites should be completed by the beginning of the fall semester, junior year. Prerequisites may double count toward Dietrich College Requirements or requirements for other majors or minors.

Mathematics Prerequisite (1 course, 10 units):

Complete one of the following:		Units
21-111	Calculus I	10
21-112	Calculus II	10
21-120	Differential and Integral Calculus	10
21-127	Concepts of Mathematics	12

Statistics Prerequisite (1 course, 9 units):

36-200	Reasoning with Data	9

Computer Science Prerequisites (1 - 2 courses*, 10 - 22 units):

Students in the Technical Communication track must complete two required Computer Science courses:		Units
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12

Students in the Scientific and Medical Communication track complete one required Computer Science course:		Units
15-110	Principles of Computing	10

15-110 Principles of Computing is designed for students with little or no prior programming experience and is appropriate for students in both the SMC and TC tracks. 15-112 Fundamentals of Programming and Computer Science prepares students in the TC track for all other advanced Computer Science courses.

Beyond these prerequisites, students in both TC and SMC tracks take a common set of 5 TW Core Requirements in writing, communication, and information design. To complement these foundations courses, TW students take a set of 3 Theory/Specialization courses specific to either TC or SMC. In addition, students in the SMC track take a series of 3 courses in the natural sciences or engineering relevant to their areas of interest, while TC students take 3 electives in management, technology, and social issues.

DEPARTMENTAL CORE REQUIREMENT (1 COURSE, 9 UNITS):

Introductory Genre Writing Course		
76-260	Introduction to Writing Fiction	9
76-261	Intro to Writing Creative Nonfiction	9
76-265	Introduction to Writing Poetry	9
76-269	Introduction to Screenwriting	9

TW Core Requirements (5 courses, 45 units):

76-271	Introduction to Professional and Technical Writing	9
76-300	Professional Seminar	3
76-390	Style	9
76-391	Document & Information Design *	9
76-487	Information Architecture & Content Strategy	9
76-488	Information Architecture & Content Strategy Lab	3

* prerequisite = 76-271 Introduction to Professional and Technical Writing
**prerequisite = 76-271 Introduction to Professional and Technical Writing + 76-391 Document & Information Design

Theory/Specialization Courses (3 courses, 27 units):

Complete 3 courses to deepen your area of specialty and complement your chosen track (TC or SMC) in the major. One must be chosen from among courses designated as Recommended Options for TW majors. Theory/Specialization courses, including those marked as Recommended Options, are advertised by the English Department on a semester-by-semester basis. TW students should select courses in consultation with their academic advisor.

Recommended courses include but are not limited to the following:		Units
76-319	Environmental Rhetoric	9
76-395	Science Writing	9
76-425	Rhetoric, Science, and the Public Sphere	9
76-474	Software Documentation	9
76-476	Rhetoric of Science	9
76-481	Introduction to Multimedia Design *	12
76-491	Rhetorical Analysis	9
76-494	Healthcare Communications	9

Additional Options include but are not limited to the following:		Units
76-301	Internship	Var.
76-302	Communication Support Tutoring Practicum	6
76-318	Communicating in the Global Marketplace	9
76-319	Environmental Rhetoric	9
76-325	Intertextuality	9
76-351	Rhetorical Invention	9
76-360	Literary Journalism Workshop	9
76-372	News Writing	9
76-389	Rhetorical Grammar	9
76-395	Science Writing	9
76-425	Rhetoric, Science, and the Public Sphere	9
76-474	Software Documentation	9
76-475	Law, Performance, and Identity	9
76-476	Rhetoric of Science	9
76-481	Introduction to Multimedia Design	12
76-484	Discourse Analysis	9
39-605	Engineering Design Projects	12

Electives (3 courses, 27 units):

TW majors take 3 courses outside of English to deepen their area of specialty in their track. Typically, students in the Technical Communication (TC) track select courses that focus on management, technology, and social issues. Students in the Science and Medical Communication (SMC) track select courses in the natural sciences, engineering, statistics or (for example) healthcare-related courses in the Heinz College. (https://www.heinz.cmu.edu/) Students should work with their academic advisor and the Program Director to select courses that are meaningful for their track.

Double Counting

Students may double count up to two courses with other programs outside of the Department of English. **NOTE:** courses being used for the Dietrich General Education requirements do not have a double-counting limit. Also, the *Mathematics* and *Computer Science* prerequisite requirement courses for the Technical Writing major do not have a double-counting limit, nor do the Electives required for each specific track (TC track or SMC track).

Transfer Courses

Students may transfer up to two advisor-approved courses from other non-CMU programs/institutions toward the primary or additional major in Creative Writing or the BHA in Technical Writing, with the exception of the *Introductory Genre Writing Course* and *Technical Writing Core Requirement Courses*. If the two-course maximum is met, other related transfer courses will be considered for general education requirements and free electives for graduation. Please see the Dietrich College Advanced Standing and Transfer

Credit Policy (https://www.cmu.edu/dietrich/advisory-center/scheduling-classes/ap-and-transfer-credit.html) for more information.

Recommended Curriculum Pathway: B.S. in Technical Writing

This plan is the recommended pathway for completing the B.S. in Technical Writing in four years. While it is not required for students to follow this pathway precisely, it is highly recommended for students to do so, and we recommend students begin the major's courses as early as possible. Students in Dietrich College may declare their primary major as early as February 1. Students who have not declared their major in the Department of English may still take courses with us.

Students may also view the four-year plan (also known as a Pathway) for the B.S. in Technical Writing via the Stellic Degree Audit Application (https://www.cmu.edu/es/stellic/).

			Free Elective

*These courses must be taken in the sequence indicated. 76-271 is offered all semesters and therefore can be taken fall or spring of sophomore year. 76-271 is a prerequisite for 76-391, and 76-271 + 76-391 are the prerequisites for 76-487 and 76-488. 76-391 is typically only offered in the fall semesters, and 76-487 and 76-488 are typically only offered in spring semesters.

Completing an Additional Major in English

For Students with a Primary Major in the English Department

Students with a primary major in the English Department who have interests that include more than one of the department's majors have the option of completing an additional major within the department. Students may combine any of the departmental majors with one another, with the exception of Professional Writing and Technical Writing. Students may not combine these two majors because so many of the courses overlap.

Students with a primary major in the English Department and one or more additional majors in the English Department must fulfill the Core Requirements for each of those majors. The Survey of Forms requirement, common to all 5 majors, needs to be taken only once, with the exception of Creative Writing, which requires two Survey of Forms courses. For the English Department majors that require English Electives, students must complete the number of English Electives required by the major with the higher number of Electives. For example, a student with a primary major in Creative Writing and an additional major in Professional Writing would take 4 English Electives, as Creative Writing requires 4 English Electives, and Professional Writing requires only 3 English Electives.

Because students are only required to take a minimum of one Introductory Genre Writing course, with the exception of Creative Writing, which requires two Introductory Genre Writing courses, as well as the number of English Electives that is greater between the primary and additional major(s), students can generally add an additional major within the English Department by completing 6 to 9 additional courses.

Because sequencing of courses can become an issue when doing multiple majors, students are strongly advised to consult closely with the English Department academic advisor about the sequence of their courses. The English Department academic advisor can also provide students with documents that clearly outline the requirements for additional majors based on their primary majors within the Department.

For Students with a Primary Major Outside of the English Department

Students in other departments who wish to complete an additional major in the English Department should contact the English Department's academic advisor. Additional majors in the five English programs are required to complete all requirements for the chosen major. The English Department will allow a maximum of two courses from the additional major to double count with the primary major requirements. (The types of courses that apply to this policy are predetermined by the Department of English. See the English Academic Advisor for more details.) The only exceptions to this rule are the Technical Communication Electives for the *Technical Communication* concentration in the Technical Writing major and the Natural Science and Engineering Electives for the *Science & Medical Communication* concentration in the Technical Writing major. All of those electives may double count with programs outside of the English Department. In planning schedules for an additional major, it is critically important that students consult with academic advisors in both departments in which they are majoring to be sure that all requirements for graduation can be met.

Transfer Courses for Additional Majors

The transfer course policy for additional majors is the same of that for primary majors. Please see the Transfer Courses section for the degree that aligns with your additional major. For example: If you have an additional major in Creative Writing, you will consult the Transfer Courses section for the B.A. in Creative Writing.

Minor in English

The English Department also offers minors in **Creative Writing, Humanities Analytics, Literature & Culture, Professional Writing,** and **Technical Writing**. We also house two Dietrich College interdisciplinary minors in **Film and Media Studies** and **Gender Studies** **(p. 541).** All of these minors are available to all undergraduate students, including English majors.

Double Counting

Students who have a minor in English *as well as* a primary and/or an additional major in English may not double count any English courses with that minor. (Please see the separate double counting rules for the interdisciplinary minors in Film and Media Studies and Gender Studies.) Otherwise, up to two courses from the minor may double count with programs outside of the English Department. Courses that meet the various requirements are advertised on a semester-by-semester basis. Full descriptions are available each semester on the Department's Courses (https://www.cmu.edu/dietrich/english/courses/) web page.

Transfer Courses

Students may transfer in a maximum of one advisor-approved course from an institution outside of Carnegie Mellon University, **with the exception of the following courses**, to count toward a minor:

- Creative Writing: 76-26x Introductory Genre Writing Course
- Humanities Analytics: 76-275 Introduction to Critical Writing and 76-380 Methods in Humanities Analytics
- Film & Visual Media: 76-239 Introduction to Film Studies and 76-310 Advanced Studies in Film and Media
- Literature & Culture: 76-26x Introductory Genre Writing Course and 76-275 Introduction to Critical Writing
- Professional Writing: *Required Intro Course* and the *Core Writing Courses*
- Technical Writing: *Required Intro Course* and the *Core Writing Courses*

Courses that meet the various requirements are advertised on a semester-by-semester basis. Full descriptions are available each semester on the Department's Courses (https://www.cmu.edu/dietrich/english/courses/) web page.

Creative Writing Minor

Complete 6 courses and a minimum of 54 units, which includes First-Year Writing.

Course		Units
First-Year Writing *		9
One Introductory Genre Writing Course †		9
76-xxx	Two 300/400 level Fiction, Poetry, and/or Screenwriting Workshop Classes	18
76-3xx	One Reading in Forms Course	9
76-2xx	One 200-level or above English Elective	9

* Course options include 76-101, 76-102, [76-106 and 76-107], [76-106 and 76-108], or [76-107 and 76-108].

\+ A student must earn a grade of A or B in the Introductory Genre Writing course in order to be eligible to enroll in a workshop of that same genre. A student who earns a grade of C in an Introductory Genre Writing course may enroll in a related workshop only with the permission of his/her/their workshop professor. A student who earns a D or R in an Introductory Genre Writing course may not take a workshop in that same genre.

† Course options include 76-260, 76-261, 76-265, and 76-269.

Humanities Analytics Minor

Tech CEOs and data scientists are increasingly calling for employees with more exposure to the humanities.

At the same time, the human experience that is traditionally at the core of a humanities education is being dramatically transformed by the emergence of big data, digital platforms, computational thinking, and digital connectivity.

Spurred by such developments, the minor in Humanities Analytics (HumAn) trains students in the processes involved in analyzing, digitizing, questioning, quantifying, and visualizing different types of humanities and cultural phenomena, such as printed books, fan fiction, manuscripts, historical records, art, music, and film.

The minor is open to students across multiple colleges and degree programs and enriches their education in distinct ways that complement their primary majors. For example, students with a primary major in a humanities or social science department will learn the foundational methods used in the computational analysis of text. Students with a primary major in a non-humanities field will use technology as a lens into cultural history and will develop skills for making humanities knowledge visible and appealing. The minor bridges divides not only between the "digital/technological" and the "humanistic," but also between the qualitative and quantitative, between theory and application, and between critiquing and making.

HumAn prepares students for careers in:

- Technology
- Data Science
- Data Journalism
- Cultural Commentary
- Natural Language Processing
- Professional Writing
- Publishing
- Museums
- Libraries
- Academia

Curriculum

Required Courses — 6 courses, 54 units minimum

Required Courses		Units
76-275	Introduction to Critical Writing	9
76-380	Methods in Humanities Analytics	9

Two core courses from the following list:		Units
76-314	Data Stories	9
76-388	Coding for Humanists	9
76-425	Rhetoric, Science, and the Public Sphere	9
76-429	Introduction to Digital Humanities	9
88-275	Bubbles: Data Science for Human Minds	9
88-300	Programming and Data Analysis for Social Scientists	9

Electives — 2 courses, 15-24 units

Choose two courses from the following categories. One course must come from List A, and one from List B. Additional courses not on List A or List B may also be approved as electives; please speak with the English Department academic advisor for more information.

List A

Course Number & Title		Units
05-391	Designing Human Centered Software	12
05-434/11-344	Machine Learning in Practice	12
11-411	Natural Language Processing	12
11-441/741	Machine Learning with Graphs [1]	9
15-104	Introduction to Computing for Creative Practice	10
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
16-223	IDeATe Portal: Creative Kinetic Systems	10
16-385	Computer Vision	12
17-340	Green Computing	9
17-450	Crafting Software	12
17-562	Law of Computer Technology	9
18-090	Twisted Signals: Multimedia Processing for the Arts	10
36-202	Methods for Statistics & Data Science	9
36-204	Discovering the Data Universe	3
36-226	Introduction to Statistical Inference	9
36-311	Statistical Analysis of Networks	9
36-315	Statistical Graphics and Visualization [2]	9
36-350	Statistical Computing [2]	9
36-462	Special Topics: Statistical Machine Learning	9
48-095	Spatial Concepts for Non-Architecture Majors	Var.
48-120	Digital Media I	6
51-229	Digital Photographic Imaging	9
53-451	Research Issues in Game Development: Designing for XR	12
60/62-142	Digital Photography I	10
62-150	IDeATe Portal: Introduction to Media Synthesis and Analysis	10

[1] Course is very mathematical and is therefore appropriate only to students with such a preparation.

[2] This course has prerequisites.

List B

Course Number & Title		Units
76-210	Banned Books	9
76-245	Shakespeare: Tragedies & Histories	9
76-247	Shakespeare: Comedies and Romances	9
76-325	Intertextuality	9
76-373	Argument	9
76-385	Introduction to Discourse Analysis	9
76-476	Rhetoric of Science	9
76-491	Rhetorical Analysis	9
79-200	Introduction to Historical Research & Writing	9
79-234	Technology and Society	9
80-180	Nature of Language: An Introduction to Linguistics	9
80-280	Linguistic Analysis	9
80-381	Meaning in Language	9
80-383	Language in Use	9
82-282	Interpreting Global Texts & Cultures	Var.
82-283	Language Diversity & Cultural Identity	9
82-383	Second Language Acquisition: Theories and Research	9
82-480	Translation Technologies	9

Literature & Culture Minor

Complete 6 courses and a minimum of 54 units, including First-Year Writing as a prerequisite.

Curriculum

Required Courses 6 courses, 54 units

Two Introductory Courses		Units
76-275	Introduction to Critical Writing	9
76-26x	Introductory Genre Writing Course (Fiction, Creative Nonfiction, Poetry, or Screenwriting)	9
		18

200-Level Literature & Culture Courses (2 courses, 18 units)

One course must cover the period of 1830 or before. For example, Course options include but are not limited to the following:

Courses for 1830 or Before		Units
76-203	Literature & Culture in the 18th Century	9
76-230	Literature & Culture in the 19th Century	9
76-233	Literature and Culture in the Renaissance	9
76-245	Shakespeare: Tragedies & Histories	9
76-247	Shakespeare: Comedies and Romances	9

Courses include but are not limited to:		Units
76-203	Literature & Culture in the 18th Century	9
76-207	Special Topics in Literature & Culture	9
76-210	Banned Books	9
76-217	Literature & Culture of the 20th and 21st Century	9
76-221	Books You Should Have Read By Now	9
76-230	Literature & Culture in the 19th Century	9
76-232	Introduction to Black Literature	9
76-233	Literature and Culture in the Renaissance	9
76-239	Introduction to Film Studies	9
76-290	Literature & Culture in the 20th Century	9
76-241	Introduction to Gender Studies	9
76-245	Shakespeare: Tragedies & Histories (if not taken for pre-1830 requirement)	9
76-247	Shakespeare: Comedies and Romances (if not taken for pre-1830 requirement)	9
76-259	Film History	9
76-287	Sex & Texts	9

300- or 400-Level Literature & Culture or Theory Courses (2 Courses, 18 units)

Course options include but are not limited to the following:

Courses include but are not limited to:		Units
76-310	Advanced Studies in Film and Media	9
76-313	Creative Visual Storytelling in Film Production	9
76-314	Data Stories	9
76-315	19th Century American Literature	9
76-317	Contemporary American Fiction	9
76-326	Contemporary Global Literature	9
76-329	Performing Race in Early Modernity	9
76-337	Intersectional Feminism	9
76-339	Topics in Film and Media	9
76-343	Rise of the American Novel	9
76-350	Critical Theories about Literature	9
76-353	Transnational Feminisms: Fiction and Film	9
76-367	Fact Into Film: Translating History into Cinema	9
76-429	Introduction to Digital Humanities	9
76-439	Seminar in Film and Media Studies	9
76-440	Postcolonial Theory: Diaspora and Transnationalism	9
76-445	Milton	9
76-448	Shakespeare on Film	9
76-452	Generations and Culture	9
76-453	Literature of Empire	9
76-454	Rise of the Blockbuster	9
76-467	Crime Fiction and Film	9

Professional Writing Minor

Complete 6 courses and a minimum of 54 units.

Required Intro Course		Units
76-270	Writing for the Professions	9
or 76-271	Introduction to Professional and Technical Writing	

Two 200- or 300-Level Core Writing Courses		Units
76-26x	Introductory Genre Writing Course (Fiction, Creative Nonfiction, Poetry, or Screenwriting)	9
76-373	Argument	9
76-389	Rhetorical Grammar	9
76-390	Style	9

Two 300- or 400-Level Writing Courses (18 units minimum)		Units
76-306	Editing and Publishing (requires instructor permission)	Var.
76-308	Literary Journal Publishing	Var.
76-314	Data Stories	9
76-318	Communicating in the Global Marketplace	9
76-325	Intertextuality	9
76-351	Rhetorical Invention	9
76-354	Watchdog Journalism	9
76-360	Literary Journalism Workshop	9
76-372	News Writing	9
76-384	Race, Nation, and the Enemy	9
76-388	Coding for Humanists	9
76-391	Document & Information Design	9
76-395	Science Writing	9
76-397	Instructional Text Design	9
76-415	Mediated Power and Propaganda	9
76-418	Rhetoric and the Body	9
76-425	Rhetoric, Science, and the Public Sphere	9
76-457	Rhetorical Invention	9
76-474	Software Documentation	9
76-475	Law, Performance, and Identity	9
76-476	Rhetoric of Science	9
76-481	Introduction to Multimedia Design	12
76-484	Discourse Analysis	9
76-487	Information Architecture & Content Strategy	9

76-488	Information Architecture & Content Strategy Lab	3
76-492	Rhetoric of Public Policy	9
76-494	Healthcare Communications	9
76-496	Research Methods in Rhetoric & Writing Studies (requires instructor permission)	9

One 200-Level or Above English Elective	Units
Students may choose from the Department's listings. Please contact the academic advisor for more information.	9

Technical Writing Minor

Complete 6 courses and a minimum of 54 units.

Required Intro Course		Units
76-270	Writing for the Professions	9
or 76-271	Introduction to Professional and Technical Writing	

Two 200- or 300-Level Core Writing Courses		Units
76-373	Argument	9
76-389	Rhetorical Grammar	9
76-390	Style	9
76-391	Document & Information Design	9

Two 300- or 400-Level Theory/Specialization Courses (18 units minimum)		Units
76-301	Internship (requires department approval)	Var.
76-302	Communication Support Tutoring Practicum	Var.
76-314	Data Stories	9
76-318	Communicating in the Global Marketplace	9
76-380	Methods in Humanities Analytics	9
76-395	Science Writing	9
76-397	Instructional Text Design	9
76-474	Software Documentation	9
76-476	Rhetoric of Science	9
76-481	Introduction to Multimedia Design	12
76-483	Research Methods in Technical & Professional Communication	9
76-487	Information Architecture & Content Strategy	9
76-488	Information Architecture & Content Strategy Lab	3
76-496	Research Methods in Rhetoric & Writing Studies (requires instructor approval)	9

Additional 300- or 400-Level Theory/Specialization Course		Units
In addition to any of the courses above that have not already been taken, courses include but are not limited to:		
76-306	Editing and Publishing (requires instructor approval)	Var.
76-318	Communicating in the Global Marketplace	9
76-325	Intertextuality	9
76-354	Watchdog Journalism	9
76-360	Literary Journalism Workshop	9
76-372	News Writing	9
76-384	Race, Nation, and the Enemy	9
76-389	Rhetorical Grammar	9
76-415	Mediated Power and Propaganda	9
76-418	Rhetoric and the Body	9
76-457	Rhetorical Invention	9
76-464	Creative Nonfiction Workshop	9
76-475	Law, Performance, and Identity	9
76-492	Rhetoric of Public Policy	9
76-494	Healthcare Communications	9

Senior Honors Thesis

Seniors in all five majors in the Department of English who meet the necessary requirements are invited by the College of Humanities and Social Sciences (Dietrich College) to propose and complete a Senior Honors Thesis during their final year of study. The thesis may focus on research and/or original production in any of the areas offered as a major within the Department. To qualify for the Dietrich College Honors Program, students must have a cumulative Quality Point Average (QPA) of at least 3.50 in their major and 3.25 overall at the end of their junior year and be invited by Dietrich College to participate. Students then choose a thesis advisor within the Department and propose and get approval from Dietrich College for a Senior Honors Thesis. The Honors Thesis is completed over the two semesters of the senior year (9 units each semester) under the direction of the chosen advisor. By successfully completing the thesis, students earn 18 units of credit and qualify for graduation with “College Honors.”

Creative Writing majors participating in the Senior Honors Thesis program who thesis is directly related to their Creative Writing major may petition to have one semester of their thesis work count as one of their Workshop course requirements.

Internships for Credit

Qualified students in all five of the Department’s degree programs have the option of doing a professional internships for academic credit during. These opportunities help students explore possible program-related careers as well as gain workplace experience. Our students have interned in a wide variety of communications-related positions including placements at local radio, television, and print publications; museums, theaters, and cultural organizations; non-profit and public service organizations; public relations, advertising, and marketing firms; software and technology companies; media organizations; and hospitals and healthcare communication organizations.

Students majoring in Creative Writing, Film & Visual Media, Literature & Culture, Professional Writing, or Technical Writing can count one 9.0- or 12.0-unit enrollment in 76-301 Internship toward requirements in their major.

- In Creative Writing these 9.0- to 12.0 units can count toward the fulfillment of an English elective.
- In Film & Visual Media, these 9.0- to 12.0 units can count toward a production elective.
- In Professional Writing, these 9.0- to 12.0 units can count towards the fulfillment of an English elective or an advanced writing course.
- In Technical Writing, these 9.0- to 12.0 units can count towards the fulfillment of a technical communication elective.

Students minoring in the Department of English who wish to earn credit for an internship related to their minor should contact the Director of Undergraduate Studies, Professor Stephanie Larson, at srlarson@andrew.cmu.edu.

The Dietrich College policy allows up to 27.0 units of internship credit to count toward the overall 360.0 units students need to complete their degrees. For non-Dietrich primary majors, please consult your home college’s policy.

Students are permitted to earn pay at the internship for which they are also earning credit.

To learn more about internships for credit in the Department of English, please see our Internship for Credit Policies and Procedures (https://docs.google.com/document/d/1nNsenF4qCII78D-V2ULqKWwD_o45Ii5ZDAc9v3ByDbo/edit/?usp=sharing).

The Accelerated MA in Professional Writing: MAPW 4+1

The Master of Arts in Professional Writing (MAPW) 4+1 is an accelerated masters program under which Carnegie Mellon students (usually majors or minors in the English department or BHA or BHS students with relevant coursework) can qualify to complete the M.A. in Professional Writing in 2 semesters and a required full-time internship instead of the usual 3 semesters and a summer internship. Most 4+1 students complete their internship requirement during the summer after their graduation.

Students apply for admissions during their senior year (the GRE is not required) and, following admission and evaluation of their transcripts, may receive credit for up to four courses, or one full semester of work, toward their M.A. requirements. The degree provides the advantages of an M.A. degree in an accelerated time frame, features intensive work in writing and visual design for both print and new media, and prepares students for a range of communications careers.

The coursework and career options most commonly pursued by students in the degree include:

- Technical Writing
- Science and Healthcare Writing
- UX Writing/Content Design
- Information Architecture

- Public & Media Relations / Corporate Communications
- Nonprofit & Policy Communication
- Editing and Publishing

Students interested in applying to the 4+1 program should consult the Director of the MAPW program, Professor Suguru Ishizaki at suguru@cmu.edu, early in their junior year for further details and advice on shaping undergraduate coursework to qualify for this option.

Faculty

MARIAN AGUIAR, Associate Professor of English – Ph.D., University of Massachusetts;

JANE BERNSTEIN, Professor of English – M.F.A., Columbia University;

DAVID BROWN, Associate Teaching Professor of English, Associate Director of First-Year Writing for Research and Assessment – Ph.D., Lancaster University;

DOUG COULSON, Associate Professor of English – Ph.D., The University of Texas at Austin;

JAMES DANIELS, Professor Emeritus of Creative Writing – M.F.A., Bowling Green State University;

SHARON DILWORTH, Associate Professor of English – M.F.A., University of Michigan;

JASON ENGLAND, Assistant Professor of English – M.F.A., Iowa Writers' Workshop;

LINDA FLOWER, Professor Emerita of English – Ph.D., Rutgers University;

KEVIN GONZÁLEZ, Assistant Professor of English – M.F.A., Iowa Writers' Workshop;

SUSAN HAGAN, Assistant Teaching Professor, Liberal & Social Sciences, Carnegie Mellon University-Qatar – Ph.D., Carnegie Mellon University;

PAUL HOPPER, Paul Mellon Distinguished Professor Emeritus of the Humanities, Rhetoric and Linguistics – Ph.D., University of Texas;

SARAH HAE-IN IDZIK, Assistant Professor of English – Ph.D., Northwestern University;

SUGURU ISHIZAKI, Professor of English, Director of Undergraduate Professional & Technical Writing Programs and Graduate Professional Writing Program (MAPW) – Ph.D., Massachusetts Institute of Technology;

BARBARA JOHNSTONE, Professor Emerita of English and Linguistics – Ph.D., University of Michigan;

DAVID S. KAUFER, Mellon Distinguished Professor Emeritus of English – Ph.D., University of Wisconsin;

ALAN KENNEDY, Professor Emeritus of English – Ph.D., University of Edinburgh;

JON KLANCHER, Professor Emeritus of English – Ph.D., University of California at Los Angeles;

PEGGY KNAPP, Professor Emerita of English – Ph.D., University of Pittsburgh;

STEPHANIE LARSON, Assistant Professor of English and Director Undergraduate Studies – Ph.D., University of Wisconsin-Madison;

JOAN LUBIN, Assistant Professor of English – Ph.D., University of Pennsylvania;

ATESEDE MAKONNEN, Assistant Professor of English – Ph.D., The Johns Hopkins University;

JANE MCCAFFERTY, Professor of English – M.F.A., University of Pittsburgh;

TOM MITCHELL, Assistant Teaching Professor, Liberal & Social Sciences; Carnegie Mellon University-Qatar – Ph.D., Carnegie Mellon University;

CHRISTINE NEUWIRTH, Professor Emerita of English and Human Computer Interaction – Ph.D., Carnegie Mellon University;

KATHY M. NEWMAN, Associate Professor of English and Director of Graduate Studies – Ph.D., Yale University;

JOHN J. ODDO, Associate Professor of English – Ph.D., Kent State University;

SILVIA PESSOA, Associate Teaching Professor, Liberal & Social Sciences, Carnegie Mellon University-Qatar – Ph.D., Carnegie Mellon University;

NUPOOR RANADE, Assistant Professor of English – Ph.D., North Carolina State University;

CAMILLE RANKINE, Assistant Professor of English – M.F.A., Columbia University;

DUDLEY REYNOLDS, Teaching Professor, Liberal & Social Sciences, Carnegie Mellon University-Qatar – Ph.D., Indiana University, Bloomington;

ANDREEA DECIU RITIVOI, William S. Dietrich Professor of English, Department Head – Ph.D., University of Minnesota;

KAREN SCHNAKENBERG, Teaching Professor Emerita of English – Ph.D., Carnegie Mellon University;

LAUREN SHAPIRO, Associate Professor of English and Director of Creative Writing Program – M.F.A., Iowa Writers' Workshop;

DAVID R. SHUMWAY, Professor of English – Ph.D., Indiana University;

KRISTINA STRAUB, Professor Emerita of English – Ph.D., Emory University;

CHRISTOPHER WARREN, Professor of English and Associate Department Head with a Courtesy Appointment in History – D. Phil., University of Oxford;

MARIAM WASSIF, Assistant Professor of English – Ph.D., Cornell University;

DANIELLE WETZEL, Teaching Professor; Director of Writing & Communication Program – Ph.D., Carnegie Mellon University;

JEFFREY WILLIAMS, Professor of English – Ph.D., Stony Brook University;

STEPHEN WITTEK, Associate Professor of English and Director of Literary and Cultural Studies Program – Ph.D., McGill University;

JOANNA WOLFE, Teaching Professor of English – Ph.D., The University of Texas at Austin;

JAMES WYNN, Associate Professor of English, Director of Rhetoric Program – Ph.D., University of Maryland;

HEIDI WRIGHT, Senior Lecturer, Writing & Communication – Course Lead, ENG 76-100,

JUNGWAN YOON, Senior Lecturer, Writing & Communication

Department of English Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

76-050 Study Abroad

All Semesters
No course description provided.

76-100 Reading and Writing in an Academic Context

Fall and Spring: 9 units
Designed as an entry point for other first-year writing courses at Carnegie Mellon, 76100 is an academic reading and writing course for multilingual students which offers a space for learners to recognize and use the communicative strengths that are created by knowing two or more languages. Experiences in the course give students the opportunity to draw on multiple cultural and linguistic understandings and practices when analyzing and creating meaningful texts. The course emphasizes critical reading and research strategies for a variety of sources which become the basis for individually and collaborativelyproduced texts. The course introduces students to rhetorical choices within and across languages at the sentence, paragraph, and whole text or genre levels. Students will explore a variety of practices in academic writing (e.g., paraphrase, synthesis, counterargument and refutation, citation) as they relate to genre, audience, purpose, and other factors of a communicative situation. We discuss and practice explicit rhetorical and linguistic conventions for writing in academic English so that writers make choices to connect with readers in academic and professional discourse communities. Students who take this course identify as multilingual students who use English skillfully but perhaps with less comfort as they use another language. These students complete an online placement process that guides them through making their own informed course placement. Students may also skip the placement process and enroll directly into the course. For some students, 76100 is a prerequisite requirement for other first-year writing courses; therefore, students should check with their academic advisors regarding how 76100 fulfills their general education course requirements. All 76100 courses are structured by the learning objectives shared across sections of the course, but sections present different themes in their readings.

Course Website: https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/index.html (https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/)

76-101 Interpretation and Argument

All Semesters: 9 units
Interpretation and Argument, an inquiry-driven writing course, is one of a number of first-year writing course options available to students at Carnegie Mellon. A full-semester course experience, 76101 introduces students to foundational practices for reading, synthesizing and producing scholarly knowledge within an academic context. Within the course, students learn transferable, genre-based skills applicable to a variety of different fields. Students use a comparative genre analysis method for using models to complete new writing tasks, including an academic research proposal and a research article that contributes to an ongoing academic conversation. Faculty who teach 76-101 typically select a range of texts (e.g., scholarship, journalism, film) about an unresolved issue, so that students can identify relevant questions to frame their own research projects. Students should expect explicit, research-based instruction within the course, reflecting upon their writing processes, as well as planning, drafting and revising drafts. Because the course emphasizes authentic stakes and purposes for communicating with academic audiences, students will regularly share their work with their peers in oral and written forms within an interactive and collaborative classroom environment. Due to the limits of our schedule, we are unable to meet each student's individual preferences for course topics, but we do offer a wide variety from which to choose.

Course Website: https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/index.html (https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/)

76-102 Advanced First Year Writing: Special Topics

Fall and Spring: 9 units
76-102, Advanced First-Year Writing courses are designed for students who have demonstrated an understanding and practice of academic writing that most incoming freshmen have not, both in terms of mindful writing knowledge and experiential range. Because of the students' level of preparedness, the First-Year Writing Program provides intensive, advanced courses for students to work closely with senior faculty within the English department. Advanced courses assume that students have established strong reading and synthesizing skills, as well as a demonstrated interest in writing and communication, prior to entering Carnegie Mellon. The course topics shift each semester, but for every advanced first-year writing course, the core goals are to deepen students' rhetorical knowledge and production skills that align with the faculty member's specialty. Because the course emphasizes authentic stakes and purposes for communicating with academic audiences, students will regularly share their work with their peers in oral and written forms within an interactive and collaborative classroom environment. Students enroll through special invitation, after completing an application process. There are no prerequisites for the course.

Course Website: https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/index.html (https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/)

76-106 Writing about Literature, Art and Culture

Fall and Spring: 4.5 units
This mini or half-semester course (one of two minis students can choose to fulfill their FYW requirement) uses artistic, literary, and cultural texts (e.g., poetry, short story, lyrics, video clips) to introduce students to a variety of academic reading and writing practices that enable students to engage with texts and write about them with complexity and nuance. Within the course, we will discuss texts and evidence from multiple perspectives. We will examine how literary and cultural scholars write about texts (defined broadly), how they make claims, provide reasoning, and use textual support to argue for particular ways of seeing cultural objects. Throughout the semester, students will draw upon prior strategies and develop new ones for close reading and for critical analysis in order to produce their own thesis-driven arguments about why texts matter. We will consider and write about the extent to which these reading strategies are relevant for other kinds of reading and analysis by comparing texts from a variety of different disciplinary contexts. Because the course emphasizes authentic stakes and purposes for communicating with academic audiences, students will regularly share their work with their peers in oral and written forms within an interactive and collaborative classroom environment.

Course Website: https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/index.html (https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/)

76-107 Writing about Data

Fall and Spring: 4.5 units
This mini or half-semester course (one of two minis students can choose to fulfill their FYW requirement) focuses upon interpreting and making arguments using mainly numerical data but also qualitative data. We will look at research in a range of disciplines including psychology, education, medicine, engineering, and the sciences and note how writers select and analyze the data they collect. We will also examine what happens to this research when it is picked up by the popular media. Students will also practice collecting and analyzing their own data and reporting it to suit the needs of various stakeholders. There are two primary audiences for this section. Students in data-driven majors will find the section useful preparation for communicating in their disciplines. Students in other fields will learn how to critique and respond to the many ways that numbers shape our lives. This section presumes a basic ability to calculate averages, percentages, and ratios, but no advanced mathematical or statistical preparation. Instead, this section provides a fascinating look at how numbers and words intersect to create persuasive arguments in academic, professional, and popular contexts. Students will compare and analyze texts that make arguments with data, practice rhetorical strategies for synthesizing and representing data so that by the end of the class, students will apply these strategies to write an original data-driven research proposal. Because the course emphasizes authentic stakes and purposes for communicating with academic audiences, students will regularly share their work with their peers in oral and written forms within an interactive and collaborative classroom environment.

Course Website: https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/index.html (https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/)

76-108 Writing about Public Problems

Fall and Spring: 4.5 units
This mini or half-semester course (one of two minis students can choose to fulfill their FYW requirement) centers on introductory professional writing and offers students the opportunity to develop a proposal for change; students will examine a public problem of their choice, conduct primary and secondary research, and create a public-facing presentation. This course asks students to recognize that many problems we encounter in our communities require an invested stakeholder, like ourselves, to conduct a careful investigation of perspectives and constraints before proposing a feasible solution that considers diverse stakeholders' values and viewpoints. Students will learn how public problems are defined and argued in the proposal genre by reading a range of expert texts and analyzing a variety of sample proposals. Students will conduct various forms of social research (email, interview, survey, and/or observation) to gain perspective on a problem and develop a solution mindful of others' expertise and experience. Students will also synthesize relevant secondary research to rhetorically frame a proposal in ways that will compel their intended audience to take action. By the end of the course, students will write and present their own change proposal that identifies a community-based problem, proposes a thoughtfully-researched solution, and recommends a feasible plan for change in one of their own communities. Because the course emphasizes authentic stakes and purposes for communicating with professional and academic audiences, students will regularly share their work with their peers in oral and written forms within an interactive and collaborative classroom environment.

Course Website: https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/index.html (https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/)

76-203 Literature & Culture in the 18th Century

Fall: 9 units
Topics vary by semester. Fall 2022 This section will examine race, gender, and their intersections as points of entry into the major literary and cultural movements of the long eighteenth century, which continue to shape our present. From about 1660 to 1820, historical phenomena such as European empires, the Rights of Woman, and slavery and abolition coincided with changes in print and media culture to produce the rich literary productions we will study. Through reading and graded assignments such as short essays and oral presentations, students will learn methods for analyzing the formal features of literary texts (such as narrative structure and poetic rhythm) and how such texts respond to the pressures of history. Furthermore, students will develop their ability to think critically about race and gender, to argue persuasively, and to express ideas clearly. Examples of readings include Aphra Behn's Ooronoko, Jonathan Swift's "The Lady's Dressing Room," Jane Austen's Mansfield Park, Mary Prince's The History of Mary Prince, and William Wordsworth's "To Toussaint L'Ouverture."
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-204 Race, Ethnicity, Controversy

Intermittent: 9 units
Coverage of police violence. Condemnations of Critical Race Theory. Book bans. "Kung flu." In recent years, current issues around race have proliferated, and with them, complex layers of discourse and controversy. This course examines current issues around race through the twin lenses of rhetoric and ethnic studies, asking how power is expressed through rhetorics of race and controversy. What are the communicative practices involved in framing or responding to racial violence, prejudice, and controversy? How do these practices harness various cultural, political, and historical forces, and to what effect? How do these discourses contribute to racialization, and where, and how, are differential distributions of power being expressed? We will seek to understand discourses around these issues and the backgrounds of various debates, from policing and abolition, to recurring anti-Asian racism, to affirmative action debates, to transracial adoption. Students will learn to analyze discourses around race rhetorically, identify structures of power at work in these discourses, and produce a final paper analyzing the rhetorics of a current issue or controversy around race.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-206 Intro to Creative Writing

Intermittent: 9 units
In this course we will explore how stories work and why we tell them. Using screenplays, short fiction and personal essays, we will analyze how narratives function and how, upon reflection, narratives often function in very similar ways no matter what the genre. Storytelling has a shape. It dominates the way all stories are told and can be traced back in history to the very beginning of the recorded word. We will study traditional structure in screenplays and contemporary prose pieces, and consider stories from fairy tales to serialized television shows. These master texts will be used to guide the students as they write and develop their own stories.

76-207 Special Topics in Literature & Culture

Intermittent: 9 units
Topics very by semester and section. F24: Drama of Power and amp; Resistance - Writers throughout history have harnessed the power of the pen to give a voice to the silenced, center the marginalized, or dissent from systems of oppression. Politically charged poems, novels, and essays have changed the world. But of all genres, drama, one of the oldest art forms in the world, has been uniquely impactful in speaking truth to power and effecting social change. Dramatists from Ancient Greece until the modern age have harnessed the power of political commentary, resistance, and protest in their works for the stage. This class will examine politically engaged dramatic literature from a wide array of international and diverse voices ranging from protest plays of Ancient Greece (such as Aristophanes' Lysistrata), through Shakespearean histories that question the legitimacy of rulers and their power (King John or Coriolanus), to modern plays that force contemporary audiences to reconsider political polarization, war, and systemic inequalities in our society, such as Arthur Miller's The Crucible, the rock musical Hair, or Lynn Nottage's Ruined. We will look at the scripts, cultural contexts, and performance histories of such works, as well as interrogate what makes drama so unique as a genre and collaboratively develop reading strategies for plays. We will explore how realities of society such as systems of power, class, race, gender, and marginalization have been taken up by centuries of playwrights to comment on social and political systems. To supplement our reading, we will engage with multimedia adaptations and reimaginings of plays. In addition, our inquiry into how drama has impacted society will take a broad view of 'theater,' and look beyond the stage to examine how non-literary forms of activism and political response can also be seen as theatrical.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

Course Website: https://docs.google.com/spreadsheets/d/1U81b4BSF0aij6u_zYq39Uf7q2ZTiqqAQaOIJ9V2LhnA/edit?usp=sharing (https://docs.google.com/spreadsheets/d/1U81b4BSF0aij6u_zYq39Uf7q2ZTiqqAQaOIJ9V2LhnA/edit/?usp=sharing)

76-210 Banned Books

Fall: 9 units
Literature is powerful! Indeed, we're interested in books that are so controversial that people will shout, argue, and try to change laws in order to have a book removed from a curriculum, a school or public library, or a prison. At the same time we'll learn about how, in response, other people work extremely hard to defend books against removal and censorship. The term "banned books," can be a bit misleading in the US context; only in very rare cases does the US federal government get involved in trying to ban or censor a published work. Nonetheless, the US is a hot spot for those who seek to attack books, and for those who seek to defend them. In this course you will find that the actions of attackers and the actions of defenders are often mutually reinforcing. Every student in this course will contribute to a public facing website called The CMU Banned Books project. This website is used by journalists, scholars and activists around the world. This semester's books for reading and discussion include some of the most frequently banned and challenged books of the last five years, including The Handmaid's Tale, Gender Queer, The 1619 Project, and The Absolutely True Diary of a Part-Time Indian. Since 2020, organizations that track book banning tell us that the numbers of books banned and/or challenged are at an all-time high.

76-214 Understanding Cultural Complexities

Fall and Spring: 9 units
In today's society that explores Diversity, Equity, and Inclusion, one can ponder if Arab societies have made progress to achieve DEI towards minorities of religions (Muslims, Christians, Jews), sects (Sunni and Shi'a), ethnicities (Copts, Nubians, Kurds), Palestinians in Israel, homosexuals, and physical disabilities. This course aims to enrich students' understanding of the diversity of Arab countries and histories of intercommunal relations and conflict, explore the progress made in equating minorities to majorities, including them in various sectors, and granting them more rights. We will use readings, films, arts, and music, to engage with students in 4 Arab countries to further their learning.

76-216 Happily Ever After: Fantasies of Romance

Intermittent: 9 units
TBD

76-217 Literature & Culture of the 20th and 21st Century

Intermittent: 9 units
Spring 2022: If you're in college now, you're probably a member of "Generation Z." There are a number of studies of Generation Z and its disposition, habits, and interests. While we are familiar with factors that make up our identities and #8212;nationality, race, ethnicity, gender, sexuality, income, and abledness and #8212;one's generation is probably just as influential, and according to some sociologists, more important than those other factors. In this class we will look at portraits of American generations in fiction, from the Baby Boomers and Generation X through Millennials and Generation Z. We will also look at some of the sociology and see how it bears on the fiction. In addition, we might look back at past generations, such as the generation that came of age after World War I, the Lost Generation, which inspired writers such as F. Scott Fitzgerald, and the Beat Generation, which inspired Jack Kerouac. In more recent fiction, we might read fiction such as Coupland's Generation X, Lauren Groff's portrait of the sixties generation in Arcadia, or Ling Ma's portrait of Millennials in Severance. We will also look at film along with novels, possibly including The Big Chill, Reality Bites, and other movies.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-219 Law & Blame

Intermittent: 9 units
How do we use language to accuse and defend? How do we attribute responsibility to specific individuals or institutions and dispute such claims, either by debunking them or shifting the blame? What makes the stories we tell and the arguments we make about responsibility succeed or fail? What unintended consequences can they produce and for what groups? This course will examine these and related questions through the lens of legal cases in which individuals or institutions are accused of responsibility for harm, from vehicular accident cases to criminal trials. The study of these questions is not only valuable for understanding the legal process, participating in it, or writing about it, but the practice of attributing responsibility is common in many social and institutional contexts beyond law, even in daily conversation. The course explores fundamental questions about culture, ethics, and politics, including issues involving systematic and structural inequalities involving race, class, gender, sexual orientation, religion, and national origin, which are evident both in the legal cases studied and in the public imagination and controversy beyond the courtroom. The societal implications explored include inequitable constraints on freedom in criminal justice and economic inequalities perpetuated through civil lawsuits, as well as inequalities in cultural power and status in the ways some voices are recognized in the legal process and others are not. Drawing on readings from rhetoric, linguistics, and legal studies, as well as briefs, opening and closing arguments, direct and cross-examinations of witnesses, physical and documentary evidence, and judicial opinions from legal cases, we will examine the strategies advocates use to attribute responsibility, enhance equity, and manage such disputes.

76-220 Mystery: From Detective Fiction to True Crime

Intermittent: 9 units
Mystery fiction is one of the most enduring and popular literary genres, and there is no doubt that the current media landscape has hugely expanded the concept of the "armchair detective" to include podcasters, journalists, and true crime addicts. This course provides a better understanding of narrative and genre, as well as social norms around gender and race, by looking at the conventions of mystery fiction and true crime. What can these "formulaic" genres teach us about storytelling, character development, and narrative point of view? What do they reveal about a society's notions of justice and order? And how is textual analysis itself an act of detection? Texts may include podcasts, documentaries, and newstories; classic works by Wilkie Collins, Arthur Conan Doyle, and Walter Mosely; and contemporary works by Kiley Reid and Oyinkan Braithwaite
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-221 Books You Should Have Read By Now

Fall and Spring: 9 units
Topics vary by semester and section. F24: The United States prison system continues to grow, with nearly 2 million incarcerated people and over 6,000 prisons, jails, and detention centers nationwide. Its expansion disproportionately impacts impoverished communities, people of color, and LGBTQ+ people, as it is connected to a fraught history. Throughout this class, we will engage with novels, memoirs, letters, essays, and poetry written by incarcerated or formerly incarcerated people to understand the critiques they wage against the carceral state. We begin with early depictions of penitentiaries, then turn to political responses to imprisonment throughout the twentieth century, and close with literature about the contemporary carceral state. In studying representations of the US prison's development over time, we will ask: How do prison writers bear witness to and resist the prison-industrial complex? Readings might include works by Reginald Dwayne Betts, Jimmy Santiago Baca, Assata Shakur, Malcolm X, George Jackson, Jack Henry Abbot, and Chester Himes.

76-223 Contemporary Black Literature

Spring: 9 units
This course will take a transatlantic approach to what constitutes blackness as well as black literature and expression from the turn of the 20th century until the present. We will investigate the relationship between poetic forms and expressions of social and self-representation. However, this class will primarily focus on prose works (novels, memoirs and non-fiction essays) that span a multitude of genres from mystery to literary and science fiction. Authors include: W.E.B. Dubois, Zora Neale Hurston, James Baldwin, Zadie Smith, Claude McKay, Amiri Baraka, Franz Fanon, Marlon James, Edouard Glissant, Nnedi Okorafor, Merle Collins and Jamaica Kincaid to name a few.

76-230 Literature & Culture in the 19th Century

Intermittent: 9 units
Topics vary by semester. Fall 2023: Literature and amp; Social Change - From the French Revolution to the beginning of the twentieth century, literature began to play an explosive role in the forces of political transition and the struggle for social justice. This course studies novels, poetry and prose in relation to both political and industrial revolutions during the rise of empire and capitalism and the road to climate change. We will study apocalyptic novels like Mary Shelley's The Last Man and novels of empire like Jane Eyre and its retelling in Wide Sargasso Sea; poetry about living in revolutionary times by Wordsworth and Phillis Wheatley Peters; and anti-capitalist anti-slavery writing such as Ottobah Cugoano's "Thoughts and Sentiments on the Evil of Slavery."
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-108 and 76-107)

76-232 Introduction to Black Literature

Intermittent: 9 units
This course will take a transatlantic approach to what constitutes blackness as well as black literature and expression from the turn of the 20th century until the present. We will investigate the way authors and artists use literature and other mediums of expression for social and self-representation. Our primary focus will be on prose works (novels, memoirs and non-fiction essays) that span a multitude of genres from mystery to literary and science fiction. There will also be sections of the course that focus other mediums such as visual art, comics, music, film and television. We will cover figures such as: Fredrick Douglass, W.E.B. Dubois, Zora Neale Hurston, Langston Hughes, Claude McKay, Amiri Baraka, Franz Fanon, Toni Morrison, Merle Collins, Kyle Baker, Kara Walker and Beyonce to name a few.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-233 Literature and Culture in the Renaissance

Intermittent: 9 units
The Renaissance was a time of world-shattering change brought about by innovation, exploration, colonization, religious upheaval, the emergence of capitalism, the print revolution, scientific discovery, and unprecedented flourishing in the creative arts. In England, the same years also ushered in a golden age for English literature, which grew into its own with the arrival of canonical authors such as Thomas More, William Shakespeare, Edmund Spenser, John Milton, and many others. This course will introduce students to literary and cultural studies by convening a survey of works from the English Renaissance alongside a selection of critical readings that will help to bring England's extraordinary literary output into connection with its equally fascinating cultural context. In addition to canonical works by authors such as Shakespeare and Milton, we will also study lesser-known works by brilliant female authors such as Elizabeth Carey and Margaret Cavendish, women who have been left out of the traditional canon, not for a lack of literary merit, but because of their gender. On a similar note, the course will also consider questions such as, "How can modern readers best navigate the ethical hazards presented by problematic, centuries-old artworks?" "To what extent can we hold such artworks responsible for ideas that violate contemporary values, or contemporary boundaries of appropriateness?" and "To what extent can one study and learn from such artworks without endorsing or perpetuating the objectionable ideas or opinions they represent?" As we read, write, and converse together, we will work toward a broad understanding of what the literature of the English Renaissance means in a 21st century context, and how it has helped to shape the culture of modernity.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

76-236 Major Fiction Then and Now

Intermittent: 9 units
We read newspapers for reports about what is happening in our world. But we also read fiction and #8212;novels and stories and #8212;that tell us about imaginary worlds. Sometimes they are very much like our world, sometimes different. In this course we'll read classic novels like Charles Dickens' Great Expectations or Dostoyevsky's Crime and Punishment up to contemporary ones like Station Eleven or Severance. We will consider how they represent the world, their use of literary forms, and how they lead us into their alterior world. We will also consider what they say about their culture and society. Do they make a statement about the world, or are they more for entertainment? This course is based on the Inside-Out Prison Exchange Program, and will be taught at SCI Somerset, a nearby prison. The course will include both "outside" students from CMU, as well as "inside" students at SCI Somerset. The course focuses on active participation and discussion between students. It runs from 2:30-5:10 on Friday afternoon. CMU students will travel together by bus, leaving our campus at 12:30 and returning by 6:30. To enroll, students in the course will submit a brief application and interview with faculty. The course is part of an exciting new initiative by CMU to bring education into America's prisons.

76-239 Introduction to Film Studies

Fall and Spring: 9 units
This course is an introduction to the history, technology, aesthetics, and ideology of film. Our main focus is the narrative fiction film, but we will also discuss documentaries, avant-garde work, and animation. The central organizing principle is historical, but there are a number of recurring thematic concerns. These include an examination of the basic principles of filmmaking, the development of film technology, the definition of film as both art and business, and the history of film as an object of critical and cultural study. The goals of this course are threefold. First, it will provide you with a solid grounding in the key issues and concepts of film studies. Second, it will expand your ability to knowledgeably critique individual cinematic works and their relationship to the larger culture. Lastly, it will provide you with experience in expressing your critiques in writing.

76-241 Introduction to Gender Studies

Fall and Spring: 9 units
Intersectional feminism. Structural oppression. Biological sex vs. gender roles. LGBTQIA+ rights. Consent. Masculinity. #metoo and gender-based violence. Sexual politics. Global feminism. This course offers students a scholarly introduction to these social and political issues through critical readings, literature and film. In this discussion-based class, students read and discuss contemporary gender studies that speaks to questions of identity, race, nation, sexuality, and disability. Critical readings include work by Audre Lorde, bell hooks, Judith Butler, Kimberl and #233; Crenshaw, Sara Ahmed, Eve Sedgewick, Raewyn Connell, Mari Matsuda, Mona Eltahawy, Rosemarie GarlandThomson, and Kate Bornstein. Fiction might include Toni Morrison, Ocean Vuong, and Alison Bechdel.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-242 American Woman Writers

Intermittent: 9 units
In 1855, Nathaniel Hawthorne lamented to his publisher that "America is now wholly given to a damned mob of scribbling women and I should have no chance of success while the public taste is occupied with their trash." Even today, The New York Times Book Review and other gatekeepers rarely give women writers the coverage that male writers receive. In this course we will trace the multiple traditions of 20th century American women's writing and examine how women writers question, resist, subvert, and revise traditional gender roles. Our readings will address: the social construction of gender; the relationship between gender and genre; the cultural positions of women as writers and readers; women's rights and suffrage; women and work; female sexuality and sexual freedom; constructions of motherhood; intersections of gender with race, class, and ethnicity. Readings include: The House of Mirth, Pale Horse Pale Rider, Their Eyes Were Watching God, Raisin in the Sun, To be Young, Gifted and Black, Woman Warrior, Fun Home, and The Namesake. Every other week (or so) we will be reading excerpts from Feminist Literary Theory and Criticism.

76-244 Immigrant Fictions

Intermittent: 9 units
Contemporary writers offer vibrant portrayals of questions around identity and belonging that accompany migration and immigration to the United States. Their works show how displaced people and their children reinvent themselves, even as they look back to other homelands. This contemporary literature course combines fiction, poetry, drama and scholarly non-fiction readings to examine the experiences of the transnational movement of people to the United States, including international students, refugees, and documented and undocumented migrants and their families. We will consider not only the experience of personal migration, but also the global social, economic and political processes that structure that movement. Possible fiction readings draws from Asian American studies, Latinx studies, and African American studies, and might include Jhumpa Lahiri, Valerie Luiselli, Chimamanda Adichie, Christina Garcia, Juno D and #237;az, Lisa Ko, Cathy Park Hong, and Edwidge Danticat.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-245 Shakespeare: Tragedies & Histories

Spring: 9 units
For F24 only: In the closing decades of the sixteenth century, enterprising cultural producers in early modern London began to develop a new commercial venture called 'playing': a business that offered ordinary people a few hours of dramatic entertainment for the price of one penny. In addition to watching the professional players onstage, spectators also participated in a form of play themselves (in a sense) because theatrical experience provided a unique opportunity to engage imaginatively with otherwise inaccessible people, worlds, and ideas. More than four hundred years later, the drama of the period now ranks among the most esteemed texts in all English literature, and the name 'Shakespeare' has become a byword for literary genius. This course will offer an overview of Shakespeare's tragedies and histories. As we read through a selection of key works, we will endeavor to understand what, and how, they meant in their original context, thereby developing a historically informed perspective on their influence over our own cultural landscape. The course counts toward the GenEd requirement, and is also part of the CMU Prison Education Project. Classes will take place at Somerset State Correctional Institution. CMU students will study alongside incarcerated students. A bus will provide transport for the students from CMU. Students will have to fill out a brief questionnaire before enrolling.

Course Website: https://www.cmu.edu/dietrich/students/undergraduate/programs/pep/index.html (https://www.cmu.edu/dietrich/students/undergraduate/programs/pep/)

76-247 Shakespeare: Comedies and Romances

Fall: 9 units
Sometime around the late sixteenth century, enterprising cultural producers in early modern London began to develop a new commercial venture called 'playing': a business that offered ordinary people a few hours of dramatic entertainment for the price of one penny. In addition to watching the professional players onstage, spectators also participated in a form of play themselves, in a sense, because theatrical experience provided a unique opportunity to engage imaginatively with otherwise inaccessible people, worlds, and ideas. More than four hundred years later, the drama of the period now ranks among the most esteemed texts in all English literature, and the name 'Shakespeare' has become a byword for literary genius. This course will offer a selection of Shakespeare's delightfuland sometimes surprisingly edgycomedies and late romances. As we read through these works, we will endeavor to understand what, and how, they meant in their original context, thereby developing a historically informed perspective on their influence over our own cultural landscape.

76-253 Information Graphics

Intermittent: 3 units
This micro-course introduces the basics of designing information graphics to students in all disciplines who are interested in learning to communicate complex information clearly and ethically using information graphics. Information graphics are ubiquitous. They are used by both practitioners and academics across many disciplines to communicate complex ideas, processes, and systems. While millions of decisions are made based on information graphics daily, creating an effective graphic is not simple. Designing information graphics requires careful consideration from multiple perspectives, including visual perception, social psychology, semiotics, and design ethics. What makes information graphics effective? What is required to optimize the design of an information graphic? How should information graphics be evaluated? Can information graphics be neutral, without bias? In this introductory course, we will address these and other questions through a hands-on project and discussions on various threads of studies around the analysis of information graphics. Assigned readings will complement the projects allowing students to examine information graphics from the perspectives of relevant theories and research findings. Class discussions and critiques are an essential part of this course.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-259 Film History

Fall: 9 units
This introductory course will focus on the history of the American film industry, 1930-1980. On most weeks, we will screen two films that reflect the most important genres and most enduring achievements of the era. We will be concerned with understanding how the studio system produced and marketed these works, and how that system changed significantly from the 1950s-1970s. By focusing on individual studios (for example, MGM and Warner Bros.) as "test cases," the class will also examine how particular companies produced films of a certain type in terms of such parameters as genre, theme, player, class address, and/or style. Readings will deal with the history of Hollywood, the various films, stars and/or filmmakers considered, as well theoretical/critical issues such as authorship, reception, and high vs. low culture. Students will learn important skills for film history, including reception study, archival research, and contextual analysis. Grades will be based on three papers that require different kinds of historical research, a midterm, and a final.
Prerequisite: 76-239

76-260 Introduction to Writing Fiction

Fall and Spring: 9 units
This is an introduction to the reading and writing of short fiction. Character development and the creation of scenes will be the principal goals in the writing of short stories during the course of the semester. Revisions of the stories will constitute a major part of the final grade. Reading assignments will illustrate the different elements of fiction reviewed and practiced, and students will analyze and discuss stories from a writer's point of view.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-108 and 76-107)

76-261 Intro to Writing Creative Nonfiction

Intermittent: 9 units
This course will expose you to several contemporary Creative Non Fiction writers, while helping you connect with your own life stories so that they can be shaped into narratives. You'll be reading and analyzing both short and long form non fiction, so as to learn the elements of the art and craft of this genre. A high priority will be given to creating a community spirit in our class, so as to inspire you and your writing through connections not just to professional writers, but to the writers who will be your classmates.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-265 Introduction to Writing Poetry

Fall and Spring: 9 units
This course is meant to serve as an introduction to the craft of poetry. We'll look closely at traditional forms in an effort to understand the effects of more formal choices on the page, and we'll examine the craft choices of modern and contemporary poets to expand our understanding of poetic approaches. Our analysis of poetry will begin at the level of the syllable and progress to words, lines, stanzas, series, and collections. You will be required to read both published work and the work of your classmates with a critical eye, to write your own poems, both formal and not, to write several short analysis essays, to write a longer critical essay, and to demonstrate your knowledge on one in-class exam. The most important take-away from this class is the ability to talk knowledgeably and critically about poetry. What you learn here will pave the way for your future as both a writer and a reader.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-269 Introduction to Screenwriting

Fall and Spring: 9 units
This is a course in screenplay narrative. The screenplay has a certain format observed by every screenwriter. It is not so difficult to learn the format. The difficulty is in developing a screen story populated by believable characters, creating an expressive and logical relationship between the scenes by manipulating screen space and screen time (knowing what to omit from the story and what to emphasize), and finally writing dialogue that sounds real, but that does not simply copy everyday speech. The class will be structured into weekly writing exercises, discussion of the narratives under consideration, presentation and discussion of student work, and a final writing project.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-270 Writing for the Professions

All Semesters: 9 units
Writing in the Professions is a writing and communication design course for mainly sophomores and juniors (although it can be relevant for some freshmen and seniors) in all majors other than English. The course is appropriate for upper-level students in all CMU colleges and assumes that they may not have had much college-level writing instruction beyond the first year. The basic idea of the course is to give experience in developing the design skills for writing and communicating as students transition from student to professional. The course will cover some foundational principles of designing multimodal writing and communication within a variety of tasks including resume and cover letter writing, proposal writing and writing instructions. Students will discern the difference between writing for general and specific audiences, and analysis of visual aids in various texts. The course requires that students work both independently and in groups. All sections of 76-270 align with particular core objectives. However, some sections of 76-270 are discipline-focused and reserved for students from specific programs or colleges. Students should review the section title before attempting to register to discern which section is most appropriate for them. Dietrich College students can count any 76-270 section toward their GenEd requirement: Disciplinary Perspectives-Design.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/index.html (https://www.cmu.edu/dietrich/english/academic-programs/writing-and-communication/)

76-271 Introduction to Professional and Technical Writing

Spring: 9 units
Professional and technical communicators use words and images to connect people with information. With a strong foundation in rhetoric, this course will sharpen your abilities to communicate information clearly, effectively, and responsibly to real readers, stakeholders, and decision makers. Our assignments and conversations will include a wide range of genres and rhetorical situations you can expect to encounter as a professional and technical communicator, including job application genres, narrative genres like feature articles that blend subject matter interviews with keen observation, research genres like proposals, and team writing genres like technical documentation. A high level goal for the course is to combine theory, methods, and best practices for putting real readers and users of information at the center of our communication strategies. By the end of the course, you will have a portfolio of polished work that you can use to narrate your professional strengths and interests. This course is designed for undergraduates pursuing majors and minors in a writing and communication field, and who want to explore professional and technical communication as a discipline and career area.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-275 Introduction to Critical Writing

Fall: 9 units
(This course was formerly titled Critical Writing Workshop.) The goal of this course is to sharpen your ability to read and write about literary and other imaginative works. Critical reading and writing mean gathering and evaluating language and images to form an interpretation of a print, visual, or other media text. To that end, you will learn analytical keywords and terms from literary and cultural theory and how to apply them to texts and other objects. The focus will be on theories of race, gender and empire and how they inform literary texts and our reading of them. Our course's method for critical writing instruction will be to workshop drafts of your essays. To that end, you will write four short interpretive papers in the course. You will also gain practice at oral presentation, peer-review and critique. Since this is a writing workshop and our time for reading will be somewhat limited, we will read a several shorter literary texts in a range of genres (fiction, drama, poetry) while we consider questions of form. The communication and analytic skills you acquire in this class will transfer to your work in a wide range of academic disciplines and professional contexts.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-278 Japanese Film and Literature: The Art of Storytelling

Intermittent: 9 units
This course explores how the art of storytelling is in tandem with the vicissitudes of the human condition as illustrated in Japan's variety of fictions, non-fictions, and films in the twentieth and twenty-first centuries. Analyses of each storytelling not only reveal the cultural dynamics behind Japanese modernity, but also invite students to find new insights into Japanese culture and their ways of perceiving our globalized world. What kind of cultural exchanges took place between modern Japan and the West? How are Japan's traditional values transformed in the face of modern technicalization and industrialization, compared to the modernization of other countries? And, in turn, what kind of impact has modern Japanese culture had on today's world? Tackling these questions among others, the course also extends to such issues as the legacy of traditional Japanese culture, the modern Emperor system, World War II experiences, emerging voices of minorities, and popular culture (e.g., anime and subculture).

76-282 Disability in Pop Culture

All Semesters: 9 units
In 2016, ABC debuted the show Speechless, which follows the life of JJ, a high school teenager with cerebral palsy. In 2015, Deaf West Theatre premiered a revival production of Spring Awakening on Broadway, debuting a cast of both deaf and hearing actors who performed the show using American Sign Language and English simultaneously. In 2013, Allie Brosh released a book version of her blog titled Hyperbole and a Half: Unfortunate Situations, Flawed Coping Mechanisms, Mayhem, and Other Things That Happeneda combination of web comics and stories that included discussions of depression. These examples are a mere few of more recent representations of disability in pop culture. In this course, we will investigate how representations of disability tell stories about difference. Using the tools of rhetorical analysis, we will ask the following questions: How do memoirs, films, comics, health initiatives, advertisements, blogs, laws, and poetry use language and images to influence or construct our understanding of disability? How do these representations engage differences of gender, race, class, and sexuality? And finally, how does this work expand broader cultural, aesthetic, and political views of embodiment, disability, and difference? This course has two major parts: 1) We will examine various models of disability in order to theorize concepts such as normal, the gaze, passing, and access. In the process, we will consider how these concepts intersect with gender, race, class, and sexuality. 2) We will engage these theories through close reading of actual representations of disability that circulate in our worlds around us and shape our understandings of disability. We will pay particular attention to the rhetorical elements central to these representations such as purpose, genre, audience, context, form, and style.

76-286 Oral Communication

Intermittent: 6 units
Oral presentations are essential to professional success. Yet many people find themselves growing weak in the knees at the thought of presenting in front of a group. They read off of notes, speak too fast, or pepper their speech with nervous filler words such as "um" or "you know." 76-286 Oral Presentations is a mini intended for students who want to boost their confidence in presenting in front of others. You will learn strategies for structuring the content of a presentation, designing effective presentation slides, and controlling your voice and body language to produce a smooth, confident-sounding oral delivery. We will begin with giving short informal presentations and gradually increase the stakes as your confidence improves. You will have weekly opportunities to practice and improve your skills. We will also find opportunities to practice in a variety of physical settings so you can envision yourself as a calm, confident speaker no matter your surroundings. Grades in the course will be based on improvement and effort to encourage students to focus on their development rather than on final outcomes.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-108 and 76-106)

76-287 Sex & Texts

Intermittent: 9 units
Please see *Content Warning* Below In this course, we will consider how writing and communication serve as means to create, define, and bound our worlds, shaping our ideas about "sex" and "sexuality" at their intersections with gender, disability, race, geographic location, religion, age, and so on. Using a rhetorical perspective, we will interrogate how everyday experiences with and performances of sex and sexuality are tied to legal, medical, corporate, cultural, and historical practices and ideologies. Readings will consist of public, scholarly, and creative genres such as Roxane Gay's Unruly Bodies, Judith Butler's Gender Trouble, Cardi B's "WAP" (feat. Megan Thee Stallion), and the Hulu series Shrill and will address topics including but not limited to bathroom bills, rape culture, the beauty industry, intellectual property, citizenship, and marriage equality. Students in this course will 1) develop a vocabulary for talking about sex and sexuality; 2) examine how sex and sexuality are shaped by public, historical, and cultural norms; and 3) practice analyzing rhetorical elements such as purpose, genre, audience, context, form, and style. Student projects will include weekly discussion posts, two shorter papers, and one creative project. This course meets the Dietrich College Communicating Gen Ed requirement. *Content Warning* Because this course takes up questions of sex and sexuality, we will discuss the body/embodiment and issues related to violence (sexual, racial, intellectual, domestic, linguistic, etc.). While projects will ask students to examine questions of sex and sexuality, students will not be required to write about issues related to violence.

76-289 Billingual & Bicultural Experiences in the US

Intermittent: 9 units
What does it mean to be bilingual in the USA, when approximately 80% of Americans are monolingual English-speakers? In this course, we will learn about the nature and experience of bilingualism and biculturalism (past and present) and how it shapes different perspectives and worldviews and #8212;within an individual, between individuals, and on a larger (societal, cultural) level. The course highlights the experiences of groups such as immigrants, racial/ethnic minorities, indigenous communities, and users of signed languages to foreground experiences that may be similar to or different from those of the students. We use a variety of resources (e.g., social media, film and documentaries, historical documents, literature, music, art) to accomplish this, and students are encouraged to be creative in the ways they design their own hands-on projects. This discussion-based course is taught in English and is open to all students, whether they identify as bilingual/bicultural, or are simply interested in the course topic.

76-290 Literature & Culture in the 20th Century

Intermittent: 9 units
Topics vary by semester and instructor. For example: Spring 2020: Black Fiction This course will take a transatlantic approach to what constitutes black literature and artistic expression from the nineteenth until the early twenty-first century. We will investigate how black authors use literature and other mediums of expression for social, political and self-presentation. Our primary focus will be on fiction with some memoir, poetry and non-fiction essays thrown into the mix. We will cover canonical black writers of the diaspora as well as key literary periods and movements. Along with these more conventional ways of accounting for literary history we will look at the way gender, sexuality, (trans) national belonging, ideology and political economy shape the reception, aesthetics and context of black writing. Authors covered in this course include: Fredrick Douglass, Nella Larson, Audre Lorde, Ralph Ellison, Melvin Tolson, Percival Everett, Merle Collins, Claudia Rankine and Tayari Jones to name a few.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-108) or (76-106 and 76-107) or (76-108 and 76-107)

76-291 Getting Heard/Making a Difference

Intermittent: 9 units
How can a college student get people to pay attention to a problem, whether it is a personal, social, environmental, ethical, or public issue? In particular, how do people who don't already have what is called "standing"such as the authority or credentials to speakget their community to listen? In this course you will learn how to create real dialogue and carry out effective (not simply adversarial) engagement within a university and later in your professional lives. It introduces you to the rhetorical art of savvy, issue-centered social engagement. Drawing on research, theory, and our own campus investigation, we will try out methods for collecting competing perspectives, for framing a shared actionable problem, and for creating well-supported, persuasive and motivating accounts in proposals, reports, editorials, stories, or media. The theory and strategies we study are designed to create what is called a rhetorical presence for your ideas, to put them into circulation, and help create a more engaged local public. This course meets the Dietrich College Communicating Gen Ed requirement.

76-292 Introduction to Film Production

Fall: 9 units
This course is an introduction to the process of filmmaking. Students will develop a personal cinematic language and create a short final film from the ideation, to the synopsis and shot list, the set then to the editing room. The course will introduce technical tools to create audio and visual forms that serve the content developed in a film treatment through filming assignments, planning and producing a short film, peer review and group work. The focus will be on understanding shots and coverage of a scene, the various aspects of the cinematic language, with an emphasis on the basic visual components such as space, movement, and rhythm - and how they are used to tell the story visually. Audio layering to create a meaningful soundscape and the art of Editing will be discussed extensively.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-293 Writing about Research in Your Discipline

Intermittent: 9 units
This course introduces the characteristics and types of writing required of students at advanced undergraduate and beginning graduate levels while building sentence-level editing skills. Topics addressed include the role of writing in the academy, the writing process including editing and revision strategies, expectations for content associated with different genres, bibliographic styles and reference management software, and an introduction to the reporting of empirical research. Students will work through modules on sentence structures associated with academic language as well as workshop their own writing projects. This course is appropriate for students considering writing a senior thesis and/or applying to graduate school.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

Course Website: https://www.cmu.edu/dietrich/english/courses/fall-2020-course-descriptions.pdf

76-295 Russian Cinema: From the Bolshevik Revolution to Putin's Russia

Fall: 9 units
"Last night I was in the kingdom of shadows," said the writer Maxim Gorky in 1896 after seeing a film for the first time. "How terrifying to be there!" Early film inspired fear and fascination in its Russian audiences, and before long became a medium of bold aesthetic and philosophical experimentation. This seminar-style course surveys the development of Russian and Soviet film, paying equal attention to the formal evolution of the medium and the circumstanceshistorical, cultural, institutionalthat shaped it. We will examine Sergei Eisenstein's and Dziga Vertov's experiments with montage in light of the events of the Bolshevik Revolution and the directors' engagement with Marxism; Georgi Alexandrov's and the Vasiliev brothers' Socialist Realist production against the backdrop of Stalinist censorship; Andrei Tarkovsky's and Kira Muratova's Thaw-era films within the broader context of New Wave Cinema; and the works of contemporary directors, including Aleksei Balabanov, Alexander Sokurov, and Andrey Zvyagintsev, in connection with the shifting social and political landscape of post-Soviet Russia. Besides introducing students to the Russian and Soviet cinematic tradition, this course will hone their skills in close visual analysis. No prior knowledge of Russian language or culture is required. The course is conducted in English, but students will have the option to do work in Russian for three extra course units.

76-296 20th Century Russian Masterpieces

Intermittent: 9 units
At the beginning of the 20th century, the Russian Empire underwent a series of dramatic changes in quick succession: industrial modernization, the unsuccessful 1905 rebellion, terrible losses in the First World War, finally culminating in the 1917 October Revolution. The literature and culture of the era were deeply impacted by these upheavals as artists and writers of the era attempted to capture and convey the world rapidly shifting around them. This course will acquaint students with canonical texts from 20th-century Russian literature and will also examine the highly specific context in which they were produced. From the fin-de-si and #232;cle aesthetics of a crumbling Russian Empire to the avant-garde experimentalism of the Russian Revolution and Civil War era, to the establishment of Socialist Realism and the implementation of a Totalitarian regime under Stalin, the course invites students to think about both the realities of life and artistic production in a rapidly transforming country as well as the ways in which these works bring contemporary readers to the inner lives of Soviet citizens.

76-300 Professional Seminar

Fall: 3 units
This weekly, 3-unit seminar is designed to give professional and technical writing majors an overview of possible career and internship options and ways to pursue their professional interests. Each session will feature guest presenters who are professionals working in diverse communications-related fields such as web design, journalism, public relations, corporate and media relations, technical writing, medical communications, and working for non-profits. The visiting professionals talk about their own and related careers, show samples of their work, and answer student questions. The course is required for first-year MAPW students and is open to all English undergraduates, who are urged to participate in their sophomore or junior years to explore options for internships and careers.

76-301 Internship

All Semesters
This course is designed to help you explore possible writing-related careers as you gain workplace experience and earn academic credit. You'll work on- or off-campus as an entry-level professional writer for 8-10 hours per week in a field of interest to you (public relations, journalism, advertising, magazine writing, non-profit, healthcare, etc.). You are responsible for finding an internship. Most of your class time for the course will be completed at your internship site - a minimum of 120 hours (8-10 per week) over the semester for 9 units of credit. As the academic component of the course, you'll keep a reflective journal and meet periodically with the internship coordinator to discuss your internship and related professional issues. You must register for the course before the add/drop deadline of the semester in which you want to do your internship. Before you can register, you must contact the internship instructor listed above to express your interest in the course and to be cleared for registration. Credit for the internship course cannot be retroactively awarded for past internships.

76-302 Communication Support Tutoring Practicum

Fall
The Communication Support Practicum is designed to introduce students to communication scholarship and pedagogy as well as the methods and theories that inform them for the purpose of communication support and tutoring in CMU's Student Academic Success Center. Students will explore communication (written, oral, and visual) in multiple disciplines and genres with a focus on gaining knowledge and skills to respond to communicators and their texts. Lectures, discussion, and assignments will offer a chance to think critically about tutoring practices and the ideologies and values on which they are based as well as ways to challenge the bias inherent in them. There will be many occasions to reflect on and evaluate tutoring skills, observe others in tutoring situations, and practice a variety of methods that consider the different needs of communicators. Students will gain awareness of how various spaces, identities, technologies, and abilities inform textual production as well as how to create a meaningful response to meet the diverse needs.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

Course Website: https://www.cmu.edu/gcc/faqs/index.html (https://www.cmu.edu/gcc/faqs/)

76-303 Independent Study in Creative Writing

All Semesters
An Independent Study course is a course taken with faculty supervision that goes beyond the courses offered in a particular area of interest. It should not duplicate a course offered in the regular schedule of classes. A student wishing to take an independent study needs to locate a faculty member whose research interests are close to the area of proposed study and meet with the faculty member to discuss whether it is something the faculty member is interested in doing. The department requires that the student and instructor submit a written contract (available in the English Department) detailing the expectations (description of course of study, readings, how often the student/faculty member will meet) and requirements for the completed independent study project (number and amp; length of papers) and a time-line for completion of the work. You should think of this as developing the equivalent of a detailed course syllabus/schedule, and typically involves development of a bibliography of readings.

76-306 Editing and Publishing

Fall and Spring
Note: Registration in this course is by permission only. In this course students will work closely with the editors of Carnegie Mellon University Press to learn many of the facets of producing books. These range from business management and marketing to the elements of editing, book design, and production.

76-307 Advanced Editing and Publishing

Fall and Spring
Note: Registration in this course is by permission only. In this course students will work closely with the editors of Carnegie Mellon University Press to learn many of the facets of producing books. These range from business management and marketing to the elements of editing, book design, and production.
Prerequisite: 76-306

76-308 Literary Journal Publishing

Intermittent
In this course, students will learn about the landscape of and publication process for literary journals in the United States. We will read a variety of literary journals in print and online, will host guest speakers, and will do a variety of hands-on activities related to editing and publishing. Students will gain experience by working on The Oakland Review, an international literary journal run out of CMU, in capacities as varied as editorial, design and production, or promotion. If you are interested in registering for this course, please go to the Course URL and fill out the questionnaire. Thank you.
Prerequisites: 76-265 or 76-260

Course Website: https://form.jotform.com/CMUEnglish/literary-journal-publishing-course (https://form.jotform.com/CMUEnglish/literary-journal-publishing-course/)

76-310 Advanced Studies in Film and Media

Spring: 9 units
This course will focus on several key technical components of filmmaking and the ways they function within the film text, as well as the ways they can be read as an indication of the underlying ideology of a work. Individual units of the course will concentrate on performance, production design, photography, editing and music. Films will be drawn from a variety of national cinemas from around the world. A primary goal of the course will be the development of skills useful for filmmaking, film analysis and scholarship. Students will engage in focused projects designed to facilitate the pedagogical goals of each unit.
Prerequisite: 76-239

76-311 Independent Study in Humanities Analytics

Intermittent
An Independent Study course is a course taken with faculty supervision that goes beyond the courses offered in a particular area of interest. It should not duplicate a course offered in the regular schedule of classes. A student wishing to take an independent study needs to locate a faculty member whose research interests are close to the area of proposed study and meet with the faculty member to discuss whether it is something the faculty member is interested in doing. The department requires that the student and instructor submit a written contract (available in the English Department) detailing the expectations (description of course of study, readings, how often the student/faculty member will meet) and requirements for the completed independent study project (number and amp; length of papers) and a time-line for completion of the work. You should think of this as developing the equivalent of a detailed course syllabus/schedule, and typically involves development of a bibliography of readings.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-312 Crime and Justice in American Film

Intermittent: 9 units
Films dealing with criminal activities and criminal justice have always been popular at the box office. From the gangsters of the Thirties and the film noir of the Fifties to the more recent vigilante avenger films of Liam Neeson, the film industry has profited from films about crime and its consequences. How those subjects are portrayed, however, tells us a great deal about larger trends in American history and society. Every imaginable type of criminal activity has been depicted on screen, as have the legal ramifications of those acts. But these films raise profound questions. What is the nature of crime? What makes a criminal? Are there circumstances in which crime is justified? How do socioeconomic conditions affect the consequences? How fair and impartial is our justice system? Perhaps most importantly, how do depictions of crime and justice in popular media influence our answers to these questions? This class will utilize a variety of films to discuss the ways in which popular media portrays the sources of crime, the nature of criminals, the court and prison systems, and particular kinds of criminal acts. Films to be screened may include such titles as The Ox-Bow Incident, Out of the Past, 12 Angry Men, Young Mr. Lincoln, Brute Force, The Equalizer, Jack Reacher and Minority Report. By thoroughly discussing these films and related readings we will be able to trace the various changes in attitude towards crime and justice in America over the last century.

76-313 Creative Visual Storytelling in Film Production

Intermittent: 9 units
Visual storytelling cuts to the heart of the filmmaking process, combining all elements of the craft to engage the viewer. Every picture is comprised of a story, visuals, and, sometimes, sounds. This class is about learning how to understand and control time-based images to better tell your story. We will learn essential skills for becoming a creative technological storyteller - how to think visually and aurally. Fundamental focus will be on understanding the basic visual components -using space, tone, line, shape, color, movement and rhythm- and how they are used to visually tell a story, define characters, communicate moods, emotions, thoughts and ideas. We often are not consciously aware of them within a film but are critical in establishing the relationship between story structure and visual structure. Through readings, film analysis, creative brainstorming, assignments and individual critiques this class will guide each student into translating their creative vision into a short final film.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-314 Data Stories

Fall: 9 units
Every dataset has a story. In the age of big data, it is vital to understand the unlikely casts of algorithms, data miners, researchers, data janitors, pirates, data brokers, financiers, etc. whose activities shape culture. This course will feature a range of "farm to table" data stories, some going back hundreds of years, and introduce students to resources and strategies for contextual research. It will explore cases such as the London cholera epidemic, Google Books, Netflix, the Oxford English Dictionary, the Strava map, and the Queen Nefertiti scan alongside several pieces of art and fiction that capture aspects of data stories typically obscured elsewhere. Research methods introduced will include book history, media archeology, history of information, infrastructure studies, ethnography, narratology, and digital forensics. Students will read scholarly articles, novels, journalism, and popular non-fiction; they will test algorithms; and they will develop individualized long-form research and writing projects informed by computational methods in data studies, journalism, and art.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-315 19th Century American Literature

Intermittent: 9 units
These days, it's pretty easy to get to Walden Pond. It's right off route 126 South (not too far from Concord) and there is a nice little farm stand there called the Farm at Walden Woods, where you can get corn and raspberries and freshly baked bread. In this class we'll go back in time to the Walden Pond of Thoreau's time, with a focus on the Green Nineteen and #8212;-writers and thinkers who considered the relationship between human civilization and the American wilderness (Thoreau, Emerson and Hawthorne). We will think about the interrelationship between the environment and nascent capitalist industries by reading the poetry and prose by young women who worked in the Lowell Mill (The Lowell Mill Offerings). We will also think about the environment in relation to two slave narratives (Douglass, The Slave Narrative of Frederick Douglass and Harriet A. Jacobs, Incidents in the Life of a Slave Girl. Finally we will consider the environmental consciousness of the two most important poets of the 19th century, Walt Whitman and Emily Dickinson. As for coursework, we will use the class to practice meditation, natures walks, and one group project in which you will design your own environmentally conscious Utopian community.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-316 Topics in Literature: Watching HBO's The Watchmen

Intermittent: 9 units
This course is centered on the graphic, social and political universe created by HBO's The Watchmen series. Course viewings/readings will include: the 9-episode HBO series from 2019, the original The Watchmen comic series from the 1980s, and various cultural influences on the HBO series, including the musical Oklahoma, and the 1930s era singing group the Ink Spots, whose hit, "I Don't Want to Set the World on Fire," is featured in the series. The course will include the intro to film studies text, Writing about Movies, and one of the goals of the course will be for students to write original, accessible, and interesting 1000 word essays about the series to be published on a public website.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-317 Contemporary American Fiction

Intermittent: 9 units
No one seems to know quite how to define contemporary American fiction. It's clear that fiction has changed since the 1960s and 70s, the heyday of postmodernism, but it's hard to pin down what characterizes the work that has come since. In this course, we will read a selection of American fiction from the 1980s to the present and try to get a sense of its main lines. In particular we'll look at the turn to "genre," the expansion to multicultural authors, and the return to realism. Also, we will consider how it relates to American society. Authors will include authors like Chimamanda Ngozi Adichie, Alison Bechdel, Jennifer Egan, Emily St. John Mandel, Weike Wang, and Colson Whitehead.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-318 Communicating in the Global Marketplace

Intermittent: 9 units
Effective intercultural and global communication has become increasingly salient in today's hyper-connected world, simultaneously presenting us with challenges and rewards. A vivid thread that unspools once one begins to unravel the embroidery of intercultural and global communication in contemporaneous times is computer-mediated communication (CMC) and social media. With more than half of the world's population connected to the Internet, we are more connected than ever. But, despite how seamless the Internet may have made communication, the fact that language is rooted in culture complicates CMC, even if the language is English. The omnipresence of English leads people to assume that a common language implies a shared understanding of a given topic. But, speaking the same language does not mean we share the same cultural values, or that we even understand or are aware of other cultural values and beliefs. English may be the lingua franca in many organizations and professional settings, but the commingling of globalization and CMC raises some questions including "How can professional communicators contribute to shaping a workplace discourse that transcends national or regional borders to reach a global audience"? This course will address these questions by explaining the specific ways in which our backgrounds (from personal to social and even national) influence professional and technical communication; the impact of globalization on the workplace, especially in times of crisis; and the ways in which we can rely on general concepts and principles in order to communicate effectively in specific international settings and situations.
Prerequisites: 76-270 or 76-271 or 76-272

76-319 Environmental Rhetoric

Fall: 9 units
Should you take a hike or seize the mic? Environmental rhetoric combines commitment with contention We start by exploring its multiple discourses, from Muir's vision of conservation, to Leopold's introduction of ecology, to Carson's call for public action, to contemporary scientific research and competing public discussions. To uncover their hidden logic, we study rhetorical strategies first, for analyzing arguments (over issues such as wolves, clean water, or sustainable design), and then for communicating risk (in the face of climate change, fracking, as well as wind power). In response, this course will prepare you to act as a research-based rhetorical consultant for a group of your choice, analyzing the issues and arguments it faces, in order to propose a rhetorically effective response, supported by your own imaginative prototype of a brochure, web page, press release.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-323 Text to Screen

Intermittent: 9 units
This course is an introduction to the fundamentals of narrative filmmaking and the attendant creative processes. Students will explore the symbiosis between film literature, visual storytelling, team building and the practical planning essentials universal to making film.
Prerequisite: 76-269

76-324 Topics in Rhetoric: Language and Place

Intermittent: 9 units
TBD
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-108 and 76-106)

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-325 Intertextuality

Spring: 9 units
What do we mean when we say that someone has "twisted" our words, or that our words have been "taken out of context"? Why is Martin Luther King Jr. best remembered for saying, "I have a dream," and not for saying, "War is the greatest plague that can affect humanity"? What are political "talking points" and how are they perpetuated? How does a claim (unfounded or not) become a fact? How does a fact become a myth? These are just some of the questions that we will consider. More specifically, this is a course in how meaning changes as texts created in one context and for specific purposes are repeated, cited, and used in other contexts and for other purposes, sometimes related and relevant, sometimes not. More technically, we'll be focusing on the rhetorical nature of intertextual discourse. Our goal will be to examine the ways that people of all kindsincluding politicians, journalists, and scientistsstrategically draw upon and transform the statements, arguments, and evidence of other people to promote their own viewpoints or purposes. We will begin by investigating scholarship that views language as an extended conversation in which people struggle to have their own voices heard, and other voices countered or even suppressed. Later, we will survey a number of studies that suggest how individuals and organizations recontextualize and reinterpret prior discourse for persuasive ends. More specifically, we will analyze how the micro-features of the language (for example, qualifications, evaluations, and attributions) are used to persuade audiences that certain assertions are (not) factual, that certain speakers are (not) authoritative, and that certain proposed actions are (un)desirable. Ultimately, you can conduct your own research on intertextual rhetoric on a topic of specific interest to your academic or professional goals.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-326 Contemporary Global Literature

Intermittent: 9 units
In this course, students will read, interpret, discuss and write about novels and short stories written in English in the past ten years by writers originally from Africa, South Asia, East Asia and the Caribbean. While these works represent the "large stories" of economic globalization, refugee migration, and ecological catastrophe, they are crafted around the "small stories" of love, longing, friendship and family.We will talk about both kinds of narratives, tracing the entanglements of one in the other.Students will reflect on the relationship between history, society and culture in a global context, situating the contemporary within the longer trajectories that mark the legacies of colonialism and imperialism. This course is virtual and almost entirely synchronous; barring unexpected situations, attendance is expected for what should be a lively class discussion.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-327 Equity & Communication: Strategies for Institutional Change

Intermittent: 9 units
Communication is always embedded in power relationships with unstated social rules that govern who is able to say what when. But communication also offers us a tool for rewriting oppressive social scripts. In this class, we will look both at inequities built into our communication and strategies for overturning these inequities. The focus will be on practical actions that you can take to improve your school, workplace, or extracurricular groups. Our readings will come from diverse sources and fields, including sociolinguistics, psychology, education, organizational communication, and writing studies. While our readings might occasionally depress (or enrage) you, the overall focus of the course will be optimistic, challenging you to imagine solutions to the problems we discuss.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-328 Introduction to Corpus Linguistics

Intermittent: 9 units
This is a hands-on, project-based class that will help students build a methodological toolkit for computer-based textual analysis. That toolkit will include methods for the collection of data, its processing via off-the-shelf software and some simple code, as well as its analysis using a variety of statistical techniques. In doing so, the class offers students the opportunity to engage in scientifically oriented inquiry, giving priority to the use of corpus evidence to answer research questions. The first part of the term will be devoted to introducing fundamental concepts and taking a bird's eye view of the potential application of corpus methods in domains like academic writing, technical communication, and social media. From there, students will initiate projects of their own choosing and develop them over the course of the semester. The goal is to acquaint students with the strengths and limitations of computer- based textual analysis and to provide them with the necessary foundational skills to design projects, to apply appropriate quantitative methods, and to report their results clearly and ethically to a variety of audiences. This class requires neither an advanced knowledge of statistics nor any previous coding experience, just a curiosity about language and the ways in which identifying patterns in language can help us solve problems and understand our world.

76-329 Performing Race in Early Modernity

Intermittent: 9 units
The earliest known use of the term "white" in reference to Europeans occurs in The Triumphs of Truth, a 1613 play by Shakespeare's contemporary, Thomas Middleton. In addition to suggesting an important connection between race and drama in 17th-century England, this simple historical note raises a range of questions that have a direct bearing on some of the most pressing issues of the 21st century: Where do ideas about race come from? By what processes do the distinctions of racial concepts emerge, evolve, calcify, and mutate? How does the conceptualization of race relate to media? How do racial representations bolster and conduct political power? In this course, we will broach these questions by taking a close look at the race-making function of drama in early modernity, a period when race was an inchoate, incipient concept, caught up with the emergence of colonialism, capitalism, and increasing interconnection between peoples, cultures, and worlds. As we think, read, and converse together, we will endeavor to come to terms with the problems and paradoxes of racial representation in the early modern theater, a forum that offered access to innovative, daring thinking about human equality and ethical responsibility, but was also a site for the perpetuation of hateful stereotypes and exploitative theories of white supremacy. In a wide-ranging survey of drama, historical documents, and contemporary criticism, we will work toward an understanding of how race-based concepts operated in the theater, and how the drama early of modernity continues to influence thinking about race in our own time. This course meets the Dietrich College Reflecting Gen Ed requirement.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-332 Writing about Research in Your Discipline

Intermittent: 9 units
This course introduces the characteristics and types of writing required of students at advanced undergraduate and beginning graduate levels while building sentence-level editing skills. Topics addressed include the role of writing in the academy, the writing process including editing and revision strategies, expectations for content associated with different genres, bibliographic styles and reference management software, and an introduction to the reporting of empirical research. Students will work through modules on sentence structures associated with academic language as well as workshop their own writing projects. This course is appropriate for students considering writing a senior thesis and/or applying to graduate school.
Prerequisite: 76-101

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-335 20th and 21st Century American Fiction

Intermittent: 9 units
This course will examine American fiction from 1900 to the present. It will cover the movement from modernism, through midcentury realism and postmodernism, to the contemporary. We will look at scholarly definitions of those modes, as well as some of the cultural context that has informed American literature. Some of the authors will include modernists like Stein and Faulkner; midcentury writers and postmodernists like Ellison, McCarthy, and Pynchon; and contemporary writers like Diaz, Lahiri, and Franzen.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-108 and 76-106)

76-337 Intersectional Feminism

Intermittent: 9 units
The concept of intersectionality first appeared in African-American feminist legal theory, but it rapidly spoke to other ideas and movements authored by other women positioned on the margins in the United States and beyond. Now widely disseminated as a feminist practice embraced by many identities, intersectional feminism acknowledges how interlocking power structures produce systematic oppression and discrimination to create distinctive gender identities in terms of such aspects as sexuality, race, ethnicity, class, religion, language (and accent), and neuro- and physical diversity. In this class, we will consider a wide variety of texts that mobilize this movement, including fiction, poetry, memoir, scholarly works, drama, popular media and films. We will consider voices from the "global south," non-Western countries that are speaking back to the economic and political centers of globalization. Pairing analysis with these texts with some examples of praxis, or political practice, we will think through and debate how critiques of power can move toward social change. Students will be encouraged to use these texts and a series of shorter writing assignments about texts to build toward a final project relevant to their own discipline. Readings might include Kimberl and #233; Crenshaw, Audre Lorde, bell hooks, Roxane Gay, Chimamanda Ngozi Adichie, Mona Eltahawy, Erika L. S and #225;nchez, Chandra Talpade Mohanty, Fatima Mernissi and Mari Matsuda, Fatima Mernissi, and Aiwah Ong.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-338 Internship Mini

Intermittent
This course is designed to help you explore possible writing-related careers as you gain workplace experience and earn academic credit. You'll work on- or off-campus as an entry-level professional writer in a field of interest to you (public relations, journalism, advertising, magazine writing, non-profit, healthcare, etc.). You are responsible for finding an internship. Most of your class time for the course will be completed at your internship site. As the academic component of the course, you'll keep a reflective journal and meet periodically with the internship coordinator to discuss your internship and related professional issues. You must register for the course before the add/drop deadline of the semester in which you want to do your internship. Before you can register, you must contact the internship instructor listed above to express your interest in the course and to be cleared for registration. Credit for the internship course cannot be retroactively awarded for past internships.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-339 Topics in Film and Media

Intermittent: 9 units
Topics very by semester and section. For Fall 2023 section descriptions, visit the course URL.
Prerequisites: 76-101 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: https://docs.google.com/spreadsheets/d/1HzTjLjBFM73kSJver61zYwMb2GfFYzS7zFdxzMyH6Ig/edit?usp=sharing (https://docs.google.com/spreadsheets/d/1HzTjLjBFM73kSJver61zYwMb2GfFYzS7zFdxzMyH6Ig/edit/?usp=sharing)

76-340 Hospitable Worlds: Migration and Settlement on Earth and in Space

Intermittent: 9 units
Are you an artist, writer, designer, science major or film major who has ever thought about living on Mars? Do you watch sci-fi movies and think, "whoa, that looks cool," or "no way, that's not how it would work!" Do you worry about climate change on planet Earth, and think about how to use your creativity to imagine a better future? This class invites students in the visual/literary arts and the sciences to explore planetary hospitality. With each passing year, climate change makes our planet less hospitable for human life. As concerns about Earth's climate grow and the costs of space travel shrink, there has been renewed interest in establishing settlements in outer space. The goal of this class is to explore both the diminishing hospitability of our planet and the prospects of hospitality on others. We will investigate these themes through a variety of media (written, visual, auditory, etc.) and use the questions/themes of the course as inspiration for creating collaborative artistic productions incorporating art and media of all kinds (sketches, poems, paintings, videos, music, etc.).
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-341 Race & Gender in the Age of Jane Austen

Intermittent: 9 units
From Bridgerton (Netflix) to Sanditon (ITV), there is a current boom in Regency adaptations that practice "colorblind" or "color-conscious" casting while interrogating the period's gendered and racial dynamics. But how were race and gender, and their intersections, actually forged and navigated in the age of Austen? This 300-level course will look at Romantic-era in both a historical and a contemporary context. Through reading, viewing, and graded assignments including short essays and oral presentations, we will practice methods for analyzing the formal features of literary and visual texts, such as the structure of a novel, the rhythms of poetry, or the costuming of period drama. In doing so, we will ask: how do these texts respond to historical phenomena such as empire, the rights of women, and slavery and abolition? How and why do contemporary adaptations take up these questions? Examples of readings include Aphra Behn's Ooronoko, Jonathan Swift's "The Lady's Dressing Room," Jane Austen's Mansfield Park, Mary Prince's The History of Mary Prince, and William Wordsworth's "To Toussaint L'Ouverture."
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-342 Love: A Cultural History

Spring: 9 units
This is a course about the cultural history of love. We will focus on romantic love, with an emphasis on how ideas about love have been a dynamic part of our social, political and economic world. Some of the questions to be addressed include: How, historically, did the idea of love become coupled with freedom? How did romantic love come to be considered the epitome of self-fulfillment and what are the problems with that idea? How has the idea of romantic love been mobilized on behalf of things like the state, the nation, capitalism or revolution? How do types of love function as a measure of belonging or deviance? How does the discourse of love enter different kinds of institutional arrangements, such as marriage or state citizenship? As a way to explore these questions, this course looks primarily to literature, including fiction, poetry, and drama, but also to philosophy, history, anthropology, sociology and law. Students will immerse themselves in an interdisciplinary range of material as they read, discuss and write about these representations. We will roam through cultural theory of affect, psychoanalytic notions of love, historical constructions of marriage, and feminist discussions of love and sexuality. Possible texts include works by William Shakespeare, Jane Austen, Toni Morrison, Arundhati Roy and Ocean Vuong.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-107) or (76-106 and 76-108)

76-343 Rise of the American Novel

Intermittent: 9 units
This course will survey American fiction from the beginning of the nation through the first half of the twentieth century. We will look at early fiction, like Washington Irving's "Rip Van Winkle" and mid-1800s classics like Hawthorne's Scarlet Letter, up to twentieth-century works like The Great Gatsby and perhaps some contemporary novels. Through the term, we will ask how the fiction represents the special character of American experience. Alongside readings, you will write several short papers and present some of your research to the class.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-347 Major Fiction

Intermittent: 9 units
We read newspapers for news about our world. But we also read fictionnovels and storiesto tell us about how it feels to live in the world. Sometimes they are like our world, and sometimes very different. In this course we'll read fiction that offers realistic portraits of 19th century society, like Charles Dickens' Great Expectations or Anne Bronte's The Governess, alongside more fantastical portraits like "Rip van Winkle" or contemporary scifi. We will sample fiction from the 19th through the 21st century to trace the course of fiction from romance to realism through modernism to contemporary genre, like dypstopian masterpieces like Station Eleven or Severance. We will also consider about what they say about their culture and society.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-107) or (76-108 and 76-106)

76-349 Climate Fictions

Intermittent: 9 units
During the last 20 or so years, a new kind of fiction has emerged responding to scientific models of climate change. Climate fiction, or "cli-fi," most often imagines a future in which nothing has been done or done soon enough to limit global warming. Much of this literature fits into the broad genre of science fiction, but some of it uses other fictional modes, including realism and postmodernism. This course will look at a variety of fictional approaches to climate change, including a few in visual media. We will consider why fiction is a necessary component of our understanding climate changecomputer models are fictions of a sortbut also whether and how fictional narratives such as novels and films can help motivate action. We may also read some earlier narratives of environmental catastrophe, and some nonfictional discussions of climate change. Likely authors include Amitav Ghosh, Margaret Atwood, Barbara Kingsolver, Kim Stanley Robinson, and Richard Powers.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

76-350 Critical Theories about Literature

Intermittent: 9 units
This course studies the long-debated problem of how readers or spectators respond to texts (in print, performances, film, or painting) from ancient rhetoric and tragedy to contemporary mass culture.We will read in a range of critical theories, from thinkers like Aristotle, Plato, and Longinus to recent theorists in poststructuralism, gender studies, Marxism, and affect theory. How have such critics and theorists thought about the nature of the text and of representation and #8212;or the relation of authorship to reading, ideas, and affects? What techniques of analyzing literary texts have such theories stimulated? Two papers and vigorous in-class discussion will be required.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-351 Rhetorical Invention

Intermittent: 9 units
Rhetorical invention is a discursive approach to the process of inquiry, discovery, and problem solving, or how we decide what to say, what arguments to advance, and what means of persuasion to use in any situation. In other words, it is a rhetorical approach to content generation in any speaking or writing situation. Although invention is centrally important to rhetoricwithout it rhetoric becomes a superficial and marginalized study of style and arrangementfrom the Scientific Revolution and Enlightenment through the mid-twentieth century invention all but disappeared as a topic of rhetorical study, influenced by the view that the content of communication should be exclusively governed by deductive logic and the scientific method rather than rhetorical considerations such as audience, situation, or the history and figurality of language. This repudiation of rhetorical invention fundamentally shaped modern thought and continues to influence the ways we think and communicate today. In this course, we examine the status of rhetorical invention in the development of modern thought and then attend to scholarly efforts to revive a rhetorical understanding of invention from the mid-twentieth century forward, surveying contemporary theories of rhetorical invention including those promoted by postmodern, posthuman, and digital rhetorics. The course is designed to explore the central importance of invention to contemporary rhetorical theory through a pairing of historical and contemporary readings. In addition to regular reading responses, students select a research project examining the history or theory of rhetorical invention.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-353 Transnational Feminisms: Fiction and Film

Intermittent: 9 units
How do controversial practices related to women become touchstones that draw women together across cultures or, conversely, push them into separate cultural and political spheres? This introductory-level course familiarizes students with the challenges transnational feminism has posed to Western notions of feminism. To explore these contestations, we will look at a series of controversies. We will read these controversies through novels, drama, short stories and films, with some secondary theoretical readings. This course will take six case studies concerning cultural practices that have generated global debates about the status of women and issues like consent, freedom, and equality. Beginning with several works about regional/Islamic practices of veiling, we will look specifically at the close connections made between womens practices and elements of tradition, including religion. With an eye toward historicizing feminist interventions, we will look at 19th century debates on sati, commonly called widow burning, in India, to see how certain issues became loci for global intervention during colonial periods and, later, for global feminist movements. Within the contemporary period, we will turn to cultural, economic and political practices like female genital cutting, transnational domestic labor, global sex trade, and transnational forced marriage. For each of these controversies, we will be reading a range of positions represented in different types of writing across genre, with a focus on literary and filmic depictions.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-106 and 76-108)

76-354 Watchdog Journalism

Intermittent: 9 units
The practice of journalism involves covering the news of the day. Investigative journalism uncovers it, digging through public records and data to expose corruption or correct social injustices. The process takes patience and persistence, as well as familiarity with right-to-know laws, to find that gold nugget of information that exposes secrets or becomes the missing piece to a larger puzzle. In this course, students will learn investigative techniques that make the powerful accountable, using government documents, financial filings and databases to spot undetected crime patterns, an unfair housing policy or perhaps questionable spending by a non-profit charity. Investigative journalism has a storied history of exposing wrongdoing and today many of the tools historically used to tell those stories are available to everyone. This course will help budding journalists, researchers and anyone else interested in addressing societal problems find those tools and learn how to use them. This course meets the Dietrich College Deciding Gen Ed requirement.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-357 Linguistic & Social Aspects of Immigration

Intermittent: 9 units
This course introduces students to the linguistic and social aspects of immigration in today's global society. Immigration will be studied as a socio-political construct with an emphasis on the linguistic, socio-cultural, and political challenges and opportunities that migration creates for the individual and society. Throughout the course we will explore one key question: What challenges and opportunities do different aspects of migration posses for multilingual societies and individuals? A great deal of the course focuses on the linguistic challenges that migration creates for the individual and society, with a special emphasis on the development of bilingualism and the education of immigrant children. From a larger socio-political perspective, the course focuses on various case studies of immigrant populations throughout the world in order to obtain a better understanding of the characteristics, opportunities, and challenges faced by immigrant populations internationally.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-358 Making the Documentary

Spring: 9 units
Making The Documentary This will be an experimental one-of-a-kind course where students will be working alongside an experienced film director while taking part in a hands-on documentary project from concept to finished product. This course will explore the filmmaking process from concept and development through to production and postproduction with the intention of completing a feature documentary. The documentary subject this semester will focus on artists, journalists, filmmakers and writers who are living in exile from their home countries. In many places around the world, oppressive regimes still do not respect the right to freedom of expression. Artists resisting oppression sometimes have no other choice than to abandon their countries. Their engagement continues abroad in safer countries, where they can continue to create politically-infused art. The documentary project will focus on several exiled artists living in Pittsburgh in collaboration with the City of Asylum, the world's largest sanctuary for writers and artists living in exile. Our focus will be to reveal the existential creativity and the role of these artists in a time of crisis. Students will be required to engage in concept development, researching, producing, and editing through to final distribution. Students will take part in organizing and ordering the footage, choosing screen selects, creating rough cuts, and fine cuts in order to find the heart of the documentary. Pick-up shoots, B-roll, archival material, music, and sound design will also be considered as needed.
Prerequisite: 76-292

76-360 Literary Journalism Workshop

Intermittent: 9 units
S23: How can storytelling and reading literature help us understand the worlds of healing and illness? We'll read texts focusing on doctors, nurses, patients, caregivers, those living with chronic illness, and disability. Students will write about their own experiences, and those of loved ones.
Prerequisites: 76-262 or 76-261 or 76-270 or 76-271 or 76-472 or 76-372 or 76-265 or 76-260

76-361 Corpus Rhetorical Analysis

Intermittent: 9 units
The Digital Humanities is a huge and growing field spanning many disciplines and skill sets. The focus of this course is on tools and methods that allow students to analyze textual corpora as purveyors of stories, information, and arguments that seek to influence cultural thinking, reveal existing cultural mindsets, and often both in tandem, either synchronically or diachronically. This is the point of view often taken by analysts who work for universities, think tanks and intelligence agencies who seek to understand cultural trends and mindsets from volumes of digital texts. For such analysts, close reading is an indispensable part of their work and computing tools help focus their reading while reading helps refine their understanding of the computer output. The course will give students intensive practice with methods and tools for analyzing corpora of text at the word, phrase, and sentence level, and with working with large scalable dictionaries and multivariate statistics.
Prerequisites: (76-106 or 76-108 or 76-107 or 76-108 or 76-106 or 76-107 or 76-102 or 76-101) and 76-380

76-362 Reading in Forms: Nonfiction

Intermittent: 9 units
In this reading-intensive course we will analyze and discuss different types of narrative structure, narrative suspense, voice, metaphor, and point of view that make for effective non-fiction writing. We will also examine the difference between good writers and good work, the functions of objective distance from and intimate investment in a subject, as well as the philosophical questions spurred by non-fiction writing. What is the non-fiction writer's role, and how does it differ from that of the fiction writer? Where do the two genres overlap? What gives non-fiction writing integrity? What does the term "creative non-fiction" mean? How have the form and aims of non-fiction writing - from memoir to essays to long-form journalism - evolved for better and for worse? We'll be reading a selection of essays from a variety of writers, as well as full works from a few writers considered masters of the form.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-363 Reading in Forms: Poetry

Intermittent: 9 units
How does identity color our reading or alter our expectations of a poem? How does a poet's identity inform their poetic approach? In this course, we'll shift our focus from poetry to poet, text to context, and back, as we explore how the poet's identity operates both within their work and outside of it. Through class discussion and readings of poetry and essays we'll approach questions of permission, permissibility, responsibility, appropriation, and the identity poetics and politics at play in the evolving landscape of contemporary American poetry.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-364 Reading in Forms: Fiction

Fall and Spring: 9 units
What does it mean to feel at home? In this course, we will read and discuss fiction, memoir, and other creative work that centers on the search for home. We'll expand the idea of home to include not only the desire for comfort in a particular place, but also for a feeling of home in one's body, family, or culture. Expect to read nine or ten books, to write a response paper for each class, and to do one in-class presentation, in which you will lead the discussion. Active participation in discussions is a major part of your course work.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-365 Beginning Poetry Workshop

Fall and Spring: 9 units
In this workshop, we'll explore the building blocks of poetry, as participants develop their eye and ear as poetry readers, and practice different poetic techniques in their writing. Students will read the work of contemporary poets, attend poetry readings, respond to writing prompts, and read and respond to each other's work. Through our reading, discussions, and creative exercises, we'll examine the role of line, line break, shape, sound, silence, rhythm and form in poetry, with an eye toward how craft choices communicate on the page and how they reflect the world of the poet.
Prerequisites: (76-102 or 76-101 or 76-106 or 76-107 or 76-108) and 76-265 Min. grade B

76-367 Fact Into Film: Translating History into Cinema

Intermittent: 9 units
From the very beginning, film has provided a window into the past. But how useful are the images we see through that window? For every person who reads a work of history, thousands will see a film on the same subject. But who will learn more? Can written history and filmed history perform the same tasks? Should we expect them to do so? How are these two historical forms related? How can they complement each other? This course will draw examples from across the history of film in order to examine how the medium of film impacts our understanding of facts and events, the ways that film transfers those facts to the screen, and how that process affects the creation of historical discourse. Films may include such titles as The Fall of the Roman Empire, The Gunfight at the O.K. Corral, Saving Private Ryan, World Trade Center, Enemy at the Gates, Lagaan and Hero.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-368 Role Playing Game Writing Workshop

Fall: 12 units
Role playing games (RPGs) are a vibrant and viable popular medium for interactive storytelling. This workshop builds upon dramatic theory DNA existing in plays, TV and film. Gameplay is performance. The skills developed when creating any time-bound media transfer well to games but must be seen through a different lens - the lens of the player. To do so, we first examine and dissect both RPG story and game design (using pencil and paper examples) seeking an understanding of both game systems as well as narrative best practices. In class we focus our examination on the most popular existing intellectual property (The Lord of the Rings). Students who desire admittance to this class should be at least somewhat familiar with that world to succeed in the class. Each student works on a four-person team to create an original RPG campaign-style adventure for an already existing story world. The final product is a portfolio-quality set of dramatic scenes, epic tabletop encounters, and character sketches. This is not an RPG design course. Any level of writing experience is welcome, BUT experience playing RPGs and #8212; either tabletop or video game and #8212; is a must. Experience as a GM for an RPG is a big plus, and applicants who possess such experience should be sure to let the instructor know in advance.
Prerequisites: 76-269 Min. grade C or 76-260 Min. grade C

76-370 Independent Study in Literary and Cultural Studies

All Semesters
An Independent Study course is a course taken with faculty supervision that goes beyond the courses offered in a particular area of interest. It should not duplicate a course offered in the regular schedule of classes. A student wishing to take an independent study needs to locate a faculty member whose research interests are close to the area of proposed study and meet with the faculty member to discuss whether it is something the faculty member is interested in doing. The department requires that the student and instructor submit a written contract (available in the English Department) detailing the expectations (description of course of study, readings, how often the student/faculty member will meet) and requirements for the completed independent study project (number and amp; length of papers) and a time-line for completion of the work. You should think of this as developing the equivalent of a detailed course syllabus/schedule, and typically involves development of a bibliography of readings.

76-372 News Writing

Fall: 9 units
In this course, we will study and learn the fundamental skills of journalistic writing as well as discuss topics related to how different media outlets cover news. On the writing side, we will start with the basics - the importance of accuracy, clarity and fairness, writing for audience, striving for objectivity, judging newsworthiness, meeting deadlines. The core class work (and most of your grade) will be based on seven writing assignments due approximately every two weeks throughout the semester. Expect to do some writing each class period. We will learn how to write a story lead, how to structure a story and how to write different kinds of news stories, from crime news to features to editorials and commentary. We also will learn how to research a news story, conduct an interview and sort through mountains of information to discern what's important so we can write about it in a clear, concise manner.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-373 Argument

Fall and Spring: 9 units
This course introduces the fundamentals of argumentation theory and offers guided practice in analyzing and producing arguments. Through analysis, we will learn what an argument is, how to identify one, and what the names and functions of a variety of argument features are. We will also explore the production of argument by pursuing the questions: What are my argumentative goals? How do I build a theory of my audience? What means of persuasion are available for me to achieve my goals? And how should I order the contents of my argument? To answer these questions, we will explore argument in a variety of genres including visuals, op-eds, presidential speeches, and congressional testimonies.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-106 and 76-108)

76-374 Mediated Narrative

Spring: 9 units
We are offering the opportunity to travel into the future, build it, and represent it in creative and critical ways. The Mediated Narrative: Futuristic Explorations course aims to explore the concept of the future, analyze its representations, and create a media project based on potential utopian/dystopian areas of human progress and evolution. Students will have to recreate and represent their own visions of the future through a media project. Essential to the research and development of the class is the concept of humanity and empathy within a technological social world. Ideas such as: "reality ahead of schedule"; "high tech, low life"; "neon and corporate dystopias"; "cyberpunk"; "post-human"; "sustainability"; etc, will be analyzed and discussed in class. Concepts of civilization, the cityscape, the individual, the body and the mind will be examined as we have seen technology and society evolve. During the 2024 spring semester there will be two onsite visits to historical places that under similar idealist social premises of the future have embodied diverse existential outcomes: a) The city of Arcosanti in the Arizona dessert b) The Old Economy Village in Pennsylvania. Both places represent a utopian philosophy of life which attempted to be in synchronicity with everyday life. The idea is to map traditional futuristic themes and styles and find new ways to represent them based on the needs and contradictions in our present world.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-106 and 76-108)

76-376 Crafting Race in 19th-Century Britain

Intermittent: 9 units
This course explores how the idea of race was developed, deployed, and reinforced through nineteenth-century British culture, from novels to museums to ballet. Students investigate how literature and art produced and replicated arguments about race that justified or fought against oppression. Alongside literary texts, students will also work with advertisements, paintings, filmic adaptation, and theatrical practice. We take an intersectional approach, thinking not only about race, but also the connections between gender, class, sexuality, and disability. What are the roots of problems we think of as modern, like whitewashing in media? How has racial thinking been passed down through time and across oceans? Ultimately, our investigation aims to provide insight to modern issues of race through a better understanding of cultural history. Note: we will have one field trip during class time (Carnegie Museum of Art and Natural History)

Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-377 Shakespeare on Film

Intermittent: 9 units
The dramatic works of William Shakespeare have inspired an extraordinarily rich and varied corpus of films that includes legendary performances, adaptations from across the full breadth of world cinema, and experiments in every major genre. This course will consider a selection of key Shakespeare films alongside critical readings centered on questions of authorship, adaptation, technology, and performance. As we watch, read, write, and converse together, we will work toward a broader understanding of what Shakespearean drama means in a 21st century context and how film has helped to shape Shakespeare's unparalleled cultural influence.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-108 and 76-107)

76-380 Methods in Humanities Analytics

Spring: 9 units
The computer-aided analysis of text has become increasingly important to a variety of fields and the humanities is no exception, whether in the form of corpus linguistics, stylometrics, "distant reading," or the digital humanities. In this course, we will build a methodological toolkit for computer-aided textual analysis. That toolkit will include methods for the collection data, its processing via off-the-shelf software and some simple code, as well as its analysis using a variety of statistical techniques. In doing so, the class offers students in the humanities the opportunity to put their expertise in qualitative analysis into conversation with more quantitative approaches, and those from more technically-oriented fields the opportunity to gain experience with the possibilities and pitfalls of working with language. The first part of the term will be devoted to introducing fundamental concepts and taking a bird's eye view of their potential application in domains like academic writing, technical communication, and social media. From there, students will initiate projects of their own choosing and develop them over the course of the semester. The goal is to acquaint students with the strengths and limitations of computer-aided textual analysis and to provide them with the necessary foundational skills to design projects, to apply appropriate quantitative methods, and to report their results clearly and ethically to a variety of audiences. This class requires neither an advanced knowledge of statistics nor any previous coding experience, just a curiosity about language and the ways in which identifying patterns in language can help us solve problems and understand our world.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-384 Race, Nation, and the Enemy

Intermittent: 9 units
Conflicts over racial and national identity continue to dominate headlines in the United States as they often have during the nation's history, from debates regarding the immigration, naturalization, and birthright citizenship of racial minorities to debates regarding racial disparities in access to civil rights. This course explores the discursive practices through which racial and national identities are formed and the frequent conflicts between them, particularly by focusing on the role of enemies, threats to the nation, and sacrifices made on behalf of the nation in American public discourse. Alongside primary sources of public discourse regarding wars, the immigration and citizenship of racial minorities, racial segregation and civil rights, and the criminal prosecutions of dissidents during periods of crisis, we will read secondary sources offering multiple theoretical and disciplinary approaches to the study of racial and national identity formation. Along with regular brief responses to readings, assignments will include a short rhetorical analysis paper and a longer research paper.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-107) or (76-108 and 76-106)

76-385 Introduction to Discourse Analysis

Intermittent: 9 units
"Discourse" is language: people talking or signing or writing. Discourse analysts ask and answer a variety of questions about how and why people do the things they do with language. We study the structure of written texts the semi-conscious rules people use to organize paragraphs, for example as well as the unconscious rules that organize oral discourse such as spontaneous stories and arguments. We study how people signal their intended audience-interpretations of what they say as foreground or background information, a casual remark or solemn promise, more of the same or change of topic. We look at how grammar is influenced by what people need to do with language, and how discourse affects grammar over time. We ask how children and other language learners learn how to make things happen with talk and writing. We ask how people learn what language is for, from exchanging information to writing poetry to perpetuating systems of belief. We analyze the choices speakers and writers make that show how they see themselves and how they relate to others. (Choices about how to address other people, for example, both create and reflect relationships of power and solidarity). We study how people define social processes like disease, aging, and disability as they talk about them, and how language is used to mirror and establish social relations in institutional settings like law courts and schools as well as in families and among friends. This course touches on a selection of these topics and gives students practice in analyzing the complex nuances of language. The course is meant for anyone whose future work is likely to involve critical and/or productive work with language: writers and other communication designers, critics who work with written or spoken texts, historians, actors, sociologists, and so on.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-108 and 76-106)

76-386 Language & Culture

Intermittent: 9 units
This course is an introduction into the scholarship surrounding the nature of language and the question of how language shapes and is shaped by social, cultural and political contexts. We will begin by studying important literature in linguistics and language theory, both to introduce us to how scholars think about language and to give us a shared vocabulary to use for the rest of the semester. We will then move into case studies and theoretical works exploring the intersections of language use, individual and group identities, and the exercise of power, in its many forms. In particular, we will focus on the relationship between language and culture by asking, in what ways does language influence and constitute social change? How is social change reflected by changes in the way we use language? Over the course of the semester, you will work on applying the knowledge and theoretical tools you gain to your own analysis of a linguistic artifact that you choose.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-108 and 76-106)

76-387 Writing in the Disciplines

Intermittent: 6 units
This mini will introduce you to the theory and practice of writing instruction in contexts outside of English studies. We will learn about the distinction between Writing across the Curriculum and Writing in the Disciplines and challenges to providing integrated, high quality writing instruction across the university. We will explore the implications of the wide variety of forms of academic writing for instruction in English classrooms, including high school and first-year writing classrooms. Assessments will include reading responses and a final paper reviewing research on writing in a specific writing context of your choosing. Students enrolled in the course for six units will be expected to do additional readings and give an oral presentation. Please note that in terms of time commitment, a 3-unit mini will require approximately six hours per week (three hours homework and three hours class meetings) and a 6-unit mini will require twelve hours per week.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-108 and 76-106)

76-388 Coding for Humanists

Intermittent: 9 units
This course provides students with the foundational knowledge and skills to develop and/or utilize computer-aided research tools for text analysis. Through a series of hands-on coding exercises, students will explore computation as a means to engage in new questions and expand their thinking about textual artifacts. This course is designed for students with no, or very little, coding experience. So, if you have already taken a programming course, this course is most likely not for you. Students who have taken 15-110 and/or 15-112 may not take this course. For the final project, you will develop a small research project involving a computational analysis of a corpus of texts. You will plan, design, and write a computer program that processes and analyzes a textual corpus of your choice. Students who are taking the course for 9-unit will write a brief project report (3-5 pages) that summarizes your final project. Graduate students in the MA in Rhetoric/PhD programs must register for 12-unit, and will complete a research paper (4,000-5,000 word).
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-389 Rhetorical Grammar

Fall and Spring: 9 units
This is a course in fundamental grammatical structures of English and how these structures fit into the writer's toolkit. This means you will learn a lot about English-language grammar in this course en route to understanding a lot about English language writing. This course is designed for MA students in professional writing and undergraduates who want to improve their grammar, their writing, and their depth of understanding of how improvement in grammar impacts improvement in writing.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-390 Style

Fall and Spring: 9 units
This course teaches you how to write clearly. Specifically, the principles you learn in this course will help you 1) to clearly represent actions and the characters responsible for them; 2) to make your paragraphs coherent and cohesive; 3) to write sentences that stress important information; 4) to cut unnecessary prose; and 5) to reshape lengthy sentences so as not to perplex your reader.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-107) or (76-108 and 76-106)

76-391 Document & Information Design

Fall: 9 units
This course provides students who have already learned the foundation of written communication with an opportunity to develop the ability to analyze and create visual-verbal synergy in printed documents. Students will be introduced to the basic concepts and vocabulary, as well as the practical issues of visual communication design through a series of hands-on projects in various rhetorical situations. Assigned readings will complement the projects in exploring document design from historical, theoretical, and technological perspectives. Class discussions and critiquing are an essential part of this course. Adobe InDesign, Photoshop, and Illustrator will be taught in class, and used to create the assigned projects.
Prerequisites: 76-390 or 76-270 or 76-271

76-392 Special Topics in Literature & Culture

Intermittent: 9 units
Topics vary by semester. See course URL for details.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

Course Website: https://docs.google.com/spreadsheets/d/1U81b4BSF0aij6u_zYq39Uf7q2ZTiqqAQaOIJ9V2LhnA/edit?usp=sharing (https://docs.google.com/spreadsheets/d/1U81b4BSF0aij6u_zYq39Uf7q2ZTiqqAQaOIJ9V2LhnA/edit/?usp=sharing)

76-395 Science Writing

Spring: 9 units
You will learn how to write clear, well-organized, compelling articles about science, technology and health topics for a general audience. You will learn how to carry out research on scientific topics using primary and secondary sources, how to conduct interviews, and how to organize that information in a logical fashion for presentation. For writing majors, the course will increase their understanding of scientific research and how to describe it accurately and in a compelling manner to a general audience. For science majors, this course will teach them how to craft fluid, powerful prose so that they can bring their disciplines to life. The course is not intended just for those who want to become science writers, but for anyone who may have the need to explain science, medicine, or technology to a general audience, whether it is an engineer describing a green building project at a public hearing or a computer programmer describing new software to a firm's marketing staff. Scientists and educators today are increasingly concerned about the public's lack of understanding about scientific principles and practices, and this course is one step toward remedying that deficit. You will get a chance to read several examples of high-quality science writing and interview researchers, but the primary emphasis will be on writing a series of articles, and rewriting them after they've been edited. Your assignments will range from profiles of scientists to explanations of how something works. In particular, this year's class will focus on how science and society interact, whether that means the way that science writers write about public health and the COVID pandemic or climate change. The class will be run partly as a writing workshop where students will be organized in teams where they will discuss ideas, as well as edit and critique each other's work in class, in a process similar to what journalists routinely go through.
Prerequisites: (76-108 or 76-106 or 76-107 or 76-101 or 76-102) and (76-372 or 76-270 or 76-271)

76-397 Instructional Text Design

Intermittent: 9 units
This course focuses on the planning, writing, and evaluating of instruction of various kinds, especially instructional texts. It is particularly appropriate for professional and technical writers, but also a good option for anyone interested in fields that involve substantial instruction, such as teaching or employee training. In the first part of the course, we'll examine the recent history of instructional design and the major current theories. Then we'll take a step back and study the concepts of learning upon which these theories are based, with particular attention to their implications for how instruction is structured. You'll find that different learners (e.g., children, older adults) and goals (e.g., learning concepts and principles, learning to apply principles to solve novel problems, learning a procedure, learning to change one's behavior, etc.) require different types of instruction.
In the second part of the course, we'll look in detail at models of how people learn from texts and what features (e.g., advanced organizers, examples, metaphors, illustrations, multimedia) enhance learning under what circumstances. We will study and analyze particular types of texts. Some possible examples include an introduction to the concept of gravity; a tutorial for computer software; a self-paced unit in French; adult educational materials in health care; a workshop on sexual harassment in the workplace; or a unit to train someone how to moderate a discussion. We will also look at various methods (concept mapping, think-aloud, comprehension tests, etc.) that are used to plan and evaluate instructional text. You will do a project, either individually or in a small group (2-3), in which you design, write and evaluate instruction.
Prerequisites: 76-271 or 76-270

76-401 Hollywood vs. the World

Intermittent: 9 units
For almost a century the American film industry has dominated popular media worldwide. Anywhere in the world, American stars, American films, and American modes of storytelling are never far away. Why and how was that dominance achieved, and how have other cultures and industries challenged it? Film and television account for billions of dollars of U.S. exports and provide one of the key sources of global "soft power" and cultural influence. Understanding how that dominance works is therefore crucial to the question of America's economic, political and cultural place in the world. This course will examine ways in which other national cinemas have fought, or are currently fighting, against the hegemony of American popular film culture, and the ways in which the American film industry has maintained its dominant position in world markets for nearly a century.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-407 Topics in Literary & Cultural Studies

Intermittent: 9 units
Topics vary by semester. Spring 2022: There Are Black People in the Future. In 2018 the African American artist and CMU professor, Alisha Wormsley created a slogan for a billboard in Pittsburgh's East Liberty that read: THERE ARE BLACK PEOPLE IN THE FUTURE. The billboard had featured many artists and slogans over a period of years, but this one was taken down when the building's landlord objected to the content. The controversy over this piece of art gives this course its name. There are black people in the future, and there are extraordinary black artists in Pittsburgh at this very moment. This special topics course will consider what some are calling a new Pittsburgh Renaissance in the black arts, from art to literature to film and music. Featured writers include Deesha Philyaw, The Secret Life of Church Ladies, Brian Broome, Punch Me Up To The Gods, and Damon Young, What Doesn't Kill You Makes You Blacker. We will also look at the work of the writer Jason England, the artists Alisha Wormsley, Vanessa German, Devan Shimoyama, the rapper Jasiri X, and the film maker Chris Ivey. An in depth look at these artists will be paired with an examination of the history of African Americans in Pittsburgh, and current economics, sociology and politics surrounding race in the city.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-106 and 76-108)

76-408 Culture and Globalization

Intermittent: 9 units
We are often told we live in a period of globalization, but what that means differs widely. Theories of globalization describe such diverse processes as international capital and markets, neo-liberalism and neo-colonialism, environmental devastation, transnational labor and migration, modernity, shifts in spatial and temporal relations, cosmopolitanism, global cultural production and consumption, and the resurgence of nationalism. In this course we will explore and historicize the concept of globalization from both a global literary perspective and an interdisciplinary lens. Pairing literary works from around the world with scholarship from sociology, political science, gender and critical race studies, and anthropology, we will examine the contradictions, conflicts and possibilities of associated changes in the world. We will investigate the role of representation and aesthetics by considering the work of literary writers as well as some filmmakers, journalists and activists. The course will be organized as a series of topical foci that might include neoliberalism and labor, the local and the global, environmental changes, secularism and tradition, the globalization of feminism, and global migration and border control.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-106 and 76-108)

76-410 The Long Eighteenth Century

Intermittent: 9 units
Angela Davis wrote that "freedom is a constant struggle": how do the freedom struggles of the long eighteenth century continue into the present? How were "modern" categories of race and gender forged and navigated in the long eighteenth century? In this course, we will study literature and culture between roughly 1660 and 1820, an era in which historical phenomena such as European empires, the Rights of Woman, and slavery and abolition coincided with changes in print and media culture to produce profound cultural changes that are still with us. Through reading, discussion, and graded assignments including short essays and oral presentations, we will examine the interanimating relationship of literature and history in moments of crisis. Examples of primary readings include Aphra Behn's Ooronoko, selections from Milton's Paradise Lost, Jane Austen's Mansfield Park, Mary Prince's The History of Mary Prince, and William Wordsworth's "To Toussaint L'Ouverture." Secondary readings will draw from a variety of critical traditions such as post- and de-colonial studies, Black studies, post-structuralism, and material culture studies.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-414 Decolonial Imaginaries

Intermittent: 9 units
TBD
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-107) or (76-108 and 76-106)

76-415 Mediated Power and Propaganda

Intermittent: 9 units
For most of us, the word "propaganda" triggers a familiar script. We tend to think of totalitarian regimes where the State controls information and prohibits the expression of dissenting views. We also tend to associate propaganda with certain rhetorical techniques - highly emotional words, deceptive representations, and glittering generalities that inhibit rational thought and manipulate public opinion. According to such popular views, propaganda is linked to the dissemination of false information and is antithetical to the norms of democratic society. Our class will challenge these assumptions. First, instead of confining propaganda to authoritarian governments, we will examine how propaganda functions within democratic society. Indeed, we will focus on domestic propaganda in America, especially political propaganda but also propaganda in advertising and public relations. Next, instead of focusing exclusively on deceptive rhetorical techniques, we will ask a more elemental question: What enables propaganda to circulate? Answering this question will force us to consider the routines and values of corporate media as well as the power relations that give some people special access to channels of mass communication. Certainly, we will also examine propaganda messages themselves, attending to manipulative tactics as well as rhetorical strategies used to induce uptake in the mainstream press. We begin our seminar by studying key theories of propaganda, looking at primary texts for various definitions and criticisms of the concept. We will then examine how powerful institutions, especially media organizations, manage the dissemination of propaganda in democracies. Finally, we will consider how to analyze propaganda, generating methodological prerequisites for scholarly study. Ultimately, students will have the opportunity to conduct their own research on propaganda as it relates to their academic and professional goals.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-416 Rhetorics of Race & Empire

Intermittent: 9 units
The construction and enforcement of racial hierarchies has been a central phenomenon in empire-building around the world. This class takes as its main focus the relationship between imperialism and race, especially in, but not limited to, the United States. How has the U.S. justified imperial expansion around the world-military, economic, and cultural? How have its actions triggered the movements and migrations of populations, and how have those movements and displacements been explained? What cultural shifts around racial meanings have occurred, here and abroad, as a result of U.S. imperialism? How has the role of the U.S. in relation to the rest of the world, particularly peripheries and the global South, been narrated? We will take a special interest in the role of language in constructing and perpetuating racial meanings in the context of empire, and in the everyday communicative practices that both shape and have been shaped by imperial impulses. Students will learn to think critically about the presence of such discourses in everyday life, and produce a final paper or project analyzing a narrative of their own choosing in which race and empire intersect.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-108 and 76-107)

76-418 Rhetoric and the Body

Intermittent: 9 units
This course offers an introduction to rhetorical studies of the body and is centered on the following three questions: What is the role of the body in rhetorical theory? What role does rhetoric play in constructing the body as a raced, gendered, dis/abled, cultural, fleshy, and political entity? And, how might moving, feeling bodies challenge, regulate, or disrupt these rhetorical constructions and furthermore, our theories of rhetoric? Our readings will explore the role of embodiment in rhetorical theory, examining a number of contemporary and historical theories of the body. In the process, we will explore how to put rhetoric and the body into conversation with one another and what methodological implications this conversation has for rhetorical studies more broadly. The goal of this course is to provide breadth rather than depth, with the assumption that most students, even those relatively familiar with body and/or rhetorical theory, will approach rhetorical studies of the body as novices. Students will conduct their own research on a topic related to rhetorical studies of the body that also aligns with their professional and academic goals. Graduate students interested in research will benefit from this course's focus on theory and the professional genres central to rhetorical studies. Undergraduates students (both majors and non-majors) will have the opportunity to examine how the body intersects with communication and writing contexts in their everyday public and professional lives. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-423 Transnational Feminisms

Intermittent: 9 units
How do controversial practices related to women become touchstones that draw women together across cultures or, conversely, push them into separate cultural and political spheres? This course introduces the challenges transnational feminism has posed to Western notions of feminism. To explore these contestations, we will look at a series of controversies. This course will take six case studies concerning cultural practices that have generated global debates about the status of women and issues like consent, freedom, and equality. Beginning with several works about regional/Islamic practices of veiling, we will look specifically at the close connections made between women's practices and elements of tradition, including religion. With an eye toward historicizing feminist interventions, we will look at 19th century debates on sati, commonly called widow burning, in India, to see how certain issues became loci for global intervention during colonial periods and, later, for global feminist movements. Within the contemporary period, we will turn to cultural, economic and political practices like female genital cutting, transnational domestic labor, global sex trade, and transnational forced marriage. For each of these controversies, we will be reading a range of positions represented in different types of writing across genre, including scholarly writing, legal cases, media debates, films and literature.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-108 and 76-107)

76-424 Theories of Social Class

Spring: 9 units
How do we define social class? And how do we define popular culture? And what is the relationship between the two? In this class we'll try to answer these questions by looking at the history of class identity in the US, the rise of staggering inequality in the 21st century, and what Newman calls the "labor theory of culture," juxtaposed against the "commodity theory of culture." Texts for the course will include: White Trash: The 400 Year Untold History of Class in America, Robert Reich's documentary Inequality for All, the Oscar winning film Parasite, Netflix's TV series The Maid as well as readings from Marx/Marxist influenced cultural theory.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-106 and 76-108)

76-425 Rhetoric, Science, and the Public Sphere

Intermittent: 9 units
In the 21st century science and technology are ubiquitous presences I our lives. Sometimes these phenomena spark our imagination and affirm our confidence in a better future. In other instances, they create fear and generate protests over the risks new technologies and scientific ideas pose to prevailing social, cultural, economic, and political orders. In this course we will examine the complex dynamics in the relationships between science, technology, and society. Towards this end we will engages with questions such as: How do we decide who an expert is? To what extent do scientists have an obligation to consider the social and ethical consequences of their work? Is public education about science and technology sufficient for addressing social concerns about risk and controversial scientific ideas? We will grapple with these and other questions by exploring public debates including conflicts over global warming, vaccinations, and the AIDS crisis. With the help of analytical theories from sociology, rhetoric, and public policy, we will develop a framework for thinking about argument and the dynamics of the relationship between science, technology, and the public. We will also look to these fields for tools to assess public debate and to complicate and/or affirm prevailing theories about the relationship between science and society.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-429 Introduction to Digital Humanities

Intermittent: 9 units
This course is a "learn by doing" introduction to questions and methods in digital humanities, with special emphases on common tasks in digital history, digital literary studies, library science, and cultural analytics. Students will likely partner with a national humanities organization to tackle real-world humanities problems while developing core computational competencies such as those required for gathering data (text mining, APIs), transforming data (OCR, regular expressions, natural language processing, image magick), file management (shell commands), data visualization (matplotlib, arcGIS), and more. This course is for juniors and seniors.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-431 Gender Play in Early Modern Drama

Intermittent: 9 units
The playhouses of early modern London offered access to an astonishing spectacle that would be difficult to find anywhere else in the city: men dressed as women, skillfully reproducing (but also exposing, interrogating, and refining) the significations that structure concepts of gender difference. In addition to this fundamental condition of performance and theatrical experience, the plots of the plays themselves regularly engaged with issues pertaining to gender and sexuality, an interest that runs through the raunchy satires performed by companies of adolescent boys, the innumerable comedies of cross-dressing and mistaken identity, and the equally numerous tragedies centered on problems of inequality and imbalances of power. This course will consider a wide range of drama from the period alongside a selection of readings in sexuality and gender theory, thus bringing early modern dramatists such as William Shakespeare and Thomas Middleton into conversation with contemporary thinkers such as Judith Butler and Sarah Ahmed. The body of core texts will include Twelfth Night, The Merchant of Venice, As You Like It, The Roaring Girl, The Taming of the Shrew, The Tamer Tamed, The Island Princess, The Witch of Edmonton, The Silent Woman, Women Beware Women, and Galatea. Please note: First-year students are prohibited from registering for this course. Sophomore students must obtain instructor permission.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-107) or (76-106 and 76-108)

76-434 Literature & Social Change in the 19th Century

Intermittent: 9 units
From the French Revolution to the Victorian era, literature began to play an explosive role in the forces of political transition and the struggle for social justice. This course studies novels, poetry and prose in relation to both political and industrial revolutions during the rise of empire and capitalism and the road to climate change. We will study apocalyptic novels like Mary Shelley's The Last Man and novels of empire like Jane Eyre and its retelling in Wide Sargasso Sea; poetry about living in revolutionary times by Wordsworth and Phillis Wheatley Peters; and anti-slavery writing such as Ottobah Cugoano's "Thoughts and Sentiments on the Evil of Slavery." Secondary readings for graduate students will draw from a variety of critical traditions such as critical race studies, environmental studies, gender studies, postcolonial studies.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-437 Global Realisms:

Intermittent: 9 units
In the standard history of the novel, the genre emerges in distinction from earlier narrative romances as a form bounded by a greater fidelity to ordinary life. In the nineteenth century, this general tendency is further specified in new narrative strategies and subject matter that define realism, which according literary historians, becomes identified with the novel per se. The standard history also insists that realism, while dominant in the 19th century, becomes a residual form in the 20th, replaced first by modernism, then postmodernism. In global/postcolonial fiction, ludic form, especially magical realism, becomes an important standard bearer of progressive politics in the mid20th century, again perceiving realism as residual. This course interrogates that history by looking again at classic realist texts from France and England, reading them in conjunction with novels from the U.S., India, the Caribbean, and Africa, by charting uneven development of forms and richer modes of reading. We will explore the continued importance of realist fiction and the ways it changes across time by placing it in a global context. Likely authors: Balzac, Zola, George Eliot, Joyce, Adiga, Adichie, Updike, Petry, and Semb and #232;ne. Theoretical/critical writings: Woolf, Barthes, Jameson, Luk and #225;cs, Howells, Zola, Brecht, Bloch, and others.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-439 Seminar in Film and Media Studies

Intermittent: 9 units
Topics vary by semester. Fall 2023: Novelistic Television - Topics vary by semester. Fall 2023: Novelistic Television: In this course we will look at television series defined by narrative complexity developed over the course of a season and beyond. We will watch whole seasons of such shows as The Sopranos, Mad Men, The Wire, Six Feet Under, and Slings and Arrows, which bear greater similarity to the novel than to traditional, episodic TV. We will trace the development of the novelistic form of television from the first wave of "quality television" series in the 1990s, in which HBO changed the way people conceived of the artistic possibilities of the medium, through the 2000s, when The Wire and Mad Men fully exploited the new form, and finally into the streaming era, when it has become common but less innovative. We will read media history and theory, and narrative theory to develop an understanding how and why the new form emerged. We will endeavor to understand these shows as expressions of and commentaries on the social and political conditions under which they were produced. We may read a novel or two for purposes formal comparison, and we will watch some episodes of more traditional TV series. Likely theorists include Raymond Williams, Linda Williams, Jason Mittell, Pierre Bourdieu, and Fredric Jameson.

Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-440 Postcolonial Theory: Diaspora and Transnationalism

Intermittent: 9 units
Arjun Appadurai argues that one of the primary transformations in this period of globalization has been in the capacity for people to imagine themselves or their children will live and work in places other than where they were born. Although the novel has long been considered a national form, contemporary novels frequently represent transnational mobility, both in their plots and as global commodities. A significant body of contemporary fiction focuses on imaginative and physical movement across national borders. This global literature course combines literary and theoretical readings to examine the experiences of transnationalism and diaspora. Theories of transnationalism look at the interconnections that cut across nations. The concept of diaspora, a term first used to reference the movement of a people out of a homeland, has become a way to think about the identities of immigrants, migrant workers, and refugees. Readings for the course will be drawn from a diverse group of writers from around the globe. Literary readings might include works by Caryl Phillips, Jamaica Kincaid, Christina Garcia, Nadeem Aslam and Jhumpa Lahiri; theoretical readings might include works by Salman Rushdie, Paul Gilroy, Gloria Anzaldúa, Arjun Appadurai, Inderpal Grewal and Avtar Brah.

76-442 Black Lives in Pre-1900 Britain

Intermittent: 9 units
This course engages with Black voices writing from, to, about, and against Pre-1900 Britain, from abolitionists to actors to royalty. We explore topics including racial philosophy, the transatlantic slave trade, revolution, abolition, imperialism, and popular culture, from both contemporary and modern sources. Our texts and conversations trace how the lives and experiences of individuals like Ignatius Sancho, Sarah Baartman, Ira Aldridge, and Alemayehu Tewodros presage those of a modern global Black diaspora.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-445 Milton

Intermittent: 9 units
Although censored and reviled by many in his own day, John Milton (1608-1674), author of Paradise Lost among other powerful anti-monarchical writings of the English Revolution, has influenced writers as varied as William Blake, Mary Shelley, Thomas Jefferson, Friedrich Engels, C.S. Lewis, Malcolm X, and Philip Pullman. This course will investigate what has made Milton a writer at once so much imitated and beloved by his admirers and loathed and denigrated by detractors. The bulk of this course will center on a careful, challenging, and chronological reading of Milton's works, primarily Paradise Lost but also his great shorter poems including Lycidas, Paradise Regain'd, and Samson Agonistes, and selections of his voluminous prose (Areopagitica, Of Education, Tenure of Kings and Magistrates, Readie and Easy Way to Establish a Free Commonwealth). Studying Milton's development as a poet, controversialist, and pamphleteer, students will examine Milton's contexts (chiefly, literary, political, and theological) in order gain further insights into the complex relations between Milton's 17th-century world and his major poems and prose. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-446 Revenge Tragedy

Intermittent: 9 units
Attendants to the early modern English theater seem to have had an almost insatiable appetite for revenge tragedy: a lurid, blood-soaked genre distinguished by plots involving insanity, skulls, ghosts, poisonings, stabbings, suicide, and other forms of unnatural death. This course will cover key examples of the genre, putting particular emphasis on the depiction and interrogation of justice, analyses of death, and playful engagement with theatricality. Our central curriculum will include the following plays: Thyestes (Seneca), The Spanish Tragedy (Kyd), Titus Andronicus (Shakespeare), Hamlet (Shakespeare), The Revenger's Tragedy (Middleton), and The Duchess of Malfi (Webster). We will also read a selection of critical essays and related literature from the period.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-108 and 76-106)

76-448 Shakespeare on Film

Intermittent: 9 units
The dramatic works of William Shakespeare have inspired an extraordinarily rich and varied cinematic legacy that began in the era of silent films and now boasts masterpieces by directors such as Akira Kurosawa, Roman Polanski, Peter Greenaway, and Orson Welles, not to mention history-making performances by icons including Marlon Brando, Elizabeth Taylor, Laurence Olivier, Al Pacino, Leonardo DiCaprio, and Ian McKellen (among many others). This course will consider a selection of key Shakespeare films alongside critical readings centered on questions of adaptation and performance. As we watch and read together, we will work toward a broader understanding of what Shakespearean drama means in a 21st century context, and how film has helped to shape the author's massive cultural impact.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-450 Law, Culture, and the Humanities

Intermittent: 9 units
"I'm not a lawyer, but..." How many times have you heard this disclaimer, closely followed by a lay analysis of law? This course, an introduction to the cultural study of law for graduate students and advanced undergraduate students, can be seen as an introduction to what goes into the making of such a statement. Where do we get our ideas about law? What do we mean when we say "law"? What counts as law? How does culture influence law, and law, culture? And to what degree should historical context condition any answers we might be tempted to give? Students in the course will study works in a range of genres (novels, plays, poems, judicial opinions, pamphlets) and develop methods for investigating ways that law and culture have been made by one another from the 16th-century to the present. Readings will include influential theoretical accounts of law (Aristotle, Hobbes, Cover, Habermas, Bordieu, MacKinnon, Alexander), canonical texts in Law and Literature (Shakespeare's Measure for Measure, Melville's Billy Budd, Kafka's The Trial) and some "weird fiction" by the novelist/legal theorist China Mi and #233;ville. As a counterpoint to the fiercely anti-historical "law and economics" movement, however, the course will put special emphasis on rooting intersections of law and culture in rich historical context, considering both local and international legal contexts (sometimes in fairly technical detail) alongside so-called "ephemera" of culture. Students will tackle the especially fruitful "case" of Renaissance Britain before developing final research projects, whether on the Renaissance or another period of their choosing.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-452 Generations and Culture

Intermittent: 9 units
We frequently hear about generations and #8212;the Millennials and their multitasking, Gen X and their minivans, and the Baby Boomers and their self-satisfaction and #8212;but generations have usually been ignored in cultural studies. Yet generations have significant impact on cultural tastes, consumer choices, and political views, as a good deal of research shows, and identity, alongside other factors such as race, class, gender, sexuality, ethnicity, and abledness. This course will study the theory of generations, as well as novels and films that tell us about generations. Please note: first-year students are prohibited from registering for this course. Sophomore students require instructor permission.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-453 Literature of Empire

Fall: 9 units
Nineteenth and early twentieth-century British literature was shaped by events taking place outside as well as inside of national borders. Even in the eighteenth and nineteenth centuries, with international trade and slavery supporting the manor house and plantations abroad providing the cotton for British looms, the "England" of English literature spanned the globe. By the first half of the twentieth century, this empire had begun to collapse in upon itself, a process witnessed by writers inside Britain and its colonies. This course will investigate British literature within the international context of global imperialism. A section on gothic stories takes us into the realm of popular culture with Mary Shelley's Frankenstein and Arthur Conan Doyle's short stories. We take to the seas with Joseph Conrad's Lord Jim, before we consider W. Somerset Maugham's exploration of sexuality in the tropics in The Painted Veil. Finally, we return to England to outline the links between colonial empire and international war rendered in Virginia Woolf's Mrs. Dalloway. These literary works will be read alongside some of the most important works of postcolonial theory. While course readings focus on 19th and early 20th century, student's will undertake a research project over the semester in their own period of interest in British literature in connection with empire studies.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-107) or (76-106 and 76-108)

76-454 Rise of the Blockbuster

Intermittent: 9 units
The term "blockbuster" has been a part of the American film industry for over sixty years, but, like "pornography," it's extremely difficult to define from a critical standpoint. For most of the viewing public the "we know it when we see it" definition seems to suffice. In an academic sense, however, such vagueness is problematic. This course will explore the idea of the "blockbuster" over time and across cultural boundaries. What is the origin of the concept? What is the structural impact of the "blockbuster" on the film industry? How does the meaning of the term change from genre to genre? Is it a genre in and of itself? How does a "blockbuster" reinforce our cultural conceptions? How might the concept change in the future? What does all of this tell us about ourselves? This course will draw examples from across the history of film in order to develop a holistic understanding of what the term might encompass from a variety of perspectives. By thoroughly discussing a wide selection of texts we will be able to better understand the ways in which the "blockbuster" has influenced the film industry, how the concept has both manifested itself and changed over time, and how it has shaped our cultural perspectives. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.
Prerequisite: 76-101

76-456 Independent Study in Film & Media Studies

All Semesters
TBA
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-457 Rhetorical Invention

Fall: 9 units
Rhetorical invention refers to the discursive process of inquiry, discovery, and problem solving, or how we decide what to say, what arguments to advance, and what means of persuasion to use in any situation. Although invention is centrally important to rhetoricwithout which it becomes a superficial and marginalized study of clarity, style, and arrangementfrom the Scientific Revolution and Enlightenment through the mid-twentieth century invention all but disappeared as a topic of rhetorical study under the pressure of the view that invention should be exclusively governed by deductive logic and the scientific method rather than rhetorical considerations such as audience or the figurality of language. This repudiation of rhetorical invention fundamentally shaped modern thought and continues to influence the ways we think and communicate today. In this course, we begin by examining the status of rhetorical invention in the development of modern thought before focusing on various scholarly efforts to revive a rhetorical understanding of invention from the mid-twentieth century forward, surveying a variety of contemporary theories of rhetorical invention including those promoted by postmodern, posthuman, and digital rhetorics. The course is designed to explore the central importance of invention to contemporary rhetorical theory through a pairing of historical and contemporary readings.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-458 Sociology of Literature & Culture

Intermittent: 9 units
This course introduces you to the sociology of literary and cultural media, emphasizing how texts arise within "the field of cultural production" and its dynamics. We will first read in the classical social theory of Max Weber, Emile Durkheim, and Karl Marx, then move to late 20th and early 21st century sociological thinking about literature by Raymond Williams, Pierre Bourdieu, Bruno Latour, Sara Ahmed and others. Key topics will include the problem of social conditioning and "habitus"; the structure of the literary and media fields; the question of "affect" and emotiona topic not usually considered sociologicalin the writing of Ahmed, Williams, and others; the politics of social networks in Latour and other network theorists who have been aiming to redefine what the "social" means. Literary writers to be read alongside these theorists will include William Blake, the Shelleys, Herman Melville, William Morris, Bertolt Brecht, and Toni Morrison. The last two weeks of the course will be devoted to students' presentation of their research. Two papers and several in-class presentations will be required. This course is for juniors and seniors only.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-460 Beginning Fiction Workshop

Fall and Spring: 9 units
In this writing-intensive workshop students will be laser-focused on producing and polishing their own fiction. We'll complement our workshops with readings from masters of short fiction and novels, with an eye on sharpening our own facility with dialogue, structure, and voice. Each student must be prepared to constructively critique and deconstruct her/his peers' work, as well as actively contribute to class discussions about the elements of craft that undergird successful works of fiction. Each student will be expected to produce a portfolio of original writing (short exercises originating from thematic prompts and a substantial story) by the end of the semester.
Prerequisite: 76-260 Min. grade B

76-461 Refugee Stories: Literature, Art and Film

Intermittent: 9 units
Contemporary literary, film and other visual culture have reimagined the experiences of transnational migration and asylum claims. These global works focus on recent and ongoing wars, state regulations, borders, detainment, and transnational labor. In this discussion-based, interdisciplinary course, students will study Anglophone and some translated global literature, documentary and feature film and photojournalism, art installations, and digital activist projects. We will ground our analysis using theoretical insight from Critical Refugee Studies, Postcolonial and Decolonial Studies. We will encounter a wide range of forms, aesthetics and themes that represent these experiences, including unexpected elements like humor, romance and horror. Possible readings might include Dina Nayeri, Viet Thanh Nguyen, Thi Bui, Isabel Allende, Valerie Luiselli, Mohsin Hamid, and Shailja Patel; art by Ai Weiwei, Marc Quinn, Christoph B and #252;chel, Banksy, Mona Hatoum and Reza (Deghati); and films/television by Remi Weekes, Sally El Hosaini, Jonas Poher Rasmussen, Mohammed (Mo) Amer.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-462 Advanced Fiction Workshop

Fall and Spring: 9 units
This course will give you experience reading and writing in two genres: fiction and creative nonfiction. The course is discussion based, and several classes per month will be devoted to generative, in-class writing exercises, which students will then work on as drafts to revise. Readings will include novels, stories, essays, and short journalistic pieces. Attendance and participation is mandatory. If you're interested in delving more deeply into the craft and art of these prose genres, and willing to put the time in to develop your own writing, this is a good class for you. I stress that a classroom is a community, and emphasis will be on establishing real connection between students. We will see how writing can help create and build on these connections between people, and serve as a tool for healing during a particularly rough time in our culture.
Prerequisites: (76-260 Min. grade B and 76-460 Min. grade B) or (76-261 Min. grade B and 76-460 Min. grade B)

76-464 Creative Nonfiction Workshop

Intermittent: 9 units
Narrative Medicine looks at the intersection of writing and healing. How does narrative help heal the mind, and how are the mind and body inextricably linked? The couse will introduce you to several books and essays centered around the theme of wellness and illness and #8212;- and how these modes of being are represented and shaped by culture. You will write your own personal essays on these topics along with a final research paper. A great class for anyone interested in the power of story-telling in our own lives.
Prerequisites: 76-265 Min. grade B or 76-365 Min. grade B or 76-460 Min. grade B or 76-262 Min. grade B or 76-260 Min. grade B or 76-261 Min. grade B

76-465 Advanced Poetry Workshop

Fall and Spring: 9 units
In this workshop, we'll investigate what's possible in poetry, as participants examine their relationship to the poetic practice both as readers and as writers. Through writing exercises, discussion, and readings, we will explore the diverse landscape of contemporary poetry, and experiment with form and technique. As we study different methods of making a poem, and different notions of what makes a poem, and what makes a poem great, participants will work to discover imaginative ways of approaching the line and the page.
Prerequisite: 76-365

76-467 Crime Fiction and Film

Intermittent: 9 units
This course will be concerned with hardboiled crime fiction in print and on screen. The hardboiled emerges in Ernest Hemingway a distinctive literary style, and about same becomes a formula for pulp crime fiction. The language and attitude of the hardboiled became associated with urban gangsters in films such as The Public Enemy. Newspaper crime coverage beginning in the 1920s becomes increasingly frank in both its language and photographic coverage of crime. These various elements will be the material for a new kind of literature represented Dashiell Hammett, James M. Cain, and especially Raymond Chandler, and for a cycle of films that owe much to their work, film noir. Chandler was responsible for invention of one of most enduring types in American fiction, the hardboiled detective. The course will focus on Chandler and the crime stories after him that make various uses of that type and the formula that has become associated with it. Throughout the course we will consider the social and political contexts in which these cultural forms developed, and what cultural work the hard-boiled performed. We will be especially interested such questions as the function of the misogyny typical of much of it, the different representations of race by white and black artists, the representation of police, whether the hardboiled is best understood as having a working-class affiliation, and the degree to which its various manifestations might be called realist. NOTE: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-468 Space and Mobilities

Intermittent: 9 units
This course will investigate space and movement as social constructions. Space is something dynamically created that may be interpreted for the ways it creates meaning, while movement reproduces and constitutes power and institutions. This interdisciplinary course considers theories of space and movement as a field of study and in reference to literary and film texts. The course might include discussions of migrants and state borders, cultural constructions of transport, the poetics of space, and the dynamic mapping of the city through movement and sound. Readings might include Henri Lefebvre, Doreen Massey, Edward Soja, Gaston Bachelard, Wendy Brown, John Urry, Tim Cresswell, Marian Aguiar; literary texts might include Brian Friels Translations, Christina Garcia's Dreaming in Cuban, W.G. Seabald's Austerlitz and Teju Cole's Open City. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission. Students across disciplines are encouraged and may work on a final project related to their primary field.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

76-469 Screenwriting Workshop

Spring: 9 units
This semester will begin with a review of the fundamentals of screenwriting, including character development, scene construction, dialogue, and story structure. Student work will include exercises that encourage writers to take creative risks with genre, tone, character, and structure, one collaborative project, and two short scripts. We will also view mainstream, personal, and experimental narrative films in both American and international cinema.
Prerequisite: 76-269 Min. grade B

76-473 Rhetoric & the Construction of Race

Intermittent: 9 units
In their seminal book on race, Michael Omi and Howard Winant write that race is "socially constructed and historically fluid." This course takes their assertion seriously by examining the role of communicative practices in constructing race, from discourses around the NFL national anthem protests to dominant discussions around transnational and transracial adoption. We'll look for common themes in the discourse around certain events and practices, asking why certain ideas or tropes are used and repeated, and what historical, social, cultural, and political associations inform these tropes that help them to perpetuate racial stereotypes in popular culture without overtly claiming racism. Students will practice thinking critically about everyday cultural narratives, and produce a final paper identifying the work one such set of narratives does to shape reality and create, reinforce, or perpetuate the construction of racial meanings.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

76-474 Software Documentation

Spring: 9 units
This course teaches theory, techniques, and best practices for creating software documentation. We will learn to plan, architect, write, and publish audience-appropriate user assistance, while applying concepts and approaches like minimalism, topic-oriented authoring, single-source publishing, content reuse, and metadata. Students will complete homework assignments and larger projects to reinforce principles and provide experience in all phases of the software documentation lifecycle. Readings and class discussion will bridge theory and practice. This course is for juniors and seniors only.
Prerequisites: 76-270 or 76-271

76-475 Law, Performance, and Identity

Intermittent: 9 units
Although rhetoric and law have long been closely associated, the modern professionalization of law has often promoted the idea that legal discourse is not rhetorical but a rigorously defined technical discourse that can be applied free of social, cultural, or political considerations. This view of legal discourse is disputed by critics who point out the figurative aspects of legal language, the relevance of character, emotion, and narrative in legal communication, and the ways in which law protects social structures of power such as race, class, and gender privilege. The course broadly examines the fraught relationship between rhetoric and law by considering the ways in which a variety of legal discourses serve to construct and reinforce identities, with a particular focus on the ways in which legal systems are portrayed to reflect the ideals of democracy to suit particular foreign relations goals. We begin by studying the ways in which Cold War foreign policy goals influenced desegregation and civil rights discourse in the United States, then we turn to the ways in which the prosecutions of deposed authoritarian rulers in various regions of the globe have been orchestrated to persuade global audiences that emerging democracies observe the "rule of law" for purposes of garnering international support. Alongside primary sources of legal discourse, we will study a selection of interdisciplinary scholarship about the relationship between rhetoric and law. Students write a two-stage research paper on a topic of their choosing regarding the relationship between legal discourse and the construction of identity. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-476 Rhetoric of Science

Fall: 9 units
This course explores questions about scientific argument and communication that are of interest to students in the sciences, rhetoric, and professional/technical writing. These include questions like: How are scientific arguments structured? How is scientific information and argument transformed when it moves from research papers for specialist audiences to publications for non-specialists? How does the social, historical, and cultural context of science shape the way it is communicated and/or argued? What contributions do visuals make to scientific argument and communication? To investigate these questions, we will be examining a wide variety of real-world communications in and about science as well as texts in rhetoric, history, and philosophy of science.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-479 Model Minorities? Race, Rhetoric, & Identity in Asian America

Intermittent: 9 units
"Asian American" is a self-conscious political identity developed by pan-Asian ethnic groups in solidarity with one another in 1968. What does it mean now, 55 years later, to be Asian American? How do Asian Americans fit into the differentially racialized landscape of the U.S., and how, in turn, are Asian American identities and experiences shaped and expressed in culture? How does the political and activist history of Asian America inform social movements today? And how do rhetorical scholars engage Asian American communities, identifying both varied processes of racialization, and patterns of counterdiscourses in which Asian Americans speak against the mainstream images that have circumscribed their subjectivities? This course brings together Asian American studies and Asian American rhetoric with a focus on the study of culture, examining the currents of global and domestic power that have shaped Asian American experience, the movements and communities that have acted in solidarity among and against those forces, and the communicative practices that both shape and are shaped by Asian Americans. By the end of the course, students will be well versed in significant topics and theories in Asian American studies and Asian American rhetoric, and will produce a final paper analyzing a topic, issue, policy, movement, or historical/cultural artifact that speaks to, or illustrates a new nuance about, Asian America. This course is for juniors and seniors.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-481 Introduction to Multimedia Design

Fall: 12 units
This class meets the increasing demand for professional/technical writers who understand multimedia and its communicative possibilities. It provides students with the opportunity to create both an explainer video and a more persuasive animation merging text, spoken voice, music, images, and video clips. Students will learn the basic concepts and vocabulary of motion graphics, practical issues surrounding designs that change over time, and digital storytelling through hands-on projects. Inspiration is drawn from popular Vox and Ted Ed explainer videos that have come to represent the genre. Students explore writing and recording their own narration and how to best utilize elements of time, motion, and sound to enhance their visual communication skills. Adobe After Effects will be taught to complete assignments and explore multimedia possibilities. Some Adobe Photoshop, Illustrator, and Audition will also be taught to support specific tasks. Basic experience with Photoshop or Illustrator prior to taking this class is helpful, but not required. In-class discussions and critiques are essential components of the course.
Prerequisites: (76-270 or 76-271) and (51-261 or 51-262 or 76-391)

76-482 Rise of the Art Film

Intermittent: 9 units
The years between 1945 and 1970 saw an explosion of filmmaking talent around the world. Directors such as Vittorio De Sica, Jean-Luc Godard, Agnes Varda, Akira Kurosawa, Ingmar Bergman and Satyajit Ray completely changed the way narratives looked on screen. Just as important, however, was the fact that American audiences used to the standards and storytelling strategies of the Hollywood studio system were suddenly presented with a variety of international cinemas which collectively came to be known as "art films." This class will examine a broad cross section of such films while also scrutinizing the impact of the "art film" on Hollywood narrative strategies, domestic distribution networks, film criticism and American culture.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-483 Research Methods in Technical & Professional Communication

Fall: 9 units
This course provides you with practical, hands-on experience with designing, collecting, and analyzing research in Technical and Professional Communication. These same research methods are also applicable to Writing Studies and classroom research. We will go into depth on three main methods in this class: interviews, surveys, and think-aloud protocols. In addition, we will touch on focus groups, eye-tracking analysis, and collaborative analysis techniques. More specifically, in this class you will learn how to design well-worded questions that produce reliable information; critically reflect on and improve your interview technique; explore software designed to aid in open-ended analysis of qualitative data; design an A/B (or control/experimental) study; write a data-driven research report, and experiment with a range of data collection techniques. Students taking the course for 12-units will have additional readings that look at how these research methods have been applied in Technical and Professional Communication and Writing Studies.
Prerequisites: 76-270 or 76-271

76-484 Discourse Analysis

Fall: 9 units
Discourse is a focus of study in most of the humanities and social sciences, and discourse analysis is practiced in one way or another by anthropologists, communications scholars, linguists, literary critics, and sociologists, as well as rhetoricians. Discourse analysts set out to answer a variety of questions about language, about writers and speakers, and about sociocultural processes that surround and give rise to discourse, but all approach their tasks by paying close and systematic attention to particular texts and their contexts. We are all familiar with the informal discourse analysis involved in paraphrasing the meanings of written texts and conversations, a skill we learn in writing and literature classes and in daily life. Here we ask and answer other questions about why people use language as they do, learning to move from a stretch of speech or writing or signing outward to the linguistic, cognitive, historical, social, psychological, and rhetorical reasons for its form and its function. As we look at resources for text-building we read analyses by others and practice analyses of our own, using as data texts suggested by the class as well the instructor. In the process, we discuss methodological issues involved in collecting texts and systematically describing their contexts (ethnographic participant-observation and other forms of naturalistic inquiry; transcription and "entextualization;" legal and ethical issues connected with collecting and using other people's voices) as well as methodological issues that arise in the process of interpreting texts (analytical heuristics; reflexivity; standards of evidence). The major text will be Johnstone, Barbara. 2008. An Introduction to Discourse Analysis. 2nd ed. (Malden, MA: Blackwell Publishers). Other reading will be made available as .pdf files.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-487 Information Architecture & Content Strategy

Fall: 9 units
In the digital age, the vast amount of information available online can be overwhelming, and even individual websites often struggle to present their content in a user-friendly manner. In this course, students will immerse themselves in a semester-long real-world project with practical exercises designed to address this challenge. This course equips students with the skills necessary to develop user-centered information architecture and content strategy/design, enabling them to create user-friendly websites that align with user expectations and industry best practices. Throughout the course, students will adopt a user-centered approach, utilizing essential usability methods to gain insights into the information needs, behaviors, and preferences of users. They will develop the ability to identify and rectify usability issues on websites. Additionally, students will delve into the principles of online information design, encompassing topics such as information architecture, navigation, and effective labeling. In the required lab section of the course, students will gain hands-on experience with core web technologies, including HTML and CSS, to shape and style web content. They will also gain an understanding of JavaScript and APIs, which play a pivotal role in integrating data and services into websites.
Prerequisites: (76-102 or 76-101 or 76-272 or 76-270 or 76-271) and (51-261 or 51-262 or 76-382 or 76-391)

76-488 Information Architecture & Content Strategy Lab

Spring: 3 units
Lab exercises for this course include the following: basic HTML, images, tables, animation, image maps, interactive forms, Web interfaces to databases, and basic Javascripting. All students must do the lab exercises. The exercises are designed so that those students who already know particular topics (e.g., basic HTML) do not need to attend the lab session. Students who would like guided practice in doing the lab exercises must attend the lab session. Lab sessions take place in a computer cluster.
Prerequisites: (76-271 or 76-379 or 76-270) and (76-382 or 76-383 or 76-391)

76-490 Digital Rhetorics

Intermittent: 9 units
As most of the communication now takes place using digital technologies (such as Generative-AI, blockchain, AR and VR, and the Internet of Things), the nature of public speech has been fundamentally transformed in these environments. This course explores the connection between rhetoric, socio-political systems and digital media. In today's world, it is difficult to separate digital from human. Students in this class will examine a variety of digital media as they intersect with humans as well as with theories of rhetoric. Students will also have the opportunity to explore digital technology by actively participating in digital spaces and creating digital artifacts. The course provides in depth coverage of rhetoric as an historically rooted but evolving humanistic perspective covering argumentation and figuration, performance and text, and delineating its connections to logic, aesthetics, politics, and ethics.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-491 Rhetorical Analysis

Intermittent: 9 units
Students in this course will learn various approaches to analyzing discourse artifacts from a rhetorical point of view. Early in the course, students will identify an artifact or artifacts they wish to analyze. From there, students will be encouraged to explore their own methods of analysis based on two required books for the course and reviews of literature. For the midterm, students will create an annotated bibliography of five specimens of criticism taken from a single journal. For the final project student will first present and then hand in a polished 15 page piece of criticism based on one or some combination of methods. The presentation and final paper count 50% of the grade, with the mid-term, class attendance, participation, and homework making up the final 25%.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-492 Rhetoric of Public Policy

Intermittent: 9 units
This course explores a rhetorical approach to public policy which focuses on the interconnected role that data, values, beliefs, and argument play in the policy process. From this perspective we will examine the important public debate over the pros and cons of various forms of energy production including nuclear, natural gas, and solar. In these investigations, we will explore questions like "How do policy makers use rhetoric to shape public perspectives on energy production?" "How can rhetorical approaches to argument function as tools for policy analysis and development?" And "What role does technological expertise play in public debate?" To pursue these questions, we will be reading works in rhetorical theory and public policy and applying the concepts and methods in those works to exploring primary artifacts of public argument like records of public hearings, social media memes, handbooks designed by activists, and stories about energy production in the popular media.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

76-494 Healthcare Communications

Fall: 9 units
Healthcare communications is designed for students with an interest in how medical and health care information is constructed and transferred between medical experts, health care providers, educators, researchers, patients and family members who are often not experts but need a thorough understanding of the information to make important health decisions. Throughout the course, we will explore the interactions of current theory and practice in medical communication and the role of writing in the transfer and adoption of new therapies and promising medical research. We will also study how the web and social media alter the way information is constructed, distributed, and consumed. We will examine the ways medical issues can be presented in communication genres (including entertainment genres) and discuss how communication skills and perceptions about audience can influence clinical research and patient care. Additionally, we will explore clinical trials, grant writing, and press releases, and will feature guest speakers from these fields will discuss their experiences.
Prerequisites: 76-271 or 76-395 or 76-270

76-495 Other People's Words: The History, Theory, and Practice of Interviews

Intermittent: 9 units
In literary studies, we usually draw our research from books and articles, or sometimes from documents in archives. But one other way to find out information is from interviews. Historians, anthropologists, and journalists use interviews, albeit in different ways. How might we apply their methods to literary study? This course will look at different modes of interviewing. You will also conduct various kinds of interviews yourselves. Thus the course will be a mix between a criticism course and a workshop. Through the semester you will be responsible for conducting and editing one long-form interview with a person about art, literature, or another field. In addition, you will develop a project conducting multiple interviews on a topic. Lastly, you will build a portrait or report drawn from one of those projects.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-496 Research Methods in Rhetoric & Writing Studies

Intermittent: 9 units
NOTE: This course is only available for seniors with special permission. This course is a survey introduction to historical, empirical, text-based, and qualitative methods of inquiry used in the fields of rhetorical and writing studies. We will read broadly to understand the philosophical questions, research traditions, practical applications, and innovative directions that shape the field, exposing students to a range of methods and methodologies. Studies of rhetoric, writing, and literacy have evolved tremendously, and we will examine approaches for how to trace, analyze, and critique the use of meaning making in a variety of cultural, political, workplace, technological, and pedagogical contexts. By the end of the course, students will develop a sense of how to put together an effective research project on their own and design and articulate the research methods and methodologies appropriate to that study. Throughout, we will ask a fundamental question: How do rhetoric, writing, and literacy work and for what consequences?
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-700 Professional Seminar

Fall: 3 units
This weekly, 3-unit seminar is designed to give professional and technical writing majors an overview of possible career and internship options and ways to pursue their professional interests. Each session will feature guest presenters who are professionals working in diverse communications-related fields such as web design, journalism, public relations, corporate and media relations, technical writing, medical communications, and working for non-profits. The visiting professionals talk about their own and related careers, show samples of their work, and answer student questions. The course is required for first-year MAPW students and is open to all English undergraduates, who are urged to participate in their sophomore or junior years to explore options for internships and careers.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-702 Communication Support Tutoring Practicum

Fall
The Communication Support Practicum is designed to introduce students to communication scholarship and pedagogy as well as the methods and theories that inform them for the purpose of communication support and tutoring in CMU's Student Academic Success Center. Students will explore communication (written, oral, and visual) in multiple disciplines and genres with a focus on gaining knowledge and skills to respond to communicators and their texts. Lectures, discussion, and assignments will offer a chance to think critically about tutoring practices and the ideologies and values on which they are based as well as ways to challenge the bias inherent in them. There will be many occasions to reflect on and evaluate tutoring skills, observe others in tutoring situations, and practice a variety of methods that consider the different needs of communicators. Students will gain awareness of how various spaces, identities, technologies, and abilities inform textual production as well as how to create a meaningful response to meet the diverse needs.

Course Website: https://www.cmu.edu/gcc/faqs/index.html (https://www.cmu.edu/gcc/faqs/)

76-708 Literary Journal Publishing

All Semesters
In this course, students will learn about the landscape of and publication process for literary journals in the United States. We will read a variety of literary journals in print and online, will host guest speakers, and will do a variety of hands-on activities related to editing and publishing. Students will gain experience by working on The Oakland Review, an international literary journal run out of CMU, in capacities as varied as editorial, design and production, or promotion. If you are interested in registering for this course, please go to the Course URL and fill out the questionnaire. Thank you.

Course Website: https://form.jotform.com/CMUEnglish/literary-journal-publishing-course (https://form.jotform.com/CMUEnglish/literary-journal-publishing-course/)

76-719 Environmental Rhetoric

Fall
Should you take a hike or seize the mic? Environmental rhetoric combines commitment with contention We start by exploring its multiple discourses, from Muir's vision of conservation, to Leopold's introduction of ecology, to Carson's call for public action, to contemporary scientific research and competing public discussions. To uncover their hidden logic, we study rhetorical strategies first, for analyzing arguments (over issues such as wolves, clean water, or sustainable design), and then for communicating risk (in the face of climate change, fracking, as well as wind power). In response, this course will prepare you to act as a research-based rhetorical consultant for a group of your choice, analyzing the issues and arguments it faces, in order to propose a rhetorically effective response, supported by your own imaginative prototype of a brochure, web page, press release.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-720 Leadership & Organizational Communication

Intermittent
Please note: In order to register for this course, students must have had an internship with an organization prior to registration. Even as most organizations continue to change, one constant is the importance of effective communication. Upward, downward, and lateral communications are the lifeblood of organizations. If you are in a leadership position, communication become your key tool for managing teams, improving performance, and creating change. In any position, you can spearhead progress by designing effective documents and improving existing communication practices. Proficiency in written and oral communications tends to be recognized and rewarded in organizations. Combined with the ability to leverage formal organizational structures and social networks, it helps one excel, and thrive, in organizations. This course is designed as an overview to the field of organizational communication with an emphasis on leadership roles and behaviors. The content will blend the conceptual with the practical. It will focus on problems that are likely to arise in the workplace and ways to solve them through communication. The students will build a portfolio of "solutions" that will demonstrate their evolving skills of applying rhetoric in organizational contexts. Specific topics will include the attributes of great communicators (including leaders and managers as communicators), the challenges of communicating in organizations as we play particular roles (e.g., individual contributor, manager or team member), ways to build credibility and enhance internal resumes, and techniques to master communication requirements related to performance management processes, conflict situations, and changing organizational culture and design. We will also explore a myriad of organizational issues such as communicating across generations and cultures, communicating externally, and communicating through technology.

76-727 Equity & Communication: Strategies for Institutional Change

Spring
Communication is always embedded in power relationships with unstated social rules that govern who is able to say what when. But communication also offers us a tool for rewriting oppressive social scripts. In this class, we will look both at inequities built into our communication and strategies for overturning these inequities. The focus will be on practical actions that you can take to improve your school, workplace, or extracurricular groups. Our readings will come from diverse sources and fields, including sociolinguistics, psychology, education, organizational communication, and writing studies. While our readings might occasionally depress (or enrage) you, the overall focus of the course will be optimistic, challenging you to imagine solutions to the problems we discuss.

76-729 Performing Race in Early Modernity

Intermittent
The earliest known use of the term "white" in reference to Europeans occurs in The Triumphs of Truth, a 1613 play by Shakespeare's contemporary, Thomas Middleton. In addition to suggesting an important connection between race and drama in 17th-century England, this simple historical note raises a range of questions that have a direct bearing on some of the most pressing issues of the 21st century: Where do ideas about race come from? By what processes do the distinctions of racial concepts emerge, evolve, calcify, and mutate? How does the conceptualization of race relate to media? How do racial representations bolster and conduct political power? In this course, we will broach these questions by taking a close look at the race-making function of drama in early modernity, a period when race was an inchoate, incipient concept, caught up with the emergence of colonialism, capitalism, and increasing interconnection between peoples, cultures, and worlds. As we think, read, and converse together, we will endeavor to come to terms with the problems and paradoxes of racial representation in the early modern theater, a forum that offered access to innovative, daring thinking about human equality and ethical responsibility, but was also a site for the perpetuation of hateful stereotypes and exploitative theories of white supremacy. In a wide-ranging survey of drama, historical documents, and contemporary criticism, we will work toward an understanding of how race-based concepts operated in the theater, and how the drama early of modernity continues to influence thinking about race in our own time. This course meets the Dietrich College Reflecting Gen Ed requirement.

76-731 Dissenters and Believers: Romantics, Revolution, and Religions

Intermittent
This course examines the relation of Romantic writing to religion in the age of revolutions. We will read a number of Romantic-age writersWilliam Blake, S. T. Coleridge, William Wordsworth, Edmund Burke, Monk Lewis, Percy Shelley and #8212;in relation to the most "orthodox" religious modes (Anglican, Catholic, Lutheran, and Evangelical) and the most "heterodox"Enthusiasm, Rational Dissent, Unitarianism, Deism, Pantheism, or atheism. We will also distinguish between "religions" (as formally institutionalized) and "religiosity"defining religiosity as more diffused or displaced feelings, ideas and practices that are often not clearly marked as religious or related to any one institutional religion. Two papers are required.

76-749 Climate Fictions

All Semesters
During the last 20 or so years, a new kind of fiction has emerged responding to scientific models of climate change. Climate fiction, or "cli-fi," most often imagines a future in which nothing has been done or done soon enough to limit global warming. Much of this literature fits into the broad genre of science fiction, but some of it uses other fictional modes, including realism and postmodernism. This course will look at a variety of fictional approaches to climate change, including a few in visual media. We will consider why fiction is a necessary component of our understanding climate changecomputer models are fictions of a sortbut also whether and how fictional narratives such as novels and films can help motivate action. We may also read some earlier narratives of environmental catastrophe, and some nonfictional discussions of climate change. Likely authors include Amitav Ghosh, Margaret Atwood, Barbara Kingsolver, Kim Stanley Robinson, and Richard Powers.

76-750 Critical Theories about Literature

Fall
This course studies the long-debated problem of how readers or spectators respond to texts (in print, performances, film, or painting) from ancient rhetoric and tragedy to contemporary mass culture.We will read in a range of critical theories, from thinkers like Aristotle, Plato, and Longinus to recent theorists in poststructuralism, gender studies, Marxism, and affect theory. How have such critics and theorists thought about the nature of the text and of representation and #8212;or the relation of authorship to reading, ideas, and affects? What techniques of analyzing literary texts have such theories stimulated? Two papers and vigorous in-class discussion will be required.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-754 Watchdog Journalism

Intermittent
The practice of journalism involves covering the news of the day. Investigative journalism uncovers it, digging through public records and data to expose corruption or correct social injustices. The process takes patience and persistence, as well as familiarity with right-to-know laws, to find that gold nugget of information that exposes secrets or becomes the missing piece to a larger puzzle. In this course, students will learn investigative techniques that make the powerful accountable, using government documents, financial filings and databases to spot undetected crime patterns, an unfair housing policy or perhaps questionable spending by a non-profit charity. Investigative journalism has a storied history of exposing wrongdoing and today many of the tools historically used to tell those stories are available to everyone. This course will help budding journalists, researchers and anyone else interested in addressing societal problems find those tools and learn how to use them. This course meets the Dietrich College Deciding Gen Ed requirement.

76-755 Leadership, Dialogue, and Change

Fall
This course offers an alternative to the "great man" theory of leadership and #8212;in which success is built on charisma, power, status, or institutional authority. The contemporary model of "adaptive leadership," however, depends on an ability to draw a divided community into a dialogue that re-frames the problem and may even call on us to re-interpret our values. We will see this in action, comparing the methods of Martin Luther King to the radical community organizing of Saul Alinsky, and in the influential of African-American cultural critiques of Cornel West and bell hooks, and in the work of students calling for change on campuses. All this work poses a question: how does dialogue work in the rhetoric of making a difference? So in the second half, we put theory into practice, organizing a CMU Community Think Tank on a campus issue, in this case on student empowerment will learn strategies for analyzing a problem, framing, issues, giving rhetorical presence to those problems and creating counterpublics that put new ideas into circulation. The class collects data across diverse, often competing perspectives, to create a Briefing Book, that will guide your live Round Table problem-solving dialogues, and then document, write and publish your Findings www.cmu.edu/thinktank. Aa a portfolio project it will demonstrate your ability to support problem-solving dialogues across difference in a community or organization.

76-758 Rhetoric & Storytelling

Spring
What are stories and why do we tell them? What purpose do they serve? What makes a story true? What effect do stories have on those who hear them? In this course, we will ask how narratives work rhetorically to shape how we perceive and encounter events, movements, places, and experiences. Students can expect to read and discuss narrative theories and practice employing these theories to analyze story artifacts, such as written collections, political speeches, newspaper articles, curated experiences, and oral histories. We will begin the semester by exploring and analyzing the many stories surrounding September 11 but will also consider the stories that infuse recent or local subjects of interest. Students will investigate the effect these and other narratives have on contemporary contexts. Any student who is interested in developing a critical awareness of the rhetorical power of storytelling and enhancing their analytical toolkit will benefit from this course. Most class sessions will involve guided student discussions of theoretical texts as well as collaborative opportunities to analyze story artifacts. Weekly assignments will include short analyses and reflection activities. The course will culminate in a final project where students will select and analyze a collection of stories within a cultural, social, and/or historical context.

76-762 Introduction to Translation

Fall: 9 units
In "Introduction to Translation," we will survey a number of different translation theories in order to understand the various approaches that are at our disposal when translating a text. In addition, we will briefly explore several fields of translation studies, such as health care, business or literature, that require specialized terminology and expertise in the subject. All theory taught in class will be accompanied by hands-on translation projects that will give students the opportunity to try out their knowledge first-hand and evaluate the usefulness of different approaches on a personal basis.

76-763 Translation as Profession I

All Semesters: 3 units
In "Translation as a Profession," we will learn from professionals in the field of translation. Every class will feature a guest speaker from the Pittsburgh area and beyond who will present his or her own educational background, experience in the field and current relation to the translation industry. Students will meet a variety of professionals, learn about the field, and establish valuable connections for the future.

76-765 Beginning Poetry Workshop

All Semesters: 9 units
tbd

76-766 Essay Writing Workshop

Fall
In this course we will analyze the different types of narrative structure, narrative suspense, voice, metaphor, and point of view that make for effective non-fiction writing. We will also examine the difference between good writers and good work, the functions of objective distance from and intimate investment in a subject, as well as the philosophical questions spurred by non-fiction writing. What is the non-fiction writer's role, and how does it differ from that of the fiction writer? Where do the two genres overlap? What gives non-fiction writing integrity? What does the term "creative non-fiction" mean? How have the form and aims of non-fiction writing - from memoir to essays to long-form journalism - evolved for better and for worse? We will scrutinize the writing of Eula Bliss, Kate Fagan, Joan Didion, James Baldwin, Jo An Bear, Gary Younge, David Foster Wallace, Umberto Eco, and many others. In addition to critical writing assignments, students will have several opportunities to write their own non-fiction pieces.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-771 Teamwork for Innovators

Fall
Academic teams, campus organizations, workplaces are all dynamic activity systems, organized and driven by institutional habits and rules, by roles, status and power, and by the material and conceptual tools we draw on. Yet as we have all observed, these Rules, Roles and Tools often operate in contradictory ways, even in conflict with one another. Effective team leaders are able to recognize these contradictions and draw a writing group, a project team, a social organization or a workplace into what is called an "expansive transformation." That is, to innovate new ways of working together. In this course, you will learn how to become more effective not only as a team member, but also a project leader, and even group consultant in your college work and workplace. Looking at films, case studies, research, and your own experience, we will learn how to analyze how teams of all sorts are working, to communicate more effectively across different expectations and values, and to collaboratively innovate new ways of working together. Your final project will let you document your ability to be a knowledgeable team leader and effective collaborator.

76-772 News Writing

Fall: 9 units
In this course, we will study and learn the fundamental skills of journalistic writing as well as discuss topics related to how different media outlets cover news. On the writing side, we will start with the basics - the importance of accuracy, clarity and fairness, writing for audience, striving for objectivity, judging newsworthiness, meeting deadlines. The core class work (and most of your grade) will be based on seven writing assignments due approximately every two weeks throughout the semester. Expect to do some writing each class period. We will learn how to write a story lead, how to structure a story and how to write different kinds of news stories, from crime news to features to editorials and commentary. We also will learn how to research a news story, conduct an interview and sort through mountains of information to discern what's important so we can write about it in a clear, concise manner.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-773 Argument

Fall and Spring
This course introduces the fundamentals of argumentation theory and offers guided practice in analyzing and producing arguments. Through analysis, we will learn what an argument is, how to identify one, and what the names and functions of a variety of argument features are. We will also explore the production of argument by pursuing the questions: What are my argumentative goals? How do I build a theory of my audience? What means of persuasion are available for me to achieve my goals? And how should I order the contents of my argument? To answer these questions, we will explore argument in a variety of genres including visuals, op-eds, presidential speeches, and congressional testimonies.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-784 Race, Nation, and the Enemy

Intermittent
Conflicts over racial and national identity continue to dominate headlines in the United States as they often have during the nation's history, from debates regarding the immigration, naturalization, and birthright citizenship of racial minorities to debates regarding racial disparities in access to civil rights. This course explores the discursive practices through which racial and national identities are formed and the frequent conflicts between them, particularly by focusing on the role of enemies, threats to the nation, and sacrifices made on behalf of the nation in American public discourse. Alongside primary sources of public discourse regarding wars, the immigration and citizenship of racial minorities, racial segregation and civil rights, and the criminal prosecutions of dissidents during periods of crisis, we will read secondary sources offering multiple theoretical and disciplinary approaches to the study of racial and national identity formation. Along with regular brief responses to readings, assignments will include a short rhetorical analysis paper and a longer research paper.

76-786 Language and Culture

Fall
This course is an introduction into the scholarship surrounding the nature of language and the question of how language shapes and is shaped by social, cultural and political contexts. We will begin by studying important literature in linguistics and language theory, both to introduce us to how scholars think about language and to give us a shared vocabulary to use for the rest of the semester. We will then move into case studies and theoretical works exploring the intersections of language use, individual and group identities, and the exercise of power, in its many forms. In particular, we will focus on the relationship between language and culture by asking, in what ways does language influence and constitute social change? How is social change reflected by changes in the way we use language? Over the course of the semester, you will work on applying the knowledge and theoretical tools you gain to your own analysis of a linguistic artifact that you choose.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-787 Writing in the Disciplines

All Semesters
This mini will introduce you to the theory and practice of writing instruction in contexts outside of English studies. We will learn about the distinction between Writing across the Curriculum and Writing in the Disciplines and challenges to providing integrated, high quality writing instruction across the university. We will explore the implications of the wide variety of forms of academic writing for instruction in English classrooms, including high school and first-year writing classrooms. Assessments will include reading responses and a final paper reviewing research on writing in a specific writing context of your choosing. Students enrolled in the course for six units will be expected to do additional readings and give an oral presentation. Please note that in terms of time commitment, a 3-unit mini will require approximately six hours per week (three hours homework and three hours class meetings) and a 6-unit mini will require twelve hours per week.

76-788 Coding for Humanists

Intermittent
This course provides students with the foundational knowledge and skills to develop and/or utilize computer-aided research tools for text analysis. Through a series of hands-on coding exercises, students will explore computation as a means to engage in new questions and expand their thinking about textual artifacts. This course is designed for students with no, or very little, coding experience. So, if you have already taken a programming course, this course is most likely not for you. Students who have taken 15-110 and/or 15-112 may not take this course. For the final project, you will develop a small research project involving a computational analysis of a corpus of texts. You will plan, design, and write a computer program that processes and analyzes a textual corpus of your choice. Students who are taking the course for 9-unit will write a brief project report (3-5 pages) that summarizes your final project. Graduate students in the MA in Rhetoric/PhD programs must register for 12-unit, and will complete a research paper (4,000-5,000 word).

76-789 Rhetorical Grammar

Fall and Spring: 9 units
This is a course in This is a course in fundamental grammatical structures of English and how these structures fit into the writer's toolkit. This means you will learn a lot about English-language grammar in this course en route to understanding a lot about English language writing. This course is designed for MA students in professional writing and undergraduates who want to improve their grammar, their writing, and their depth of understanding of how improvement in grammar impacts improvement in writing.grammatical structures of English and how these structures fit into the writer's toolkit. This means you will learn a lot about English-language grammar in this course en route to understanding a lot about English language writing. This course is designed for MA students in professional writing and undergraduates who want to improve their grammar, their writing, and their depth of understanding of how improvement in grammar impacts improvement in writing.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-790 Style

All Semesters
This course teaches you how to write clearly. Specifically, the principles you learn in this course will help you 1) to clearly represent actions and the characters responsible for them; 2) to make your paragraphs coherent and cohesive; 3) to write sentences that stress important information; 4) to cut unnecessary prose; and 5) to reshape lengthy sentences so as not to perplex your reader.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-791 Document & Information Design

Spring: 9 units
This course provides students who have already learned the foundation of written communication with an opportunity to develop the ability to analyze and create visual-verbal synergy in printed documents. Students will be introduced to the basic concepts and vocabulary, as well as the practical issues of visual communication design through a series of hands-on projects in various rhetorical situations. Assigned readings will complement the projects in exploring document design from historical, theoretical, and technological perspectives. Class discussions and critiquing are an essential part of this course. Adobe InDesign, Photoshop, and Illustrator will be taught in class, and used to create the assigned projects.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-793 Narrative & Argument

Spring
This is a course for non-English majors interested in understanding and practicing writing as an art of design thinking and decision-making. We work through seven writing exercises divided into "experiential" and "informational" clusters and we discuss the underlying design principles that unite and divide these clusters. Experiential writing (think character-based fiction, personal profiles, travel writing, narrative histories) supports reader learning but in an indirect, unsupervised fashion. Students write short papers within each of these clusters to glimpse and grapple with the different compositional (design) challenges. Within experiential writing, students practice making themselves (from the first person) and third parties characters readers can come to know and care about. They practice immersing readers within immediate and historical scenes by creating the feel of extended space or elapsed time. Within information writing, students practice presenting readers with new ideas by following the readers' native curiosity (exposition), guiding readers through manual tasks (instruction), and structuring readers' decision-making (argument) in controversies when there are multiple decision paths. Argument is a capstone of information writing that bids for social and political change. While writing for experience and writing for information are distinct clusters, they are highly interactive and the best information writers routinely import techniques of experiential writing into their craft to enliven and layer the reader's experience. Technologies for making visible for students their tacit decision-making over hundreds and thousands of compositional moves when writing experience and information are introduced and provide students a literal "lens" on the texts they write as an endlessly curious design artifact.

76-796 Non-Profit Message Creation

Intermittent
Non-profit organizations support a multitude of causes ranging from the arts to animals to the environment to health care to human rights to scientific research to many great causes in between. Non-profits achieve their missions by advocating on behalf of their organization's cause, raising public awareness about issues surrounding their cause, and fundraising to make their advocacy possible. In this course, students will select a local, Pittsburgh-area non-profit to examine and produce materials based on the organization's needs. Over the course of the semester students will research the organization's persona and values via interviews with chosen organization's staff and analysis of existing communication channels and different forms of content currently used by the organization. Students will use this research and analyses to inform and shape a final project that should meet the specified, needed deliverables from the selected non-profit. Previous example projects include: Revising a newsletter and specifying future best practices for an organization; developing new format and copy for an organization's website; developing a social media campaign for an upcoming event; developing a grant proposal for an organization's project; among many others. Students will have a wide selection of organizations to choose from and know projects associated with the organization at the beginning of the semester, as these will be organized by the professor. At the end of the course, students will have a portfolio ready material and an increased understanding as to how non-profit organizations advance their causes.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-805 Institutional Studies: English as a Discipline

All Semesters: 6 units
While literature has existed for centuries, the discipline of literary studies is relatively new, only forming in the late 19th century and not coalescing until after World War II. This course will look at the history of the discipline of literary studies, from its roots in scholarly methods like philology, to its expansion into cultural studies. We'll read some key texts, such as Gerald Graff's Professing Literature, and critiques by Richard Ohman and many contemporary critics.

76-807 Topics in Literary & Cultural Studies

All Semesters
Topics vary by semester. Spring 2022: There Are Black People in the Future. In 2018 the African American artist and CMU professor, Alisha Wormsley created a slogan for a billboard in Pittsburgh's East Liberty that read: THERE ARE BLACK PEOPLE IN THE FUTURE. The billboard had featured many artists and slogans over a period of years, but this one was taken down when the building's landlord objected to the content. The controversy over this piece of art gives this course its name. There are black people in the future, and there are extraordinary black artists in Pittsburgh at this very moment. This special topics course will consider what some are calling a new Pittsburgh Renaissance in the black arts, from art to literature to film and music. Featured writers include Deesha Philyaw, The Secret Life of Church Ladies, Brian Broome, Punch Me Up To The Gods, and Damon Young, What Doesn't Kill You Makes You Blacker. We will also look at the work of the writer Jason England, the artists Alisha Wormsley, Vanessa German, Devan Shimoyama, the rapper Jasiri X, and the film maker Chris Ivey. An in depth look at these artists will be paired with an examination of the history of African Americans in Pittsburgh, and current economics, sociology and politics surrounding race in the city.

76-808 Culture and Globalization

Intermittent
We are often told we live in a period of globalization, but what that means differs widely. Theories of globalization describe such diverse processes as international capital and markets, neo-liberalism and neo-colonialism, environmental devastation, transnational labor and migration, modernity, shifts in spatial and temporal relations, cosmopolitanism, global cultural production and consumption, and the resurgence of nationalism. In this course we will explore and historicize the concept of globalization from both a global literary perspective and an interdisciplinary lens. Pairing literary works from around the world with scholarship from sociology, political science, gender and critical race studies, and anthropology, we will examine the contradictions, conflicts and possibilities of associated changes in the world. We will investigate the role of representation and aesthetics by considering the work of literary writers as well as some filmmakers, journalists and activists. The course will be organized as a series of topical foci that might include neoliberalism and labor, the local and the global, environmental changes, secularism and tradition, the globalization of feminism, and global migration and border control.

76-813 Book Design: A Cultural History

All Semesters: 12 units
Today the book is thriving despite earlier predictions of its "death" at the hands of the digital media. What has made the book so powerful a medium over six centuries? This course will take you into the book's makeup, design, and impact over time. We study how the book was made at different times in its historyfor instance, the manuscript book (medieval), the hand-press book (Renaissance and eighteenth century), the machine-made book (1800s to present). We also ask how today's databases like Google Books make us see new dimensions of the print medium that were not visible earlier. Likewise we will study theories of the print medium and the cultural effects of the book among readers and social groups. Students will have hands-on experience with a printing press and the Rare Book archives at Hunt and Hillman libraries. Two papers and shorter assignments will be required.

76-818 Rhetoric and the Body

Intermittent
This course offers an introduction to rhetorical studies of the body and is centered on the following three questions: What is the role of the body in rhetorical theory? What role does rhetoric play in constructing the body as a raced, gendered, dis/abled, cultural, fleshy, and political entity? And, how might moving, feeling bodies challenge, regulate, or disrupt these rhetorical constructions and furthermore, our theories of rhetoric? Our readings will explore the role of embodiment in rhetorical theory, examining a number of contemporary and historical theories of the body. In the process, we will explore how to put rhetoric and the body into conversation with one another and what methodological implications this conversation has for rhetorical studies more broadly. The goal of this course is to provide breadth rather than depth, with the assumption that most students, even those relatively familiar with body and/or rhetorical theory, will approach rhetorical studies of the body as novices. Students will conduct their own research on a topic related to rhetorical studies of the body that also aligns with their professional and academic goals. Graduate students interested in research will benefit from this course's focus on theory and the professional genres central to rhetorical studies. Undergraduates students (both majors and non-majors) will have the opportunity to examine how the body intersects with communication and writing contexts in their everyday public and professional lives. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-822 Intro to Gender and Sexuality Studies

Intermittent: 6 units
This graduate-level course offers students a scholarly introduction to theories of gender and sexuality. In this class, we will use intersectional approaches to consider gender theories, feminist theory, masculinity studies, queer theory and scholarly discussions of sexuality. Readings will include Kimberl and #233; Crenshaw, bell hooks, Judith Butler, Raewyn Connell, Sara Ahmed, Eve Sedgewick, and Jasbir Puar, among others.

76-825 Rhetoric, Science, and the Public Sphere

Intermittent
In the 21st century science and technology are ubiquitous presences I our lives. Sometimes these phenomena spark our imagination and affirm our confidence in a better future. In other instances, they create fear and generate protests over the risks new technologies and scientific ideas pose to prevailing social, cultural, economic, and political orders. In this course we will examine the complex dynamics in the relationships between science, technology, and society. Towards this end we will engages with questions such as: How do we decide who an expert is? To what extent do scientists have an obligation to consider the social and ethical consequences of their work? Is public education about science and technology sufficient for addressing social concerns about risk and controversial scientific ideas? We will grapple with these and other questions by exploring public debates including conflicts over global warming, vaccinations, and the AIDS crisis. With the help of analytical theories from sociology, rhetoric, and public policy, we will develop a framework for thinking about argument and the dynamics of the relationship between science, technology, and the public. We will also look to these fields for tools to assess public debate and to complicate and/or affirm prevailing theories about the relationship between science and society.

76-829 Introduction to Digital Humanities

Intermittent
This course is a "learn by doing" introduction to questions and methods in digital humanities, with special emphases on common tasks in digital history, digital literary studies, library science, and cultural analytics. Students will likely partner with a national humanities organization to tackle real-world humanities problems while developing core computational competencies such as those required for gathering data (text mining, APIs), transforming data (OCR, regular expressions, natural language processing, image magick), file management (shell commands), data visualization (matplotlib, arcGIS), and more.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-831 Gender Play in Early Modern Drama

All Semesters: 12 units
The playhouses of early modern London offered access to an astonishing spectacle that would be difficult to find anywhere else in the city: men dressed as women, skillfully reproducing (but also exposing, interrogating, and refining) the significations that structure concepts of gender difference. In addition to this fundamental condition of performance and theatrical experience, the plots of the plays themselves regularly engaged with issues pertaining to gender and sexuality, an interest that runs through the raunchy satires performed by companies of adolescent boys, the innumerable comedies of cross-dressing and mistaken identity, and the equally numerous tragedies centered on problems of inequality and imbalances of power. This course will consider a wide range of drama from the period alongside a selection of readings in sexuality and gender theory, thus bringing early modern dramatists such as William Shakespeare and Thomas Middleton into conversation with contemporary thinkers such as Judith Butler and Sarah Ahmed. The body of core texts will include Twelfth Night, The Merchant of Venice, As You Like It, The Roaring Girl, The Taming of the Shrew, The Tamer Tamed, The Island Princess, The Witch of Edmonton, The Silent Woman, Women Beware Women, and Galatea.

76-833 Historicisms

All Semesters
What is a critical historicism? What theories of history, texts, and social life have been driving literary and cultural scholarship since the late twentieth century? What is the ongoing tension between historical accounts of literature/culture? This course will introduce students to ways of thinking about how literary and cultural texts or genres can be studied historically, whether they were written in the early modern age or the twentieth century. We will especially explore controversities about methods of studying texts in history and #8212;about historicism vs. presentism, the relation of text and context, periodization, longue dur and #233;e, reception history, transhistorical meanings. Readings will include Walter Benjamin, Karl Marx, Michel Foucault, Jack Halberstam, Stephen Greenblatt, Judith Newton, Joan Scott and others.

76-844 History of Books and Reading

Fall
Rather than putting an end to the book, digital media have had the oddly exhilarating effect of making us look at all kinds of print, past and present, through newly focused lenses. This course will introduce you to the history of books and reading, a cross-fertilizing field of study that is having an impact on many disciplines, from the history of science to literary history, cultural studies, and the arts. Scholarship in this still-emerging field will include work by Roger Chartier, Michel Foucault, Elizabeth Eisenstein, Pierre Bourdieu, Michel de Certeau, , and the current scholars who appear in one of our key books, "Interacting with Print: A Multigraph." We'll also read primary texts by Joseph Addison, Jane Austen, Samuel Coleridge, and Wilkie Collins to see how differing modes of print and reading became highly contested cultural and political matters in the eighteenth and nineteenth centuries. Other topics include the division between new reading publics and their ways of reading books; important changes in book production, typography, printing methods (hand-press to steam press). Such knowledge of the history of print has become especially crucial in an era of emerging "new media" and the field of digital humanities in the university. Two papers will be requiredone shorter paper (5-7 pp.) and a longer research paper on the uses of books and print by producers and readers. Though the course meets in Baker Hall, you will have hands-on experience with early books and other forms of print as we also meet periodically in the Rare Book Room at Hunt Library.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-846 Revenge Tragedy

All Semesters
Attendants to the early modern English theater seem to have had an almost insatiable appetite for revenge tragedy: a lurid, blood-soaked genre distinguished by plots involving insanity, skulls, ghosts, poisonings, stabbings, suicide, and other forms of unnatural death. This course will cover key examples of the genre, putting particular emphasis on the depiction and interrogation of justice, analyses of death, and playful engagement with theatricality. Our central curriculum will include the following plays: Thyestes (Seneca), The Spanish Tragedy (Kyd), Titus Andronicus (Shakespeare), Hamlet (Shakespeare), The Revenger's Tragedy (Middleton), and The Duchess of Malfi (Webster). We will also read a selection of critical essays and related literature from the period.

76-849 Race and Media

Intermittent
This course will introduce students to useful methodological approaches to analyze race and representation within a variety of media formats. Media in this course is understood broadly: technologies used to store and deliver information. With this rather broad understanding in mind our course will look at how artists and intellectuals use discrete formats (print, film/video, electronic, and other recording mediums) to imagine, remediate and study the circulation of racialized bodies and identities within global capitalism. We will also think about the concept of race itself as another, particularly problematic "media" format used to store and deliver information about the human for political, economic, ideological and juridical purposes. The class will be organized around specific material and "immaterial" media objects that will allow us to explore the processes of (re)mediation that characterize racialized bodies and formats. We will look at a range of formats from literature and music to film, television, and social media. The course is structured to provide both a chronological and historicist approach to the discourses that define race and media. More than likely, we will watch and (or) read the works of D.W. Griffith, Nella Larson, Melvin Van Peebles, Lizzie Borden, Audre Lorde, Claudia Rankine, Alex Rivera and Nia DaCosta. We will also read the theoretical works of Jacques Ranciere, Huey P. Newton, Dallas Smythe, Lisa Gitelman and Michael Gillespie, Simone Browne, Theodore Adorno, Sara Ahmed and many others.

76-850 Law, Culture, and the Humanities

Intermittent
"I'm not a lawyer, but..." How many times have you heard this disclaimer, closely followed by a lay analysis of law? This course, an introduction to the cultural study of law for graduate students and advanced undergraduate students, can be seen as an introduction to what goes into the making of such a statement. Where do we get our ideas about law? What do we mean when we say "law"? What counts as law? How does culture influence law, and law, culture? And to what degree should historical context condition any answers we might be tempted to give? Students in the course will study works in a range of genres (novels, plays, poems, judicial opinions, pamphlets) and develop methods for investigating ways that law and culture have been made by one another from the 16th-century to the present. Readings will include influential theoretical accounts of law (Aristotle, Hobbes, Cover, Habermas, Bordieu, MacKinnon, Alexander), canonical texts in Law and Literature (Shakespeare's Measure for Measure, Melville's Billy Budd, Kafka's The Trial) and some "weird fiction" by the novelist/legal theorist China Mi and #233;ville. As a counterpoint to the fiercely anti-historical "law and economics" movement, however, the course will put special emphasis on rooting intersections of law and culture in rich historical context, considering both local and international legal contexts (sometimes in fairly technical detail) alongside so-called "ephemera" of culture. Students will tackle the especially fruitful "case" of Renaissance Britain before developing final research projects, whether on the Renaissance or another period of their choosing.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-852 Generations and Culture

Intermittent
We frequently hear about generations and #8212;the Millennials and their multitasking, Gen X and their minivans, and the Baby Boomers and their self-satisfaction and #8212;but generations have usually been ignored in cultural studies. Yet generations have significant impact on cultural tastes, consumer choices, and political views, as a good deal of research shows, and identity, alongside other factors such as race, class, gender, sexuality, ethnicity, and abledness. This course will study the theory of generations, as well as novels and films that tell us about generations.

76-853 Literature of Empire

Fall
Nineteenth and early twentieth-century British literature was shaped by events taking place outside as well as inside of national borders. Even in the eighteenth and nineteenth centuries, with international trade and slavery supporting the manor house and plantations abroad providing the cotton for British looms, the "England" of English literature spanned the globe. By the first half of the twentieth century, this empire had begun to collapse in upon itself, a process witnessed by writers inside Britain and its colonies. This course will investigate British literature within the international context of global imperialism. A section on gothic stories takes us into the realm of popular culture with Mary Shelley's Frankenstein and Arthur Conan Doyle's short stories. We take to the seas with Joseph Conrad's Lord Jim, before we consider W. Somerset Maugham's exploration of sexuality in the tropics in The Painted Veil. Finally, we return to England to outline the links between colonial empire and international war rendered in Virginia Woolf's Mrs. Dalloway. These literary works will be read alongside some of the most important works of postcolonial theory. While course readings focus on 19th and early 20th century, student's will undertake a research project over the semester in their own period of interest in British literature in connection with empire studies.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-854 Introduction to Literary and Cultural Studies

Fall
Cultural Studies is an intellectual and professional movement identified with the Center for Contemporary Cultural Studies in Birmingham. This movement grew out of literary studies. It is neither identical with literary studies, nor opposed to literary studies. It is today one form that the study of literature or other cultural works may take. This course offers a theoretical genealogy of cultural studies, showing how and why its theories and practices emerged and developed. As a genealogy, the course does not assume that cultural studies has an essence or an origin. The texts and topics will reflect the heterogeneity of its emergence and development. The course does, however, embody what we see as several historical changes in cultural studies, from idealism to materialism, from mono to multiculturalism, and from high culture exclusiveness to democratic inclusivity. The course is not designed to teach "approaches," but to explore and interrogate the founding assumptions of the academic project that you are being trained to join. Students should, by the end of the class, have a sense of where cultural studies came from and of the problems and possibilities raised by the theories it continues to invoke.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-864 Creative Nonfiction Workshop

Fall
Narrative Medicine looks at the intersection of writing and healing. How does narrative help heal the mind, and how are the mind and body inextricably linked? The couse will introduce you to several books and essays centered around the theme of wellness and illness and #8212;- and how these modes of being are represented and shaped by culture. You will write your own personal essays on these topics along with a final research paper. A great class for anyone interested in the power of story-telling in our own lives.

76-867 Crime Fiction and Film

Intermittent: 12 units
This course will be concerned with hardboiled crime fiction in print and on screen. The hardboiled emerges in Ernest Hemingway a distinctive literary style, and about same becomes a formula for pulp crime fiction. The language and attitude of the hardboiled became associated with urban gangsters in films such as The Public Enemy. Newspaper crime coverage beginning in the 1920s becomes increasingly frank in both its language and photographic coverage of crime. These various elements will be the material for a new kind of literature represented Dashiell Hammett, James M. Cain, and especially Raymond Chandler, and for a cycle of films that owe much to their work, film noir. Chandler was responsible for invention of one of most enduring types in American fiction, the hardboiled detective. The course will focus on Chandler and the crime stories after him that make various uses of that type and the formula that has become associated with it. Throughout the course we will consider the social and political contexts in which these cultural forms developed, and what cultural work the hard-boiled performed. We will be especially interested such questions as the function of the misogyny typical of much of it, the different representations of race by white and black artists, the representation of police, whether the hardboiled is best understood as having a working-class affiliation, and the degree to which its various manifestations might be called realist.

76-868 Space and Mobilities

Intermittent
This course will investigate space and movement as social constructions. Space is something dynamically created that may be interpreted for the ways it creates meaning, while movement reproduces and constitutes power and institutions. This interdisciplinary course considers theories of space and movement as a field of study and in reference to literary and film texts. The course might include discussions of migrants and state borders, cultural constructions of transport, the poetics of space, and the dynamic mapping of the city through movement and sound. Readings might include Henri Lefebvre, Doreen Massey, Edward Soja, Gaston Bachelard, Wendy Brown, John Urry, Tim Cresswell, Marian Aguiar; literary texts might include Brian Friels Translations, Christina Garcia's Dreaming in Cuban, W.G. Seabald's Austerlitz and Teju Cole's Open City. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission. Students across disciplines are encouraged and may work on a final project related to their primary field.

76-870 Professional and Technical Writing

Fall
This course is an introduction to the theory, research, and practice of professional and technical communication as a discipline. Through readings, discussions, projects, and writing workshops, you will develop a rhetorically-grounded approach to analyzing communications problems and producing a range of effective and situation-specific professional documents. This user-centered approach views professional documents as means to accomplish specific, well-defined purposes: getting funding or support for a project (proposals), supporting managerial decision-making (reports), communicating effectively within organizations (email, correspondence), guiding action (instructional writing), getting a job or internship (resumes and application letters), or making choices among various medical treatments (science writing for general audiences). Because writers need a range of skills that go well beyond the actual inscribing of words on a page, you also gain practice in how to test documents on actual users, edit and revise your own work and that of other writers, and participate in and manage collaborative writing projects. The course features three major writing assignments. Core course for MAPW students.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-881 Introduction to Multimedia Design

Fall: 12 units
This class meets the increasing demand for professional/technical writers who understand multimedia and its communicative possibilities. It provides students with the opportunity to create both an explainer video and a more persuasive animation merging text, spoken voice, music, images, and video clips. Students will learn the basic concepts and vocabulary of motion graphics, practical issues surrounding designs that change over time, and digital storytelling through hands-on projects. Inspiration is drawn from popular Vox and Ted Ed explainer videos that have come to represent the genre. Students explore writing and recording their own narration and how to best utilize elements of time, motion, and sound to enhance their visual communication skills. Adobe After Effects will be taught to complete assignments and explore multimedia possibilities. Some Adobe Photoshop, Illustrator, and Audition will also be taught to support specific tasks. Basic experience with Photoshop or Illustrator prior to taking this class is helpful, but not required. In-class discussions and critiques are essential components of the course.
Prerequisites: 76-391 or 51-262 or 76-791

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-884 Discourse Analysis

Fall
This course teaches an empirical and systematic approach to analyzing texts. The central question we ask is this: how does language shape contexts and how do contexts, in turn, shape language? We typically focus on micro-linguistic elements, but also examine visual aspects of texts.

Course Website: http://www.cmu.edu/dietrich/english/index.html (http://www.cmu.edu/dietrich/english/)

76-885 The New Public Sphere

Fall
Public deliberation about issues that matter to us is at the heart of the rhetorical tradition. But is meaningful public dialogue really a live option in a divisive, media-saturated world of sound bites addressed to partisan publics? Moreover, is the process of debate, deliberation, and decision making (in which the best argument wins) really the normal (or even ideal) model? Or can people use local public spaces to develop new, more inclusive positions? How might such a process create a boundary-crossing public in which diverse groups enter intercultural deliberation around racial, social, economic or environmental issues? This course looks at critical ways people use rhetoric to take literate social action within local publics. From the debate spurred by Habermas's canonical version of the public sphere, we move to a feminist "rereading" of the Greek Sophists, to more contemporary studies of deliberation in workplaces, web forums, grassroots groups, new media, and community think tanks. Working as a rhetorical consultant into the meaning making process of a local public of your choice, you will also learn how to support your inquiry with a variety of methods, from an interactive activity analysis to a more focused probe into the social/cognitive negotiation conflict may require.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-891 Rhetorical Analysis

Fall and Spring
Students in this course will learn various approaches to analyzing discourse artifacts from a rhetorical point of view. Early in the course, students will identify an artifact or artifacts they wish to analyze. From there, students will be encouraged to explore their own methods of analysis based on two required books for the course and reviews of literature. For the midterm, students will create an annotated bibliography of five specimens of criticism taken from a single journal. For the final project student will first present and then hand in a polished 15 page piece of criticism based on one or some combination of methods. The presentation and final paper count 50% of the grade, with the mid-term, class attendance, participation, and homework making up the final 25%.

76-893 Introduction to Global & Postcolonial Studies

Intermittent: 6 units
Since the 1978 publication of Edward Said's groundbreaking work Orientalism, postcolonial theory has gained currency as a critical discourse examining global experiences of colonization and decolonization. Since the term "postcolonial" was first invoked to describe the cultural effects of colonization, the field of study has expanded considerably. Today postcolonial studies looks backwards at earlier works on nationalism and cultural identity, gazes forwards towards seemingly dire futures, and unpacks present conjunctures. In this course, we will follow several threads of postcolonial theory to talk about the discursive operations of empire, the politics of representations, the problems of nationalism, the intersections of race, gender and sexuality in a global context, and the effects of colonialism, imperialism and globalization on economies, ecology, climate, and migration.

76-894 Digital Humanities

Intermittent: 6 units
Digital Humanities is an emerging discipline as well as a broad collection of scholarly activities that apply new technologies to humanities research while expanding traditional forms of scholarly communication. Some of its many facets include: book history, cartography (using maps to better understand the cultural production of texts), the preservation and sharing of collections that are otherwise difficult to access. DH can also include the fostering of new creative expression by using digital media. In this mini we'll be reading a variety of leaders in the field including Robert Binkley, Franco Moretti, Matthew Jockers, Peter deBolla, Johanna Drucker, Alan Liu, Jerome McGann, Christopher Warren, and Bethany Nowviskie, attending the CMU DH lunch workshops, and taking some field trips around the city to see some DH projects in action.

76-896 Research Methods in Rhetoric & Writing Studies

All Semesters
This course is a survey introduction to historical, empirical, text-based, and qualitative methods of inquiry used in the fields of rhetorical and writing studies. We will read broadly to understand the philosophical questions, research traditions, practical applications, and innovative directions that shape the field, exposing students to a range of methods and methodologies. Studies of rhetoric, writing, and literacy have evolved tremendously, and we will examine approaches for how to trace, analyze, and critique the use of meaning making in a variety of cultural, political, workplace, technological, and pedagogical contexts. By the end of the course, students will develop a sense of how to put together an effective research project on their own and design and articulate the research methods and methodologies appropriate to that study. Throughout, we will ask a fundamental question: How do rhetoric, writing, and literacy work and for what consequences?

Department of History

Christopher J. Phillips, Department Head
Location: Baker Hall 240
Phone: 412-268-2880
Fax: 412-268-1019
https://www.cmu.edu/dietrich/history/

Undergraduate Degree Options in the Department of History

The B.A./B.S. in Social & Political History

The B.A. in Global Studies

The B.A./B.S. in Ethics, History, and Public Policy

The Department of History offers undergraduates a choice of three majors: Social & Political History, Global Studies, and Ethics, History, and Public Policy. Specific requirements and courses for each major are detailed below.

All three History majors are grounded firmly in the liberal arts. Each has a strong interdisciplinary bent and an equally strong commitment to using knowledge of the past to illuminate present-day social, cultural, and political affairs.

In different ways, all three majors emphasize empirical research methods and conceptual analysis, and cultivate reading, research, and writing abilities central to a variety of professions. Our students develop strong analytic and writing skills; choose among diverse U.S., global, and thematic courses; learn experientially through internships and/or study abroad; and benefit from small class sizes and easy access to faculty who are internationally known for innovative historical, anthropological, and other social science approaches to investigating the past. The study of history necessarily includes diverse societies and controversial public policy issues, usefully blending liberal education with professional development.

History is also excellent preparation for leadership positions in law, business, journalism, politics, education, and government service (e.g., U.S. Foreign Service, Health & Human Services, Federal Trade Commission). The resumes of innumerable CEOS and government statesmen show how effectively the study of history serves as a foundation for preparing leaders both at home and abroad.

Having been trained to analyze subtle and complex issues, to develop breadth of understanding, to dig out information and make sense of it, and to present their findings effectively, graduates of the History Department do extremely well in many types of for-profit, non-profit, governmental, and non-governmental organizations. Because history training combines research and writing skills with analysis of social and policy trends, it also prepares graduates for journalism and other writing careers in the modern media age.

All three History degree programs combine easily with majors in Business, Economics, English, Information Systems, Languages, Cultures, and Applied Linguistics, Philosophy, Professional Writing, Social and Decision Sciences, and Statistics.

Additional Majors

The majors in Social & Political History, Global Studies, and Ethics, History, and Public Policy may be declared as additional majors in consultation with the Academic Program Manager, Dr. Alexandra Garnhart-Bushakra. You can reach Dr. Garnhart-Bushakra in the History Department, Baker Hall 240G to schedule a meeting with her directly.

Interdepartmental Majors

In addition to the Ethics, History, and Public Policy major, History faculty are also integral participants in interdepartmental majors described elsewhere in this catalog: International Relations and Politics in the Institute for Politics and Strategy, and the Languages, Cultures, and Applied Linguistics Department.

Minors

Options for pursuing a minor in Social & Political History or Anthropology are discussed below, following the sub-section on Ethics, History, and Public Policy.

Several other minors with strong History content, detailed elsewhere in the Undergraduate Catalog, can be linked with any degree. Students should contact the relevant History faculty members listed below:

- African and African American Studies: Professor Edda Fields-Black (fieldsblack@cmu.edu)
- Environmental and Sustainability Studies: Professor Abigail E. Owen (aeown@cmu.edu)
- Gender Studies: Professor Lisa M. Tetrault (tetrault@andrew.cmu.edu)
- Religious Studies: Professor Allyson F. Creasman (allysonc@andrew.cmu.edu)
- Russian Studies: Professor Wendy Goldman (goldman@andrew.cmu.edu), Professor Tatyana Gershkovich (tgershko@andrew.cmu.edu)
- Science, Technology, and Society: Professor Christopher J. Phillips (cjp1@cmu.edu)

Research and Outreach Centers

History Department faculty members lead three research and outreach centers that advance new interdisciplinary knowledge and help translate knowledge into public policies that further the pursuit of social, economic, and political justice.

1. CAUSE (Center for African American Urban Studies and the Economy), Joe W. Trotter, Director
2. The Bajaj [India] Rural Development Lab, Nico Slate, Director
3. The Center for Human Rights Science, Jay D. Aronson, Director

The Major in Social & Political History (SPH)

Professor Ricky Law, *Director of Social & Political History and Director of Undergraduate Studies*, History Department
Location: Baker Hall 238B, 412-268-2880, rlaw@andrew.cmu.edu

Dr. Alexandra Garnhart-Bushakra, *Academic Program Manager*, History Department
Location: Baker Hall 240G, 412-268-1260, agarnhar@andrew.cmu.edu

www.cmu.edu/dietrich/history/undergraduate/sph (https://www.cmu.edu/dietrich/history/undergraduate/sph/)

Social & Political History (*SPH*) is a research- and writing-intensive major that emphasizes analysis of change over time and in-depth understanding of the societies, cultures, economies, political systems and conflicts that have shaped our world. History electives focus on areas of faculty expertise such as science, technology, race, culture, public health, environment, gender, labor, war, politics, sports, education, and criminal justice.

All majors take Introduction to Historical Research & Writing (79-200, 9 units) and the capstone Historical Research Seminar (79-420, 12 units), where they conduct individualized projects using archival and other primary sources. Several students have published the results of their research, and we are exploring new ways to facilitate future publication of students' research in both undergraduate and professional history journals.

The broad analytic, research, and writing skills cultivated by the SPH major prepare students for success in a wide variety of graduate and professional schools, and for exercising leadership in careers in business, law, government, education, journalism, public policy, social work, the armed services, Foreign Service, media, museums and libraries. Often, history graduates pursue post-undergraduate professional school, such as law, business administration, education, public policy, urban planning, librarianship, journalism, the ministry, and social work.

For students interested in pursuing a professional career in History, options today include not only research and teaching -- our graduates have earned Ph.D. degrees at Harvard, Northwestern, and other major universities -- but also expert positions as historians in museums, archives, historic sites, the armed services, media outlets, and other public history venues.

Students graduating with a primary major in Social & Political History may pursue a B.A. or B.S. degree. *SPH* may also be taken as an additional (i.e., second) major.

Curriculum (93 units)

All students in the Social & Political History major are required to complete two research-training courses: Introduction to Historical Research & Writing (79-200, 9 units), and Historical Research Seminar (79-420, 12 units), which is regularly offered in the Fall semester of the senior year. Students must earn a final grade of “C” or better in these two courses in order to fulfill the requirements for the *SPH* major.

Students in the Social & Political History major are also required to take at least one of the following general education courses: Genocide and Weapons of Mass Destruction (79-145, 9 units) Introduction to the History of Science (79-160, 9 units), or Democracy and History: Thinking Beyond the Self (79-189, 9 units).

In addition, students must take two historical *survey courses* from a wide range of attractive options that include most major regions of the world.

Otherwise, students enjoy great flexibility: they are free to take additional survey courses or to specialize in thematic topics or regions of the world that are of special interest to them.

If you are interested in pursuing a minor in SPH, please view the section (see below) for the Minor in Social and Political History.

Social & Political History Major (*SPH*)

I. Required General Education Course (9 units)

79-145	Genocide and Weapons of Mass Destruction	9
79-160	Introduction to the History of Science	9
79-189	Democracy and History: Thinking Beyond the Self	9

II. Required History Department Courses (21 units)

79-200	Introduction to Historical Research & Writing	9
79-420	Historical Research Seminar	12

III. Required Survey Courses (*choose two* -- 18 units)

79-120	Introduction to African American History: Black Americans and the World	9
79-170	Introduction to Science, Technology, and Society	9
79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-203	The Other Europe: The Habsburgs, Communism, & Central/Eastern Europe, 1740-1990	9
79-204	American Environmental History	9
79-205	20th Century Europe	9
79-206	Crime and Punishment in Early Modern Europe	9
79-211	Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange	9
79-212	Jim Crow America	9
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-225	West African History in Film	9
79-226	African History: Earliest Times to 1780	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-229	The Origins of the Palestinian-Israeli Conflict, 1880-1948	9
79-230	The Arab-Israeli Conflict and Peace Process Through 1948 to Present	9
79-240	Development of American Culture	9
79-242	African American History: Reconstruction to the Present	9
79-244	Women in American History	9
79-245	Capitalism and Individualism in American Culture	9
79-248	U.S. Constitution & the Presidency	9
79-249	20th Century U.S. History	9
79-250	Voting Rights: An Introduction	9
79-255	Modern Ireland: Politics and Culture from the Famine (1847) to Today	9
79-260	Nazi Germany	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-265	Russian History: Game of Thrones	9
79-266	Russian History and Revolutionary Socialism	9
79-269	Russian History: From Socialism to Capitalism	9
79-272	Coexistence and Conflict: Muslims, Christians and Jews in Spain and Portugal	9
79-282	Europe and the World Since 1800	9
79-288	Bananas, Baseball, and Borders: Latin America and the United States	9
79-320	Women, Politics, and Protest	9

IV. Social & Political History Elective Courses (45 units)

Students must complete 45 elective History units (*typically 5 courses*) for the Social & Political History major. Any History Department courses not fulfilling another major requirement may be chosen as an elective.

Social & Political History majors have considerable flexibility in choosing their elective courses, but should consult with the Academic Program Manager, Dr. Alexandra Garnhart-Bushakra, History Department, Baker Hall 240G, in making their selections.

For a complete list of elective course options in History, please consult the History course descriptions elsewhere in this catalog. The selections below are designed to give you a sense of the great variety of thematically centered courses (in addition to the survey courses listed earlier) that History Faculty members regularly teach:

79-112	Introduction to Asian American History	9
79-175	Moneyball Nation: Data in American Life	9
79-201	Introduction to Anthropology	9
79-207	Asian American History through the Novel	9
79-208	Witchcraft and Witch-Hunting	9
79-216	Genghis Khan and the Mongol Empire	3
79-218	Tiananmen Square and Popular Protest in Modern China	6
79-219	Hong Kong, Taiwan and the Idea of "China"	6
79-220	Screening Mexico: Mexican Cinema, 1898 to Present	6
79-222	China and the Second World War	6
79-234	Technology and Society	9
79-237	Comparative Slavery	9
79-243	The Civil War in American Memory	6
79-246	Industrial America	9
79-247	African Americans, Imprisonment, and the Carceral State	9
79-252	"Harriet": Harriet Tubman, Slavery, and the Underground Railroad	6
79-257	Germany and the Second World War	9
79-256	Sex, Guns, Rock, and Skinheads: Youth Rebellion in Europe, 1960-1990	9
79-260	Nazi Germany	9
79-263	Mao and the Chinese Cultural Revolution	9
79-264	Tibet and China: History and Propaganda	9
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-268	World War I: The Twentieth Century's First Catastrophe	9
79-270	Anti-Semitism Then and Now: Perspectives from the Middle Ages to the Present	9
79-273	Jews and Muslims in History	9
79-276	Beyond the Border	9
79-278	How (Not) to Change the World	9
79-280	Coffee and Capitalism	9
79-283	Hungry World: Food and Famine in Global Perspective	9
79-289	Animal Planet: An Environmental History of People and Animals	9
79-290	The Slave Passage: From West Africa to the Americas	9
79-292	China and the West	9
79-297	Technology and Work	9
79-298	Guns, Gun Cultures, and Gun Violence in American History	6
79-300	Controversial Topics in the History of American Public Policy	9
79-301	History of Surveillance: From the Plantation to Data Capitalism	6
79-302	Killer Robots? The Ethics, Law, and Politics of Drones and A.I. in War	9
79-303	Pittsburgh and the Transformation of Modern Urban America	6

79-309	The Chinese Revolution Through Film (1949-2000)	9
79-313	"Unwanted": Refugees, Asylum Seekers, and Patterns of Global Migration	6
79-314	How Do We Remember? The Politics and Cultures of Memory	9
79-315	The Politics of Water in Global Perspective	9
79-316	Photography, the First 100 Years, 1839-1939	9
79-317	Art, Anthropology, and Empire	9
79-318	Sustainable Social Change: History and Practice	9
79-319	India Through Film	6
79-322	Stalin and the Great Terror	9
79-324	#MeToo: Naming and Resisting Gender Violence	6
79-326	Shall We Dance? Culture, Politics, and Movement in the 20th Century	6
79-328	Photographers and Photography Since World War II	9
79-330	Medicine and Society: Health, Healers, and Hospitals	9
79-331	Body Politics: Women and Health in America	9
79-337	Educational Policy and "School Choice": Historical and Contemporary Perspectives	6
79-338	History of Education in America	9
79-339	History of Juvenile Delinquency & Juvenile Justice	9
79-340	Juvenile Delinquency & Film: From "Boyz N the Hood"(1991) to "The Wire"(2002-08)	6
79-342	Age of Crusading, 1000-1800	9
79-343	Education, Democracy, and Civil Rights	9
79-345	Roots of Rock & Roll	9
79-346	U.S. Political Films and Satire	9
79-350	Early Christianity	9
79-352	Christianity Divided: The Protestant and Catholic Reformations, 1450-1650	9
79-357	Science and the Body	6
79-359	Truth, Lies, and Propaganda: A Historical Inquiry	9
79-360	Crime, Policing, and the Law: Historical and Contemporary Perspectives	9
79-363	The Rise of American Modern Golf, 1895 to the Present	9
79-368	Un-natural Disasters: Societies and Environmental Hazards in Global Perspective	6
79-371	African American Urban History	9
79-372	The Rise and Fall of Pittsburgh Steel	6
79-373	Culture and Revolution: The Socialist Experiment in Soviet Russia	6
79-377	Food, Culture, and Power: A History of Eating	9
79-379	Extreme Ethnography	9
79-380	Hostile Environments: The Politics of Pollution in Global Perspective	9
79-383	The History of Capitalism	9
79-385	Out of Africa: The Making of the African Diaspora	9
79-387	General Francisco Franco: Fascism and its Legacies in Spain	6
79-394	Exploring History through Geography	6
79-395	The Arts in Pittsburgh	9

Social & Political History Major — Sample Curriculum

General Education Course	Fourth Course (open)	Fourth Course (open)	Fourth Course (open)
Fifth Course (open)	Fifth Course (open)	Fifth Course (open)	Fifth Course (open)

The table above represents a four-year plan for completing all requirements for the Social & Political History Major. Students may declare the major and begin course requirements as early as the start of the sophomore year and in some instances in the freshman year. Students should meet with the department's Academic Program Manager, Dr. Alexandra Garnhart-Bushakra, Department of History, Baker Hall 240G, for both short- and long-term course planning.

*Some Social & Political History majors choose to apply for the senior honors thesis program. The department strongly encourages students to take advantage of this option.

V. Courses in Other Departments that Satisfy SPH Elective Requirements (*up to 27 units*)

Students may satisfy the elective requirements in SPH with *up to 27 units* of the following courses offered by other departments in Dietrich College:

73-476	American Economic History	9
76-230	Literature & Culture in the 19th Century	9
76-239	Introduction to Film Studies	9
76-295	Russian Cinema: From the Bolshevik Revolution to Putin's Russia	9
80-135	Introduction to Political Philosophy	9
80-226	The Nature of Scientific Revolutions	9
80-335	Social and Political Philosophy	9
82-245	New Directions in Hispanic Studies	9
82-247	US Latinos Literature	9
82-293	Russian Cinema: From the Bolshevik Revolution to Putin's Russia	9
82-327	The Emergence of the German Speaking World	9
82-420	The Crucible of Modernity:Vienna 1900	9
82-427	Nazi and Resistance Culture	9
84-275	Comparative Politics	9
84-322	Nonviolent Conflict and Revolution	9
84-324	The Future of Democracy	9
84-325	Contemporary American Foreign Policy	9
84-362	Diplomacy and Statecraft	9
84-380	US Grand Strategy	9
84-386	The Privatization of Force	9
84-389	Terrorism and Insurgency	9
85-380	In Search of Mind: The History of Psychology	9
88-281	Topics in Law: 1st Amendment	9
88-284	Topics of Law: The Bill of Rights	9

VI. 79-505: SPH Internship (6-9 units)

The Social & Political History program strongly encourages students to locate internship opportunities in Pittsburgh or elsewhere that complement their historical interests (as, for example, in a museum or historical society) or in areas of policy research that complement their historical interests (as, for example, in a government agency or non-profit organization). The Academic Program Manager will assist students with matching their interests to local organizations. SPH students can earn up to 9 units in each internship. Please note, however, that internship credits do not count toward fulfillment of course requirements for the SPH major (though the units do count toward graduation).

VII. Additional Major in Social & Political History (*SPH*)

The Social & Political History Major may be scheduled as an additional major in consultation with the Academic Program Manager, Dr. Alexandra Garnhart-Bushakra, History Department, Baker Hall 240.

VIII. Bachelor of Science Option

Students may elect to earn a Bachelor of Science rather than a Bachelor of Arts degree by completing two courses from the list below, or by petitioning the Academic Program Manager, Dr. Alexandra Garnhart-Bushakra, History Department, Baker Hall 240, to accept equivalent courses as substitutions.

21-257	Models and Methods for Optimization	9
36-202	Methods for Statistics & Data Science	9
or 70-208	Regression Analysis	
36-303	Sampling, Survey and Society	9
36-309	Experimental Design for Behavioral & Social Sciences	9
70-257	Optimization for Business	9
80-305	Game Theory	9
80-306	Decision Theory	9
88-221	Markets, Democracy, and Public Policy	9
88-223	Decision Analysis	12
88-251	Empirical Research Methods	9
88-300	Programming and Data Analysis for Social Scientists	9

The Major in Global Studies

Professor Ricky Law, *Director of Undergraduate Studies and Director of Global Studies,* History Department
Location: Baker Hall 238B, 412-268-2880, rlaw@andrew.cmu.edu (egrama@andrew.cmu.edu)

Dr. Alexandra Garnhart-Bushakra, *Academic Program Manager*, History Department
Location: Baker Hall 240G, 412-268-1260, agarnhar@andrew.cmu.edu

www.cmu.edu/hss/globalstudies (https://www.cmu.edu/hss/globalstudies/)

The B.A. in Global Studies is an interdepartmental major designed for students interested in humanistic approaches to past and present processes of globalization. The rigorous yet flexible Global Studies curriculum combines courses in anthropology, history, cultural studies, and language training that enable students to gain a nuanced understanding of both global processes and regional histories and cultures. Graduates of the program have pursued careers in a wide range of fields, including law, the private and non-governmental sectors, and graduate work in psychology, business, health and medicine, and international studies.

Faculty affiliated with the program come from the departments of History, Languages, Cultures, and Applied Linguistics, English, and Philosophy, and draw on their international expertise to help students gain a rich, multidisciplinary understanding of global issues and concerns (such as, climate change and the environment; migration; social and political movements; imperial legacies and contemporary politics; art, language, culture, and globalization.)

Students should consult with the Global Studies Academic Program Manager about new courses and study abroad courses that may be approved for the Global Studies major.

Global Studies may be elected as a **primary** or an **additional** major; the requirements for each are the same.

Curriculum

(102 units plus completion of language requirement)

There are three required courses for the major: Introduction to Global Studies (79-275), Global Studies Research Seminar (79-400) and one of the following general education courses: Introduction to Anthropology (79-201, 9 units), Introduction to African American History: Black Americans and the World (79-120, 9 units), Genocide and Weapons of Mass Destruction (79-145, 9 units), Introduction to the History of Science (79-160, 9 units)), Democracy and History: Thinking Beyond the Self (79-189, 9 units), Technology and Society (79-234, 9 units), or How Do We Remember? The Politics and Cultures of Memory (79-314, 9 units). In addition to these three courses, majors must also complete 72 units of electives and demonstrate proficiency in a modern language other than English. Students may double count a maximum of four courses taken for the Global Studies major that are also being used to fulfill the requirements of other majors and programs. Students should consult with the Global Studies Academic Program Manager about new courses and study abroad courses that may be approved for students pursuing the major in Global Studies.

I. Required General Education Course (9 units)

79-201	Introduction to Anthropology	9
79-120	Introduction to African American History: Black Americans and the World	9
79-145	Genocide and Weapons of Mass Destruction	9
79-160	Introduction to the History of Science	9
79-189	Democracy and History: Thinking Beyond the Self	9
79-234	Technology and Society	9
79-314	How Do We Remember? The Politics and Cultures of Memory	9

II. Global Studies Introductory Course (9 units)

Students must earn a final grade of "C" or better for the course to count toward the major.

79-275	Introduction to Global Studies	9

III. Language Requirement

Demonstrating intermediate to advanced level proficiency in a language other than English is a crucial component of the major in Global Studies. Normally this requirement can be satisfied by successfully completing a course conducted in the second language at the 300 level or above for French, German, Italian, or Spanish, or the fourth semester (Intermediate II) level or above for Arabic, Chinese, Japanese, or Russian. Comparable proficiency for other languages can be considered. Additional advanced cultural, historical, and literary study in the second language is strongly recommended. Courses in a language other than English may also be counted as Global Studies transnational, global, or regional courses or Global Studies electives as appropriate.

Studying abroad for one semester, in a foreign country whose language is not English, is an alternative way to fulfill the language requirement.

Please see the Languages, Cultures, and Applied Linguistics section of the schedule of classes.

IV. Theoretical and Topical Core Courses (18 units)

To gain a solid foundation in the theories and analytical topics underpinning the B.A. in Global Studies, students select 18 units (typically two courses). Students must earn a final grade of "C" or better in these courses to fulfill the theoretical and topical core course requirement.

79-211	Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange	9
79-278	How (Not) to Change the World	9
79-280	Coffee and Capitalism	9
79-289	Animal Planet: An Environmental History of People and Animals	9
79-314	How Do We Remember? The Politics and Cultures of Memory	9
79-315	The Politics of Water in Global Perspective	9
79-317	Art, Anthropology, and Empire	9
79-318	Sustainable Social Change: History and Practice	9
79-377	Food, Culture, and Power: A History of Eating	9
79-379	Extreme Ethnography	9
79-380	Hostile Environments: The Politics of Pollution in Global Perspective	9
79-383	The History of Capitalism	9

V. Transnational, Global, and Regional Courses (27 units)

To gain insight into how complex transnational and global processes shape and are affected by local, national, and regional dynamics, students will select 27 units (typically three courses).

Transnational and Global Courses

76-337	Intersectional Feminism	9
76-353	Transnational Feminisms: Fiction and Film	9
76-384	Race, Nation, and the Enemy	9
76-440	Postcolonial Theory: Diaspora and Transnationalism	9
79-149	Ancient Rome: What Have the Romans Ever Done for Us?	9
79-237	Comparative Slavery	9
79-273	Jews and Muslims in History	9

79-270	Anti-Semitism Then and Now: Perspectives from the Middle Ages to the Present	9
79-276	Beyond the Border	9
79-280	Coffee and Capitalism	9
79-282	Europe and the World Since 1800	9
79-283	Hungry World: Food and Famine in Global Perspective	9
79-288	Bananas, Baseball, and Borders: Latin America and the United States	9
79-313	"Unwanted": Refugees, Asylum Seekers, and Patterns of Global Migration	6
79-333	African Americans, Race, and the Fight for Reparations	9
79-350	Early Christianity	9
79-368	Un-natural Disasters: Societies and Environmental Hazards in Global Perspective	6
79-385	Out of Africa: The Making of the African Diaspora	9
79-510	Global Studies Guided Reading	3
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9
82-283	Language Diversity & Cultural Identity	9
82-304	French & Francophone Sociolinguistics	9
82-345	Using Spanish in Social Contexts	9
84-226	International Relations	9
84-322	Nonviolent Conflict and Revolution	9
84-370	Nuclear Security & Arms Control	9
84-389	Terrorism and Insurgency	9

Regional Courses

Africa:

79-225	West African History in Film	9
79-226	African History: Earliest Times to 1780	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-290	The Slave Passage: From West Africa to the Americas	9

Eastern and Southern Asia and the Pacific:

79-207	Asian American History through the Novel	9
79-210	Identity, Ethnicity, and Place in Modern China	9
79-211	Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange	9
79-264	Tibet and China: History and Propaganda	9
88-411	Rise of the Asian Economies	9

Europe:

79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-203	The Other Europe: The Habsburgs, Communism, & Central/Eastern Europe, 1740-1990	9
79-205	20th Century Europe	9
79-208	Witchcraft and Witch-Hunting	9
79-268	World War I: The Twentieth Century's First Catastrophe	9
79-270	Anti-Semitism Then and Now: Perspectives from the Middle Ages to the Present	9
79-272	Coexistence and Conflict: Muslims, Christians and Jews in Spain and Portugal	9
82-320	Contemporary Society in Germany, Austria and Switzerland	9
82-415	Topics in French and Francophone Studies	9
82-441	Studies in Peninsular Literature and Culture	9

The Middle East:

79-229	The Origins of the Palestinian-Israeli Conflict, 1880-1948	9
79-230	The Arab-Israeli Conflict and Peace Process Through 1948 to Present	9
82-215	Arab Culture Through Dialogues, Film, and Literature	9
84-323	War and Peace in the Contemporary Middle East	9

The Americas:

79-223	Mexico: From the Aztec Empire to the Drug War	9
82-245	New Directions in Hispanic Studies	9
82-343	Latin America Language and Culture	9
82-451	Studies in Latin American Literature and Culture	9
82-455	Topics in Hispanic Studies	9
82-456	Topics in Hispanic Studies	9

VI. Elective Courses (27 units)

Please schedule an appointment with the academic program manager for guidance in selecting appropriate Thematic and region-based courses that satisfy Global Studies degree requirements.

Students are required to take an additional 27 units of elective courses, selected from one or both of the subcategories below. Any History course (79-xxx) not listed above at the 200 level or higher will count as an elective. In addition, Category IV and V courses listed above that are not used to fulfill those requirements may be counted as electives in addition to the courses listed below.

Students should consult each semester with the Global Studies Academic Program Manager, Dr. Alexandra Garnhart-Bushakra, about new courses approved for the Global Studies major. Students may “double-count” a maximum of four courses for the Global Studies major that are used to fulfill the requirements of other majors and programs. (Note that some of the courses may have prerequisites established by the departments offering them. Students should consult with the academic advisor about how such prerequisites may affect their course of study.)

Please visit the Department of History’s Current Courses webpage to see what is available. You can also see a list of electives in the Undergraduate Course Catalog.

Thematic Elective Courses

57-306	World Music	9
70-365	International Trade and International Law	9
76-241	Introduction to Gender Studies	9
76-386	Language & Culture	9
76-450	Law, Culture, and the Humanities	9
76-468	Space and Mobilities	9
79-101	Making History: How to Think About the Past (and Present)	9
79-204	American Environmental History	9
79-281	Introduction to Religion	9
79-316	Photography, the First 100 Years, 1839-1939	9
79-324	#MeToo: Naming and Resisting Gender Violence	6
79-330	Medicine and Society: Health, Healers, and Hospitals	9
79-343	Education, Democracy, and Civil Rights	9
80-244	Environmental Ethics	9
80-335	Social and Political Philosophy	9
82-215	Arab Culture Through Dialogues, Film, and Literature	9
82-541	Special Topics in Hispanic Studies	Var.
84-275	Comparative Politics	9
84-310	Policy in a Global Economy 1: International Trade and Trade Policy	6
84-318	Politics of Developing Nations	9
84-362	Diplomacy and Statecraft	9
88-234	Negotiation: International Focus	9

Area–based Elective Courses

79-216	Genghis Khan and the Mongol Empire	3
79-256	Sex, Guns, Rock, and Skinheads: Youth Rebellion in Europe, 1960-1990	9
79-257	Germany and the Second World War	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-263	Mao and the Chinese Cultural Revolution	9
79-265	Russian History: Game of Thrones	9
79-266	Russian History and Revolutionary Socialism	9
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-269	Russian History: From Socialism to Capitalism	9

79-309	The Chinese Revolution Through Film (1949-2000)	9
79-319	India Through Film	6
79-320	Women, Politics, and Protest	9
79-322	Stalin and the Great Terror	9
79-326	Shall We Dance? Culture, Politics, and Movement in the 20th Century	6
79-331	Body Politics: Women and Health in America	9
82-253	Korean Culture Through Film	9
82-254	World of Korea, Then and Now	9
82-273	Introduction to Japanese Language and Culture	9
82-278	Japanese Film and Literature: The Art of Storytelling	9
82-293	Russian Cinema: From the Bolshevik Revolution to Putin's Russia	9
82-294	19th Century Russian Masterpieces	Var.
82-295	20th Century Russian Masterpieces	Var.
82-303	French & Francophone Cultures	9
82-305	French in its Social Contexts	9
82-333	Introduction to Chinese Language and Culture	Var.
82-342	Spain: Language and Culture	9
82-344	U.S. Latine Cultures	9
82-361	Italian Language and Culture I	9
82-420	The Crucible of Modernity:Vienna 1900	9
82-425	Topics in German Literature and Culture	Var.
82-427	Nazi and Resistance Culture	9
82-428	History of German Film	9
82-433	Topics in Contemporary Culture of China	9
82-434	Studies in Chinese Traditions	9
82-440	Studies in Chinese Literature & Culture	9
82-473	Topics in Japanese Studies	9

VII. Senior Capstone Course (12 units)

The research seminar is the capstone course for Global Studies majors and is designed to give students the chance to define and carry out a research project of personal interest. Students are strongly encouraged to incorporate their prior coursework (including foreign language training), study abroad, or internships into their research. Students must earn a final grade of "C" or better for the course to count toward the major.

79-400	Global Studies Research Seminar	12

Global Studies Major — Sample Curriculum

This sample curriculum presents a course of study for completing the requirements for the Global Studies major that includes an optional study abroad semester. Students may declare the Global Studies major and take required courses as early as the second semester of the freshman year and as late as the junior year.

First-Year		Second-Year	
Fall	**Spring**	**Fall**	**Spring**
79-201 Introduction to Anthropology or 79-145, Genocide and Weapons of Mass Destruction or 79-189, Democracy and History: Thinking Beyond the Self	79-275 Introduction to Global Studies	GS Theoretical & Topical Core Course	GS Theoretical & Topical Core Course

	Fifth Course (open)		

*Spring semester of the junior year is a popular semester for study abroad. However, Global Studies majors may instead choose to study abroad in spring of sophomore year, or fall of junior year. Students should discuss study abroad and curricular planning with the Academic Program Manager, Dr. Alexandra Garnhart-Bushakra, History Department, Baker Hall 240. Study Abroad in a summer program is also an option.

**Many Global Studies majors choose to apply for the senior honors thesis program. The department strongly encourages students to take advantage of this option.

VIII. Additional Major

Global Studies may be elected as a primary or an additional major; the requirements for each are the same. Contact the Academic Program Manager, Dr. Alexandra Garnhart-Bushakra, History Department, Baker Hall 240G, to elect the additional major.

The Major in Ethics, History, and Public Policy

The B.A./B.S. in Ethics, History, and Public Policy (EHPP) is an interdepartmental major offered jointly by the Departments of History and Philosophy.

Preparing students to be leaders is a vital goal of colleges and universities in every democratic society. The intellectual challenges facing public and private sector leaders have expanded dramatically since the pioneering EHPP program began in 1996, but the need remains as great as ever for broadly educated, ethically sensitive, and technically skilled leaders.

EHPP prepares students to demonstrate sophistication and flexibility in their command of interdisciplinary knowledge; deep historical understanding of how modern-day policy problems have emerged and evolved; and clear, rational criteria for ethical and socially just decision making. The curriculum provides students with a strong humanistic foundation for developing such high-level, historically grounded, and ethically attuned leadership capacities. It also offers ample room for specialization in a wide range of policy areas in which the History and Philosophy departments have special expertise, e.g., medicine and public health, criminal justice, environment, technology, artificial intelligence (AI), gender, civil rights, immigration, and education.

Curriculum

Students seeking a primary major in Ethics, History, and Public Policy may elect to receive either a Bachelor of Arts or a Bachelor of Science degree (additional requirements apply; see below). Basic requirements include 120 units encompassing 45 units in History, 45 units in Philosophy, 18 units in Law and Social Science, and a 12-unit EHPP Capstone Course. This program may also be taken as an additional (i.e., second) major. All courses toward the major must be taken for a letter grade and must be passed with a grade of "C" or better. Students can double count any course for the major with another major or minor, with the exception of Social and Political History, for which a student can double count a maximum of two courses.

I. Foundation Courses in History and Philosophy **18 units**

Choose one of the following two courses:

79-189	Democracy and History: Thinking Beyond the Self	9
79-248	U.S. Constitution & the Presidency	9

Choose one of the following two courses:

80-130	Introduction to Ethics	9
80-330	Ethical Theory	9

II. Ethics and Policy Core 36 units

Choose four of the courses below:

No more than one course may be taken at the 100 level and at least one course must be taken at the 300 level or above.

80-135	Introduction to Political Philosophy	9
80-136	Social Structure, Public Policy & Ethics	9
80-208	Critical Thinking	9
80-221	Philosophy of Social Science	9
80-234	Race, Gender, and Justice	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-249	AI, Society, and Humanity	9
80-305	Game Theory	9
80-306	Decision Theory	9
80-324	Philosophy of Economics	9
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9
80-336	Philosophy of Law	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9

III. History and Policy Core 36 units

Choose four of the courses below:

79-175	Moneyball Nation: Data in American Life	9
79-204	American Environmental History	9
79-212	Jim Crow America	9
79-215	Environmental Justice from Conservation to Climate Change	9
79-234	Technology and Society	9
79-242	African American History: Reconstruction to the Present	9
79-248	U.S. Constitution & the Presidency	9
79-250	Voting Rights: An Introduction	9
79-278	How (Not) to Change the World	9
79-300	Controversial Topics in the History of American Public Policy	9
79-320	Women, Politics, and Protest	9
79-321	Documenting Human Rights	9
79-330	Medicine and Society: Health, Healers, and Hospitals	9
79-343	Education, Democracy, and Civil Rights	9
79-360	Crime, Policing, and the Law: Historical and Contemporary Perspectives	9
79-370	Technology in the United States	9
79-380	Hostile Environments: The Politics of Pollution in Global Perspective	9

IV. Foundation Courses in Law and Social Science 18 units

Choose two of the courses below:

17-200	Ethics and Policy Issues in Computing	9
19-101	Introduction to Engineering and Public Policy	12
70-332	Business, Society and Ethics	9
73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9
84-104	Decision Processes in American Political Institutions	9
84-110	The Economics of Politics, Policy, and Technology	9
84-352	Representation and Voting Rights	9
84-393	Legislative Decision Making: US Congress	9
84-402	Judicial Politics and Behavior	9
88-281	Topics in Law: 1st Amendment	9
88-284	Topics of Law: The Bill of Rights	9

EHPP students will also be able to complete the Foundations of Law and Social Science category by participating in the Washington Semester Program. Students are encouraged to pursue additional policy-relevant courses in law and social science, along lines consistent with their career ambitions.

V. EHPP Capstone Course 12 units

In Fall semester of senior year, EHPP students will participate in an interdisciplinary capstone course that asks students to integrate their studies in Ethics and History by addressing a policy topic of contemporary national urgency (e.g., climate change, immigration, infrastructure, abortion, hate speech, reparations, law enforcement and policing, charter schools, affirmative action, vaccination, taxation, voting rights, global justice). The Departments of History and Philosophy will alternate teaching the EHPP Capstone Course.

79-449	EHPP Capstone Course [cross-listed]	12
80-449	EHPP Capstone Course [cross-listed]	12

VI. Bachelor of Science Option

Students may elect to earn a Bachelor of Science rather than a Bachelor of Arts degree by completing two courses from the list below, or by petitioning the Director of EHPP to accept equivalent courses as substitutions.

21-257	Models and Methods for Optimization	9
36-202	Methods for Statistics & Data Science	9
or 70-208	Regression Analysis	
36-303	Sampling, Survey and Society	9
36-309	Experimental Design for Behavioral & Social Sciences	9
70-257	Optimization for Business	9
80-305	Game Theory	9
80-306	Decision Theory	9
88-221	Markets, Democracy, and Public Policy	9
88-223	Decision Analysis	12
88-251	Empirical Research Methods	9
88-300	Programming and Data Analysis for Social Scientists	9

Additional Major

The B.A./B.S. in Ethics, History, and Public Policy may be scheduled as an additional major in consultation with the Director of Ethics, History, and Public Policy.

Ethics, History, and Public Policy Sample Curriculum

Third-Year		Fourth-Year	
Fall	**Spring**	**Fall**	**Spring**
Foundations Course in History	Foundations Course in Law and Social Sciences	EHPP Capstone Course	Ethics and Policy Core Course
Foundations Course in Philosophy	Foundations Course in Law and Social Sciences	Ethics and Policy Core Course	History and Policy Core Course
Ethics and Policy Core Course	Ethics and Policy Core Course	History and Policy Core Course	Third Course (open)
History and Policy Core Course	History and Policy Core Course	Fourth Course (open)	Fourth Course (open)
Fifth Course Open	Fifth Course (open)	Fifth Course (open)	Fifth Course (open)

The above sample program is presented as a two-year (junior-senior year) plan for completing EHPP major requirements. Its purpose is to show that this program can be completed in as few as two years; not that it must be.

Students may enter the EHPP major, and begin major course requirements, as early as they wish. Students should consult their advisor when planning their program.

The Minor in Social & Political History (*SPH*)

Professor Ricky Law, *Director of Undergraduate Studies,* History Department

Location: Baker Hall 238B, 412-268-2880, rlaw@andrew.cmu.edu

Dr. Alexandra Garnhart-Bushakra, *Academic Program Manager*, History Department
Location: Baker Hall 240G, 412-268-1260, agarnhar@andrew.cmu.edu

www.cmu.edu/dietrich/history/undergraduate/minors/sph.html (https://www.cmu.edu/dietrich/history/undergraduate/minors/sph.html)

The minor in Social & Political History involves a minimum of 54 units of History course work.

Curriculum (54 units)

I. Required History Survey Courses (choose two -- 18 units)

Students must complete 18 units (typically 2 courses) from the following list of survey courses:

79-120	Introduction to African American History: Black Americans and the World	9
79-160	Introduction to the History of Science	9
79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-203	The Other Europe: The Habsburgs, Communism, & Central/Eastern Europe, 1740-1990	9
79-204	American Environmental History	9
79-205	20th Century Europe	9
79-206	Crime and Punishment in Early Modern Europe	9
79-211	Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange	9
79-212	Jim Crow America	9
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-225	West African History in Film	9
79-226	African History: Earliest Times to 1780	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-229	The Origins of the Palestinian-Israeli Conflict, 1880-1948	9
79-230	The Arab-Israeli Conflict and Peace Process Through 1948 to Present	9
79-240	Development of American Culture	9
79-242	African American History: Reconstruction to the Present	9
79-244	Women in American History	9
79-245	Capitalism and Individualism in American Culture	9
79-248	U.S. Constitution & the Presidency	9
79-249	20th Century U.S. History	9
79-250	Voting Rights: An Introduction	9
79-255	Modern Ireland: Politics and Culture from the Famine (1847) to Today	9
79-260	Nazi Germany	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-265	Russian History: Game of Thrones	9
79-266	Russian History and Revolutionary Socialism	9
79-269	Russian History: From Socialism to Capitalism	9
79-272	Coexistence and Conflict: Muslims, Christians and Jews in Spain and Portugal	9
79-282	Europe and the World Since 1800	9
79-288	Bananas, Baseball, and Borders: Latin America and the United States	9
79-320	Women, Politics, and Protest	9

II. Elective courses for the Minor in Social & Political History (36 units)

Students must complete 36 elective History units (typically 4 courses). Social & Political History minors have considerable flexibility in choosing their elective courses, but should feel free to consult with the Director of Undergraduate Studies in making their selections.

The Minor in Anthropology

Professor Noah Theriault, *Faculty Advisor,* History Department
Location: Baker Hall 240C, noaht@andrew.cmu.edu

Dr. Alexandra Garnhart-Bushakra, *Academic Program Manager*, History Department
Location: Baker Hall 240G, 412-268-1260, agarnhar@andrew.cmu.edu

www.cmu.edu/dietrich/history/undergraduate/minors/anthropology.html (https://www.cmu.edu/dietrich/history/undergraduate/minors/anthropology.html)

The Minor in Anthropology exposes students to the methods and theories that anthropologists use to study cultural variation and change. Courses in the minor explore the history and practice of ethnography, apply anthropological approaches to global problems, and examine how cultural differences interact with a range of other social, political, and environmental forces. Students also gain a deeper understanding of how cultural differences shape (and are shaped by) the arts, technology, economics, politics, and ecology. The minor, which may be combined with any major, equips students with a sophisticated understanding of human diversity in a rapidly changing world.

The Minor in Anthropology requires that students complete two "Methods" courses (18 units) and four "Anthropological Perspectives" courses (36 units). In addition, 79-201 Introduction to Anthropology is required (9 units), but it may be taken at any time during the student's coursework. Including this course, the Minor in Anthropology totals 63 units.

Curriculum (63 units)

I. General Education Course, Disciplinary Perspectives: Social Sciences (9 units)

This requirement need not be satisfied before beginning the minor.

79-201	Introduction to Anthropology	9

II. Methods (18 units)

Students must complete 18 units (typically 2 courses) in Methods, selecting from the list below. (Other courses may fulfill these requirements, with permission of the Faculty Advisor.)

79-275	Introduction to Global Studies	9
79-314	How Do We Remember? The Politics and Cultures of Memory	9
79-317	Art, Anthropology, and Empire	9
79-379	Extreme Ethnography	9
79-380	Hostile Environments: The Politics of Pollution in Global Perspective	9

III. Anthropological Perspectives (36 units)

Students must complete 36 units (typically 4 courses) in Anthropological Perspectives, selecting from the list below. (Other courses may fulfill these requirements, with permission of the Faculty Advisor.)

57-306	World Music	9
79-170	Introduction to Science, Technology, and Society	9
79-203	The Other Europe: The Habsburgs, Communism, & Central/Eastern Europe, 1740-1990	9
79-208	Witchcraft and Witch-Hunting	9
79-210	Identity, Ethnicity, and Place in Modern China	9
79-211	Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange	9
79-215	Environmental Justice from Conservation to Climate Change	9
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-234	Technology and Society	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-264	Tibet and China: History and Propaganda	9
79-275	Introduction to Global Studies	9
79-276	Beyond the Border	9

79-278	How (Not) to Change the World	9
79-280	Coffee and Capitalism	9
79-313	"Unwanted": Refugees, Asylum Seekers, and Patterns of Global Migration	6
79-314	How Do We Remember? The Politics and Cultures of Memory	9
79-315	The Politics of Water in Global Perspective	9
79-317	Art, Anthropology, and Empire	9
79-368	Un-natural Disasters: Societies and Environmental Hazards in Global Perspective	6
79-331	Body Politics: Women and Health in America	9
79-371	African American Urban History	9
79-377	Food, Culture, and Power: A History of Eating	9
79-379	Extreme Ethnography	9
79-380	Hostile Environments: The Politics of Pollution in Global Perspective	9

Relevant Anthropology courses may be taken at another university (for instance, study abroad, the University of Pittsburgh, or other Pittsburgh institutions) with permission of the Anthropology Minor's Faculty Advisor.

Senior Honors

Senior Honors Thesis: Dietrich College

The Dietrich College Honors Program may be undertaken by students completing the major in Social & Political History, the major in Global Studies, or the interdepartmental major in Ethics, History, and Public Policy. An Honors Thesis requires two semesters of work. Eligibility requirements are set by the College; contact the Associate Dean of Dietrich College for details.

Study Abroad

Study abroad is especially encouraged for all students in the History Department; this experience can help students better understand the relationship between cultural heritage and modern political processes in a host country. To make study abroad successful and determine how specific study abroad programs fit into History Department graduation requirements, History majors should consult with a relevant faculty member and/or with the Academic Advisor.

PAUL K. EISS, Associate Professor of Anthropology and History – Ph.D., University of Michigan; Carnegie Mellon, 2000–

EDDA L. FIELDS-BLACK, Professor of History – Ph.D., University of Pennsylvania; Carnegie Mellon, 2001–

MICHAL R. FRIEDMAN, Assistant Teaching Professor of History and Jack Buncher Professor of Jewish Studies – Ph.D., Columbia University; Carnegie Mellon, 2012–

WENDY Z. GOLDMAN, Paul Mellon Distinguished Professor of History – Ph.D., University of Pennsylvania; Carnegie Mellon, 1988–

EMANUELA GRAMA, Associate Professor of Anthropology and History; Associate Head – Ph.D., University of Michigan; Carnegie Mellon, 2013–

CARL KUBLER, Assistant Professor of History – Ph.D., University of Chicago; Carnegie Mellon, 2023–

RICKY W. LAW, Associate Professor of History; Director of Undergraduate Studies – Ph.D., The University of North Carolina at Chapel Hill; Carnegie Mellon, 2013–

DEEPA NAIR, Assistant Teaching Professor of History, Carnegie Mellon-Qatar – Ph.D., National University of Singapore; Carnegie Mellon, 2019–

ABIGAIL E. OWEN, Assistant Teaching Professor of History; Director of Education, Steinbrenner Institute for Environmental Education & Research – Ph.D., Columbia University; Carnegie Mellon, 2016–

CHRISTOPHER J. PHILLIPS, Professor of History; Department Head – Ph.D., Harvard University; Carnegie Mellon, 2014–

BENJAMIN REILLY, Teaching Professor of History, Carnegie Mellon-Qatar – Ph.D., University of Pittsburgh; Carnegie Mellon, 2004–

EDMUND RUSSELL, David M. Roderick Professor of Technology and Social Change and Professor of History – Ph.D., University of Michigan; Carnegie Mellon, 2019–

SCOTT A. SANDAGE, Associate Professor of History – Ph.D., Rutgers University; Carnegie Mellon, 1995–

EZELLE SANFORD III, Assistant Professor of History – Ph.D., Princeton University; Carnegie Mellon, 2021–

STEVEN SCHLOSSMAN, Professor of History; Director of Ethics, History, and Public Policy – Ph.D., Columbia University; Carnegie Mellon, 1988–

NICO SLATE, Professor of History – Ph.D., Harvard University; Carnegie Mellon, 2009–

JOHN SOLURI, Professor of History – Ph.D., University of Michigan; Carnegie Mellon, 1999–

LISA M. TETRAULT, Associate Professor of History – Ph.D., University of Wisconsin–Madison; Carnegie Mellon, 2005–

NOAH THERIAULT, Associate Professor of Anthropology and History – Ph.D., University of Wisconsin–Madison; Carnegie Mellon, 2017–

JOE WILLIAM TROTTER JR., Giant Eagle University Professor of History and Social Justice – Ph.D., University of Minnesota; Carnegie Mellon, 1985–

BENNO R. WEINER, Associate Professor of History; Director of Graduate Studies – Ph.D., Columbia University; Carnegie Mellon, 2015–

Affiliated Faculty

AIDAN BEATTY, Graduate Academic Advisor and Lecturer – Ph.D., University of Chicago; Carnegie Mellon, 2023–

STEPHEN BROCKMANN, Professor of German with Courtesy Appointments in English and History – Ph.D., University of Wisconsin–Madison; Carnegie Mellon, 1993–

JOSEPH E. DEVINE, Associate Dean for Undergraduate Studies, Dietrich College of Humanities and Social Sciences – D.A., Carnegie Mellon University; Carnegie Mellon, 1979–

ALEXANDRA S. GARNHART-BUSHAKRA, Academic Program Manager and Lecturer – Ph.D., University of Tennessee, Knoxville; Carnegie Mellon, 2023–

TIMOTHY HAGGERTY, Principal Lecturer – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2000–

JEFFREY HINKELMAN, Senior Lecturer and Director of the Film & Visual Media Program, English Department – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2016–

JASON HOSTUTLER, Humanities Advisor, Dietrich College of Humanities and Social Sciences – Ph.D., University of Wisconsin–Madison; Carnegie Mellon, 2023–

ANDREW S. RAMEY, Director of Advising, Dietrich College of Humanities and Social Sciences – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2017–

CHRISTOPHER WARREN, Professor of English and Associate Department Head with a Courtesy Appointment in History – D. Phil., University of Oxford;

Emeriti

CAROLINE JEAN ACKER, Associate Professor Emeritus of History – Ph.D., University of California, San Francisco; Carnegie Mellon, 1993–

LAURIE Z. EISENBERG, Teaching Professor Emeritus of History – Ph.D., University of Michigan; Carnegie Mellon, 1992–

DONNA HARSCH, Professor Emeritus of History – Ph.D., Yale University; Carnegie Mellon, 1990–

KATHERINE A. LYNCH, Professor Emeritus of History – Ph.D., Harvard University; Carnegie Mellon, 1980–

RICHARD MADDOX, Professor Emeritus of Anthropology and History – Ph.D., Stanford University; Carnegie Mellon, 1993–

JOHN MODELL, Professor Emeritus of History – Ph.D., Columbia University; Carnegie Mellon, 1982–

DANIEL P. RESNICK, Professor Emeritus of History – Ph.D., Harvard University; Carnegie Mellon, 1966–

JUDITH SCHACHTER, Professor Emeritus of Anthropology and History – Ph.D., University of Minnesota; Carnegie Mellon, 1984–

DONALD S. SUTTON, Professor Emeritus of History and Anthropology – Ph.D., Cambridge University, England; Carnegie Mellon, 1969–

JOEL A. TARR, Richard S. Caliguiri University Professor of History and Policy – Ph.D., Northwestern University; Carnegie Mellon, 1967–

Department of History Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes *(*https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/*) each semester for course offerings and for any necessary pre-requisites or co-requisites.*

79-101 Making History: How to Think About the Past (and Present)

Intermittent: 9 units
Who makes history? This apparently straightforward question is at the heart of studying the past, but it is also an important question to answer if we are to understand the world around us. Being able to answer the question "Who and what caused changes to political, cultural, economic, and environmental systems?" is fundamental to thinking about the past, but it is also essential to analyzing current issues as widespread and yet connected as economic inequality, social justice, and climate change. "Making History" is an introductory course ideal for students who are curious about the past and want to learn how to become better critical thinkers by applying its lessons to the present. The course explores how history is made on two levels: both the historical events themselves and how those events are documented, interpreted, and remembered. In other words, making history is not just about understanding what happened, but what it meant to different groups of people then and what it means to different groups of people now. We'll visit some famous (and not-so-famous) historical events and actors to learn about how individual choices combine with deeper structural factors, like gender, race, environment, and class to "make history." Along the way, we'll also encounter different ways to interpret the past, drawing upon the latest scholarship to understand how historians think about the past and #8212; and present. Students will be encouraged to synthesize what they learn in class to develop their own critical perspectives on their lives and the world around them. This course fulfills Dietrich College's "Humanities" general education requirement.

79-104 Global Histories

Fall and Spring: 9 units
Human activity transcends political, geographical, and cultural boundaries. From wars to social movements, technological innovations to environmental changes, our world has long been an interconnected one. Acquiring the ability to understand such transnational and even worldwide processes is an indispensable part of any college education. This course provides students with an opportunity to develop the skills and perspectives needed to understand the contemporary world through investigating its global history. All sections are comparable in their composition of lectures and recitations, required amounts of reading, and emphasis on written assignments as the central medium of assessment. The sections all aim to help students: (1) master knowledge through interaction with the instructors, reading material, and other students, (2) think critically about the context and purpose of any given information, (3) craft effective verbal and written arguments by combining evidence, logic, and creativity, and (4) appreciate the relevance of the past in the present and future.

79-112 Introduction to Asian American History

Intermittent: 9 units
This introductory course surveys the histories of Asian Americans from the early nineteenth century to the present. We will cover major themes such as migration and diaspora, race, labor, citizenship, and identity and community formation as we examine the continuities and discontinuities between the Asian American past and present. Special attention will also be paid to both local and global aspects of Asian American history (in the United States, in other countries of the Americas, and in Asia) as we work to build a more robust understanding of what it means to be "Asian American" and how such social categorizations fit into broader patterns of construction and re-articulation according to varying historical contexts. This course fulfills Dietrich College's "Humanities" general education requirement.

79-120 Introduction to African American History: Black Americans and the World

All Semesters: 9 units
Exploring the history of Black Americans requires a global perspective. Beginning with early modern African civilizations, the transatlantic slave trade, the global age of revolutions, the implementation of transnational regimes of racial segregation, to the growth of transnational movements for civil and human rights, this course surveys the history of Black Americans from a global perspective. It analyzes how Black Americans conceived of their social position in relation to others in the world. It also explores how perspectives from across the world made sense of Black Americans. This course will follow African-descended people as they theorized, moved, migrated, and traveled throughout the world. From this perspective, students will learn about the diasporic dimensions of Black American identity. Students will also trace the historical circulation of African-descended people, knowledge, culture, and technologies. Students will analyze the important themes of freedom, movement, and migration from a global perspective. Through this course, students will learn that Black American historical actors have and continue to understand their position not only within the domestic social and political spheres of the United States but also in the global order of states and societies. From their marginalized social position, Black Americans, therefore, have articulated alternative frameworks for understanding the United States, the West, and the world. This is an introductory survey course. This course fulfills Dietrich College's "Intercultural and Global Inquiry" general education requirement.

79-145 Genocide and Weapons of Mass Destruction

Fall and Spring: 9 units
"Genocide" and "weapons of mass destruction" have been getting a lot of exposure lately - in the news, in popular culture, and even on the Fence on campus. What do they mean? Why was it necessary to invent them? How do we know when we are being confronted with them? What should we do then? This course surveys the history of genocide, weapons of mass destruction, and related phenomena. Can you imagine being responsible for the deaths of hundreds, thousands, or even millions of people? No? Almost everyone who ended up committing unspeakable atrocities had not been able to either. In fact, many of them still would not face their responsibility even after their complicity has been proven beyond doubt. Some convinced themselves, often sincerely, that there was no choice or that someone else was actually responsible. Others found reasons to justify, in their minds at least, taking many lives. Still others managed to forget that they had blood on their hands. How could anyone do such terrible things? More important, can you be sure that you would not act like them under similar circumstances? This course will teach you to look out for factors that turn ordinary people into mass killers. You will explore why conflicts break out and potential solutions. You will also learn to see from multiple perspectives and to be humble before history. Our exploration will begin with the European encounter with the Western Hemisphere and continue to 19th-century imperialism, the Holocaust, the atomic bombings of Japan, the Cold War, and decolonization and independence. By the end, you will have grasped the historical facts and contemporary concepts of genocide and weapons of mass destruction. You will also come to appreciate the significance of unintended consequences and the ambiguity of human progress, a realization that will guide you in life. This course meets the Dietrich Gen Ed "Intercultural and Global Inquiry" requirement.

79-149 Ancient Rome: What Have the Romans Ever Done for Us?

Intermittent: 9 units
The Romans are nowhere and everywhere in our world. Hundreds of years after anyone could plausibly claim to be Roman, the influence of ancient Rome is still palpable in our political institutions, religions, languages, geography, art, law, architecture, technology, and so much more. And not just in Europe. The legacy of ancient Rome can be felt in the Americas and elsewhere in the world. It affects how we think about the tension between West and East, the definitions of civilization and barbarism, and citizenship and belongingness in a multiethnic society. How did ancient Rome rise and how did it fall? Did it fall at all? How can a people who flourished about two thousand years ago still play a role now? If ancient Rome's impact is still so broad and deep, what lessons can or should we draw from the Romans? This course will explore these questions by tracing the history of Rome from its mythical and actual foundations to its expansion, gradual decline, and repeated renewals. At the end of the course, students will be able to answer that memorable question in Monty Python's Life of Brian: What have the Romans ever done for us?

79-160 Introduction to the History of Science

All Semesters: 9 units
This course provides an introduction to the history of modern science in Europe and North America, from the Enlightenment to the mid-twentieth century. Our goal is to understand scientific theories and practices on their own terms and as products of their own contexts, rather than as a progression of developments moving inevitably toward the present. The course seeks to explore both how and why science has become the dominant way of knowing about the natural world, as well as how scientific activity intersects with the history of religion, war, commerce, and the state. The course also introduces students to the history of science as a standalone discipline, and in particular to the similarities and differences with other objects of historical inquiry (art, politics, etc.). This course fulfills Dietrich College's "Humanities" general education requirement.

79-170 Introduction to Science, Technology, and Society

Intermittent: 9 units
Science and technology are among the most powerful transformative forces in today's global society. They shape the way we think about ourselves, the world around us, and even what is possible in the future. This course provides an introduction to Science and Technology Studies, a vibrant interdisciplinary field that examines the ways that science and technology interact with contemporary politics, culture, and society. Using theories and methods from history, philosophy, anthropology, sociology, and public policy, we will examine: the nature of scientific and technical knowledge; how facts are produced both inside and outside the laboratory; how politics and societal values impact scientific inquiry and the development of new technologies; whether objectivity is possible; what expertise is and the role that experts play in the world today; how our understanding of science and technology has been enhanced by focusing on issues of race, sex, gender, sexuality, and class; as well as the imperative to make science and technology more equitable and just than they have been in the past. Specific topics covered will include the development of military technologies like radar and the atomic bomb, genetic engineering and cloning, artificial intelligence, social media, transportation infrastructure, racial classification, gender identity, and the Covid-19 pandemic, among others. This course is meant to serve as a foundation for the new Science, Technology, and Society major, but it is open to anyone concerned with the social and political dimensions of science and technology.

79-175 Moneyball Nation: Data in American Life

Intermittent: 9 units
From conducting clinical trials and evaluating prisoners' parole cases to drafting professional ballplayers, we increasingly make decisions using mathematical concepts and models. This course surveys the development of and #8212;and resistance to and #8212;such tools by grounding them in the recent cultural history of the United States. Focusing on baseball, medicine, and the law, we'll explore how and why Americans have come to believe mathematical and computational methods can solve complicated problems, even in seemingly unrelated moral, political, and social domains. The course encourages students to think critically about the wider implications of these transformations by situating their development historically. This course fulfills Dietrich College's "Logic/Mathematical Reasoning" general education requirement.

79-189 Democracy and History: Thinking Beyond the Self

Fall and Spring: 9 units
Voters face a momentous decision. A fascist demagogue is running for president. He has already tried to seize power through an insurrection. It failed, but he mostly escaped punishment thanks to sympathetic or feckless judges. He mixes braggadocio, lies, flattery, empty promises, and a victimhood narrative to depict himself as the country's savior and to attract millions to his personality cult. If elected, he vows to make future elections unnecessary, rule as a dictator, stop outsiders from poisoning the nation's blood, and rid the country of leftist vermin. He fearmongers about who deserves membership in the nation, the country's international obligations, crime, the economy, and a faraway war to divide the people. The last person standing between him and his goal is an octogenarian president running for reelection. How will the voters decide? In addition to experiencing what happens to this country, we will examine democracy in ancient Rome, France, Japan, China, and Iran. Living in a democracy means thinking beyond the self and from others' perspectives. It means looking for facts but being open to different interpretations. And it means taking responsibility to think critically. These traits are also essential for understanding history. This course will train you in the historian's skillset and mindset so you can act democratically. You will learn to tell facts from opinions and to see from various angles. The course will push you to think for yourself and to argue effectively for your own position. These skills of thinking historically are useful not just for school or work, but they are indispensable to a democratic society. Democracy is chosen as the course theme because it is a feature that sets humans apart from other organisms. Knowing the history of democracy is knowing what it means to be human, which is the soul of the humanities. This course meets the Dietrich Gen Ed "Humanities" requirement.

79-198 Research Training: History

Fall and Spring: 9 units
This course is part of a set of 100-level courses offered by Dietrich College departments as independent studies for second-semester freshmen and first- or second-semester sophomores in the College. In general, these courses are designed to give students some real research experience through work on a faculty project in ways that might stimulate and nurture subsequent interest in research participation. Faculty and students devise a personal and regularized meeting and task schedule. Each Research Training course is worth 9 units, which generally means a minimum for students of about 9 work-hours per week. Prerequisites/restrictions: For Dietrich College students only; minimum cumulative QPA of 3.0 (at the time of registration) required for approved entry; additional prerequisites (e.g., language proficiency) may arise out of the particular demands of the research project in question. By permission of the relevant professor and the Director of Undergraduate Studies. Students sign up for these courses through both the History Department and the Dean's Office. Section A: The Right to Vote: An Unexpected History, L. Tetrault Section B: The History of Biostatistics, C. Phillips Section C: From "Banana Republic" to "Cup of Excellence:" Explaining the rise of Honduras in the Global Coffee Business, J. Soluri Section D: Mapping Segregated Medicine, E. Sanford

Course Website: https://www.cmu.edu/dietrich/students/undergraduate/programs/research-training-program.html

79-200 Introduction to Historical Research & Writing

Fall and Spring: 9 units
Introduction to Historical Research acquaints students with how historians practice their craft in interpreting events from the past. As a class, we will work together through a variety of tools in the historian's toolbox, using episodes from American history as case studies. By the second half of the semester, students will have identified their own topics, in any time period or field of history, and will write research papers incorporating the analytical techniques covered earlier. The goal is for students to learn the skills required to identify a research topic, find and work with many kinds of sources, create a strong thesis statement, design a persuasive paper, and produce a properly formatted and well written research paper.

79-201 Introduction to Anthropology

Intermittent: 9 units
Anthropologist Ruth Benedict claimed that anthropology's mission is truly to "make the world safe for human difference." Cultural anthropologists "make the strange familiar and the familiar strange," attempting to understand the internal logic of cultures which might, at first glance, seem bizarre to us. At the same time, anthropologists probe those aspects of our own society which might appear equally bizarre to outsiders. The goal of this course is to raise questions basic to the study of culture and social relationships in a multitude of contexts. We will also discuss the particular research methods informing anthropology, as well as anthropologists' relationship to the people they study, and the responsibilities informing those relationships. The readings focus on topics that have long captured anthropologists' attention and that continue to be intensely debated: social inequality, race, colonialism, body, kinship, religion, gender, social lives of things, globalization and migration. Through written work, including ethnographic readings and a novel, films, and in-class discussions, we will examine how anthropology makes us more aware of our own culturally ingrained assumptions, while broadening our understanding of human experiences. This course is structured as a combination of lectures and seminar discussions. In the first part of the course, I will give a lecture every week, followed by a class session that will focus solely on discussing the readings and key concepts. In the second part of the course, I will introduce the readings by placing them within larger debates, but the course will become more discussion oriented. This course fulfills Dietrich College's "Social Sciences" general education requirement. This class also satisfies one of the core requirements for the Anthropology minor.

79-202 Flesh and Spirit: Early Modern Europe, 1400-1750

Intermittent: 9 units
This course examines European history from the Black Death to the French Revolution, a period known to history as the "early modern" period. That is, it marks a period in European history that was not quite medieval, and yet not quite modern. Many features of modern society, such as the nation-state, free-trade economies, religious pluralism, scientific rationalism, and secular culture trace their origins to the early modern era, yet the period was also marked by important continuities with the Middle Ages. During this course, we will explore how Europeans re-imagined their world in its transition from the medieval to the modern. Topics to be considered will include the "renaissance" of the arts, the problems of religious reform, exploration and colonialism, the rise of science, and the expansion of the state. Through these developments, we will focus on Europeans' changing notions of the human body, the body politic, and the natural world, as well as their re-interpretations of the proper relation between the human and the divine, the individual and the community, and the present and the past.

79-203 The Other Europe: The Habsburgs, Communism, & Central/ Eastern Europe, 1740-1990

Intermittent: 9 units
During the last two centuries, Central and Eastern Europe has been a political laboratory and #8212;a region in which various political actors had attempted to launch and develop radical political and social experiments, from imperial reforms meant to strengthen and modernize the Habsburg empire, to the ethnic cleansing promoted by Nazi Germany and their acolytes in the region, to the attempts at establishing of a new social order under the post-WWII communist regimes. An understanding of the profound and rapid political and social changes that have occurred in this region will enable you to see global politics in a new light, and better understand the modern era. This course is a survey of the history of modern Central and Eastern Europe, from late 18th to late 20th century. It begins with a focus on modern Habsburg empire, the rise of nationalism in mid 19th century, and the demise of the Austro-Hungarian empire following the First World War. It continues with an examination of the rise of illiberal politics during the interwar era, the Second World War, and the establishment of the communist regimes and the Soviet sphere of influence during the Cold War. Course materials include secondary historical analyses, primary sources, memoirs, and documentaries. The course will rely heavily on the format of interactive lectures, a combination of lecture and discussion, which will productively challenge the students to engage with the material in a critical manner, and will help them contextualize and enrich the knowledge they gain from the course readings. This course fulfills Dietrich College's "Humanities" general education requirement.

79-204 American Environmental History

Intermittent: 9 units
This course examines how people in North America have interacted with their surroundings from the end of the last ice age to the present. This course fulfills Dietrich College's "Contextual Thinking" general education requirement.

79-205 20th Century Europe

Intermittent: 9 units
This course surveys the history of Europe from 1900 through the present. We shall examine some of the major political trends and social/economic changes of the last century, including: the collapse of Europe's multiethnic empires and the rise of the modern nation-state; the extraordinary violence and impact of WWI and the rise of ethno-nationalism and fascism during the inter-war period; The Spanish Civil War, WWII and the War in the Balkans in the 1990s. We will also examine Communism and its collapse; colonial resistance and the process of decolonization; and the creation of the European Union. In addressing contemporary Europe, we shall discuss: the re-emergence of ethno-nationalism and rising anti-immigrant sentiment and antisemitism over the last decades; cultural and political debates surrounding Islam and Muslims; contemporary debates over the memory of the Holocaust, and Russia's brutal war against Ukraine. Primary sources, academic articles, memoir and film will be used in the classroom to explore these topics. Classes will combine lecture, discussion and group work.

79-206 Crime and Punishment in Early Modern Europe

Intermittent: 9 units
This course will examine European legal and social institutions and their role in defining and punishing crime in the early modern era (c. 1400-1800). European society was fundamentally transformed in this period of transition between the medieval and the modern eras, and the laws and legal systems that exist in the Western world today reflect those influences at the deepest levels. This course will focus on how shifting definitions of "crime" and "punishment" reflected prevailing societal attitudes and anxieties toward perceived acts of deviance and persons on the margins of society. Assigned readings will examine the evolution of early modern European criminal court systems and the investigation and punishment of crime, focusing in particular on the historical debates concerning the use of torture and capital punishment and the evolution of modern policing and prisons. It will also address the criminalization of social deviance (witches, religious minorities, and other outcasts) and the legal enforcement of sexual norms and gender roles. The course concludes with an examination of current debates concerning criminal justice reform, policing, torture, and criminal punishment.

79-207 Asian American History through the Novel

Intermittent: 9 units
This course examines the interwoven histories of migration, language, and identity formation and re-formation in Asian American experience. How have migrant and diasporic identities been represented in fictional (or quasi-fictional) terms? How have factors such as race, religion, class, gender, and sexuality shaped everyday Asian American life? And how can literary sources enrich our understanding of such historical experiences? Course readings consist primarily of novels, representing a variety of Asian ethnicities and experiences, by authors including Gaiutra Bahadur, Carlos Bulosan, Maxine Hong Kingston, Joy Kogawa, Chang-Rae Lee, and John Okada. These works are supplemented by selected historical documents and short lectures to shed additional light onto the sociohistorical contexts and issues under study.

79-208 Witchcraft and Witch-Hunting

Intermittent: 9 units
Between the late 15th and the early 18th centuries, many Europeans became convinced that their society was threatened by a conspiracy of diabolic witches. Although Western beliefs in witchcraft and "devil worship" dated back to antiquity, the 16th and 17th centuries witnessed the most intense campaign of witch-hunting in all of Europe's history. Before it was over, the "Great European Witch-Hunt" of the early modern era cost the lives of thousands across Europe and in its colonies. And although the witch-hunts in early modern Europe and its colonies gradually came to an end, beliefs in witchcraft persist into the modern era and, in many parts of the world today, continue to generate campaigns of popular violence against alleged perpetrators. This course examines witchcraft beliefs and witch-hunting in historical perspective in both their European and colonial contexts. In addition to the early modern witch-hunts, it will address modern witchcraft beliefs and consider witch-hunting as a global problem today. It will focus on the origin and rationale of witch beliefs, the factors driving the timing and intensity of witch-hunts, and the patterns of accusations. Throughout, we will examine the many historical and regional variations in witch beliefs and prosecutions and explore how they reflect major social and cultural issues such as the relationship between "popular" and "elite" culture; religious change; state formation; gender and patriarchy; and the rationalization of law, medicine, and science. This course satisfies one of the elective requirements for the Religious Studies minor.

79-210 Identity, Ethnicity, and Place in Modern China

Intermittent: 9 units
Within popular imagination, China is often considered to be the world's oldest nation. As a result, concepts such as "China" and "Chinese" have become so embedded in our consciousness that we often fail to consider how, like all identities, ideas of Chinese-ness have been constructed hand-in-hand with the invention of the modern Chinese nation-state. This course examines nation-making in China from the outside in. We privilege avenues of inquiry that challenge state-sponsored narratives, complicate the hegemonic notion of "Han" as a majority identity, and consider ways in which processes of state consolidation and majoritization have subjected various ethnic, subethnic, diasporic, linguistic, gender, and religious communities to discrimination, marginalization, exclusion, and in some cases state and majoritarian violence. Rather than uncritically accepting the notion that China is a uniquely "historical nation," we instead consider the possibility that the Chinese state and nation are products of the same transglobal currentssuch as imperialism, settler colonialism, assimilation, minoritization, and exclusion that has made our modern world. Whenever possible, we employ historical texts, short stories, novels, memoirs, and film produced by members of disadvantaged, marginalized, and/or targeted communities in order to demonstrate how and why historical experiences and memories for example among "ethnic minorities" differ from the Han majority and from state orthodoxy, and why these differing perspectives matter. This course fulfills Dietrich College's "Perspectives on Justice and Injustice" general education requirement.

79-211 Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange

Intermittent: 9 units
When you hear the term "Southeast Asia," what comes to mind? The US War in Vietnam? The ruins of the Angkor civilization? Rich culinary traditions? Or perhaps your own heritage? However you imagine it, Southeast Asia is an incredibly diverse and dynamic region that has long been integral to world affairs and whose importance continues to grow. This course offers a wide-ranging survey of Southeast Asia's peoples, their histories, and some of the issues they face today. Together we will explore the region as a "global crossroads," where the world's religions, economies, cultures, and politics come together in generative, sometimes traumatic, and often surprising ways. This course fulfills Dietrich College's "Contextual Thinking" general education requirement.

79-212 Jim Crow America

Intermittent: 9 units
Michelle Alexander's The New Jim Crow (The New Pres 2010) has drawn attention to the ways that American institutions and social systems continue to produce racial inequalities. The recent failure of federal voting rights bills in the United States Congress and the proliferation of state-led efforts to constrain voting rights have led activists to claim "Jim Crow 2.0." Using these present-day assessments as a point of departure, this course introduces students to the Jim Crow period of American history spanning the late nineteenth century to the mid-twentieth century. From the 1890s to the 1950s, Black freedoms were limited by the policies and practices of racial segregation in the Jim Crow system of American apartheid. This course critically examines Black life in Jim Crow America, from the halls of federal power, to the every-day practices of racial subjugation and resistance. It examines cross-cutting themes: how racial segregation structured the legal, social, economic, and political sectors of American life; the role of national, state, and local policy mandating racial segregation; African American modes of resistance;vigilante and state racial violence. This course will also endeavor to make connections between the consequences of anti-Black racism and the social life of other American minoritized populations. Throughout the course, as an exercise in historical Interpretation and periodization, students will consider the question: Is this current moment "Jim Crow 2.0.?" This course fulfills Dietrich College's "Contextual Thinking" general education requirement.

79-215 Environmental Justice from Conservation to Climate Change

Intermittent: 9 units
What is environmental justice? Who are environmental justice activists, what do they believe, and how do they act? This course will explore these questions by reading, discussing, and comparing the biographies of famous activists (e.g. Rachel Carson, Chico Mendes, Ken Saro-Wiwa, Wen Bo, Berta C and #225;ceres, and Greta Thunberg) and not-so-famous, "everyday" people in order to understand how and why they have struggled against disproportionate exposure to pollution, government or corporate usurpation of life sustaining resources, or the loss of a home due to climate change. Course readings and discussions will use historical examples to understand connections between "social" problems such as racism and "environmental" problems such as climate change. We will evaluate how social identities, political ideologies, and ecological contexts have influenced the ideas and actions of environmental justice activists. Class discussions, short, written responses to readings, and a final project will encourage students to engage in critical analysis of environmental justice and self-reflect on their individual and collective responsibilities. This course fulfills Dietrich College's "Perspectives on Justice and Injustice" general education requirement.

79-216 Genghis Khan and the Mongol Empire

Intermittent: 3 units
This course examines the rise, rule, and impact of the Mongol Empire on global history. In the 13th century, Eurasia was shaken by a force contemporary chroniclers likened to an apocalypse. Within a few decades, horsemen under the command of Chinggis (Genghis) Khan swept out of the northeastern steppe to establish the largest land empire the world would ever know. Few events in world history have inspired such fear and awe. However, the Mongol period also ushered in the so-called pax Mongolica, the first period of sustained contact and exchange across Eurasia as people, technologies, arts, biodiversity, and ideas spread throughout the Mongol domains and beyond. Questions to be examined include: Who was Genghis Khan and how did he lead a little known nomadic people to conquer much of the known world? What cultural and technological innovations aided the Mongols rise and conquest? How did Genghis's successors rule their vast, diverse domains? What role did religion play in Mongol Eurasia? Why did a unified Mongol empire fall apart in such a relatively short period of time? And how did the Mongols and their empire help shape the world we live in today?

79-218 Tiananmen Square and Popular Protest in Modern China

Intermittent: 6 units
On June 4, 1989, the world watched as tanks rolled into Beijing's Tiananmen Square ending what had been six weeks of student-led protest calling for reform of the Chinese Communist Party and its policies. This was not the first time students had gathered at Tiananmen to demand political change. Exactly seventy earlier, student-led protests launched the May 4th Movement, a social and intellectual revolution that fundamentally changed China and helped birth both the Nationalist Party of Chiang Kaishek and Communist Party of Mao Zedong. This class examines the causes and consequences of popular protest in modern China. While the focus is on the protests of 1919 and 1989, we will also look at other popular protests, including the Cultural Revolution (1966-1969), Democracy Wall Movement (1979), post-Tiananmen protests among workers, farmers, and ethnic minorities (especially Tibetans and Uyghurs), and the current protests in Hong Kong.

79-219 Hong Kong, Taiwan and the Idea of "China"

Intermittent: 6 units
Starting with the core question, "What is China?", this mini-course explores the recent histories of Hong Kong and Taiwan to investigate questions of identity, nationalism, ethnicity, exceptionalism, colonialism, and historical memory in "Greater China." While both Hong Kong and Taiwan are generally considered to be "Chinese," neither ever has been fully included in the modern Chinese nation-state. The agreement that transferred Hong Kong from British rule to PRC control in 1997 enshrined the idea of "One Country, Two Systems," a guarantee that Hong Kong's political, legal, and economic systems would not be altered for fifty years. One Country, Two Systems has also been offered as a blueprint for "reunifying" Taiwan with Mainland China. However, in recent years publics in both Hong Kong and Taiwan not only increasingly resist political reunification with the PRC, but more and more identify themselves as citizens of either Hong Kong or Taiwan rather than members of a singular Chinese nation. This has led to mass protests in Hong Kong and calls for true independence in Taiwan. Other topics that may be discussed include subethnic identity and ethnic minorities in modern China and the Chinese diaspora.

79-220 Screening Mexico: Mexican Cinema, 1898 to Present

Intermittent: 6 units
This mini-course is a survey of Mexican cinema from its origins in silent film to the present. Some areas of focus will include documentary footage and films of the Mexican Revolution (1910-1920), films of the Mexican "Golden Age" (1930-1960), and "New Mexican Cinema" from the 1990s forward. We will explore cinema as a window on Mexico's changing social, cultural and political dynamics, and as a way to probe such topics as: changing conceptions of Mexican identity; political critique and revolutionary movements; and urbanization, migration and the "drug war" in contemporary Mexico.

79-222 China and the Second World War

Intermittent: 6 units
This course is an introduction to China's experiences during the Second World War. Although China's involvement in the war is often considered to be of secondary importance, it was in China that the war began (1937) and China was occupied longer than any other allied country. Throughout, sustained Chinese resistance ensured that 1.5 million Japanese troops could not be transferred to other war theaters. However, it came at great cost. Only the Soviet Union suffered more casualties during World War II, perhaps as many as 20 million lives lost. In this class we explore the roots of the Second World War in both China and Japan, trace the political and military history of the war, contemplate the terrible levels of violence that were inflicated upon the Chinese population, including violence committed by Chinese forces, seek to understand the social impact of the war, and think about the consequences of the war for China and the world, including the rise of Mao Zedong's Chinese Communist Party. We also explore the manner in which the war is commemorated in China and Japan and the role communal memory plays in galvanizing nationalism among both the Chinese and Japanese publics.

79-223 Mexico: From the Aztec Empire to the Drug War

Intermittent: 9 units
This course provides a survey of Mexican history and culture over avariety of periods, from the rise of the Aztec empire, to Spanish conquest and colonization, to national independence, to the Mexican Revolution and contemporary Mexico. A wide range of topics will be addressed, such as: race, ethnicity, and indigeneity; state formation and politics; national identity and the politics of memory; the border, migration, and the deportation regime; and the drug war. Students will discuss historical and anthropological scholarship on Mexico, but will also consider cultural documents of various kinds, like Mexican music, art, cinema and food. This course is interdisciplinary, bringing together the perspectives of both history and anthropology. A majority of readings for the course are primary documents-historical, but also cultural texts-and hence a good amount of time is spent considering issues around primary source interpretation in historical and cultural terms.This course stresses the importance of taking account of difference (social, cultural, historical) as we consider large questions about history, politics, and in some cases, policy.

79-225 West African History in Film

Intermittent: 9 units
West Africa is a vibrant, diverse, and rich region, which has had the largest influence demographically, culturally, socially, and linguistically on the Americas. This course will examine West Africa's history from the pre-colonial to the independence period. It will cover such topics as states vs. stateless societies, urbanization, trans-Saharan trade, Islamization, European interaction, the trans-Atlantic slave trade, colonialism, cash crops, missionaries, nationalism, and independence. Students will understand how this dynamic region changed over time as a result of internal factors, such as state formation, as well as external factors, interaction with Muslim and European traders. Students will also be exposed to the variety of sources used by historians to reconstruct West Africa's rich history. The course will use historical films by some of West Africa's most famous filmmakers, such as Ousman Sembene, to illustrate the diversity of the region and its historical change over time. Course includes two class meetings and mandatory film screenings on Wednesdays from 6:40-9:30pm. This course fulfills Dietrich College's "Contextual Thinking" general education requirement. Note to CFA Students: If the film-showing portion of this class conflicts with a theatre/stage placement, please know that alternative screening times can be arranged on a case-by-case basis. If you have any questions or concerns, please contact the instructor directly.

79-226 African History: Earliest Times to 1780

Intermittent: 9 units
A beginning point for this course will be the question: how do historians reconstruct history when few written sources are available? Breaking disciplinary boundaries, the course will draw on linguistics, "climateology," archaeology, and anthropology to reconstruct dynamic social, cultural, political, and economic processes in Africa before the arrival of Europeans and before the availability of written source materials. When written sources are available, the course will interrogate them to illuminate the changes that occurred in African societies during the early period of contact with Europeans. Lastly, by focusing on long-term processes, such as economic specialization, urbanization, and Islamization, the course will begin to put the slave trade in an African-centered perspective.

79-227 Modern Africa: The Slave Trade to the End of Apartheid

Intermittent: 9 units
The course is designed to give students an understanding and appreciation of African history and culture from the "inside out." Though it deals with the period of European expansion in Africa, it is centered on African language/ethnic groups, villages, and individuals as historical actors who daily make collective and personal decisions to pass down, innovate, and borrow practices, technology, spiritual systems, etc. in the face of social, political, and economic realities. The course is also designed to get students thinking critically about how historians select and interpret sources to construct and reconstruct history at these different levels. This course fulfills Dietrich College's "Intercultural and Global Inquiry" general education requirement. It also satisfies one of the core requirements for the African and African American Studies minor.

79-229 The Origins of the Palestinian-Israeli Conflict, 1880-1948

Intermittent: 9 units
This course considers the historical origins of the contemporary Arab-Israeli conflict, beginning with the decline of the Ottoman Empire and the rise of Arab nationalism and Zionism in the late 19th century and emphasizing the period of the British Mandate over Palestine (1920-1948). Students will move beyond textbooks to explore primary source documents, maps, photographs, biographies and historical testimony. For five weeks in the middle of the semester, students will immerse themselves in an extended role-playing exercise, "The Struggle for Palestine, 1936," an elaborate simulation game linked to Barnard College's "Reacting to the Past" program. Students portraying British examiners, specific Arab and Zionist characters and journalists will recreate the activities of the 1936 Royal Commission that came to Palestine to investigate the causes of an Arab rebellion and Arab-Jewish strife. This historical reenactment experience constitutes an exciting pedagogical opportunity for delving deeper into the topic material than regular coursework allows. All the role-playing will take place during regular class time, but students should be aware that they will need to devote outside time for preparation and research. Outstanding attendance is also a requirement. Regular classroom activity resumes at the end of the five weeks. The goal of the course is for students to develop a nuanced understanding of the varying goals and priorities of all the actors in Mandate Palestine. Running throughout the course is the question, was peace ever possible?

79-230 The Arab-Israeli Conflict and Peace Process Through 1948 to Present

Intermittent: 9 units
The course begins with the origins of both Zionism as an intellectual, European movement and of Arab and then Palestinian Arab claims for sovereignty in the early 20th century. The course interrogates not only the histories of ideologies that led to revolution and violence in the modern history of Palestine and Palestinians and of Zionism and Israel, but also the very notions of 'conflict' and 'peace.' It examines ideas of state and nation as well as practices of Ottoman and then British imperialism and Zionist settler colonialism in the territory that became Palestine, then Eretz Israel, and now Israel and the occupied Palestinian territories. Throughout the semester, students will explore how these ideas and practices are linked to the development of violence, armed struggle and a myriad of nationalist and religious-nationalist ideologies as they came to be understood by Palestinian Arabs, Zionist settlers, Palestinian citizens of Israel, Islamists, and Israeli religious/national groups. Students are tasked with considering the historical social, political, cultural, and religious implications of these discourses and practices. We will make use of documentary and other primary sources and texts, including poems, excerpts from literature, memoirs, film footage, posters, and other forms of media. By the end of the semester, students will be able to analyze and discuss the historical significance of the multi-faceted ideologies and motivations held by actors involved in the armed struggle movement(s) in Palestine and Israel, and the shifting nature of nationalisms as dependent upon locations, time periods, and understandings of history and politics. This course fulfills Dietrich College's "Intercultural and Global Inquiry" general education requirement.

79-232 Arabian Peninsula Environmental History

Intermittent: 9 units
This course is ONLY offered at Carnegie Mellon in Qatar. This course will look at the history of the Arabian Peninsula from a fresh perspective, examining human/environmental interactions over a long stretch of time. In contrast to the way that Arabian history is typically taught in academia, this course will take the pre-Islamic period of Arabian history (al-jahiliyya) as seriously as the post-Islamic period, and will focus on continuities between the two periods as much as discontinuities. What is more, while conventional histories of the Arabian Peninsula focus on political and religious affairs, this course will try to understand Arabian history on a deeper level by focusing on the lifeways of the Arabian people, including pastoralism, oasis "bustan garden" agriculture, fishing and pearling, and shifting patterns of long-distance trade. What is more this course will draw heavily from material from other disciplines, especially medical sciences, to better understand patterns of change over time. Finally, this course will examine to what degree these older patterns of human/landscape interactions are still valid for the Arabian Peninsula today, which has undergone a transformation almost unparalleled in world history due to the discovery natural gas and oil.

79-234 Technology and Society

Intermittent: 9 units
How has technology shaped human society? And how have human beings shaped technology in return? This course investigates these questions across history-from stone tools, agriculture, and ancient cities to windmills, cathedrals, and the printing press; from railroads, electricity, and airplanes to atom bombs, the internet, and the dishwasher. In analyzing these tools, we will explore the dynamic relationships between technological systems and the social, political, religious, artistic, and economic worlds in which they emerged. We will also pay particular attention to technology's effects, asking both who benefited from and who was harmed by technological change. By the end of the course, students will be able to reflect critically on how humanity chooses which technologies to exploit and how human societies have been transformed by these choices. This course fulfills Dietrich College's "Humanities" general education requirement.

79-237 Comparative Slavery

Intermittent: 9 units
This course will examines the pervasive, world-spanning institution of human slavery. Although the time frame this course deals with is broad - from the rise of complex societies in the ancient world to slavery-like labor systems in the modern era - this class will focus more thoroughly on a few case studies, especially slavery in the Middle East and sub-Saharan Africa, the US, and the Caribbean. These disparate examples will be related to a number of core themes, including race, class, family, gender, religion, national identity and underdevelopment.

79-238 Modern African American Film: History and Resistance

Intermittent: 6 units
This course explores the historical and contemporary impact of resistance on and in African American film during the twentieth and twenty-first centuries. We will consider how filmmakers use narrative and aesthetics to represent, address, and combat anti-blackness, attend to filmmaking itself as a potential act of resistance, and cultivate our own "oppositional gazes" as spectators and critics. The five films we will watch are: · Within Our Gates (dir. Oscar Micheaux, 1920) · Do the Right Thing (dir. Spike Lee, 1989) · Daughters of the Dust (dir. Julie Dash, 1993) · The Watermelon Woman (dir. Cheryl Dunye, 1996) · Moonlight (dir. Barry Jenkins, 2016) Access to the films and any supplemental readings will be provided; unless otherwise stated on the syllabus, students will be expected to carefully study this material prior to each class. Though there will be brief lectures contextualizing each film's production and reception history, the majority of our meeting times will be spent on student-led discussion. Assignments include weekly written responses, a final project, and classroom participation. Because of the nature of the course topic and the content of the films, participation requires extended engagement with fictional depictions of issues including, but not limited to, lynching, sexual violence, police brutality, homophobia, and intraracial antagonism. Students are free to contact me at any point in the term if this becomes an issue.

79-239 History of the American Working Class

Intermittent: 9 units
This course will examine the transformation of the American working class from its preindustrial origins to the recent period of deindustrialization, gentrification, and the onset of the Corona Virus. It will emphasize the changing relationship between owners, managers, and workers, the role of the state, and the impact of gender, race, and ethnicity. More specifically, this course will not only analyze the factors that facilitated and/or impeded working class solidarity, but assess the impact of the working class upon the development of American history, including the recent recognition of previously maligned human service workers as "essential workers" during the upheaval of COVID-19.

79-240 Development of American Culture

Intermittent: 9 units
This is an introductory survey of American history from colonial times to the present. The course focuses on cultural history instead of the more traditional emphasis on presidents, wars, and memorizing facts or timelines. The major theme of the course is the changing meaning of freedom over three centuries. Required readings include several short books and historical documents, which will be paired with class lectures to provide students with context needed to think about and understand America's cultural history. Assignments will include three short essays and a final research project on a form of popular culture of the student's choosing, developed over the course of the semester through three short blog posts.

79-242 African American History: Reconstruction to the Present

Intermittent: 9 units
This course explores changes in the African American experience from the end of the Civil War to the emerging era of Joe Biden and Kamala Harris. Through an examination of a wide range of scholarly and popular debates in African American life and history, this course will emphasize transformations in both inter- and intra-race relations; economic mobility as well as economic inequality; and forms of political engagement and grassroots movements for social change. We will explore these developments under the impact of the segregationist regime; the Great Migration; the rise of the urban-industrial working class; increasing residential segregation; growth and expansion of the middle class; and the fluorescence of the Modern Black Liberation Movement. Students will compare the dynamics of the contemporary Black Lives Matter Movement with earlier 20th century grassroots social and political movements in African American and U.S. history. Finally, based upon a mix of primary and secondary sources and lectures, students will write a series of short analytical essays; and establish their own unique interpretation of key issues in Black History.

79-243 The Civil War in American Memory

Intermittent: 6 units
The American Civil War remains among the most venerated and fought over stories in American history. This class explores those debates. Why was the war fought? Was the Confederate cause noble? Did the North oppose slavery? What did freedom mean? How does a nation erect racial justice? What does it mean to fly the Confederate flag or confront a Confederate monument today? Tackling these ongoing debates (and more) from the war (1861-65) itself until today, this course grapples with why the war continues to be one of the most defining moments in U.S. history - 150 years later - and what that means for our past and present as a bi-racial democracy. This course is open to all students.

79-244 Women in American History

Intermittent: 9 units
This course is a survey. It examines U.S. history through the eyes of women and gender. It begins in the colonial era (1600s) and runs chronologically to the present. It covers topics such as witchcraft, the story of Pocahontas, women's work, motherhood, slavery, and much more. We will look at the lives of individual women, as well as trends among women, paying attention to questions of race and class. At the same time, we will explore changing concepts of gender, meaning ideas about what women are or should be. Finally, the course asks: how different does American history look when we factor in women and gender?

79-245 Capitalism and Individualism in American Culture

Intermittent: 9 units
This small discussion course traces ideas about individualism and capitalism in the U.S., from colonial times to the present. We will focus on three main themes: 1) the relationship between capitalism, work, and identity; 2) changing definitions of success and failure; and 3) the historical origins of students' attitudes toward 1 and amp; 2. In short, we will study the economics and emotions of the American dream: how class, race, gender, occupation, and ambition shape our identities. Readings include "The Autobiography of Benjamin Franklin," poems by the enslaved writer Phillis Wheatley, studies by Alexis de Tocqueville and Max Weber, writings of Frederick Douglass, Henry David Thoreau, Charlotte Perkins Gilman, Andrew Carnegie's classic essay "Gospel of Wealth," an essay by Malcolm Gladwell, Arthur Miller's "Death of a Salesman," and Sarah Lewis's "The Rise," a book about failure and ambition. Grading is based upon a readings journal, participation in discussion, three short essays and a longer final paper.

79-246 Industrial America

Intermittent: 9 units
This course examines the transformation of America into an urban industrial society during the 19th and 20th centuries. The transformation of work, culture, and politics will receive close attention, but the course will primarily focus around how workers defined their own labor and changes in the culture of work over time. This course will investigate how race, class, and gender informed workplace relations as well as how immigration and migration changed the nature of American work. Through lecture, discussion, and three short writing assignments we will uncover how workers defined America.

79-247 African Americans, Imprisonment, and the Carceral State

Intermittent: 9 units
The mass incarceration of people of African descent has emerged as one of the most daunting issues in contemporary U.S. society and politics. But too often discussions of this important phenomenon proceeds without sufficient historical perspective. Thus, this course explores the history of African Americans in the nation's prison system from the emancipation of some four million enslaved people following the Civil War through recent times. Specifically, we examine the process by which the nation's prison population shifted from predominantly white inmates during the mid-19th century through the inter-World War years to majority African Americans and other people of color by the closing years of the 20th century. In addition to examining the role of law, policing, and racist social policies and practices, students explore the lived experiences of imprisoned people, with an emphasis on the impact of class and gender as well as racial considerations. Along with selected primary documents, assigned readings include a series of scholarly case studies on the carceral experiences of black men and women in the North and South during the industrial and emerging postindustrial eras in African American and U.S. history. Finally, students will write a series of short essays on particular facets of African American life in the American prison system.

79-248 U.S. Constitution & the Presidency

Intermittent: 9 units
This course explores the changing role and powers of the American Presidency under the Constitution, from the founding era through the twentieth century. After absorbing drafting and ratification debates, we will focus on how particular presidents (Washington, Lincoln, FDR, Nixon) established or expanded the executive power and how particular conflicts (the Civil War, the "Court Packing" plan, Watergate) restructured or restricted the presidency. Readings will include the U.S. Constitution (of course), selections from The Federalist Papers, and short books including Daniel Farber's "Lincoln's Constitution" and Cass Sunstein's "Impeachment: A Citizen's Guide." Grades will be based on three short papers, a final paper, and daily preparedness and participation in group discussion. This course fulfills Dietrich College's "Contextual Thinking" general education requirement.

79-249 20th Century U.S. History

Intermittent: 9 units
This survey course covers the history of the United States from Reconstruction to today through by focusing on migration, race and ethnicity, and citizenship or national belonging. Chronologically organized, the course centers key themes and issues of social, economic, and political importance in both past and present. We will also explore how historical events and their documentation change in meaning and importance over time, and what forces and influences shape these realities. Overall, we will consider the causes, processes, and experiences shaping the arrival of different immigrant groups to the United States at different historical moments. More specifically, we will follow migrations of different groups of people, like African Americans, north and westward; European immigrants into coastal port cities and beyond; Mexican bracero workers into agricultural industries; Chinese laborers work experiences in diverse economic settings; and more. We will apply critical lenses toward movements like Americanization and try to understand different groups of citizens' divergent experiences with national belonging. We will also interrogate the logics, values, and symbols that shaped ideas regarding ethnic, racial, class, and gender difference, particularly as they were used to characterize difference regarding citizenship.

79-250 Voting Rights: An Introduction

Intermittent: 9 units
Did you know that American citizens have no right to vote? None. The United States is one of the only constitutional democracies in the world that does not enshrine this right in its founding charter. Not only did the nation's founders punt on creating one, social movements have also never succeeded in creating one. What, then, have voting rights activists won over the centuries? And how and why has an affirmative right to vote never been achieved? Starting with the U.S. Constitution and working forward to the present, this course will help you make sense of all the accusations swirling in the news about voter fraud, voter suppression, voter theft, voting rights, and all the other things no one ever taught you about the world's oldest democracy. This course is open to all students.

79-251 COVID-19: What History Can Teach Us

Intermittent: 3 units
For many, the COVID-19 Pandemic feels like a rupture in time - a disaster unprecedented in scale and impact. Yet one-hundred years ago, the Influenza Pandemic of 1918 killed between 17 million and 50 million people. That virus infected approximately a third of all human beings on the planet and #8212; some 500 million people. Since then, humanity has faced a series of influenza epidemics and other global catastrophes, from world wars to HIV-AIDS. Like COVID-19, those crises were shaped by pre-existing forms of inequality and discrimination based on race, gender, sexuality, religion, nationality, and other forms of identity. Pandemics affect everyone, but not equally. For many of the world's poorest and most oppressed people, the COVID-19 pandemic feels less like a rupture than an escalation of long-standing inequalities. In the United States, the racial disparities of the pandemic reflect the long history of systemic racism. What can we learn from the past about how to cope with our current crisis? How can we confront the inequities and injustices of the world in the midst of such a crisis? This course will offer a historical lens on many of the most urgent and difficult questions that we face as a result of COVID-19.

79-252 "Harriet": Harriet Tubman, Slavery, and the Underground Railroad

Intermittent: 6 units
Most Americans who know and love Harriet Tubman know she escaped enslavement, led herself and more than 60 people out of bondage via the Underground Railroad, gave instructions on getting to freedom to 50 or 60 more people, and became a suffragist. However, the many biographies, children's books, and even the biopic "Harriet" about Tubman are all virtually silent on a very important chapter of her life: during the US Civil War, Harriet Tubman worked as a nurse, cook, spy, and scout for the US Army Department of the South. This course will look at two parts of Tubman's life, her enslavement in the Maryland Eastern Shore and freedom via the Underground Railroad, as well as her military service in coastal South Carolina and participation in the Combahee River Raid, which freed 756 blacks enslaved on nine rice plantations six months after the Emancipation Proclamation went into effect. We will watch the biopic "Harriet" and discusses where it does and does not accord with historical sources about Tubman's life. And, we will tour the "From Slavery to Freedom" exhibit at the Senator John Heinz History Center to learn more about the Underground Railroad, particularly in Western Pennsylvania.

79-253 Imperialism and Decolonization in South Asia

Intermittent: 9 units
Home to a diversity of cultures, languages, and histories, the population of South Asia is linked through a common experience of European colonialism in the nineteenth and early twentieth centuries. Virtually all of the contemporary nation-states of South Asia achieved independence from European colonial powers in the middle of the twentieth century, most between the 1940s and 1960s. With a focus on South Asian history, this course will include introductory sessions on pre-colonial interaction and the early modern world. The bulk of the course will focus on colonialism, nationalism, and decolonization from the early nineteenth century to the mid-twentieth century. In addition to assessing the legacies of colonialism in the present day, the course will interrogate the differences between colonial and postcolonial experiences across the South Asian world. It will further examine the challenges and trials confronting the new states "after" decolonization, in particular, their search not only for new political frameworks to replace the colonial structures they had discarded, but also for solutions to mitigate the issues of social integration, inter-state conflict and regional co-operation.

79-255 Modern Ireland: Politics and Culture from the Famine (1847) to Today

Intermittent: 9 units
[Note: students who have already taken this course under its former number 79-255 and former titles, Irish History, or Politics, Religion, and Conflict in the 19th and 20th Century Ireland, may not enroll.] This course studies the political, economic and social development of Ireland across its long nineteenth century. Beginning with the social and economic effects of the Famine of the 1840s, it studies Ireland's growing incorporation into the British-centric global economy, the growing role of Catholicism in Irish politics, the cultural ferment of the late nineteenth century and the events leading up to formal independence in 1922. Following on from this, the course reviews the development of the two Irelands (the Republic of Ireland and Northern Ireland), the rise to hegemony of Fianna F and #225;il and the Ulster Unionist Party, the politics of gender and sexuality in two of western Europe's most conservative societies, violence in Northern Ireland, and rapid economic, social and political changes since the 1990s. Ultimately, this course seeks to use Ireland as a case study for understanding the history of small nations and modern European nationalism as well as economic and political development on the periphery of Europe. This course fulfills Dietrich College's "Humanities" general education requirement.

79-256 Sex, Guns, Rock, and Skinheads: Youth Rebellion in Europe, 1960-1990

Intermittent: 9 units
Between 1960 and 1990, young Europeans rebelled against the conservatism of their parents and politicians. In 1968, they exploded into the streets in capitalist Paris and socialist Prague. In West Germany and Italy, a minority of left-wing radicals took up the gun to bring former Nazis and Fascists to "justice." Young people demanded and practiced sexual liberation. Young women marched for their emancipation and led the struggle to legalize abortion. Young Europeans also contributed to the liberalization of anti-homosexual laws. The British Beat revolution rocked the world with its innovative music, anti-establishment lyrics, shocking fashions, and wild lifestyles. By the 1980s, youth rebellion had taken on disturbing trends with the emergence of right-wing Skinheads and a surge in drug addiction. The course combines lecture and discussion of readings and films. Students will write three essays (1000 words each) based on class assignments. They will write a final essay (1500-1700 words) based on their own research into the press, fanzines, films, etc. (in place of a final exam).

79-257 Germany and the Second World War

Intermittent: 9 units
This course, taught in Somerset prison, covers many aspects of the war unleashed by the Third Reich: its origins; Hitler's ideology and war plans; the course of the war; major military operations; the Holocaust; Nazi occupation of Europe; resistance to Nazism; and life inside Germany. It concentrates on the Wehrmacht's strategies, decisions, and its relationship with Hitler and Nazi organizations. (The Wehrmacht was the Third Reich's "defense/armed forces" but the term is generally used to refer to its army.) We will investigate the role of the Wehrmacht in Nazi/SS crimes against humanity, including genocide, fighting partisans, killing civilians, and the treatment of Soviet POWs. We aim to understand how, where, why, and when the Wehrmacht came to have "dirty hands." Course readings; chapters from Ben H. Shepherd, Hitler's Soldiers: The German Army in the Third Reich; chapters from Nicholas Stargardt, The German War: A Nation under Arms, 1939-1945; primary documents. Written assignments (10 in total): weekly 500-600 word responses to questions based on course readings. The course combines lecture, discussion, in-class group exercises, and a debate.
To all students registering for this PEP course, please fill out this brief questionnaire so that the instructor may address your questions/concerns in advance: https://forms.gle/j4kjshSrRzSaNFbu6.

79-259 Black Rice

Intermittent: 6 units
Rice originates in only two places in the world: Africa and amp; Asia. Most historians agree that West African rice and its cultivation and amp; processing technology were transmitted to colonial SC and amp; GA via the trans-Atlantic slave trade, laying the foundation for the commercial rice industry and making South Carolina rice planters the richest planters in British North America before the American Revolution. Though some historians don't agree.... In "Black Rice," we'll learn about how rice technology in West Africa's Upper Guinea Coast for subsistence, how it was transferred to the antebellum US South, and why technology in precolonial West Africa and enslaved people as skilled, not just brute labor are so, so controversial! In addition, we will watch the March 3, 2023 performance of "Unburied; Unmourned, Unmarked: Requiem for Rice" by the New York Philharmonic at Lincoln Center and discuss the libretto on which the project was based.

79-260 Nazi Germany

Intermittent: 9 units
This course covers Nazism in Germany from its beginnings as a small movement after the First World War through its rise to power in 1933 to its fiery destruction and defeat in 1945. What were the sources of its appeal as a political party? How did the Nazi regime suppress the political opposition in 1933? Why did so many ordinary Germans collaborate with the regime in its hunt against political, religious, sexual, and racial enemies? Why did they support the regime to the bloody end of the most murderous war in history?

79-261 The Last Emperors: Chinese History and Society, 1600-1900

Intermittent: 9 units
This course is an introduction to late-imperial "Chinese" history and society with a focus on the Qing dynasty (1644-1912). We begin by examining the Qing not just as the last of China's imperial dynasties but also as an early-modern, multi-ethnic empire that included Mongolia, Tibet, and Xinjiang. In fact, China's "last emperors" were actually Manchus from northeast Asia. Secondly we investigate the social, economic, intellectual and demographic developments that transformed late-imperial China prior to the coming of the West. Thirdly, we examine Qing responses to a string of nineteenth-century disruptions, including but not limited to western imperialism, that threatened to not only end the dynasty but also challenged the very tenants of Chinese civilization. Lastly, we will look at the fall of China's imperial system, the end of empire, and the post-imperial struggle to reformulate the state and re-imagine society for the twentieth century. This course fulfills Dietrich College's "Humanities" general education requirement.

79-262 Modern China: From the Birth of Mao ... to Now

Intermittent: 9 units
This course is an introduction to major themes in twentieth-century Chinese history, including the transition from empire to nation, revolution, social change and modernization, western and Japanese imperialism, the rise of the party-state, Chinese socialism, economic liberalization and the so-called "Chinese Dream." The first half of the class is devoted to the period between the fall of the imperial system and the founding of the People's Republic of China (1911-1949). If the victory of the Chinese Communist Party and development of the socialist state are to be considered in historical context, it is necessary to first understand the political, cultural, economic and intellectual currents that immediately preceded them. During the second half of the course, we will examine the Maoist period (1949-1976). We will investigate the Chinese Communist Party as both a state-building institution and an engine of social transformation, and consider the tensions these dual roles produced. Finally, we will look at the Reform Period (1978-present), and reflect on a newly robust China's attempts to come to terms with its own recent past and what the consequences might be for both China and the world.

79-263 Mao and the Chinese Cultural Revolution

Intermittent: 9 units
This course is an in-depth examination of China's "Great Proletarian Cultural Revolution" (1966-1976), one of the most impactful and bewildering events of the twentieth century. It started when Mao Zedong announced that enemies had infiltrated the Communist Party that he led. Soon students were attacking their teachers, teenagers in army uniforms were raiding homes and destroying remnants of "feudal" and "bourgeois" culture, and armed fighting had erupted among factions of ordinary Chinese people. Why? What were the political and social dynamics of Maoist China that propelled it along this violent trajectory? What was everyday life like during the Cultural Revolution, an event that could be both terrifying and empowering for those that lived through it? What were the social, political and cultural consequences? How has the Cultural Revolution been judged in China and the west, and are their other possible interpretations? This class will explore these questions from a variety of perspectives and sources, including documents, literature, memoir, film, academic writings, visual arts and performing arts.

79-264 Tibet and China: History and Propaganda

Intermittent: 9 units
This course is an introduction to the "Tibet Question," the dispute over whether Tibet should be part of China, an independent nation-state, or, as the current Dalai Lama now advocates, something in between. "History" often serves as the battleground on which competing visions of the nation are fought - who should be included and excluded, where "natural" boundaries begin and end. This almost always requires a process of simplification in which inconvenient details are forgotten or repurposed in the service of national agendas. The "Tibet Question" is a telling example. In this class, we investigate the historical relationship between "China" and "Tibet" from the 13th century through the present, and note the ways advocates on both sides of the "Tibet Question" have constructed historical narratives (propaganda) in support of their political positions. We will also discuss the prospects for a political solution and consider the lessons the "Tibet Question" may hold for understanding other outstanding "historical" disputes.

79-265 Russian History: Game of Thrones

Intermittent: 9 units
How are states built? How are empires forged? This course, beginning with the first settlements of tribal nomads in the ninth century and ending with the abolition of serfdom in 1861, surveys the grand 'game of thrones' in Russian history. It explores the building of a Russian Empire from the first princely kingdoms at murderous war with each other to the emergence of a strong state, headed by a tsar and centered in Moscow. Over the centuries, we make the acquaintance of Mongol marauders, greedy princes, and brave peasant rebels, as well as Ivan the Terrible, Peter the Great, and the long succession of reformers and reactionaries who occupied the Russian throne. Students will be challenged to think critically about social injustice and resistance, and the relationship between ethnicity, serfdom, land ownership, and empire. This course fulfills Dietrich College's "Contextual Thinking" general education requirement.

79-266 Russian History and Revolutionary Socialism

Intermittent: 9 units
This course covers an epic set of events in Russian history beginning with the emancipation of the serfs in 1861 and ending with the death of Stalin in 1953. Spanning almost a century of upheaval and transformation, it examines the terrorist and populist movements against the tsar, the growth of urbanization and a new working class, the great general strike and revolution of 1905, the Russian revolution in 1917, and the Communist Party and amp;#39;s attempt to build a new socialist society amid the wreckage of the old. We will discuss the struggle for power within the Party in the 1920s, Stalin's triumph over his opponents, the wrenching processes of collectivization and industrialization, and the "Great Terror." The course will explore the Soviet role in World War II, the shattering losses, and the death of Stalin in 1953. This course meets the Gen Ed requirement for "Humanities"

79-267 The Soviet Union in World War II: Military, Political, and Social History

Intermittent: 9 units
On June 22, 1941, Hitler invaded the Soviet Union. German troops surrounded Leningrad in the longest running siege in modern history, reached the outskirts of Moscow, and slaughtered millions of Soviet civilians. Of the 6 million Jews murdered by the Nazis, almost 2 million were killed on Soviet soil. Over 26 million Soviet citizens died in the war. Eventually, the Red Army came back from defeat to free the occupied territories and drive Hitler and amp;#39;s army back to Berlin. Using history, film, poetry, veterans' accounts, documentaries, and journalism, this course surveys the great military battles as well as life in the occupied territories and on the home front. It highlights the rise of fascism, the Stalinist purges of the Red Army, and the Nazi massacres of the civilian population.Occasional film screenings may be required.

79-268 World War I: The Twentieth Century's First Catastrophe

Intermittent: 9 units
This course offers a comprehensive retrospective of the First World War in Europe. Guiding questions will be: How did a containable crisis between Austria-Hungary and Serbia become the most murderous war Europe had ever experienced? How did the war spill over into the Middle East? Why did the US enter the war? Why did every General Staff follow unimaginative military strategies that turned the war into a bloody horror for soldiers? How did the war affect women's situation and rights? How did the war become a Total War that fomented social and political revolution and led to the downfall of four Empires?

79-269 Russian History: From Socialism to Capitalism

Intermittent: 9 units
Beginning with Stalin's death in 1953, this course focuses on the efforts of a new group of Soviet leaders to eliminate the repression of the Stalin years and to create a more democratic socialism. It will examine the reforms of Khrushchev and the reaction against them, the long period of Brezhnev's rule, and the hopeful plans of Gorbachev. Finally, it will survey Gorbachev's loss of control, the collapse of socialism and the Soviet Union, and the growth of "wild west" or "gangster" capitalism. We will look at the rise of the oligarchs and the impact of the capitalist transition on ordinary people. The course provides essential background for anyone interested in understanding Russia's place in the world today and its relationship with the West. This course fulfills Dietrich College's "Intercultural and Global Inquiry" general education requirement.

79-270 Anti-Semitism Then and Now: Perspectives from the Middle Ages to the Present

Intermittent: 9 units
This course will examine the history of anti-Jewish hatred and violence from the Middle Ages through the present. The course will focus on representative case studies, texts, and films. These will include pre-modern incidents of "fake news" such as the medieval rumor of "blood libel" that unleashed massacres and mass expulsions of Jews from countless communities. In examining the rise of modern anti-Semitism, we shall focus on debates over Jewish assimilation and citizenship and consider the popular impact of the print media's dissemination of conspiracy theories of Jewish world domination, including the infamous forgery, "The Protocols of the Elders of Zion." We will also examine cases of mass anti-Jewish violence, known as pogroms, in Eastern Europe and Russia, and the genocidal onslaught against European Jewry by the National Socialist regime. Finally, we will discuss the contemporary global resurgence of anti-Semitism.

79-272 Coexistence and Conflict: Muslims, Christians and Jews in Spain and Portugal

Intermittent: 9 units
In Medieval Spain and Portugal, Islam, Judaism and Christianity coexisted in a situation distinguished by cooperation and exchange, as well as by friction, rivalry and violence. In this course, we shall explore the complexity of this unique historical encounter, as well as its role in shaping debates over modern Iberian and global identities, and historical memory. We shall discuss topics such as: Inter-ethnic collaboration and violence; Jewish-Christian disputations; the exclusion and expulsion of religious and ethnic minorities; as well as Muslim and Jewish presence in present day Spain and Portugal. Historical documents, literary texts, film, musical traditions, as well as contemporary political and cultural debates will be discussed to enhance familiarity with the topic.

79-273 Jews and Muslims in History

Intermittent: 9 units
What is the history of Muslim-Jewish interaction beyond the Palestinian-Israeli conflict and the images of violence in the Middle East that permeate the media? The overarching goal of this course is to explore this question through close study of the history of Jews and Muslims who lived as neighbors, in cooperation as well as in conflict in the Middle East, North Africa and Europe, from the rise of Islam in the seventh century to the present day. Our sources will include works of scholarship, primary source texts such as religious queries and government documents, journalistic materials, memoirs, and films.

79-275 Introduction to Global Studies

Spring: 9 units
We live in an increasingly interconnected world, one in which our everyday actions have repercussions across vast distances. To understand this ever-denser web of connections, we must think beyond simplistic accounts of globalization as a uniformly positive, negative, or homogenizing process. Economic crisis, impoverishment, rising inequality, environmental degradation, pandemic disease, and irredentist movements are just as much a part of the story as are technological innovation, digital communication, global supply chains, cultural exchange, the promotion of human rights, and the rise of cosmopolitan values. This course aims to equip you with an interdisciplinary toolkit for thinking critically about the many dimensions of globalization (economic, social, political, cultural) and for engaging thoughtfully with differing experiences of them. By examining how globalization connects and shapes the everyday lives of people around the world, including our own, we will establish a foundation both for your advanced coursework in Global Studies and for your lifelong education as a globally aware professional and citizen. This course fulfills Dietrich College's "Intercultural and Global Inquiry" general education requirement.

79-276 Beyond the Border

Intermittent: 9 units
In this course we will consider the historical emergence and transformation of the U.S.-Mexico border, as much as an idea as a physical boundary. Our explorations will be far-ranging: from the initial encounters of Christopher Columbus and Hern and #225;n Cort and #233;s with indigenous populations, to social, cultural and political dynamics of the borderlands in subsequent centuries; from the experiences and practices of cross border migrants, to contemporary immigration debates and policies surrounding migration, border control and walling, and the deportation of unauthorized migrants. In addition to course readings, we will screen several Mexican films that are centrally concerned with the dynamics of bordering and border-crossing. This course fulfills Dietrich College's "Perspectives on Justice and Injustice" general education requirement.

79-278 How (Not) to Change the World

Intermittent: 9 units
It's often said that the road to hell is paved with good intentions. What, then, can we learn by excavating some of those pavers and interrogating the theories of change that underlie them? And what can we learn from more successful attempts to enact social change? In this course, we will use the tools of history, anthropology, and critical theory to examine various efforts to 'change the world'. From top-down social engineering to neoliberal 'market citizenship' to grassroots organizing, case studies will challenge us to detect theories of change (even when they are concealed) and evaluate their consequences (intended and otherwise). With those lessons in mind, we will then apply our tools to the theories of change that we enact, often unwittingly, as members of a university. Which roads are we paving and where do they lead?

79-280 Coffee and Capitalism

Intermittent: 9 units
What role has coffee played in connecting people and places to capitalist markets and consumer cultures? What are the economic, social, and environmental consequences of these connections? How did espresso change from an "ethnic drink" to something served at McDonalds? Why do college students (and professors!) hang out in coffee shops? This course will answer these questions and more by using coffee to learn about the history of capitalism, and capitalism to understand the history of coffee. We will follow the spread of coffee and capitalism across the globe, with excursions to places where people grow coffee (Ethiopia, Yemen, Indonesia, Brazil, and Costa Rica), and also where they drink coffee (Seattle, Tokyo, Seoul, New York, and Berlin). In the process, we will confront global problems linked to economic inequality, trade, gender relations, and environmental degradation. Course meetings will combine interactive lecture, group discussions, and mini-presentations. Assignments will include journal responses, ethnographic observations, and writing a short script that tells a story about coffee and capitalism.

79-281 Introduction to Religion

Intermittent: 9 units
Religion can be understood from the "outside," through the academic lenses of history, sociology, psychology, philosophy, etc., and from the "inside," listening to the experiences and reflections of those who practice various faiths. The course will examine major religious traditions from several perspectives and begin to explore such topics as the relationship between religion and science, faith and reason, religion and moral values, and religion in public life. This introduction is designed for students with a general interest in religion, as well as those contemplating a Religious Studies minor.

79-282 Europe and the World Since 1800

Intermittent: 9 units
This course will introduce students to topics of historical and contemporary relevance in European society and culture from the nineteenth century to the present. We shall focus especially on Europe's place in shaping debates of major international importance and #8212;both new and old and #8212;about topics such as: colonialism; migration; religious, ethnic, and national identity; Islamophobia; and antisemitism. Throughout we will pay special attention to the situation of inhabitants. past and the present, who have been considered outsiders or "others" in European society. In addition to class lectures, students will view films and listen to music related to the main themes of the course, in addition to reading and discussing historical texts.

79-283 Hungry World: Food and Famine in Global Perspective

Intermittent: 9 units
The science and technology of the Green Revolution in the second half of the 20th century were heralded as a miracle. Agricultural science promised seeds, peasants, companies, governments, scientists, economists, exporters, and planners would work together to support growing populations, especially in the post-colonial world. The human population on Earth reached 6 billion by the year 2000; 7.6 billion were estimated around 2017. The United Nations predicts 8.6 billion by 2030. Awareness of living in this unique period of human history brought new debates among scholars, practitioners, and planners thinking about the critical role of agriculture and development on Earth. How can we conceptualize, hope, and plan for best possible outcomes for a human population that depends on agriculture and development? How has the legacy of the Green Revolution encouraged (or betrayed) public enthusiasm for innovative fixes? This interdisciplinary course will use methods and case studies drawing on History, Historical Demography, Anthropology, Cultural Studies, Regional Studies, Geosciences and Agricultural Sciences, and International Economic Development. If students wish to pursue a particular thematic or regional interest, there will be room in this course to explore particular cases in depth.

79-288 Bananas, Baseball, and Borders: Latin America and the United States

Intermittent: 9 units
This course will examine the tumultuous and paradoxical relationship between Latin America and the United States from the time of independence to the present, with an emphasis on Mexico, Central America, and the Caribbean during the Cold War (1945-1989) and its aftermath (1990s-present). We will literally talk about bananas, baseball and borders; the title also alludes to the key dimensions of the relationship we will study: economic, cultural, and geopolitical. We will learn about the actions of U.S. and Latin American government leaders and diplomats along with many other kinds of people including activists, artists, and journalists; athletes, movie stars, and scientists; and migrant workers, tourists, and drug traffickers. Mondays and Wednesdays will feature interactive lectures, videos and in-class activities; Fridays will be entirely devoted to student-driven discussion. Evaluation will be based on participation; two written analysis of historical documents, and a final reflection. This course fulfills Dietrich College's "Intercultural and Global Inquiry" general education requirement.

79-289 Animal Planet: An Environmental History of People and Animals

Intermittent: 9 units
Why do modern societies go to great lengths to protect some animals and slaughter others? Why do some cultures make pets of animals that other cultures turn into a meal? What are the environmental ramifications of hunting, domestication, and trading animals? Is there a connection between human pandemics like COVID-19 and animals? Why are there so many cute animals inhabiting social media? These are some of the questions that we will seek to answer as we trace changes in human and #8212;animal relationships over time. We will explore these themes through both texts and visual representations (art, film, photography) of animals. Evaluation will be based on active participation in class discussions, submission of weekly field notes, and a final curated exhibit of images of people and animals.

79-290 The Slave Passage: From West Africa to the Americas

Intermittent: 9 units
"The Slave Passage" begins among flourishing, technologically advanced, and globally connected regions of Western Africa before the advent of the trans-Atlantic slave trade. It tells the painful story of African captives during the Middle Passage, piecing together the historical record to recognize their suffering aboard the slaving vessels and their multiple strategies of resistance. Students will study slave narratives, slave ship logs, and autobiographies of former enslaved people, as well as analyze films depicting the Middle Passage and New World enslavement.

79-291 Innovation and Entertainment: A Business History of American Popular Culture

Intermittent: 9 units
This course will examine one topic in popular culture and entertainment per week, from newspapers to streaming services. The course will consider these industries through the lens of business history, documenting innovation and the development of entertainment as commodities. While we will trace many changes over the years, we will primarily focus on the birth of new industries. Guiding questions will be: How did the country's economy, society, and politics structure the development of popular culture? How did performers and entrepreneurs develop industries around new innovations in popular culture? And how did popular culture shape the country's economy, society, and politics?

79-292 China and the West

Intermittent: 9 units
This course examines the global history of China from the time of Marco Polo to the era of Xi Jinping, with particular emphasis on the political, social, and economic dimensions of how "China" and "the West" have interacted over the past three centuries. How have European and American writers, travelers, and political figures thought about China over time? How have their Chinese counterparts thought about the West? What have been the dominant narratives about Sino-Western relations, and how do these compare with how China and the West actually interacted? We will cover major topics such as the Opium Wars and Cold War geopolitics as well as more mundane issues, including the everyday lives of foreigners in China and the experiences of Chinese abroad. Using government documents, trade records, memoirs, and other sources, students will come to situate Sino-Western relations in a new historical perspective as they examine the dynamics of transnational interaction and reflect critically on how the present informs the construction of narratives about the past. This course fulfills Dietrich College's "Intercultural and Global Inquiry" general education requirement.

79-293 Inward Odyssey

Intermittent: 9 units
This course is ONLY offered at Carnegie Mellon in Qatar. Inward Odyssey will explore world history by examining it through the outward-looking eyes of travel writers, on the assumption that travelogues, though supposedly written about the "other," in fact provide crucial insights about the mindset of the culture that produced them, and often serve as a vehicle for cultural self-exploration or even self-criticism. In terms of content, this course is intended to overlap with World History, Islam and the European World, and US-Arab Encounters. However, this course is intended to be a skills course, designed not to teach students about specific historical periods, but rather to give students the tools they need to conduct their own critical explorations into the historical past.

79-295 Legacies of Fascism and Anti-Fascism:From 1930s Spain to Russia's War on Ukraine

Intermittent: 3 units
Russia's war on Ukraine has elicited divergent responses from different political and civil actors and scholars around the globe. Many of these responses are steeped in the history of the 1930s and World War II, including around questions of fascism and anti-fascism. In this course we will inquire whether the history of fascism and anti-fascism might provide us with any useful tools to address the current war in Ukraine. We will start by examining the history of the rise of fascism and of antifascist response, beginning with Mussolini's march on Rome in 1922 and the impact of Italian fascism on Spanish fascism and the outbreak of the Spanish Civil War (1936-1939). The final part of the course will focus on the origins of the war in Ukraine. We will hear from guest speakers, including relatives of volunteers and experts on the Spanish Civil War, as well as experts on the history of Ukraine, including Ukrainian scholars and refugees. Monday, 10/31 from 4:40pm-7:00pm-HH B131 Tuesday, 11/1 from 4:40pm-7:00pm-HH B131 Wednesday, 11/2 from 4:40pm-7:00pm-HH B131 Thursday, 11/3 from 4:40pm-7:00pm-HH B131 Saturday, 11/5 from 11:30am-5:00pm-BH A36

79-296 Religion in American Politics

Intermittent: 6 units
Religion figures prominently in American politics, especially in congressional election years. A common view, reinforced by some media and polling organizations, holds that "religiosity" correlates with conservative politics, but that's highly misleading, as religious people are in fact all over the political map - even on issues like abortion, same-sex marriage, and what is taught in public schools. Thomas Jefferson's mention of a "wall of separation" between church and state indicates that religious institutions are generally kept separate from government in America, but religious motivations have always played an important part in our politics. This course will provide a historical perspective on religion in public life down to the present day, including religion's influence on political parties and public policies, and the boundaries set by the Constitution on such activity. This course satisfies one of the elective requirements for the Religious Studies minor.

79-297 Technology and Work

Intermittent: 9 units
In recent years, conversations about the relationship between technology and work seem to have been conducted with particular fervor: claims of revolutionary ease and freedom sit side-by-side with dystopian visions of exploitation, surveillance, and alienation. Will technological development lead to a new "sharing economy" or widespread deskilling? Will it bring general prosperity or enrich the few at the expense of the many? These concerns - though especially apparent today - are by no means new. In this course, we will examine their history, focusing in particular on North America and Europe in the past two centuries. We will examine the ways in which new technologies - from the assembly line to the washing machine to the personal computer - transformed what it meant to work, and how workers, their families, and the companies who employed them reacted to these changes. Our historical actors will include famous figures like Henry Ford, but also unnamed women, children, people with disabilities, and racial and ethnic minorities. Throughout, we will pay attention to who benefitted, who was harmed, and what broader economic, cultural, or social purposes these technologies were designed to serve.

79-298 Guns, Gun Cultures, and Gun Violence in American History

Intermittent: 6 units
This course traces the development of gun cultures and gun-related policy and law in the United States from the colonial era to the present. Students will be expected to synthesize perspectives from social history, ethnography, public health, criminology, policy analysis, and legal scholarship. They will also engage the critical examination of popular culture and media representations of guns and gun violence. Particular emphasis will be placed on changing views about the authority of the government to intervene in the manufacture, ownership, and use of guns, as well as the best way to balance individual and collective interests in a pluralistic society.

79-300 Controversial Topics in the History of American Public Policy

Intermittent: 9 units
This course traces the development of US domestic public policy, the growth of the federal government, and the changing relationship among citizens, states, and the federal government over time. We begin with an examination of the current policy landscape and then go back in time to understand how we got to where we are today. We very quickly discover that our current political predicaments are not accidental. Particular people or groups across the political spectrum have worked hard to shape public policy at various critical points in history and have reaped tremendous benefit, even if their influence makes the overall system unstable or unworkable today. We identify critical moments of crisis or change in American politics, examine the imaginaries and policy levers available to people at that time, and explain how policy decisions were made. Students will gain a clear understanding of how interests and political will have been cultivated and mobilized in the past, which can offer them useful models for advancing their own priorities and those of their generation. Topics covered currently include health care and health insurance, abortion, and immigration. This course fulfills Dietrich College's "Contextual Thinking" general education requirement.

79-301 History of Surveillance: From the Plantation to Data Capitalism

Intermittent: 6 units
Our awareness of surveillance has been dramatically heightened over the past few years. From Edward Snowden's revelations about the U.S. National Security Agency's data collection infrastructure to the extent to which companies like Facebook and Google monetize our personal information, surveillance has become one of the most controversial political issues of our time. In this course, we will place these developments in context, examining the long history of surveillance in the United States. We will begin with the 18th-century plantation "overseer," who was charged with ensuring the productivity and obedience of slaves under his watch. We will then move on to explore the emergence of commercial surveillance in the 19th century, which sought to gather intelligence on the credit worthiness and moral worthiness of businessmen in a rapidly growing, and increasingly impersonal, economy. Next, we will examine the shifting focus of surveillance from the late 19th century to the present, as it expanded from immigrants and criminals to include industrial workers, political radicals, civil rights activists (most notably Martin Luther King), the poor, and ultimately, all of us. Today, anyone who has a cell phone in their pocket, surfs the Internet, keeps up with friends through social networks, makes purchases with a credit card, uses membership cards, travels, or even just spends time in public spaces ought to assume that their movements, purchasing habits, communication metadata, social connections, and Internet browsing histories are being recorded, stored and analyzed for a variety of governmental and commercial purposes. In the final week of the course, we will debate the implications of these incursions into our public and private lives.

79-302 Killer Robots? The Ethics, Law, and Politics of Drones and A.I. in War

Intermittent: 9 units
Unmanned aerial vehicles (drones) have become a central feature of the United States' global counterterrorism strategy since September 11, 2001, and autonomous weapons systems (often called "killer robots" by critics) are increasingly being integrated into military arsenals around the world. According to proponents, drones and autonomous weapons systems are much safer than manned systems, so accurate that they can be used to target individuals and detect threats in real time, and efficient and inexpensive enough to be used for long-term surveillance and protection missions around the globe. According to critics, the use of lethal autonomous weapons systems is problematic because of the obfuscation of historically and legally accepted chains of accountability and responsibility, as well as the difficulty of translating complex decision-making processes including ethical and moral ones into computer code. This course will evaluate these issues through the lenses of law, politics, morality, history, and military strategy.

79-303 Pittsburgh and the Transformation of Modern Urban America

Intermittent: 6 units
[Note: students who have already taken this mini course under its previous number 79-303 and title may not enroll.] This course will focus on the transformations, both positive and negative, of Pittsburgh and the Pittsburgh region in the period from 1945 through the present. It will explore the following themes: the rise of industrial Pittsburgh, the redevelopment of the city in the Pittsburgh Renaissance; urban renewal and its consequences; the collapse of the steel industry and its impacts; the development of an Eds/Meds service economy; air, land and water environmental issues; and the city's changing demography.

79-306 Fact into Film: Translating History into Cinema

Intermittent: 9 units
From the very beginning, film has provided a window into the past. But how useful are the images we see through that window? For every person who reads a work of history, thousands will see a film on the same subject. But who will learn more? Can written history and filmed history perform the same tasks? Should we expect them to do so? How are these two historical forms related? How can they complement each other? This course will draw examples from across the history of film in order to examine how the medium of film impacts our understanding of facts and events, the ways that film transfers those facts to the screen, and how that process affects the creation of historical discourse. Films may include such titles as The Fall of the Roman Empire, The Gunfight at the O.K. Corral, Saving Private Ryan, World Trade Center, Enemy at the Gates, Lagaan and Hero.

79-308 Crime and Justice in American Film

Intermittent: 9 units
Films dealing with criminal activities and criminal justice have always been popular at the box office. From the gangsters of the Thirties and the film noir of the Fifties to the more recent vigilante avenger films of Liam Neeson, the film industry has profited from films about crime and its consequences. How those subjects are portrayed, however, tells us a great deal about larger trends in American history and society. Every imaginable type of criminal activity has been depicted on screen, as have the legal ramifications of those acts. But these films raise profound questions. What is the nature of crime? What makes a criminal? Are there circumstances in which crime is justified? How do socioeconomic conditions affect the consequences? How fair and impartial is our justice system? Perhaps most importantly, how do depictions of crime and justice in popular media influence our answers to these questions? This class will utilize a variety of films to discuss the ways in which popular media portrays the sources of crime, the nature of criminals, the court and prison systems, and particular kinds of criminal acts. Films to be screened may include such titles as The Ox-Bow Incident, Out of the Past, 12 Angry Men, Young Mr. Lincoln, Brute Force, The Equalizer, Jack Reacher and Minority Report. By thoroughly discussing these films and related readings we will be able to trace the various changes in attitude towards crime and justice in America over the last century.

79-309 The Chinese Revolution Through Film (1949-2000)

Intermittent: 9 units
This course is about both film and history. It is not a detailed history of film, but rather introduces some key issues of modern Chinese history and examines how that history is treated in film. Most of the films are made in China (including Taiwan and Hong Kong) but some are produced in the west. Topics that may be explored include the rise of the Communist Party, life in Maoist China, the Cultural Revolution, the Cold War/anti-imperialism, depictions of China's minority peoples, and the Reform-era under Mao's successors. Along with feature movies, we may view documentaries, propaganda films, TV shows and even music videos. In addition to providing a general history of the period, accompanying readings and assignments explore the social context and methodology of the films while developing critical skills in writing, analysis, and historical imagination.

79-312 War and Peace: A History of Peace Movements

Intermittent: 9 units
We generally assume war is a constant in our history and in the modern world. However, in every era there have been voices attempting to understand, explain and ultimately prevent it. In the modern world there has been a great deal of debate about the relationship of violence, capitalism, colonialism, empire, and racism to war. We will examine some of these debates among peace activists. Advocates for peace have attempted to build movements addressing the factors leading to war. What kinds of efforts have been made for a more peaceful world and how have they fared? We will examine how world leaders, business people, civil rights, and other peace activists have thought about war and peace. We will examine case studies of select wars and select peace movements.

79-313 "Unwanted": Refugees, Asylum Seekers, and Patterns of Global Migration

Intermittent: 6 units
What is home? What does it mean to belong? What does it mean to be mobile? Is mobility a privilege or a curse? How do experiences of migration, exile, and displacement shift one's understanding of home? This course examines the modern patterns of mobility and displacement, with a focus on the US and Europe at particular moments during the 19th,the 20th, and 21st centuries. We will focus on several case studies to illustrate broader concepts: the connection between the formation of nation-states and the rise of exclusionary citizenship; the emergence of 20th-century modern legal concepts such as "refugee" and "asylum"; the influence of the Cold War on the immigration policies in the US; and the criminalization of border-crossing.

79-314 How Do We Remember? The Politics and Cultures of Memory

Intermittent: 9 units
What is the relationship between an individual person and collective memories? How do societies "remember"? This course proposes an interdisciplinary approach to the relationship between memory and history. It explores various ways in which societies have mobilized their remembrances of the past for political and economic ends in the present; how and whose memory began to matter in a global 20th century; and how individual testimonies have highlighted the role of body, experience, trauma, and nostalgia for writing new, more inclusive and heterogenous histories. In the first part of the course, we will read excerpts from works by historians, sociologists, and anthropologists about cultural and collective memory. In the second part of the course, we will analyze how the politics of memory intermesh at a local and global scale, via a set of case studies that focus on: the memory of the Shoah (the Holocaust) in post-1945 Western and Central Europe; political violence, civil war, and reconciliation in post-1990 Guatemala; and the role of remembrance and testimony for claims of moral retribution in the aftermaths of colonialism (the Mau Mau revolt in colonial Kenya and the long-term efforts of the British government to conceal their violent repression of the anticolonial struggles). This class will follow the format of a seminar. The professor will give short lectures each week in order to introduce the readings and place them within larger debates, but the course will mainly be discussion-oriented. This course fulfills Dietrich College's "Contextual Thinking" general education requirement.

79-315 The Politics of Water in Global Perspective

Intermittent: 9 units
Water is necessary for all forms of life on Earth. The purpose of this course is to introduce students to social and political aspects of water, using in-depth case studies that draw on a variety of perspectives. Examples of regional water projects we'll study include traditional tank irrigation in South India; international negotiations along the Nile River; and the U.S. Government in negotiation with native activists and fisheries on the Columbia River. In addition to regional variety, readings will explore a variety of themes, for example, water and gender; water and armed conflict; and water and private companies versus public management. By the end of this course, students should be able to articulate their own answers to these questions: How have global organizations and participants characterized, enacted, and addressed problems of water supply and delivery for those who need it most? How do particular regions reflect global trends in water resource development, and how might these diverge from global trends? How have social and environmental studies in the literature of development come to understand the problem of water? One set of readings is assigned each week. Students should be prepared to discuss each week's readings in a thoughtful way during class meeting time.

79-316 Photography, the First 100 Years, 1839-1939

Intermittent: 9 units
Photography was announced to the world almost simultaneously in 1839, first in France and then a few months later in England. Accurate "likenesses" of people were available to the masses, and soon reproducible images of faraway places were intriguing to all. This course will explore the earliest image-makers Daguerre and Fox Talbot, the Civil War photographs organized by Mathew Brady, the introduction in 1888 of the Kodak by George Eastman, the critically important social documentary photography of Jacob Riis and his successor, Lewis Hine, the Photo-Secession of Alfred Stieglitz, the Harlem Renaissance of James VanDerZee, the precisionist f64 photographers Ansel Adams, Imogen Cunningham, and Edward Weston, and other important photographers who came before World War II. The class will be introduced to 19th century processes, such as the daguerreotype, tintype, and ambrotype, as well as albumen prints, cyanotypes, and more.

79-317 Art, Anthropology, and Empire

Intermittent: 9 units
This seminar will explore the anthropology and history of aesthetic objects, as they travel from people and places sometimes labeled "primitive" or "exotic" to others, whose inhabitants deem themselves "civilized," "modern," or Western. First, we will consider twentieth-century anthropological attempts to develop ways of appreciating and understanding objects from other cultures and in the process to reconsider the meaning of such terms as "art" and "aesthetics." Then we will discuss several topics in the history of empire and exoticism. Finally, we will consider attempts by formerly colonized populations to reclaim objects from museums, and to organize new museums, aesthetic styles, and forms of artistic production that challenge imperialism's persistent legacies.

79-318 Sustainable Social Change: History and Practice

Intermittent: 9 units
If you wanted to change the world, who would you ask for guidance? Mahatma Gandhi? Rachel Carson? Nelson Mandela? In this interdisciplinary course, we will examine the history of efforts to create sustainable social change. Through a series of targeted case studies, we will examine the successes and failures of notable leaders, past and present, who strove to address social problems nonviolently and to create lasting improvements in fields such as education, healthcare, and human rights. In keeping with the example of the people we will be studying, we will bring our questions and our findings out of the classroom through a variety of creative, student-driven experiments in sustainable social change.

79-319 India Through Film

Intermittent: 6 units
Bollywood films attract hundreds of millions of viewers, not just in India but throughout the world. The name "Bollywood" makes it seem that the Indian film industry is a junior partner, merely an echo of Hollywood. But more films are made in Mumbai every year than in Los Angeles. And Mumbai is only one of many film hubs in India. The rich diversity of Indian cinema speaks to the equally rich history of India itself. This course uses Indian movies to examine several key themes in India's history. We will focus on the twentieth century and on questions of democracy, diversity, and development. This course includes a mandatory film screening on Wednesday evenings beginning at 6:30pm.

79-320 Women, Politics, and Protest

Intermittent: 9 units
This course examines the history of women's rights agitation in the United States from the early nineteenth-century to the present. It investigates both well-known struggles for women's equality and #8212;including the battles for women's voting rights, an Equal Rights Amendment, and access to birth control and #8212;and also explores the history of lesser-known struggles for economic and racial justice. Because women often differed about what the most important issues facing their sex were, this course explores not only the issues that have united women, but also those that have divided them, keeping intersectionality and women's diversity at the center of the course. This course is open to all students.

79-321 Documenting Human Rights

Intermittent: 9 units
This course will teach students about the origins of modern human rights and the evolution of methods to document the extent to which these rights are being upheld or violated. The need to understand and document human rights issues is at the center of the most pressing current events. From threats to democracy and civil rights to work holding perpetrators of mass harm accountable in legal proceedings to efforts to quantify and advance economic, social, cultural, and environmental rights, making human rights violations visible is fundamental to achieving a more just world. We will begin with an overview of the history of human rights, the main philosophical and political debates in the field, and the most relevant organizations, institutions, and agreements. We will then delve into specific cases that highlight methodological opportunities and challenges, including: the identification of mass atrocity victims, the disappeared, and missing migrants; efforts to estimate civilian casualties in war; the documentation of police brutality and other human rights violations with smartphones; as well as the use of satellite imagery and drone footage for the documentation of genocide, environmental rights, and war crimes. We will critically assess the technical challenges that arise in each context and how the human rights and scientific communities have responded. After reviewing these cases, we will conclude by reflection on why the documentation of human rights actually matters and what happens to evidence once it is gathered. Students will then take what they've learned and do two multidisciplinary group projects, one involving the document of a rights violation in Western Pennsylvania and the other involving an international situation. This course fulfills Dietrich College's "Perspectives on Justice and Injustice" general education requirement.

79-322 Stalin and the Great Terror

Intermittent: 9 units
Joseph Stalin has been vilified and praised, damned and worshipped. He left behind a mixed and complex legacy. He created an industrialized modern economy in the Soviet Union and won a great and painful victory over the Nazis. At the same time, he built a police state, sent millions to labor camps, and destroyed the possibilities for socialist democracy. When he died, thousands of Soviet citizens wept at his funeral and the prisoners in the camps toasted his death. This course will examine Stalin, the man, and Stalinism, the phenomenon. Using history and film, we will explore one of the most complicated and influential dictatorships of the 20th century.

79-323 Making Modern Cities

Intermittent: 9 units
Cities have been a feature in the landscapes of human settlement for nearly 6000 years. This course will examine the origins and evolution of cities by examining the role of urban areas in the economic, cultural, political, and environmental history of the world. The main line of inquiry for this course emphasizes the culture of cities and the processes of urbanization that give rise to them. Students will explore why and how cities form, the functions they serve, the ways of life they support, and the problems and opportunities to which they give rise. Cities are socially and politically contested spaces, and observers of urban life have long-sought to understand the process of urbanization and the consequences of living in cities. Some argue that cities represent the crowning achievement of modernity; others suggest that cities are isolating and alienating, fostering discord, rather than social cohesion. The course integrates work by historians, urban planners, architects, political scientists, geographers, and sociologists to provide a comprehensive set of tools to understand and analyze modern urban life.

79-324 #MeToo: Naming and Resisting Gender Violence

Intermittent: 6 units
#metoo represents a sea change in society's response to gender-based violence. This course addresses gender-based violence as a public health and amp; human rights issue, focusing on the U.S. and asking where we are, and how we got here. It will delineate the legal and social definitions of gender violence, explore how those definitions function both positively and negatively, and examine the long history of protest that has culminated in this moment. Come join the conversation! This course is open to all students.

79-325 U.S. Gay and Lesbian History

Intermittent: 6 units
US Gay and Lesbian History offers an overview of the changing context and circumstances of sexual minorities in American culture. From early constructions of moral opprobrium, criminal deviance or medical pathology, the LGBT community emerged in the twentieth and twenty-first century as a political constituency and a vital part of contemporary society. Students should be aware that this course will necessarily address issues of intimate relations and sexuality as well as broader historical issues.

79-326 Shall We Dance? Culture, Politics, and Movement in the 20th Century

Intermittent: 6 units
Waltzes and flash mobs, hula and swing, disco and breakdance: this course will examine the history and practice of these and other popular dance movements across the course of the twentieth century. In doing so, we will pay particular attention to the ways in which dance both shaped and reflected major moments of political, cultural, and social change. Dancing bodies were used to justify imperial ambitions, explore new kinds of gender relations, and both uphold and upend racial hierarchies, making dancers key - if underappreciated - participants in the century's tumultuous history. The course will include a mix of lecture and discussion, drawing on scholarly analyses, archival sources, films, literature, images, and live performances. Students will also be asked to explore at least one new dance form for themselves and reflect on the experience.

79-328 Photographers and Photography Since World War II

Intermittent: 9 units
Invented in 1839, photography was a form of visual expression that immediately attracted a large public following. Starting around 1900, photography was practiced with two dominant strands. One of these firmly believed in the power of photographs to provide a window on the world, and was led by Lewis Hine, whose documentary photographs for the National Child Labor Committee helped to ameliorate living and working conditions for thousands of immigrant children. The other strand adhered to the philosophy of Alfred Stieglitz who adamantly affirmed that photographs were first and foremost reflections of the soul and were art objects, equal to painting, drawing and sculpture. These two schools of thought guided photographers throughout the twentieth century. This course explores in depth the tremendous range of photographic expression since World War II and examines in particular the contributions of significant image-makers such as Helen Levitt, W. Eugene Smith, Robert Frank, Diane Arbus, Garry Winogrand, Charles "Teenie" Harris, Cindy Sherman, Carrie Mae Weems, Nan Goldin, James Nachtwey, and many others. Classes include a slide lecture, student presentation, and video segments that introduce a focused selection of images by major photographers in an attempt to understand their intentions, styles, and influences. As available, students will be expected to make one or more visits to photography exhibitions on view in Pittsburgh (locations to be announced at the first class.)

79-329 LGBTQ+ History

Intermittent: 9 units
This class introduces and discusses LGBTQ history over time, drawing cases and readings from a number of cultures and timeframes. It introduces students to the concept of sexuality as an area of historical inquiry as well as introducing students to the methods and the questions that have engaged historians in this area. This introductory course is designed for all interested students and non-majors alike, as well as those contemplating a Gender Studies minor.

79-330 Medicine and Society: Health, Healers, and Hospitals

Intermittent: 9 units
How have notions of health and healing changed over time in the United States? Why are doctors seen as professional "heroes"? Why are hospitals so central to patient care and professional training? How has American healthcare developed into its present form? This course explores the history of American medicine and its relationship to American society. By exploring major developments in the history of American medicine and public health, students will examine the voices of historical actors, including physicians, patients, activists, policymakers, and researchers. In analyzing these voices, students will learn what was at stake as Americans confronted diseases and struggled to explain and cure them. Students will also examine medical research, education, disease patterns, patient experiences, and technologies from the colonial period to the present day. Readings include a range of primary accounts and secondary sources of medicine and health in America.

79-331 Body Politics: Women and Health in America

Intermittent: 9 units
[Note: Students who have taken 66-121, First Year Seminar: Body Politics: Women and Health in America, may not enroll.] This course takes a topical, intersectional approach to the history of U.S. women's health in the nineteenth and twentieth centuries. It is less about governmental politics, although we do some of that. Rather, it sees bodies as cultural texts through which power is built and contested. The course covers topics such as the history of anatomy, menstruation, reproductive rights, body image, mental health, sexuality, violence, childbirth, and menopause. We explore how science and American culture both have constructed these issues over time (some of it is super whacky!), while also examining women's organizing around them. This course is open to all students and majors alike, and it also satisfies one of the core requirements for the Gender Studies minor.

79-333 African Americans, Race, and the Fight for Reparations

Intermittent: 9 units
By the onset of the 21st century, African American history and interdisciplinary programs in Black studies had emerged at the center of our reinterpretation of the American experience. And with this new understanding of the nation's history there has been a growing interest in the relationship of history to public policy, race, human injustice, and resulting redress movements in comparative and historical perspective. Accordingly, this course will not only explore the case for reparations by analyzing the inequities of enslavement, Jim Crow, and post-industrial capitalism. It will examine the ongoing fight for reparations among people of African descent from the early postbellum years after the Civil War through the Black Lives Matter Movement in recent times. In addition to examining the experiences of Blacks in the United States, however, this course will consider other experiences around the globe: Native Americans, Mexican Americans, and Japanese Americans within the United States; the Holocaust in Germany; Japan's so-called "comfort women" system of sexual exploitation; and South Africa's movement toward reconciliation and reparations since the fall of apartheid.

79-337 Educational Policy and "School Choice": Historical and Contemporary Perspectives

Intermittent: 6 units
Fierce battles have been fought over education policy throughout American history. Parents, teachers, students, and everyday Americans have sought to position schools to meet often conflicting goals. This course introduces students to historical and contemporary perspectives on the rise of charter schools and school privatization, debates over religion in the classroom, legal questions surrounding segregation and forced bussing, as well as fundamental political shifts in who controls and funds public schools.

79-338 History of Education in America

Intermittent: 9 units
Americans have long understood schools both as mechanisms for inculcating communal values and as instruments for social reform. Schools have been alternatively described as pillars of democratic society and as authoritarian institutions for managing deviance. Institutions of education - whether schools, colleges, or universities - figure prominently in discussions of inequality and discrimination, opportunity and meritocracy. This course provides an introductory historical survey of American educational ideas and institutions. From debates in the 17th and 18th centuries over the proper balance of religious and secular education to fierce battles today over the role of the federal government, citizens have been politically mobilized through their concerns about education. By understanding the complicated history of American educational ideas and institutions, this course prepares students to engage critically with ongoing debates about the curriculum, vouchers, charter schools, and national standards.

79-339 History of Juvenile Delinquency & Juvenile Justice

Intermittent: 9 units
Course description to be added soon.

79-340 Juvenile Delinquency & Film: From "Boyz N the Hood"(1991) to "The Wire"(2002-08)

Intermittent: 6 units
How have American films portrayed juvenile crime, drug use, gang violence, and law enforcement responses (especially police and prisons) to juvenile crime and violence? How have American films portrayed individual juvenile delinquents, their families, and the communities in which they live? Do films vividly capture or distort the "realities" of juvenile crime and the operations of law enforcement? This course uses feature films from the late 20th and early 21st centuries, as well as social science and historical readings, to explore these issues. The course is run as a colloquium, with students playing central leadership roles in launching and guiding class discussions.

79-342 Age of Crusading, 1000-1800

Intermittent: 9 units
What does it mean to become a crusader and #8212;or be crusaded? How did a pope's sermon galvanize over 100,000 people to leave their homes and undertake a perilous journey across Europe to a place many had never seen? Why did one military campaign in 1096 initiate a seismic shift in the articulation (and acceptance) of Christian holy war? What started as a series of expeditions to Jerusalem and #8212;which we now call the "crusades and #8212;later extended to the cities of Constantinople and Cairo, to the regions of Southern France and Italy, and even to the Baltic Sea and the Americas. In this course, we will trace crusading ideology and knighthood from their roots to their fullest expressions throughout the Middle Ages and into modernity. These individuals who "took up the cross" and #8212;or encouraged others to do likewise and #8212;radically shaped the ideas of identity and piety in Latin Christendom. Perceiving themselves as God's agents in an apocalyptic age, crusaders came to fight Muslims, Jews, pagans, heretics, and even their fellow Christians. They also served as heroic inspiration in bardic song and courtly literature across Spain, France, and England. As scholars we will explore the perspectives of the invaders and those who were invaded, thereby (re)imagining how people responded to the crusaders' presence and their accompanying violence. Our sources will include prophecies, sermons, scripture, poetry, art and archeological remains, and film. Together, we will approach this challenging topic critically, yet respectfully, while completing short analytical papers and a set of reflective quizzes. This course is open to all students, requires no prerequisites, and may be used to fulfill the Religious Studies minor.

79-343 Education, Democracy, and Civil Rights

Intermittent: 9 units
What is the relationship between education and democracy? By examining a series of case studies at the intersection of education and the civil rights movement, this course will prepare students to approach contemporary educational debates as historically-informed critical thinkers. The controversy surrounding charter schools, vouchers, the common core, and the role of standardized testing cannot be understood outside the long history of debates regarding the relationship between education and democracy. Are schools meant to perpetuate the status quo? How did both traditional and more radical forms of education advance the struggle for civil rights? What role have students played in advancing civil rights and democracy? While exploring these questions, we will also partner with local high school students and teachers to bring our learning beyond the classroom.

79-345 Roots of Rock & Roll

Intermittent: 9 units
This course is about open source, collaborative innovation and the impact of social and technological change on American music. We will spend the first half on early "remix" music (slave songs, Anglo-Appalachian ballads, ragtime, and Depression era blues and country). After studying Bessie Smith, Woody Guthrie, Lead Belly, Hank Williams, and other early artists, we'll spend the second half on revolutionaries like Chuck Berry, Bob Dylan, Jimi Hendrix, and Janis Joplin. The format is informal lecture and discussion. Assignments include reading two books plus some articles, listening to short Spotify playlists, and writing three short essays. This course fulfills Dietrich College's "The Arts" general education requirement.

79-346 U.S. Political Films and Satire

Intermittent: 9 units
A longtime course taught in election years, this version focuses on Hollywood satires of the presidency. Satire means critique as much as humor, often more funny-strange than funny ha-ha. We will watch films attentively (no devices allowed during screenings) and communally, hence the class meets Tuesday evenings. We will study each film for two weeks; one session discussing readings/learning the history of the time it was made, then watching/discussing the whole film the following week. Attendance will be required and essential. Students will learn how (and why) to take notes during screenings, sometimes working together in class to shape their notes and discussions into individual papers. Screenings include 1930s classics "Gabriel Over the White House" and the Marx Brothers' "Duck Soup," Cold War thrillers "The Manchurian Candidate" and "Seven Days in May," and the dark comedies "Dr. Strangelove" and "Being There." One final film will be chosen by the students. Readings include short books and PDF articles. Grading emphasizes attendance and attentive participation, notetaking, and short essays. No prior knowledge of history or film is needed, and there are no prerequisites.

79-350 Early Christianity

Intermittent: 9 units
This course examines the origins of Christianity in historical perspective. Using both Christian and non-Christian sources from the period, we will examine how and why Christianity assumed the form that it did by analyzing its background in the Jewish community of Palestine, its place in the classical world, and its relationship to other religious and philosophical traditions of the time. We will also examine historically how the earliest Christians understood the life and message of Jesus, the debates about belief and practice that arose among them, and the factors influencing the extraordinary spread of the movement in its earliest centuries. This course satisfies one of the elective requirements for the Religious Studies minor.

79-352 Christianity Divided: The Protestant and Catholic Reformations, 1450-1650

Intermittent: 9 units
At the dawn of the sixteenth century, most western Europeans shared a common religious identity as members of the Roman Catholic Church. Within less than two decades, this consensus began to crumble, and the very fabric of western culture was irrevocably altered. By 1550, Europe was splintered into various conflicting churches, confessions, sects, and factions, each with its own set of truths and its own plan for reforming the church and society at large. This period of rapid and unprecedented change in western history is commonly known as the Reformation. Though this term has traditionally referred to the birth of Protestantism, it also encompasses the simultaneous renewal and reform that occurred within Roman Catholicism. This course will survey the Reformations of the sixteenth century, both Protestant and Catholic, examining the causes of the Reformation, the dynamics of reform, and its significance for western society and culture. In the process, we will analyze such on-going problems as religious persecution and the accommodation of dissent, the relationship between religion and politics, and the interactions between ideology and political, social, and economic factors in the process of historical change.

79-353 Lock 'em up! Imprisoning Delinquent Youth, 1820s to the Present

Intermittent: 6 units
[Note: students who have already taken this course under its former number 79-353 and former title, Imprisoning Kids: Legal, Historical, and Moral Perspectives, may not enroll.]Can young lawbreakers be rehabilitated, or should they be removed from society to prevent them endangering others? Since the 1820s, reformers, philanthropists, and state officials in the Western world have wrestled with the question of how to reduce juvenile crime and turn delinquents into good citizens. The institutions and policies they created reflected their conceptions of young criminals, their backgrounds and families, their gender and their race. How did experts develop a body of knowledge about at-risk youth, what practices did they put into place, and what spaces did they build to house and contain the children? How have the children themselves responded, developing a sense of their own identity through compliance with or resistance to reformers' intent? In this course, we will explore ideas, practices, and institutions created to save juvenile delinquents, presented in reports and studies as well as fiction and film. Students will read and view a variety of primary and secondary sources from North America and Europe from the early nineteenth to the late twentieth centuries. Assessment will include participation in class discussion, short written assignments, and a final project.

79-355 Fake News: "Truth" in the History of American Journalism

Intermittent: 6 units
Scandal, conspiracy, and partisan propaganda have been among the stuff of media ever since newspapers first appeared in America, and now they figure prominently in electronic media as well. The question "What is truth" is not just a matter of philosophical speculation, but a critical issue in contemporary life, from elections to pandemics to climate change and war. Officials at the highest levels make dubious claims, and find media outlets to support them - all driven by motivations other than a commitment to truth. This course is literally "ripped from the headlines" examining conflicts over credibility in print and online in the context of historical experience. We'll explore ways of determining when news really is "fake" and when it's more likely to be "an inconvenient truth."

79-357 Science and the Body

Intermittent: 6 units
The human body has been always an object of fascination. Across time and space, people have wondered what lurks beneath the skin, why we get sick or remain well, and how to explain human variation. The methods used to investigate these questions have, however, varied widely. In this course, we will explore that diversity - from the dissection of medieval corpses to 19th century phrenology to contemporary biohacking - examining how different communities have sought to study, control, and change their bodies over the past several hundred years. In doing so, we will focus on how these scientific efforts were shaped by the political, cultural, and economic values of their times. We will also pay attention to the profound and often ongoing effects of these experiments, particularly on the people who served - both willingly and unwillingly - as their "human subjects."

79-359 Truth, Lies, and Propaganda: A Historical Inquiry

Intermittent: 9 units
For many commentators, the election of Donald Trump in November 2016 marks the beginning of the "post-truth" era, in which reality is no longer knowable, or even relevant. While this narrative certainly captures the unease that many Americans feel, it is historically inaccurate. There never was a time in the past when we could readily discern truth from falsehood without difficulty. The goal of this course is to examine the social history of truth. We will explore the concept of truth in philosophy and science; the evolution of methods for discovering facts about the world; the centrality of trust in knowledge production; and the innumerable ways that facts have been questioned, manipulated, discredited, purposefully ignored, and fabricated over the past several centuries. The course will include case studies from science, law, politics, war, art, journalism, and history.

79-360 Crime, Policing, and the Law: Historical and Contemporary Perspectives

Intermittent: 9 units
This seminar will critically explore the development of the American criminal legal system from the colonial era to the present. Students will learn how the present system took shape and what they can do to make it fairer and more effective in the future. Students will analyze the role of race, class, and gender in policy decisions that have created the American criminal legal system; how these factors play into the differential enforcement of laws in various communities; and how they affect outcomes in the legal system. Students will understand the history of social movements that have emerged to advocate for changes in our criminal legal system, including an analysis of when they have been successful and when they have not. Topics covered will include slave patrols, the 19th century origins of modern policing and incarceration, the factors leading to the emergence of urban police departments, changing understandings of crime and criminals, surveillance, the wars on crime and drugs (and their racial implications), mass incarceration, deaths in custody, police corruption, police oversight, and the portrayal of law in popular culture. The course is discussion-based and includes many opportunities to engage directly with people whose lives have been impacted by crime and the criminal legal system.

79-363 The Rise of American Modern Golf, 1895 to the Present

Intermittent: 9 units
Aristocratic pastime or the people's game? Gender inclusive or overwhelmingly male? Race inclusive or overwhelmingly white? This course will examine the emergence of golf as both an amateur game and professional sport during the past century-plus. We will focus primarily on the 20th century U.S. but pay some attention to the game's earlier growth in the United Kingdom and its spread, in more recent years, throughout Europe, Asia, Latin America, and even Africa. Students will read and discuss historical, sociological, and literary texts, view documentary and feature films, and even get a taste of how to do research on golf using primary historical documents and #8212;spanning the eras from (1910s to1950s) Bobby Jones and Glenna Collett Vare to Ben Hogan, Sam Snead, Mickey Wright, and Patty Berg; and from (1960s to present) Jack Nicklaus, Arnold Palmer and Lee Trevino to Annika Sorenstam, Michelle Wie, and Lydia Ko. And Tiger Woods, too. The course will have a mid-term essay exam, a final essay exam, a mini-research assignment, and periodic oral presentations by students linked to shared readings and their individual research topics. I will lecture only occasionally; most classes will be centered on group discussion (often student-led) of assigned readings, films, and primary historical documents.

79-366 Power & Politics: A Global History of Food

Intermittent: 9 units
The course will investigate the history of food from prehistory to the present day, and will consider examples from every corner of the world. We will begin with the science of food and taste, consider origins of agriculture and industry, and the implications of society and culture.

79-367 Disastrous Encounters

Intermittent: 9 units
This course is ONLY offered at Carnegie Mellon in Qatar. Disastrous Encounters explores the complex interaction between human beings and their environment by examining incidents in which those disasters have proven destructive or fatal to humankind. By the end of the class students will be able to: Explain the scientific principles behind "natural" disasters, including cyclonic weather, global climate change, volcanoes, earthquakes, tsunamis, river flooding, famines, and diseases. Analyze to what extent a given disaster is in fact "natural" at all, but rather was either caused by or exacerbated by human actions. Draw connections between different types of disasters, recognizing that major disasters often produce predictable secondary disaster effects. Read documents critically, especially in terms of the author's agenda and the author's likely biases. Write strong analytical essays.

79-368 Un-natural Disasters: Societies and Environmental Hazards in Global Perspective

Intermittent: 6 units
In the wake of Hurricane Katrina, Neil Smith famously observed that "there is no such thing as a natural disaster." This course takes a cue from Smith by examining the social production of disasters in the past and present, from acute environmental events like typhoons and earthquakes to disasters of "slow violence" like chronic exposure to toxic pollution and food insecurity. Examining case studies from around the world, we will explore how these different forms of disaster collide with inequalities of race, class, and gender - and in the process challenge us to rethink the relationship between nature and society.

79-370 Technology in the United States

Intermittent: 9 units
This course examines the ways in which technology and society have shaped each other in the United States from the colonial era to the present. Topics include Native Americans and technologies, farming, industrialization, transportation, automobiles, aerospace, information technology, drugs, and biotechnology. Students will read a textbook, write brief essays about technologies of their choice, and discuss their essays and the text in class. The course welcomes students from any major.

79-371 African American Urban History

Intermittent: 9 units
As the ravages of the Covid-19 pandemic gradually lifts, the plight of poor and working-class people of African descent will continue to occupy a prominent place in discussions of today's urban community. Effective contemporary public policies, movement strategies, educational programs, media campaigns, and sensitive philanthropic decisions will require deeper and more thoughtful perspectives on the history of urban race and class relations in the past. Focusing on the development of African American urban history from its colonial beginnings through today's "Black Lives Matter Movement," this course will emphasize the many ways that African Americans shaped American urban life through their roles as workers, community-builders, and social justice activists. In addition to weekly classroom discussions of assigned readings, students will write a series of short essays (based upon a mix of secondary and primary sources) on selected topics/themes in the development of African American urban life, culture, and politics. This course satisfies one of the elective requirements for the African and African American Studies minor.

79-372 The Rise and Fall of Pittsburgh Steel

Intermittent: 6 units
For over 150 years, the Pittsburgh region was world-renowned for the scale and intensity of its iron and steel manufacturing complex. This mini course will trace the origins, explosive growth, stagnation and ultimate collapse of this remarkable industrial complex. Students will gain an understanding of Pittsburgh's rich industrial history - what makes it "The Steel City," understand the emergence and evolution of iron and steel making technology, appreciate the impact of Pittsburgh's iron and steel industrialization on living and working conditions for workers, and analyze the factors that drove the emergence of Pittsburgh steel then to its decline and collapse. The course is structured loosely around a set of periods in Pittsburgh's history through which key themes are drawn.

79-373 Culture and Revolution: The Socialist Experiment in Soviet Russia

Intermittent: 6 units
In 1917, revolutionaries took power in Russia to create the world's first socialist society. In a series of radical and unprecedented experiments, they attempted to remake every phase of social and cultural life, from sexual relations to art to education. How could life be lived in a new way and better way? What values should replace the old traditions based on patriarchy and class hierarchy? How could ordinary people be empowered to create a new culture? In this course, we will study the 1920s, a riotous decade of experimentation in cultural, social, and political life.

79-375 Science & Religion

Intermittent: 6 units
A widely held notion is that science and religion are perennially at "war" with one another. Debates over evolution, and more recently climate change, are cited as examples, while predictions that science will eventually make religion obsolete are at least as old as the Enlightenment. Nevertheless, both science and religion continue to thrive in the 21st century, which raises the question of whether these two ways of seeing the world might, for some people at least, be more complementary than conflictual. We'll explore the history of the relationship between science and religion and the different "ways of knowing" employed by each. Some common assumptions will be critically examined as we consider questions of fact and value, and the competency of science and religion to address the major challenges of our day.

79-377 Food, Culture, and Power: A History of Eating

Intermittent: 9 units
How can human societies ensure that 8 billion people have enough good food to eat without exploiting people or the planet? This course will start with the assumption that the answer to that question requires not only technological innovations, but also an understanding of the cultural and political dimensions of food. For the first half of the course, we will explore the history of human eating, starting in deep time and then moving toward the present, considering along the way the historical evolution of food production and consumption, paying attention to both cultural diversity and cultural exchanges of foods and cuisine. Students will pursue individual research projects focused on a topic of their choose related to major course themes during the second half of the semester. Evaluation based on in-class participation, analytical reflections on weekly readings, and the research paper.

79-378 Gender in South Asia

Intermittent: 9 units
This course introduces students to women's position and gender relations in South Asia from a historical perspective. Using gender as a lens of examining the past, we will examine how politics of race, class, caste and religion affected and continue to impact women in South Asian countries, primarily in India, Pakistan, Bangladesh and Sri Lanka. Attention is drawn to the processes by which gender is socially constructed, the prevalent forms of gender disparity and discrimination, as well as the factors of change to which these are subject. These themes are situated in the broader context of the region's history, society, and culture. We will reflect upon current debates within South Asian women's history in order to examine some of the issues and problems that arise in re-writing the past from a gendered perspective. The chronological focus of this course is on the condition of women in the subcontinent from the ancient times till the present day. Students are encouraged to make comparisons between women's position and gender relations in South Asia with the corresponding situations in their societies. Analysis and appreciation of the cross-cultural aspects of women's position and gender disparity constitute integral elements of the envisaged learning outcomes of this course. It would be of general interest to all students concerned about women's position and gender issues, as well those interested in South Asia. To help us evaluate the different historical and temporal experiences of South Asian women, this course will extensively use primary documents, secondary readings, films, and contemporary newspaper and Internet articles. Students will be required to actively engage and participate in class discussions and group debates, which will form a substantial part of individual evaluations. This course fulfills Dietrich College's "Perspectives on Justice and Injustice" general education requirement.

79-379 Extreme Ethnography

Intermittent: 9 units
Observation, participation and direct experience of "the field" are hallmarks of anthropological ways of knowing, and their representation has played a foundational role in ethnographic writing both past and present. Yet reflexive and postmodernist explorations of these topics have triggered contentious debates over the nature of anthropology as a scientific or humanistic enterprise, and over its ethical, political and epistemological value. In this seminar, we will approach such questions through an exploration of the extremes of ethnographic fieldwork and writing. We will consider such topics as: the colonial history and politics of explorers and ethnographers; liminality and the place of extreme experience and #8212;such as cultural dislocation, violence, derangement, intoxication, sex, possession, and dreaming-in fieldwork and writing; field-notes as an ethnographic genre, and their relationship to "official" published ethnography; ethnographic surrealism and surrealist ethnography; the dimensions of sensory experience (visual, auditory, olfactory, etc.) in fieldwork and ethnography; collecting and the powers of "exotic" objects; inter-subjectivity and its implications; and experimentation with alternate ethnographic forms, such as autobiography, film, diary, and poetry.

79-380 Hostile Environments: The Politics of Pollution in Global Perspective

Intermittent: 9 units
Earth is an increasingly toxic planet. Fossil-fueled industrialization, chemical engineering, and resource-intensive consumerism have generated immense wealth, but they have also left long-term, cumulative legacies of toxic pollution and ecological harm. While these legacies affect everyone, their impacts are by no means evenly distributed. In this course, we will use the tools of anthropology, political ecology, and history to examine experiences of toxic exposure in different parts of the world, including Pittsburgh. Our analyses will ask how inequalities of race, class, gender, and ability shape exposure as well as how cultural differences create divergent understandings of ecology, health, and their interrelationship. We will consider, moreover, how these disparities shape what people know about pollution and whether/how they demand accountability for it. Cases we explore will range from acute industrial disasters (and their aftermath) to the harms experienced by other-than-human beings to the gradual, often invisible exposures that affect all of us to varying degrees.

79-383 The History of Capitalism

Intermittent: 9 units
What is capitalism? How does it differ from systems that preceded it, and how did it come to revolutionize the globe? This course will cover the global development of capitalism from the 16th century to the present. We will examine the theories of Karl Marx and Adam Smith, who both attempted to theorize the new system of labor organization. We will look at how the transition from feudalism to capitalism took place, including the role of new world slavery, commodity production, dispossession of the peasantry, and changes in the household and gender relations. We will examine "globalization," the latest dynamic phase of capitalism and its impact on people. Finally, we will discuss the advent of robotization, the loss of industrial jobs, and the potential impact of casual labor, low wages, and unemployment on democracy and the rise of a technocratic elite.

79-385 Out of Africa: The Making of the African Diaspora

Intermittent: 9 units
The trans-Atlantic slave trade dispersed Africans in the New World and the Old, creating the African Diaspora. Generations of scholars have disputed whether descendants of enslaved Africans could have retained any of their African culture and/ or fully assimilated into New World societies. This course will combine a chronological, geographical, and a thematic approach to the creation of new Africa-inspired cultures in both Africa and the African Diaspora. It will explore societies in the Caribbean, the US South, Latin America, and Africa and address themes, such as Africanisms, African survivals, African retentions, Creole languages, and religion.

79-387 General Francisco Franco: Fascism and its Legacies in Spain

Intermittent: 6 units
Francisco Franco was Europe's longest-ruling dictator. He ruled over Spain from 1939 to 1975. This course will examine the social and cultural context of the rise of Fascism in Spain. We will focus especially on the colonial legacy of Spanish fascism, the violent overthrow of the democratic II Spanish Republic and Franco's seizure of power during the bloody Spanish Civil War. We will have the opportunity to learn about the international volunteers, including from the United States, who joined the fight against fascism and how the Spanish Civil War was decisive in shaping WWII. We will also discuss the decades of Franco's lengthy dictatorship, the social and cultural politics in transitioning Spain to democracy after his death and the legacy of Spanish Fascism in contemporary Spain. In addition to class lectures, students will become familiar with these themes through the reading and analysis of historical texts and memoirs, participation in a workshop with the director of the Abraham Lincoln Brigades Archives, the viewing of documentary film, and by engaging with the current volatile debates in Spain about the historical memory of fascism.

79-388 Sports in American Culture

Intermittent: 9 units
[Note: students who have taken course number 79-388, with former titles, Race, Gender, and the Politics of Sports in America since 1900 or 79-388, History of Sports in the United States, may not enroll.] In this course, we will survey the history of sport in the United States from the late nineteenth-century into the twenty-first century. While we will discuss star athletes, famous games, and popular teams, we will focus more so on evaluating the significance of sport in American history. Specifically, we will analyze sports through four themes: westernization/globalization; the emergence and development of Capitalism; industrialization and technological change; and democratization. By doing so, we will examine the changing power relationship between the athletes, owners, and consumers (fans). We will pay particular attention to athletes' changing role in American society and the public's growing expectation that these men and women speak or act on social and political issues. By semester's end, students will look beyond box scores and critically assess how sports has reflected larger trends in our society as well as its continued influence on American life.

79-391 Nations and Nationalisms in South Asia

Intermittent: 9 units
This course examines the role which nationalism has played in the formation and political development of the nations and states of South Asia. It, therefore, examines nationalist forces in anti-colonial struggles, in post-colonial state formation and in contemporary political developments. It will be of relevance to students with an interest in political developments in Asia, with particular reference to forms of nationalism and nation-building.

79-392 Europe and the Islamic World

Intermittent: 9 units
Europe and the Islamic World explores the complex relationship between (Christian) Europe and Islamic civilization, from the conquest of the Byzantine Levant to modern-day Islamic immigration into Europe. The course will focus on a few landmark events in European/Islamic relations, such as the crusades, as well as various intellectual models describing European/Islamic relations over time. The course will also focus on developing research, writing, and documentary analysis skills relevant to the study of history.

79-393 Institutions of the Roman Church

Intermittent: 9 units
This course is only offered at Carnegie Mellon's campus in Qatar. This course will explore the history of the Catholic Church, with a particular focus on the church as an evolving European institution. Although we will have to deal with theological arguments at times, abstract theology will not be the focus of the course. Instead, the course will be centered on two main questions. First, how did the Catholic Church manage to persist, for nearly two millennium, as a stable institutional entity within an ever-changing European milieu? Secondly, to what degree did the Catholic Church influence and/or reflect developments within Western European culture?

79-394 Exploring History through Geography

Intermittent: 6 units
For studying the past, space can be as important as time. Digital mapping and GeoLocation technologies influence our everyday interactions and perceptions of the world around us. Historians are thinking about how these technologies can change their fields of study, too. Through the "spatial turn" in the Humanities and Social Sciences, historians are using spatial experience to think more deeply about the meaning of place and space. Visualizing spatial relationships via new technologies can offer meaningful new ways to approach historical questions. This course will consider viewpoints from the discipline of Geography and explore the impact of new methods in the Digital Humanities, including the impact of digital tools such as Geographic Information Systems (GIS).

79-395 The Arts in Pittsburgh

Intermittent: 9 units
This course will examine the arts in Pittsburgh, both historically and in the present. We will pay special attention to musical events and art exhibits scheduled by the city's concert halls and art museums, several of which we will attend as a group. Our "curriculum," in other words, will derive partly from the city's artistic presentations themselves, which will provide a springboard for reading assignments, discussions, a small research project (which I will work out individually with each of you), and one or two essay exams. The History Department will pay for students' admission to all museums. However, students will be charged a supplemental fee (at discounted prices) to help subsidize the considerable expense of purchasing tickets for performances by the Pittsburgh Symphony, Pittsburgh Opera, Pittsburgh Ballet, Chamber Music Pittsburgh, or other musical organizations. Attendance at all musical events and art exhibits is required.

79-396 Music, Art, and Society in 19th and 20th Century Europe and the U.S.

Intermittent: 9 units
This course will explore the interrelations between society, classical and popular music, and art in the nineteenth and early twentieth centuries in Europe and the United States. We will examine the importance of different musical forms in the life of society and how music and art reflected changing political and cultural consciousness in several national settings. We will also analyze trends in artistic expression by examining the collections and historical development of several notable European and American art museums. The "curriculum" in other words, will derive from the artistic presentations themselves and #8212; symphonies, operas, chamber music, ballet, and art exhibits and #8212; which will provide a springboard for reading assignments, discussions, a personal artistic journal, and written assignments that will help you synthesize your diverse forays into the history of music and art. In addition to visiting Carnegie Museums of Pittsburgh, students will be taking to the performances of the CMU School of Drama, Pittsburgh Symphony, Pittsburgh Opera, chamber music concerts, performances of the Pittsburgh Cultural Trust. A supplemental fee of $170 will be charged to help subsidize the considerable expense of purchasing tickets for concerts and performances.

79-400 Global Studies Research Seminar

Fall: 12 units
This research seminar is the capstone course for Global Studies majors. The course is designed to give you a chance to define and carry out a research project of personal interest. The first few weeks of the course will be devoted to developing a research topic and locating sources. We will then work on how to interpret and synthesize sources into a coherent and compelling thesis before you begin drafting your paper. Your research may be based on in-depth reading of a body of scholarly work, field notes from ethnographic observations, archival research, analysis of literary or visual media, or some combination of these sources. Incorporation of some non-English language sources is strongly encouraged where possible. Independent work, self-initiative, participation in discussion, and peer evaluations are required. There are several interim deadlines that will be strictly enforced in order to ensure successful completion of the course.

79-420 Historical Research Seminar

Fall: 12 units
The purpose of this research seminar is to help students conceptualize, design, organize, and execute a substantial research project that embodies and extends the knowledge and skill set they have been developing as History majors at Carnegie Mellon. The identification, collection and interpretation of relevant primary source data are integral parts of this intellectual task. Students will hone written and oral presentation skills, deepen their command of research methodologies and strategies, and sharpen their abilities as a constructive critic of others' research. The seminar seeks to develop these intellectual skills through a combination of in-class, student-led discussions of everyone's research-in-progress, and regular individual consultations with the instructor.
Prerequisite: 79-200 Min. grade C

79-449 EHPP Capstone Course

Fall: 12 units
In this Fall 2023 capstone course, Ethics, History, and Public Policy majors will carry out a collaborative or individual research project that examines a compelling current policy issue that can be illuminated with historical research and philosophical and policy analysis. Students will develop an original research report based on both archival and contemporary data and present their results in a public forum at the end of the semester. Please note: this semester we are experimenting with a more flexible set of research options for EHPP students, rather than a single project topic that all students are required to work on. Collaborative projects in groups of 2-3 students are encouraged, but individual projects that integrate historical, ethical, and policy perspectives are permissible too.

79-452 Women's Bodies and Cultural Politics

Intermittent: 3 units
This course explores the fraught, often shameful, often triumphant, and sometimes deadly cultural ideas and expectations around cis-gendered women's bodies. We want to explore what the stories we attach to female bodies mean, who they serve, and whether they are changeable. Are our ideas derived from science or culture? And why might it matter? Built from a popular U.S. based-course on the Pittsburgh campus, this course aims to bring feminist analysis around American cis-gendered women's bodies to an audience in Doha, and asks you to build, through class discussion and assignments, your own analyses of how these ideas and concepts work in your own culture. You will no doubt come to different conclusions, which is the goal: for you to think independently and analytically, to build your own ideas. The course is organized topically. We will learn some reproductive anatomy and biology (including the menstrual cycle), and also survey reproductive politics, sexuality, gender-based violence, and a topic of your choice. It will be heavily discussion based. No prerequisites or prior experience with this material needed and #8212;open to all.

79-453 Global Water and Development

Intermittent: 3 units
Water is necessary for all forms of life on Earth. An estimated 1 billion humans do not have satisfactory drinking water; an estimated 2 billion do not have access to adequate sanitation facilities for human health, safety, and dignity. For more than a hundred years, to address social inequalities in access to water, international organizations and scholars have created their own theories and ideas about providing water. This international community points out the social and cultural implications of technical provision of water resources. These debates about "development" showcase diverse theories, recommendations, and contradictions. The purpose of this course is to introduce students to critical studies of water and development. We will consider complex stories of social change, including unintended consequences; human and environmental impacts; and debates among experts.

79-454 The TransOceanic Railway

Intermittent: 3 units
This course is an introduction to railway restructuring and privatization, which arguably began in exactly 1990 with the privatization of Argentina's railways. The Argentine model has been replicated on other continents and in many settings and is modeled on the successful USA model of private ownership and operation of freight rail, which is generally considered a model for the world. Conversely, passenger rail in the USA almost disappeared while in the UK it has enjoyed a spectacular run with a doubling of ridership since the privatization of its railways in roughly the same era, i.e., the Thatcher years. The UK's model has been replicated in various forms throughout Europe and beyond.

79-465 The Arts in Qatar

Intermittent: 9 units
This course will examine the arts in Qatar, both historically and in the present. We will focus especially on art exhibits and musical events scheduled by the city's museums and concert halls during the Spring 2020 semester. The "curriculum" will derive from the artistic presentations themselves, which will provide a springboard for reading assignments and research papers in the history of music and art. We will also examine the historical development of cultural institutions in Qatar.

79-470 Simulating Conflict Resolution

Intermittent: 3 units
This course is only offered at Carnegie Mellon's campus in Qatar. This pass-fail, 3-credit course for the Qatar campus is designed to prepare students for a capstone event: an international conflict resolution exercise, to be held in the 2018 Spring semester, that simulates a current Middle Eastern crisis. The course will consist of two parts. First, students will meet weekly with an instructor for 1 hour/week to discuss the historical and modern Middle East, so that they will be prepared to participate meaningfully in the simulation. For these classes, students will be expected to complete and discuss readings prepared by the instructor. Secondly, students will participate in the simulation exercise in late spring, taking the role of one of the Middle Eastern actors (these will be decided ahead of time) and role-playing their nation's response to the specific crisis scenario. Finally, after the simulation, students will submit to the instructor a reflection paper on what they learned from participating in the event. Suggested pre- or co-req: Conflict Resolution (80-242 or 70-321).

79-491 Independent Study

Intermittent
An Independent Study is meant for students with a special interest in an area not covered by a formal history course. Readings and other work are negotiated between the student and an individual faculty member.

79-505 Internship: Social & Political History

All Semesters
The Social and amp; Political History program strongly encourages students to locate internship opportunities in Pittsburgh or elsewhere that complement their historical interests (as, for example, in a museum or historical society) or in areas of policy research that complement their historical interests (as, for example, in a government agency or non-profit organization). To earn academic credit for their internship, students will be required to maintain a weekly journal; write a short critical reflection on how the internship connects to their academic interests; and share their experience with other Social and amp; Political History majors. The Academic Advisor will assist students with matching their interests to local organizations. SPH students can earn up to 9 units in each internship. Please note, however, that internship credits (students may complete up to three internships) do not count toward fulfillment of course requirements for the SPH major (though the units do count toward graduation).

79-506 Global Studies Internship

Fall and Spring
This course provides Global Studies majors with a chance to explore global connections in Pittsburgh. Majors, working in close consultation with the Global Studies director and advisor, will arrange an internship with a non-governmental organization (usually in Pittsburgh) whose mission has a global reach. This could include an organization that supports projects in other countries, works with immigrants in the Pittsburgh area, or participates in international policy making/governance. We strongly encourage students to seek out opportunities that require use of a second language. Students will be required to maintain a weekly journal; write a short critical reflection on how the internship connects to academic work; and share their experience with other Global Studies majors. Global Studies advisor and director will assist students with matching their interests to local organizations and identifying an on-site supervisor available to collaborate in the ongoing and final evaluation of the student's work.
Prerequisite: Students must be Global Studies majors and obtain permission for the proposed internship from the Global Studies advisor.

79-510 Global Studies Guided Reading

All Semesters: 3 units
Global Studies Guided Reading (Fall 2023: The Environment and Climate Change) The main goal of this seminar is to encourage students to engage deeply with four books on a distinct topic, and discuss them under the guidance of the professor. You could think of this seminar as a more academically-oriented monthly book club! The small size of the seminar allows for a deep immersion in the readings, and for the development of critical thinking among students. The four books are selected by the professor, and the selection is based on several criteria, including the books' impact, current relevance, regional foci, as well as diversity and inclusivity reflected by the authors' different social, racial, and geographical backgrounds. The topics of the seminars each semester will vary, but all will have global relevance. (For instance, the Fall '22 seminar will focus on the environment and climate change, and the Spring '23 seminar will deal with the topic of cultural and historical memory). Important: In order to encourage all of the students' constant participation and their deep engagement with the books, as well as foster a sense of intellectual community, this seminar will be strategically small. For these reasons, only the GS majors will be allowed to register for this monthly guided reading. Meets monthly on Fridays.

The Major in Information Systems

Joe Mertz, Faculty Director

Gary DiLisio, Director of Undergraduate Education

Correy Dandoy, Senior Academic Advisor and Communications Manager

Jessica Lutz, Academic Advisor

Sarah Avery, Academic Advisor

Susan Miller, Senior Business Administrator

Shawna Pace, Academic Program Manager

Cassie Conrad, Administrative Coordinator

Email: isinfo@andrew.cmu.edu
Location: Hamburg Hall 3031
www.cmu.edu/information-systems (http://www.cmu.edu/information-systems/)

Did you enjoy computer science or more technical courses in high school, but are mostly interested in the practical and social applications of technology? Do you have a passion for business and want to use advanced technology to change how companies work? Do you want to learn how data and technology can be harnessed for social good?

Carnegie Mellon University's **Information Systems (IS) program,** a joint degree program between the Heinz College and Dietrich College of Humanities and Social Sciences is strongly technical, drawing from Carnegie Mellon's leadership in computer science, human-centered design, business management and software engineering. It is deeply rooted in the humanities and social sciences, allowing students the lifelong benefits of a rich liberal arts education. And it provides pathways for students to find their own Information Systems niche through advanced study and research with leading researchers. As a result, our graduates are uniquely positioned to envision and drive the positive organizational change that technology makes possible.

Artificial intelligence. Machine learning. Deep learning. Big data. Social networks. Neural networks. Robotics. Automated voice assistants. Blockchain. Driverless vehicles.

Do you want to use technologies like these to benefit companies, governments, and society? CMU offers the world's best undergraduate IS program and will help you do just that. In fact, many of the world-changing technologies listed above were invented here on campus—there is no better place to become a tech leader than CMU.

The field of Information Systems involves the effective design, delivery, and use of information and communications technologies to solve problems for companies, governments, and society. Equally, it is about understanding and measuring the impacts of these technologies on people and communities so they can be deployed ethically.

As an IS student, you will build a solid foundation in computing, communications, and software development. You will also study social sciences and organizational theory to develop "big picture" critical thinking and understand the human impacts of technological change. This blend prepares you to take a leading role in our digital future. The flexible nature of the program encourages students to explore their own interests through program electives, study in a contemporary concentration or through optional second majors and minors.

IS students are well prepared to pursue graduate work in a wide range of fields. For students interested in master's degree-level graduate work at Carnegie Mellon, there are many possibilities, including accelerated Masters degree programs in Information Systems Management, Human Computer Interaction, Information Security Policy and Management, Engineering Technology and Innovation Management, and Business Administration.

IS graduates continue to be in high demand in the information-age workplace. There has been a strong job market for IS students in recent years, and national trends indicate that this is likely to continue. IS majors often take jobs in consulting companies, major software firms, large corporations, and start-up companies. Internship opportunities closely parallel the job market.

In addition to General Education Requirements and basic prerequisites in Mathematics and Computer Science, The IS program curriculum includes:

- A broad grounding in humanities and social sciences to promote self-directed learning, critical thinking, and interdisciplinary problem-solving.
- An Information Systems Core to provide the technology, project management, and business-facing skills needed to design and build effective real-world systems solutions.
- An Information Systems Breadth focused on professional communications, quantitative analysis, and how technology functions in society.
- A Concentration that gives you the flexibility and agency to gain expertise in a supporting area and define your own niche in IS.

The IS major is the perfect place for you if you are passionate about using technology for positive gains across society, both economic and humanistic.

IS Commitment on Diversity & Inclusion:

Diversity, equity and inclusion are core values of the Information Systems Program. We strive to foster a community that promotes inclusiveness and a positive sense of belonging among all students within the program. Together, we value and celebrate the unique identities of our students and aim to create a culture where they feel empowered to share their experiences and ideas, and engage in meaningful academic, leadership, and social opportunities. We aim to elevate cultural awareness through education, programming, and an environment that embraces differences.

Study Abroad Options in Information Systems:

Given the importance of globalization, we encourage students to consider expanding their international experience by spending a semester studying abroad. The IS program is very flexible in allowing students to pursue these opportunities. With careful planning, study abroad is possible during most semesters. Students interested in study abroad should talk with the IS Academic Advisor to help plan an appropriate course of study. With prior approval, study abroad courses may be applied to major requirements.

Information Systems as Additional Major or Minor:

Information Systems is not available as either an additional major or minor.

Curriculum

The Information Systems major is offered only as a Bachelor of Science (B.S.) degree. In addition to major requirements outlined below, all Information Systems students must fulfill the General Education requirements for the Dietrich College of Humanities and Social Sciences. A total of 360 units is required for the degree.

Requirements are subject to revision. Advisor approval is required for each student's major curriculum plan. Any proposed course substitutions to courses required for the IS major must be approved in advance by the IS Academic Advisor.

Technical Core (Prerequisites)

Information Systems requires completion of prerequisite courses in Mathematics and Computer Science. All prerequisites must be successfully completed prior to the start of Fall semester, junior year.

Mathematics

Complete one of the following math courses:

		Units
21-112	Calculus II (pre-requisite of 21-111)	10
21-120	Differential and Integral Calculus	10
21-127	Concepts of Mathematics	12
21-240	Matrix Algebra with Applications	10
80-210	Logic and Proofs	9

Computer Science

Three Computer Science courses are required. To maintain normal progress toward the Information Systems degree, students must complete 15-121 Introduction to Data Structures prior to the start of Spring Semester, sophomore year.

Students entering the program as freshmen will have the option to complete a Computer Science Placement Test. Depending on appropriate Advanced Placement credit and/or results of the Computer Science Placement Test, entering students may place directly into 15-112 (http://coursecatalog.web.cmu.edu/search/?P=15-112) or 15-121 (http://coursecatalog.web.cmu.edu/search/?P=15-121). 15-110 (http://coursecatalog.web.cmu.edu/search/?P=15-110) is taken as the first Computer Science prerequisite unless a student places directly into 15-112 (http://coursecatalog.web.cmu.edu/search/?P=15-112) or 15-121 (http://coursecatalog.web.cmu.edu/search/?P=15-121). Students that do not gain a placement into 15-112 (http://coursecatalog.web.cmu.edu/search/?P=15-112) or 15-121 (http://coursecatalog.web.cmu.edu/search/?P=15-121) must begin the sequence with 15-110 (http://coursecatalog.web.cmu.edu/search/?P=15-110) and must complete it with a grade of D or above prior to entering 15-112 (http://coursecatalog.web.cmu.edu/search/?P=15-112).

		Units
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
15-121	Introduction to Data Structures	10

Note: Students cannot receive credit for both 15-104 Introduction to Computing for Creative Practice and 15-110 Principles of Computing. Students may also take 15-122 (http://coursecatalog.web.cmu.edu/search/?P=15-122) Principles of Imperative Computation in place of 15-121 (http://coursecatalog.web.cmu.edu/search/?P=15-121) Introduction to Data Structures but should first consult with their academic advisor prior to doing so.

Information Systems Core

In the Information Systems Core, students will learn the basic skills necessary to analyze, design, implement, and test high-quality, cost effective information systems. The Information Systems Core consists of seven courses (not including 67-100 and 67-200).

Complete all of these courses:

		Units
67-100	Information Systems First Year Colloquium	1
67-200	Information Systems Research Colloquium	1
67-250	The Information Systems Milieux (Spring Semester Only)	9
67-262	Database Design and Development (Fall Semester Only)	9
67-272	Application Design and Development (Spring Semester Only)	12
67-373	Information Systems Consulting Project (Spring Semester Only)	12
17-313	Foundations of Software Engineering	12
95-422	Managing Digital Transformation	9

Complete one of these three courses:

		Units
05-391	Designing Human Centered Software	12
05-410	User-Centered Research and Evaluation Not open to first-year students.	12
05-452	Service Design	12

Information Systems Breadth

In the Information Systems Breadth, students will study key areas fundamental to understanding and solving problems in information systems. At least one course is required from each of the following categories:

Professional Communications

Information systems professionals communicate with a wide range of people in most organizations and often facilitate communications between diverse groups of stakeholders. Consequently, the most successful professionals typically are those with strong communication skills. These courses help students see that the structure and presentation of information affects how well (and how easily) it can be understood and used.

Complete one of the following courses:

		Units
05-317	Design of Artificial Intelligence Products	12
36-315	Statistical Graphics and Visualization	9
51-261	Communication & Digital Design Fundamentals	9
or 51-262	Design Center: Communication and Digital Design Fundamentals	
67-265	Design Fundamentals: Shaping Interactions and Experiences	9
67-336	Building Data Visualizations in to Information Systems	9
67-338	Information & Grid Design	9
70-321	Negotiation and Conflict Resolution	9
70-340	Business Communications	9
70-342	Managing Across Cultures	9
70-350	Acting for Business	9
76-270	Writing for the Professions	9
84-250	Writing for Political Science and Policy	9
88-230	Human Intelligence and Human Stupidity	9
88-231	Thinking in Person vs. Thinking Online	9
88-341	Team Dynamics and Leadership	9
or 70-341	Team Dynamics and Leadership	

Quantitative Analysis and Research Methods

This area focuses on decision making and data analysis — essential to development of useful information systems. This area exposes students to analytic methods in the social sciences and quantitative methods for approaching complex methods.

Complete one of the following courses:

		Units
21-257	Models and Methods for Optimization	9
21-325	Probability	9
36-202	Methods for Statistics & Data Science	9
36-219	Probability Theory and Random Processes	9
36-225	Introduction to Probability Theory	9
36-235	Probability and Statistical Inference I	9
36-303	Sampling, Survey and Society	9
36-309	Experimental Design for Behavioral & Social Sciences	9
36-315	Statistical Graphics and Visualization	9
36-350	Statistical Computing	9
36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9
67-285	Across the Universe from Intelligent Agents to Users	9
67-364	Practical Data Science	9
73-265	Economics and Data Science	9
80-305	Game Theory	9
80-306	Decision Theory	9
88-223	Decision Analysis	12
88-251	Empirical Research Methods	9
88-252	Causal Inference: from Data to Decisions	9
88-275	Bubbles: Data Science for Human Minds	9
88-300	Programming and Data Analysis for Social Scientists	9
94-216	Introduction to Decision Analytics and Systems	6

Innovation and Entrepreneurship

The focus of this area is to apply disciplined techniques to generate ideas that have value in a market, and bring them through design, feasibility testing, and frequent revision, towards a potential launch. Students must complete 67-272 Application Design & Development in order to fulfill one of the courses below towards their Innovation and Entrepreneurship requirement.

Complete one of the following courses:

		Units
05-470	Digital Service Innovation	12
17-356	Software Engineering for Startups	12
67-443	Mobile Application Design and Development	12
94-491	Lean Innovation Lab	12

Information systems concentration

The study of Information Systems can take many paths; **Concentrations** allow students to find the path that best suits their plans and aspirations. They also allow students to establish relationships with leading researchers in their area of interest. It is strongly recommended to determine your concentration requirement by the end of the sophomore year to ensure timely completion by the conclusion of the fourth year.

IS Concentrations include:

- Data Analytics
- Health Information Systems
- Technology & Arts Enterprises
- Technology & International Development
- User Experience (UX) Design

Alternatively, students may choose from an approved list of minors or additional majors, including those offered through the Integrative Design, Arts, and Technology (IDeATe) (https://ideate.cmu.edu/undergraduate-programs/) initiative that blend information systems and the arts as only Carnegie Mellon University can.

Additional Majors:

- Artificial Intelligence (https://www.cs.cmu.edu/bs-in-artificial-intelligence/additional-major/)
- Behavioral Economics (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/departmentofsocialanddecisionsciences/)
- Business Administration (http://coursecatalog.web.cmu.edu/schools-colleges/tepper/undergraduatebusinessadministrationprogram/)
- Cognitive Science (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/departmentofpsychology/#cognitive_sciencetext)
- Computational Biology (https://cbd.cmu.edu/education/undergraduate/minor-in-computational-biology.html)
- Computational Finance (http://coursecatalog.web.cmu.edu/intercollegeprograms/#majorminorincomputationalfinancetextcontainer)
- Computer Science (http://coursecatalog.web.cmu.edu/schools-colleges/schoolofcomputerscience/undergraduatecomputerscience/#csadditionalmajorminortext)
- Decision Science (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/departmentofsocialanddecisionsciences/#minorstextcontainer)
- Economics (http://coursecatalog.web.cmu.edu/schools-colleges/tepper/undergraduateeconomicsprogram/#dualdegreeadditionalmajortext)
- Economics & Statistics (https://www.cmu.edu/dietrich/statistics-datascience/academics/undergraduate/majors/econstat.html)
- Engineering & Public Policy (http://coursecatalog.web.cmu.edu/schools-colleges/collegeofengineering/departmentofengineeringandpublicpolicy/#doublemajorcurriculumtext)
- Human-Computer Interaction (http://coursecatalog.web.cmu.edu/schools-colleges/schoolofcomputerscience/humancomputerinteractionprogram/#humancomputerinteractionadditionalmajortextcontainer/#humancomputerinteractionminortext)
- Linguistics (https://www.cmu.edu/dietrich/linguistics/undergraduate/major.html)
- Policy & Management (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/departmentofsocialanddecisionsciences/#minorinpolicyandmanagementtextcontainer)
- Robotics (http://coursecatalog.web.cmu.edu/schools-colleges/schoolofcomputerscience/addlmajorsminors/#roboticsadditionalmajorminortext)
- Statistics (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/departmentofstatistics/#minortext)
- Statistics and Machine Learning (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/departmentofstatistics/#statsmltext)

Approved minors:

- Artificial Intelligence (https://www.cs.cmu.edu/bs-in-artificial-intelligence/minor/)
- Behavioral Economics (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/departmentofsocialanddecisionsciences/)
- Business Analytics & Optimization (http://coursecatalog.web.cmu.edu/schools-colleges/tepper/undergraduatebusinessadministrationprogram/#minorinbusinessanalyticsoptimizationtext)
- Computational Biology (https://cbd.cmu.edu/education/undergraduate/minor-in-computational-biology.html)
- Computational Finance (http://coursecatalog.web.cmu.edu/intercollegeprograms/#majorminorincomputationalfinancetextcontainer)
- Computer Science (http://coursecatalog.web.cmu.edu/schools-colleges/schoolofcomputerscience/undergraduatecomputerscience/#computerscienceminortextcontainer/#csadditionalmajorminortext)
- Cybersecurity & International Conflict (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/instituteforpoliticsandstrategy/#minorincybersecurityandinternationalconflicttext)
- Decision Analytics & Systems (https://www.heinz.cmu.edu/programs/decision-analytics-and-systems/)
- Decision Science (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/departmentofsocialanddecisionsciences/#minorstextcontainer)
- Economics (http://coursecatalog.web.cmu.edu/schools-colleges/tepper/undergraduateeconomicsprogram/#dualdegreeadditionalmajortext)
- Engineering Studies (p. 192)
- Financial Management (http://coursecatalog.web.cmu.edu/schools-colleges/tepper/undergraduatebusinessadministrationprogram/)
- Human-Computer Interaction (http://coursecatalog.web.cmu.edu/schools-colleges/schoolofcomputerscience/humancomputerinteractionprogram/#humancomputerinteractionminortext)
- Humanities Analytics (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/departmentofenglish/#minorstext)
- IDeATe: (https://ideate.cmu.edu/undergraduate-programs/game-design/)Animation & Special Effects (https://ideate.cmu.edu/undergraduate-programs/animation-special-effects/)
- IDeATe: (https://ideate.cmu.edu/undergraduate-programs/game-design/)Design for Learning (https://ideate.cmu.edu/undergraduate-programs/design-for-learning/)
- IDeATe: Game Design (https://ideate.cmu.edu/undergraduate-programs/game-design/)
- IDeATe: Immersive Technologies in Arts & Culture (https://ideate.cmu.edu/undergraduate-programs/immersive-technologies-in-arts-culture/)

- IDeATe: (https://ideate.cmu.edu/undergraduate-programs/game-design/)Innovation & Entrepreneurship (https://ideate.cmu.edu/undergraduate-programs/innovation-and-entrepreneurship/)

Academic Policies

Transfer into Information Systems

Applications will be considered based on the following criteria:

- Completion of 15-112 Fundamentals of Programming and Computer Science with final grade of 'B' is required; a final grade of 'A' is preferred
- Completion of 15-121 or 15-122 is preferred, with a grade of 'B' or higher
- Strong record of academic performance at Carnegie Mellon (minimum QPA of 3.5 required)
- Personal statement (1-2 pages single spaced) on the following topic: *In your personal statement, please describe how your academic and career goals relate to the Information Systems Program. Please discuss your previous experiences that have led you to pursue the IS major, and how IS aligns with your future goals and aspirations. You may also discuss any other IS related experiences (e.g. internships, course projects, research, co-curricular experiences, etc.) or relevant coursework.*
- Interview with an IS Academic Advisor: IS advisor appointments should be made with the appropriate advisor (based on student last name) via the links on the advising page (https://cms-staging.andrew.cmu.edu/information-systems-4/current-students/advising.html) and should be completed by the deadline set forth for the current semester.
- Sample course plan through graduation (4th semester applicants only) When making your plan, we strongly recommend utilizing Stellic. The only Dietrich General Education course that will be waived is the Grand Challenge Seminar.

Application (https://forms.gle/9XFDdy31avh8LW326/) materials must be submitted no later than the last day of classes of the fall or spring semester. Students admitted into the IS Program will be officially declared in the semester following their application to the IS Program. If admitted, students will be declared as an IS major prior to the start of the following semester. All internal transfer students will be required to take 67-200: IS Research Colloquium during the first fall semester of their IS enrollment.

Students interested in applying for transfer to the Information Systems major should contact an IS Academic Advisor (https://cms-staging.andrew.cmu.edu/information-systems-4/current-students/advising.html) for information regarding availability, application procedures, and deadlines.

Double Counting of Courses

"Double Counting" refers to instances when a course taken to fulfill one requirement counts simultaneously toward a requirement in another major or minor program. Double Counting is permitted in the Dietrich College on a very limited basis. Information Systems students may double count no more than two courses towards an additional major/minor. There is no restriction on double counting for courses satisfying the Dietrich College General Education requirements and IS Prerequisite courses. Students must also adhere to any policy restrictions on double counting enforced by the academic department of the student's additional major or minor.

Course Repeats

Per university policy, when a course is repeated, all grades will be recorded on the official academic transcript and will be calculated in the student's QPA. This is the case regardless if the first grade for the course is a passing or failing grade.

Undergraduate students who wish to repeat a course already passed must obtain approval from the student's Dean or Department Head. When a student takes a course they already passed, only one set of units will count towards graduation requirements.

Faculty

MOHAMMAD AAZAM, Assistant Teaching Professor – Ph.D., Kyung Hee University ; Carnegie Mellon, 2022–

CHADI AOUN, CMU-Qatar Information Systems Area Head & Teaching Professor – Ph.D., Univeristy of New South Wales; Carnegie Mellon, 2015–

HOUDA BOUAMOR , Associate Teaching Professor – Ph.D., Paris-Sud University ; Carnegie Mellon, 2012–

ANIS CHARFI, Associate Teaching Professor – Dr.Ing., Technische Universitat Darmstadt; Carnegie Mellon, 2015–

SUSAN HAGAN, Associate Teaching Professor Emeritus – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2004–

C.F. LARRY HEIMANN, Teaching Professor – Ph.D., Washington University (St. Louis); Carnegie Mellon, 1998–

SHIHONG HUANG, Teaching Professor – Ph.D., University of California, Riverside; Carnegie Mellon, 2023–

NAAMA ILANY-TZUR, Assistant Teaching Professor – Ph.D , Ben-Gurion University of the Negev; Carnegie Mellon, 2023–

DIVAKARAN LIGINLAL, Teaching Professor – Ph.D., University of Arizona - Tucson; Carnegie Mellon, 2009–

SELMA LIMAM MANSAR, Teaching Professor Emeritus – Ph.D., National Polytechnic Institute of Grenoble; Carnegie Mellon, 2007–

JOSEPH S. MERTZ, Program Director & Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1997–

MANORANJAN MOHANTY, Assistant Teaching Professor – Ph.D.,Carnegie Mellon, 2024–

SARA MOUSSAWI, Associate Teaching Professor – Ph.D. , City University of New York; Carnegie Mellon, 2016-–

DANIEL PHELPS, Associate Teaching Professor Emeritus – Ph.D., Florida State University; Carnegie Mellon, 2007–

JULIA POEPPING, Director of Partnership Development – Masters, University of Pittsburgh ; Carnegie Mellon, 2019–

JERIA QUESENBERRY, Teaching Professor & Dietrich College Associate Dean of Faculty – Ph.D., Pennsylvania State University; Carnegie Mellon, 2007–

RAJA SOORIAMURTHI, Teaching Professor – Ph.D., Indiana University; Carnegie Mellon, 2007–

XIAOYING TU, Assistant Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2020–

SAVANID (NUI) VATANASAKDAKUL, Associate Teaching Professor – PhD., University of New South Wales; Carnegie Mellon, 2018–

RANDY S. WEINBERG, Teaching Professor Emeritus – Ph.D., University of Minnesota; Carnegie Mellon, 1998–

The Major in Information Systems Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes *(*https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/*) each semester for course offerings and for any necessary pre-requisites or co-requisites.*

67-100 Information Systems First Year Colloquium

Fall: 1 unit
This IS Colloquium will provide a broad introduction to the Information Systems Program, an exciting program newly joint between Carnegie Mellon's Dietrich College and Heinz College. The IS Colloquium is open only to first-year IS students and is led by an IS academic advisor who facilitates discussions on the field of IS, the program curriculum, and careers, in addition to co-curricular experiences such as internships and study abroad. Because the flexible nature of the IS program encourages students to explore their own interests, we place an emphasis on highlighting a variety of areas within the field of IS. Guest lecturers will include leaders in IS research including Dietrich and Heinz faculty and IS alumni. Additional speakers include the IS career consultant and various campus representatives. Discussions will include students' progress in their first semester, as well as guidance in course planning, creating student Spring semester class schedules, and their overall four-year plan.

67-135 Discover, organize, and synthesize: Building your research toolkit beyond Google

Intermittent: 3 units
The world of academic research literature is growing exponentially across all disciplines, leaving researchers and decision-makers with a conundrum: how do we effectively identify research gaps and how do we make sense of what we already know, given the millions of research articles published every year? This micro course will equip students with techniques and tools for a systematic approach to finding, assessing and making sense of research knowledge, applying principles from well-established synthesis methods. Students will explore the scholarly research in interdisciplinary topics and topics in their own subject areas. Students will gain skills they can apply to any research course, and will be able to use these techniques in their future careers as practitioners for making sound, evidence- and research-based decisions.

67-200 Information Systems Research Colloquium

Fall: 1 unit
The Information Systems Research Colloquium will educate students on research opportunities both in IS and beyond. By the end of the course, students should be able to: · Articulate what undergraduate research looks like at Carnegie Mellon University, and particularly identify the breadth of research opportunities in the field of Information Systems · Demonstrate how to communicate with faculty whose work aligns with individual interests · Describe several career and continuing education opportunities for Information Systems students The Information Systems Research Colloquium is open only to sophomore IS student as well as recent transfer students and is led by an IS academic advisor who facilitates discussions on the various research topics both through IS and other campus constituents.

67-204 Blockchains in Industry

All Semesters: 3 units
Industry experts characterize blockchains as breakthrough technology that has the same transformative power as that of the Internet. Blockchains have the potential to solve a variety of problems that benefit from a decentralized model of trust. This course will help students understand fundamental blockchain concepts and develop industry case studies of blockchain applications to finance, insurance, energy, healthcare, real estate, etc.

67-206 Technology Outreach and Engagement in the Pittsburgh Community

Fall and Spring: 6 units
This course is designed to provide an experiential learning opportunity to CMU students. In this course students will develop material to conduct outreach with children in grades K-12. CMU students will engage with the community, have conversations with community partners and educators, and demonstrate knowledge of civic engagement, cultural identity and diversity / inclusion. Experiential learning through engagement in the Pittsburgh Public Schools community will help CMU students make an impact on younger students, inspiring them to become familiar with and potentially pursue interdisciplinary technology careers.

67-220 Digital Accessibility - Ensuring Universal Access to the Information Society

Fall: 9 units
Digital accessibility addresses a user's ability to easily access an electronic document, a website, or a computer application unhindered by visual, auditory, motor or cognitive impairments or temporal disabilities arising from age, illness etc. Students who takes this course will gain a deep understanding of the diverse problems faced by people with disabilities in their interactions in a digital space and how the use of assistive technologies help them surmount the related accessibility barriers (CT1 and CT3). They will learn about inclusive design principles and how to author content with consideration of design decisions that impact digital accessibility. Besides gaining an understanding of user-centered design principles, the students will learn how to apply Web Content Accessibility Guidelines (WCAG) to design and develop a website (CT2). To cap it, students will learn how to test, evaluate and report conformance of a website with usability principles and accessibility standards. (CT3)

67-223 Digital Trace and Identity

All Semesters: 9 units
This course introduces students to the principles and applications of digital forensics. Students become aware of the digital traces they leave behind and how these traces can be used in forensics. Students are introduced to the typical life-cycle of a digital trace. They develop their practical digital investigation skills in computer laboratory classes by studying this life-cycle with the help of computer tools.

67-235 Puzzles, Games, and Problem Solving

Intermittent: 3 units
Puzzle-based learning (PBL) is a relatively new and model of teaching critical thinking and problem solving. Todays market place needs skilled graduates capable of solving real problems of innovation in a changing environment. A learning goal of PBL is to distill domain independent transferable heuristics for tackling problems. While solving puzzles is innately fun, companies such as Google and Yahoo also use puzzles to assess the creative problem solving skills of potential employees. In this micro-course we will examine a range of puzzles and games. What general problem solving strategies can we learn from the way we solve these examples? Students will emerge from this course with enhanced critial and creative thinking skills

67-240 Mobile Web Design & Development

Fall and Spring: 9 units
The Mobile Web Design and Development course provides a solid web design and development foundation focusing on responsive, user-centered design, and client-side components. Throughout the course, students work with HTML5, CSS3, Twitter Bootstrap, and JavaScript, and learn how the various web components function together. The course utilizes a hands-on approach to guide students through learning and understanding the design and development process. In this course, students work on in-class activities, individual assignments and a group project with a client using the current standards and best practices of web design and development. This course is primarily designed for students with minimal technical experience. By the end of the course, students will be able to plan, design, and implement a basic functioning mobile website/ app.
Prerequisites: 15-112 Min. grade C or 15-110 Min. grade C or 15-104 Min. grade C

67-250 The Information Systems Milieux

Spring: 9 units
Information systems (IS) are changing work practices, reshaping organizations, transforming cultures, and giving new meaning to the ways we see the world. This course is designed to help students understand the role of IS in the enterprise and the means by which these systems are created, utilized and maintained. The course will focus on enterprise information architecture including the components of enterprise strategy, business, application, information, and infrastructure layers. This course provides not only a framework for understanding information systems, but also a language to identify their dynamic complexities and interdependencies.

67-262 Database Design and Development

Fall: 9 units
Data driven decision making is a core process of organizations. In this class students will study the principles of database management systems, their design, and development. Recent alternatives to the classical relational model will also be examined.
Prerequisites: 15-121 or 15-112 or 15-122

67-265 Design Fundamentals: Shaping Interactions and Experiences

Fall: 9 units
This course offers hands-on experience based on theoretical grounding linked to fundamental design practices. The first fundamental idea is stakeholders need an interesting and organized pre-task environment as a precursor to engaging with a task. A pre-task environment is one that invites stakeholders to engage with and stay in a designed space because they can see that they will enjoy performing tasks that meet their goals. This useful, usable, and desirable task environment is developed by exploring compositional guidelines, color theory, and basic typography. With pre-task knowledge in hand, students explore meaning-making that emerges through the synthesis of image, word, and typeface as they design and prototype interactive solutions to problems that real users face, employing user studies and usability evaluations to create effective solutions.

67-272 Application Design and Development

Spring: 12 units
This course provides students with the concepts and techniques to design and develop software applications, and to understand the design process. Students will learn the importance of user-centered design and will develop a prototype of a web application as a course project. In the process of developing the application, students will learn how to design and create relational databases, how to acquire competency in new programming languages quickly, how to use the Model-View-Controller pattern to develop software applications, how to ensure technical quality in software development, and how to apply principles of user-centered design. This course is a required professional core course and is open only to sophomores and juniors in the IS major.
Prerequisites: (15-121 or 15-122) and 67-262

67-279 Introduction to Geographical Information Systems

Intermittent: 6 units
Geographical Information Systems (GIS) allow us to visualize information that uses location. Through displaying layers of information in computer generated maps, we can see, analyze, understand and explore spatial patterns and relationships in new and novel ways. People in many different fields use Geographical Information Systems in their work: for visualizing the environment, human development, demographics, traffic and transportation, public health and many more. In this course, students will learn the basics of GIS through hands-on experience with popular mapping tools. Sources of data, principles of coordinate and projection systems and elementary geo-analysis techniques will be included. Upon completion of the course, students will have the background to begin using GIS techniques in their own areas of interest and will be prepared for further study in advanced GIs courses.

67-285 Across the Universe from Intelligent Agents to Users

Spring: 9 units
The goal of this course is to introduce students to how intelligent agents and similar systems impact and are perceived by users. In this course, we explore different dimensions relating to intelligent agents' design, usability, and user perceptions such as humanness, trust, privacy, bias, human values, emotions, and so on. To do so, we review research articles at the intersection of Information Systems, Psychology and Artificial Intelligence. The course aims to introduce students to the research process and equip them with the necessary tools to design and explore research questions that address pressing issues in the realm of user-agent interaction.

67-306 Management of Computer and Information Systems

Spring: 6 units
The course provides the overall knowledge of how Information Technology departments are managed in organizations of all sizes. It is about the technology people, the necessary best practice processes, and how innovation occurs transforming organizations in the way they operate and compete.

67-309 Special Topics: Information Assurance and Security

Fall: 6 units
Special Topics: Information Assurance is an introduction course for Information Systems students that focuses on information security concepts. This course will be a broad introduction to many aspects of information security that affect computer systems, your everyday life on the internet, your activities - and those of others, and the practices of all organizations using and building information systems. You will learn an introduction to the practice of securing information systems, how organizations manage risk to their information assets, what threats there are to the security of an information systems, strategies for organizational resilience, applicable US cyber laws, and how organizations respond to real incidents. You will hear about some of the major cyber incidents that have shaped the way security is performed by organizations on the internet today, and you will participate through class discussions and homework analyzing important recent cyber issues, real incidents, and internet-scale events. By the end of the class you will be able to analyze systems for security using the language of security professionals and analyze the implications of real world attacks on security systems by applying core information security concepts.
Prerequisites: 15-110 or 15-112

67-319 Global Technology Consulting Groundwork

Spring: 3 units
This course is by invitation only for participants in the Technology Consulting in the Global Community program. For information on the program and how to apply, see URL below.

Course Website: http://cmu.edu/tcingc. (http://cmu.edu/tcingc.html)

67-331 Technology Consulting in the Global Community

Fall
This course is only for participants in the Technology Consulting in the Global Community program. Admitted ONLY BY Permission of Instructor

67-336 Building Data Visualizations in to Information Systems

Fall: 9 units
In an increasingly data-driven world, the ability to effectively understand complex information is crucial for problem-solving and decision-making. This course explores the art and science of designing interactive visualizations within information systems to allow data to be effectively communicated and understood. In other words, to allow the user to more easily and fully grasp the underlying story. Students in this course will gain a comprehensive understanding of the principles and theories underlying information design and visualization, including topics related to information architecture, human computer interaction, user-centered design, human perceptual and cognitive factors and how to leverage them to effectively communicate information. Students will also learn how these visualizations can be integrated into the software design process and how visualizations improve the value of information systems. Through a well-balanced breadth and depth of lectures, exercises and projects, students will learn to use popular design tools and technologies to design information systems and create visualizations that facilitate understanding, analysis, assessment and evaluation of various data sets and selected information systems. One of the important aspects of this course is to foster students' cultural and socioeconomic awareness, promote responsible technology use, and empower them to apply technical skills to address social inequalities for positive societal impact.

67-338 Information & Grid Design

Fall: 9 units
Whether you create, oversee, or want practice solving problems through grid systems for websites, responsive applications, slide presentations, or data visualizations, this course provides the skills and perspective needed to communicate in grid environments: a synthesis of content, structure, and interaction. Grids emerged to address content/structure needs linked to print production, leaving opportunities to fully explore how they can better help stakeholders in interactive environments. As we explore this space, specific skillsets will include: developing a better understanding of visual composition through the grid, using the vocabulary of communication and information design in critique, manipulating typographic variables to create readable documents, learning approaches to invention using image, text, and amp; typography, creating simple to complex grid structures, developing skills in Illustrator, Photoshop, and Adobe XD, adapting simple prototypes to HTML/CSS through basic Bootstrap.

67-346 Blockchain Fundamentals

Intermittent: 6 units
In this course, we will dig into the blockchain technology. We will learn from the basic, single-purpose blockchain (such as for Bitcoin) to general purpose blockchain (which includes a range of use-cases). The course will cover a broad spectrum of blockchain technology, different consensus algorithms, its various real-world use-cases with an eye on developing our own blockchain. We will also understand various challenges with this technology, and a case-study that covers implementation in Python. This would be an interactive course and the students are expected to share ideas and their thoughts.

67-348 Black Mirror - Cultural Representations of Technology

Fall: 9 units
Advances in technology raise a variety of fascinating ethical, cultural, and societal questions often resulting in uncertainties and unanticipated dilemmas. This course provides an opportunity to explore how cultural representations of technology are reflected in society and inform continued technical advancements. Using episodes from Black Mirror - a British anthology television series created by Charlie Brooker - we will explore the depictions of technology and society and its representation. This course will challenge you to think critically about technological change and controversial topics surrounding digital culture and social impact. You will also develop a more sophisticated understanding of the political, economic, and cultural considerations that underlie technological development. Discussions of episodes will be supplemented by popular, critical texts and academic articles. This class is more seminar-based, rather than lecture-based. We will engage critically and constructively in key debates that shape the future of the technology, through in-class discussions, activities, and presentations.

67-364 Practical Data Science

Spring: 9 units
From empirical, to theoretical, to computational science, we are at the dawn of a new revolution and #8212;-a fourth paradigm of science driven by data. Like archaeological remnants, data, by its very nature, is a marker of what happened in the past. How can data be used to better understand this past and what is happening in the present? How can data be leveraged to forecast what will happen in the future? Better still, how can data be used to mold what should happen in the future? In this course we will study descriptive, predictive, and prescriptive methods by which data can be used to gain insight and inform actions of people and organizations. The real excitement of data science is in the doing. This is an application oriented course requiring skill in algorithmic problem solving. We will use Python based data science tools. While prior programming experience with Python will be helpful the course will strive to be self-contained. If you have not programmed in Python before, you need to be comfortable programming in some language (e.g., Ruby, R, Java, C++) and will need to come up to speed with the Pythonic way of problem solving.
Prerequisites: (36-200 Min. grade C or 36-201 Min. grade C) and 15-112 Min. grade C

67-367 Information Warfare

Intermittent: 9 units
In this course, we will examine information warfare through technical as well as strategic, operational, and tactical employment perspectives. This course will address historical aspects of military deception, electronic warfare, computer network operations, operational security, and psychological operations

67-368 User Experience (UX) Research for Product Managers

Fall: 9 units
User Experience (UX) saturates the digital landscape, often acting as the pivotal determinant of user engagement with a product or service. Mastery of UX research is crucial for product managers, serving as the cornerstone for steering development efforts towards the attainment of cutting-edge user experiences. This course is geared towards providing understanding of the pivotal role of UX within the realm of product management, equipping students with the requisite arsenal of tools to research, obtain, and leverage UX insights for the development of products. The curriculum introduces UX principles, and delves in UX research methodologies, and their practical application through advanced digital experimentation. Through participation in hands-on exercises within a state-of-the-art digital laboratory environment, participants will go on the iterative journey from problem identification to the delivery of definitive solutions, thereby fine-tuning their acumen in elevating UX across the product lifecycle. By integrating theoretical paradigms with experiential learning, this course empowers participants to deftly navigate the intricacies of UX research, catalyzing the creation of next-generation, user-centric digital innovations.
Prerequisites: 36-200 or 70-207 or 36-220

67-373 Information Systems Consulting Project

Spring: 12 units
In this course, students design and implement a usable information system for a client. The client may be affiliated with the university, government, business, or non-profit agency. Students will be assigned to teams to work on these projects, and will produce operational, fully documented and tested, computer-based information systems. The projects will be supervised by CMU faculty and, when possible, by project clients.
Prerequisite: 67-272

67-380 Information Systems Security

Intermittent: 9 units
This course is an introduction to information systems security for the IS student. The course will introduce the student to fundamental concepts in information system security, including operational issues, planning, and design. Topics will include confidentiality, integrity, and availability; risk; access controls and access control frameworks; security policies; authentication strategies and issues; auditing; using cryptography; security design issues; controlling information flows; malicious logic; and applying security principles

67-384 Digital and Cybercrime

Fall: 9 units
This course will discuss various types of cybercrime and ways to deal with them. Students will learn who are doing this cybercrime, and how the technology and people's psychology can be manipulated by them to do a cybercrime. Taking multimedia-based cybercrime as an example, the course, will then discuss how to deal with such cybercrime. To that end, students will be introduced various multimedia-based cybercrime tools, and they will develop their practical digital investigation skills through the use of computer laboratory classes. Cybercrime involving the advanced technologies, such as deepfake, LLM, etc. will also be introduced.
Prerequisite: 15-112

67-390 Independent Study in Information Systems

Fall and Spring
Independent studies are opportunities to engage in research with an IS faculty member to advance your learning in certain areas of interest. Information Systems students may enroll in independent study for 3, 6, 9, or 12 units of academic credit by obtaining an IS faculty sponsor who will oversee the academic component of the coursework, monitor progress, and assign a final grade. This is available by Special Permission.

67-391 Independent Study in Information Systems

Fall and Spring
Independent studies are opportunities to engage in research with an IS faculty member to advance your learning in certain areas of interest. Information Systems students may enroll in independent study for 3, 6, 9, 12 units of academic credit by obtaining an IS faculty sponsor who will oversee the academic component of the coursework, monitor progress, and assign a final grade.

67-393 Guided Research in Information Systems

All Semesters
This course is for team-based research with an IS faculty member. Upon prior approval by the faculty member, students may enroll for 3, 6, 9, or 12 units.

67-404 Blockchain Applications

Intermittent: 9 units
In this course, we will dig into the blockchain technology. We will learn from the basic, single-purpose blockchain (such as for Bitcoin) to general purpose blockchain (which includes a range of use-cases). The course will cover a broad spectrum of blockchain technology, different consensus algorithms, its various real-world use-cases - with an eye on developing our own blockchain. We will also understand various challenges with this technology, and a case-study that covers implementation in Python. This would be an interactive course and the students are expected to share ideas and their thoughts.

67-410 Clinical Data Science

Intermittent: 9 units
This course is designed as an introductory course in Critical Care Data Science, providing an introduction to the tools and techniques of data science, specifically focused on clinically relevant critical care. Electronic Medical Records; Common Data Models for Clinical Data; SQL Querying; Computational Phenotyping; Common Machine Learning Techniques (Supervised; Unsupervised; Reinforcement Learning); and Reporting Clinical Data Science Research.

67-415 Cyber Ethics and Regulation

Intermittent: 9 units
This course investigates the ethical and regulatory implications of technology by adopting a four-dimensional framework focused on Privacy, Accuracy, Property, and Accessibility (PAPA Framework. It examines legal rights and corresponding duties and responsibilities of stakeholders. The course delves into established and emergent themes including cyber law, surveillance, dis/misinformation, artificial intelligence, intellectual property, cybersecurity, and organizational policy. Its primary focus is on social, behavioral, and legal implications of technology, assessed from multiple perspectives pertaining to individuals, organisations and societies.

67-417 Web Investigation and Surveillance

Spring: 9 units
In this course, students will learn about web investigation and surveillance which are required to deal with network-based attacks and crime. On completion, students will have an understanding of how network-based attacks and crime happens and how to deal with them. To that end, students will be introduced to topics such as intrusion detection, incidence response, internet investigation, etc. Students will also be introduced to new types of network attacks and crime arisen due to the advancement of technology. Students will develop their practical skills to mitigate network attacks and crime through the use of computer laboratory classes.
Prerequisites: 67-380 and 67-301

67-421 Advanced Topics in Information Systems: Visualizations

Fall: 9 units
Advanced topics in IS visualizations

67-425 Special Topics - Capstone course in Digitalization

Intermittent: 9 units
Most organizations including your future employers use enterprise systems to run their business processes such as sales, procurement, and production. This course discusses key business processes in organizations and the role, functions and technical foundations of enterprise systems such as Enterprise Resource Planning (ERP) systems and Customer Relationship Management (CRM) systems. Through hands-on use of enterprise systems in multiple case studies, the students will become familiar with the key concepts in such systems and demonstrate practical knowledge on how such systems allow organizations to run end-to-end business processes such as order-to-cash or make-to-order. The course also addresses the lifecycle of enterprise systems' projects and their various phases such as selection, implementation, operation and maintenance.

67-426 Special Topics - Capstone course in Data Science

Intermittent: 9 units
TBA

67-427 Privacy and Security Capstone

Fall and Spring: 9 units
This course is the capstone course for the Privacy and Security concentration in Information Systems. It requires students to engage in a substantive project related to Privacy and/or Security that will be primarily independent but guided by faculty.

67-430 AI and Emerging Economies

Intermittent: 9 units
In this course, we will explore the intersection of artificial intelligence (AI) with emerging economies. Our focus will extend beyond traditional AI research and development to address the unique challenges and opportunities faced by countries experiencing rapid economic growth. Through a combination of theoretical discussions, case studies, and practical projects, students will gain insights into how AI can drive positive change in diverse socio-economic contexts.

67-435 Advanced Topic in Information Systems:

Fall: 9 units
Advanced topic in IS

67-443 Mobile Application Design and Development

Fall: 12 units
This course provides students with the concepts and techniques to design and develop innovative mobile applications. Students will develop a series of smaller mobile applications in weekly lab sessions (using either iOS or Android frameworks). In addition, student teams will build a larger mobile application, as part of a semester-long project, that fills a demand not effectively met in the current market. In the process of developing these applications, students will gain a strong understanding of mobile application development, mobile-centered design, the process of creating and testing innovative application design, and larger principles of software engineering. In weekly labs, students can choose either the Swift/iOS or Kotlin/Android track to complete course work, but lectures will primarily use Swift to illustrate larger points of software architecture and engineering. This course is open only to seniors in the IS major.
Prerequisite: 67-272 Min. grade C

67-490 Practicum in Information Systems

Intermittent
This course is offered only at Carnegie Mellon's campus in Qatar. The practicum in information systems allows students interested in applying skills acquired in the field of information systems in the context of a working environment. Students will complete a project and be accountable to a stakeholder that is external to their program of study. They may shadow and observe practices in the field of information systems, and also perform tasks as assigned. A hands-on experience is expected. By completing this course, students practice desirable skills for employability, such as time management, project management, team work, and professional development.

67-505 Information Systems Internship

Fall and Spring
Practical experience in Information Systems.

67-738 Information & Grid Design

Fall: 9 units
Whether you create, oversee, or want practice in solving problems through grid systems for websites, responsive applications, slide presentations, or data visualizations, this course provides the skills needed to communicate using the interplay of image, text, and typography in grid environments.

Department of Philosophy

Peter Sprites, Department Head

Location: Baker Hall
www.cmu.edu/dietrich/philosophy (http://www.cmu.edu/dietrich/philosophy/)

The Department of Philosophy was founded in 1985 and reflects the tradition of philosophy as a central discipline in the humanities. The department has achieved an international reputation through the acclaimed research of its members and its innovative educational programs, not only in traditional topics such as ethics, philosophy of mind, logic, and theory of knowledge, but in such contemporary and applied areas as automated theorem proving, machine learning, the foundations of statistics, causal discovery, forward learning theory, game and decision theory, conflict resolution, and business ethics.

Philosophy thrives through contact with other disciplines. Interdisciplinary work, a traditional strength of the Carnegie Mellon community, is vital to the department and is reflected in the courses we offer, many of which incorporate substantive material from a range of other disciplines. Some courses are actually team-taught with professors from other departments and schools around the university.

Our programs are designed to develop our students' analytical sophistication and their practical and theoretical skills in specializations outside the department (see the sample curricula below). The department welcomes and, indeed, encourages minors and additional majors from other disciplines who are interested in reflecting on the foundation of their own subjects. The department offers three different undergraduate major programs, and jointly sponsors an interdepartmental major: Ethics, History, and Public Policy (with the Department of History):

- the B.A. or B.S. in Ethics, History, and Public Policy (interdisciplinary major with Department of History)
- the B.S. in Logic and Computation
- the B.A. in Philosophy
- the B.A. in Linguistics

The major in Logic and Computation is perhaps the most non-traditional of the department's majors. It offers students a firm background in computer science, together with a solid grounding in logic, philosophy, and mathematics. This reflects the department's commitment to the use of formal, analytic methods in addressing philosophical issues. A flexible system of electives allows students to focus their efforts in any of a wide range of disciplines, from engineering to the fine arts. As a capstone to the program, students engage in original research in their senior year, and write a thesis under the direction of an advisor.

The department also sponsors six minor programs:

- the minor in Ethics
- the minor in Linguistics
- the minor in Logic and Computation
- the minor in Philosophy
- the minor in Rationality, Uncertainty, and Choice: Formal Methods (RUC)
- the minor in Societal & Human Impacts of Future Technologies (SHIFT)

Finally, the department offers two master's programs directly extending the departmental majors. Both programs are coordinated with and build on the undergraduate programs, so that majors can complete the requirements for the master's degree in one additional year:

- the M.S. in Logic, Computation and Methodology
- the M.A. in Philosophy

The Major in Ethics, History, and Public Policy

Professor Steven Schlossman, Director of Ethics, History, and Public Policy, History Department
Location: Baker Hall 236A, 412-268-2880
sls@andrew.cmu.edu

Dr. Alexandra Garnhart-Bushakra, *Academic Program Manager*, History Department
Location: Baker Hall 240, 412-268-2880

https://go.oncehub.com/AlexGarnhartBushakra (https://calendar.google.com/calendar/u/0/appointments/schedules/AcZssZ24Bwky_tkdT8oSWDK0w6cwg1GvEhFDegMNcZPEEmtJ8IILU5DHrd0EVab-VLXcmKjZUc8-JqI0/)

Patrick Doyle, *Academic Program Manager*, Philosophy Department
Location: Baker Hall 161G, 412-268-3704
pdoyle2@andrew.cmu.edu
https://go.oncehub.com/PatDoyle (https://go.oncehub.com/PatDoyle/)

The B.A./B.S. in Ethics, History, and Public Policy (EHPP) is an interdepartmental major offered jointly by the Departments of History and Philosophy.

Preparing students to be leaders is a vital goal of colleges and universities in every democratic society. The intellectual challenges facing public and private sector leaders have expanded dramatically since the pioneering EHPP program began in 1996, but the need remains as great as ever for broadly educated, ethically sensitive, and technically skilled leaders.

EHPP prepares students to demonstrate sophistication and flexibility in their command of interdisciplinary knowledge; deep historical understanding of how modern-day policy problems have emerged and evolved; and clear, rational criteria for ethical and socially just decision making. The curriculum provides students with a strong humanistic foundation for developing such high-level, historically grounded, and ethically attuned leadership capacities. It also offers ample room for specialization in a wide range of policy areas in which the History and Philosophy departments have special expertise, e.g., medicine and public health, criminal justice, environment, technology, artificial intelligence (AI), gender, civil rights, immigration, and education.

Curriculum

Students seeking a primary major in Ethics, History, and Public Policy may elect to receive either a Bachelor of Arts or a Bachelor of Science degree (additional requirements apply; see below). Basic requirements include 120 units encompassing 45 units in History, 45 units in Philosophy, 18 units in Law and Social Science, and a 12-unit EHPP Capstone Course. This program may also be taken as an additional (i.e., second) major. All courses toward the major must be taken for a letter grade and must be passed with a grade of "C" or better. Students can double count any course for the major with another major or minor, with the exception of Social and Political History, for which a student can double count a maximum of two courses.

I. Foundation Courses in History and Philosophy **18 units**

Choose one of the following two courses:

79-189	Democracy and History: Thinking Beyond the Self	9
79-248	U.S. Constitution & the Presidency	9

Choose one of the following two courses:

80-130	Introduction to Ethics	9
80-330	Ethical Theory	9

II. Ethics and Policy Core 36 units

Choose four of the courses below:

No more than one course may be taken at the 100 level and at least one course must be taken at the 300 level or above.

80-135	Introduction to Political Philosophy	9
80-136	Social Structure, Public Policy & Ethics	9

80-208	Critical Thinking	9
80-221	Philosophy of Social Science	9
80-234	Race, Gender, and Justice	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-249	AI, Society, and Humanity	9
80-305	Game Theory	9
80-306	Decision Theory	9
80-324	Philosophy of Economics	9
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9
80-336	Philosophy of Law	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9

III. History and Policy Core 36 units

Choose four of the courses below:

79-175	Moneyball Nation: Data in American Life	9
79-204	American Environmental History	9
79-212	Jim Crow America	9
79-215	Environmental Justice from Conservation to Climate Change	9
79-234	Technology and Society	9
79-242	African American History: Reconstruction to the Present	9
79-248	U.S. Constitution & the Presidency	9
79-250	Voting Rights: An Introduction	9
79-278	How (Not) to Change the World	9
79-300	Controversial Topics in the History of American Public Policy	9
79-320	Women, Politics, and Protest	9
79-321	Documenting Human Rights	9
79-330	Medicine and Society: Health, Healers, and Hospitals	9
79-343	Education, Democracy, and Civil Rights	9
79-360	Crime, Policing, and the Law: Historical and Contemporary Perspectives	9
79-370	Technology in the United States	9
79-380	Hostile Environments: The Politics of Pollution in Global Perspective	9

IV. Foundation Courses in Law and Social Science 18 units

Choose two of the courses below:

17-200	Ethics and Policy Issues in Computing	9
19-101	Introduction to Engineering and Public Policy	12
70-332	Business, Society and Ethics	9
73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9
84-104	Decision Processes in American Political Institutions	9
84-110	The Economics of Politics, Policy, and Technology	9
84-352	Representation and Voting Rights	9
84-393	Legislative Decision Making: US Congress	9
84-402	Judicial Politics and Behavior	9
88-281	Topics in Law: 1st Amendment	9
88-284	Topics of Law: The Bill of Rights	9

EHPP students will also be able to complete the Foundations of Law and Social Science category by participating in the Washington Semester Program. Students are encouraged to pursue additional policy-relevant courses in law and social science, along lines consistent with their career ambitions.

V. EHPP Capstone Course 12 units

In Fall semester of senior year, EHPP students will participate in an interdisciplinary capstone course that asks students to integrate their studies in Ethics and History by addressing a policy topic of contemporary national urgency (e.g., climate change, immigration, infrastructure, abortion, hate speech, reparations, law enforcement and policing, charter schools, affirmative action, vaccination, taxation, voting rights, global justice). The Departments of History and Philosophy will alternate teaching the EHPP Capstone Course.

79-449	EHPP Capstone Course [cross-listed]	12
80-449	EHPP Capstone Course [cross-listed]	12

VI. Bachelor of Science Option

Students may elect to earn a Bachelor of Science rather than a Bachelor of Arts degree by completing two courses from the list below, or by petitioning the Director of EHPP to accept equivalent courses as substitutions.

21-257	Models and Methods for Optimization	9
36-202	Methods for Statistics & Data Science	9
or 70-208	Regression Analysis	
36-303	Sampling, Survey and Society	9
36-309	Experimental Design for Behavioral & Social Sciences	9
70-257	Optimization for Business	9
80-305	Game Theory	9
80-306	Decision Theory	9
88-221	Markets, Democracy, and Public Policy	9
88-223	Decision Analysis	12
88-251	Empirical Research Methods	9
88-300	Programming and Data Analysis for Social Scientists	9

Additional Major

The B.A./B.S. in Ethics, History, and Public Policy may be scheduled as an additional major in consultation with the Director of Ethics, History, and Public Policy.

Ethics, History, and Public Policy Sample Curriculum

Third-Year		Fourth-Year	
Fall	**Spring**	**Fall**	**Spring**
Foundations Course in History	Foundations Course in Law and Social Sciences	EHPP Capstone Course	Ethics and Policy Core Course
Foundations Course in Philosophy	Foundations Course in Law and Social Sciences	Ethics and Policy Core Course	History and Policy Core Course
Ethics and Policy Core Course	Ethics and Policy Core Course	History and Policy Core Course	Third Course (open)
History and Policy Core Course	History and Policy Core Course	Fourth Course (open)	Fourth Course (open)
Fifth Course Open	Fifth Course (open)	Fifth Course (open)	Fifth Course (open)

The above sample program is presented as a two-year (junior-senior year) plan for completing EHPP major requirements. Its purpose is to show that this program can be completed in as few as two years; not that it must be.

Students may enter the EHPP major, and begin major course requirements, as early as they wish. Students should consult their advisor when planning their program.

The Major in Linguistics

Patrick Doyle, *Academic Program Manager*
Location: Baker Hall 161G
pdoyle2@andrew.cmu.edu
https://go.oncehub.com/PatDoyle (https://go.oncehub.com/PatDoyle/)

Linguistics is the scientific study of human language. The central goal of the Linguistics Major is to provide students with the analytical skills and linguistic concepts needed to understand language scientifically, whether formally, as researchers, or informally, as participants in daily linguistic interactions. The foundation of the Linguistics Major is a set of rigorous core courses, informed by contemporary approaches to the study of linguistic form and meaning.

The **Core courses** cover the principal domains of linguistic analysis: phonetics and phonology, syntax and meaning.

Students then move on to the **Extended Core**, which includes more advanced courses as well as courses on a wider range of topics, such as intonation and language variation. These courses are supplemented by a wide-ranging set of electives including linguistically relevant courses taught in other departments.

Primary majors complete their course of study with a Senior Thesis, a semester-long research project carried out independently with one-on-one guidance from a member of the linguistics faculty.

Curriculum

The Linguistics **primary major** requires a total of 12 courses plus a senior thesis. The Linguistics **additional major** requires a total of 13 courses (senior thesis not required). This includes 2 semesters of sequential language study for all majors. At least three courses (not including specific language courses) must be at the 300-level or higher. All courses counted towards the major must be taken for a letter grade and passed with a grade of "C" or above. Students may double count any course for the major simultaneously with another major or minor.

Linguistics Core (36 units)

Complete the following requirements.

80-180	Nature of Language: An Introduction to Linguistics	9
80-282	Phonetics and Phonology I	9
80-280	Linguistic Analysis	9
or 80-285	Natural Language Syntax	
80-381	Meaning in Language	9
or 80-383	Language in Use	

Extended Core (27 units)

Choose three courses (27 units) from Extended Core and/or additional courses from Linguistics Core.

80-283	It Matters How You Say It	9
80-286	Words and Word Formation: Introduction to Morphology	9
80-287	Language Variation and Change	9
80-288	Intonation: The Meaning of Linguistic Tunes	9
80-382	Phonetics and Phonology II	9
80-384	Linguistics of Turkic Languages	9
80-385	Linguistics of Germanic Languages	9
80-388	Linguistic Typology: Diversity and Universals	9
80-488	Acoustics of Human Speech: Theory, Data, and Analysis	9

LANGUAGE REQUIREMENT

Students must successfully complete 2 semesters of foreign language study in a single language (e.g. 100 & 200 level).

Electives

Primary majors choose **three** additional electives (27 or more units). Additional majors choose **four** additional electives (36 or more units). *Primary majors: see thesis requirement below.*

These Electives can be additional courses from the Core or Extended Core courses listed above, the electives list below, or any other course which is approved by the Academic Program Manager as a linguistics elective. Listed below are the additional electives taught on a regular basis. Additional appropriate courses are offered irregularly or on a one-off basis. The Academic Program Manager will provide students with a list of possible electives each semester, and will assist students in selecting electives which are consistent with their goals and interests.

Philosophy		
80-484	Language and Thought	9
English		
76-318	Communicating in the Global Marketplace	9
76-325	Intertextuality	9
76-385	Introduction to Discourse Analysis	9
76-386	Language & Culture	9
76-388	Coding for Humanists	9
76-389	Rhetorical Grammar	9
Modern Languages		
82-239	Crazy Linguistically Rich Asian Languages	9
82-304	French & Francophone Sociolinguistics	9
82-305	French in its Social Contexts	9
82-334	Structure of Chinese	9
82-585	Topics in Second Language Acquisition	9
82-373	Structure of the Japanese Language	9
82-383	Second Language Acquisition: Theories and Research	9
82-388	Topics in Second Language Acquisition	9
Psychology		
85-354	Infant Language Development	9
85-421	Language and Thought	9
Language Technologies Institute		
11-411	Natural Language Processing	12
11-423	ConLanging: Lrng. Ling. & Lang Tech via Constru Artif. Lang.	12
11-492	Speech Technology for Conversational AI	12
11-422	Grammar Formalisims	12

Note: all 11-xxx courses have significant Computer Science prerequisites. Interested students should check with the course instructor and with the Linguistics Academic Program Manager before registering.

Statistics and Data Science		
36-468	Special Topics: Text Analysis	9

SENIOR THESIS [PRIMARY MAJORS ONLY]

Primary majors must complete a senior thesis (a workload equivalent to a 12-unit course) 80-595 Senior Thesis. Topics must be approved by an advisor, who will work with the student and guide the thesis project. Students are responsible for identifying their topic and securing their thesis advisor. Students should work with the Academic Program Manager of the major to begin the process of identifying their thesis topic and advisor during the fall of their senior year at the latest. Students will be required to submit a written proposal of their thesis project, signed by their thesis faculty advisor, before the end of the semester preceding that in which the thesis research will be conducted..

Additional Major in Linguistics

The Linguistics additional major requires a total of 13 courses. This includes 2 semesters of language study for all majors. At least three courses (not including specific language courses) must be at the 300-level or higher. Additional majors are not required to write a thesis but must take four electives (36 or more units). All courses counted towards the major must be taken for a letter grade and passed with a grade of "C" or above. Students may double count any course for the major simultaneously with another major or minor. If you are interested in obtaining an additional major in Linguistics, please reach out to the Academic Program Manager, Philosophy Department.

The Major in Logic and Computation

Patrick Doyle, *Academic Program Manager*
Location: Baker Hall 161G
pdoyle2@andrew.cmu.edu
https://go.oncehub.com/PatDoyle (https://go.oncehub.com/PatDoyle/)

The Bachelor of Science in Logic and Computation curriculum takes advantage of the preparation provided by the Dietrich College General Education Program in mathematics, philosophy, psychology, and statistics. It is flexible in that it permits students to focus on any of a number of areas including (but not limited to):

- computer science,
- artificial intelligence and cognitive science,
- logic and the foundations of mathematics,
- methodology and philosophy of science.

Curriculum

The course requirements for the major consist of seven core courses (including the Senior Thesis) and four electives. The core courses provide comprehensive background in logic, computability, and analytic philosophy.

Students in their first year and sophomore year, are expected to take three courses that provide preparation in computer science, mathematics, and statistics. Four advanced electives are chosen in the area of focus, as described below in the sample curricula, and should support independent research towards fulfilling the senior thesis requirement. In their senior year, **Primary and Additional Majors** in Logic and Computation will engage in original research under the supervision of a faculty advisor in 80-595 Senior Thesis (a workload equivalent of 12 units). Students are responsible for identifying a thesis topic and securing a faculty advisor prior to the start of the semester in which they plan to complete the thesis. Note: Students should work with the Academic Program Manager during their junior year to begin the process of identifying their topic and potential advisors. However, with suitable planning and advice from the Academic Program Manager, it is possible to complete the program in two years, beginning in the junior year.

All courses, if taken at Carnegie Mellon University, must be taken for a letter grade and passed with a grade of "C" or above. Students may double count any course for the major with another major or minor.

Prerequisites — 42 units

80-211	Logic and Mathematical Inquiry	9
36-200	Reasoning with Data	9
15-112	Fundamentals of Programming and Computer Science	12
21-127	Concepts of Mathematics	12

Logic and Computation Core — 63 units

80-150	Nature of Reason *Students should complete before their junior year.	9
80-310	Formal Logic *Students should complete before their junior year.	9
80-311	Undecidability and Incompleteness	9
15-122	Principles of Imperative Computation *Students should complete this prerequisite before their junior year.	12
15-150	Principles of Functional Programming *Students should complete this prerequisite before their junior year.	12
80-595	Senior Thesis	12

Logic and Computation Electives — 36 units

Bearing in mind prerequisites, Logic and Computation majors must complete four advanced courses in areas that use logical and computational tools, such as philosophy, computer science, linguistics, mathematical logic, psychology, or statistics. The sequence of courses, mostly at the *300-level and above, must be selected in consultation with the Academic Program Manager.

Sample Curricula

Below are four samples of Logic and Computation curricula (beyond the core courses), each reflecting a different emphasis: Computer Science, Language and Information Technology, Artificial Intelligence and Cognitive Science, Logic and the Foundations of Mathematics, and Methodology.

Sample 1.
A student interested in **Computer Science** might take the following courses:

80-315	Logics for Knowledge and Belief	9
80-413	Category Theory	9
15-312	Foundations of Programming Languages	12
15-317	Constructive Logic	9

Sample 2.
A student interested in **Artificial Intelligence and Cognitive Science** might take the following courses:

80-249	AI, Society, and Humanity	9
80-315	Logics for Knowledge and Belief	9
80-325	Foundations of Causation and Machine Learning	9
80-411	Proof Theory	9
85-412	Cognitive Modeling	9

Note: If you are a Cognitive Science (https://www.cmu.edu/dietrich/psychology/undergraduate/prospective-students/academics/cognitive-science/) major (Department of Psychology) this additional major would complement your coursework.

Sample 3.
A student interested in **Logic and the Foundations of Mathematics** might consider the following courses:

80-254	Analytic Philosophy	9
80-312	Mathematical Revolutions	9
80-411	Proof Theory	9
80-413	Category Theory	9

Sample 4.
A student interested in **Methodology** might consider the following courses:

80-220	Philosophy of Science	9
80-221	Philosophy of Social Science	9
36-309	Experimental Design for Behavioral & Social Sciences	9
80-305	Game Theory	9

Additional major in Logic and Computation

The Logic and Computation major is also suitable as an additional major for students in Dietrich College or for students in other colleges within the University. Non-Dietrich students interested in an additional major in Logic and Computation need to take only those courses in the Dietrich College General Education Program that are prerequisites to courses required in the major; all other Dietrich College General Education requirements are waived for these students. Depending on the student's background, the requirements of the additional major in Logic and Computation can be fulfilled with as few as five additional courses. The Philosophy Department does not limit the number of courses that can be counted for other majors and minors around the university. In their senior year, the additional major in Logic and Computation will write a thesis under the supervision of a faculty advisor.

The M.S. Program in Logic, Computation and methodology

The Department of Philosophy also offers a graduate M.S. degree in Logic and Computation and Methodology, which culminates with the writing of a master's thesis. It is ordinarily a two-year program, but students in the Logic and Computation major are able to complete the additional requirements in one year. Interested students in the 5th-year Master's program (https://www.cmu.edu/dietrich/philosophy/graduate/5th-year-masters.html)Master of Science in Logic, Computation & Methodology, should contact the Academic Program Manager for more information on how to apply.

The Major in Philosophy

Patrick Doyle, *Academic Program Manager*
Location: Baker Hall 161G
pdoyle2@andrew.cmu.edu (pdoyle2@andrew.cmu.edu)
https://go.oncehub.com/PatDoyle (https://go.oncehub.com/PatDoyle/)

The Major in Philosophy is intended to be flexible and to facilitate additional majors in other fields (including majors with a strong professional focus). It provides students with a broad humanities education and sharpens their analytical skills. We encourage, but do not require, students to choose a thematic concentration through their electives. Sample curricula emphasizing Law and Social Policy, Philosophy of Science, Ethics and Social Philosophy, and Philosophy of Mind are suggested below. However, alternative emphases can be proposed and approved by the Academic Program Manager. The Major in Philosophy is a B.A. degree.

Curriculum

In addition to the general education requirements for the student's college, Philosophy primary majors and additional majors must complete 80-100 Introduction to Philosophy and nine Philosophy courses in the Areas listed below. The 80-100 Introduction to Philosophy requirement must be fulfilled before the first semester of the junior year. Only two of the remaining nine courses may be at the 100-level, and two of the nine courses must be at the 300-level or higher. All ten courses, if taken at CMU, must be taken for a letter grade and passed with a grade of "C" or above. No more than two of the ten courses may be taken at another institution. Students are to choose one course out of each of the areas 1-4, two courses out of area 5, and may freely select three courses in area 6. Students may double count any course for the major with another major or minor. As per the requirement of Dietrich College, a student's Grand Challenge First-Year Seminar course may not count toward the fulfillment of the major requirements.

Introduction to Philosophy — 9 units

80-100	Introduction to Philosophy	9

Area 1: Values and Normative Theory — 9 units

One of the following:

80-130	Introduction to Ethics	9
80-135	Introduction to Political Philosophy	9
80-136	Social Structure, Public Policy & Ethics	9
80-234	Race, Gender, and Justice	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-246	Moral Psychology	9
80-249	AI, Society, and Humanity	9
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9
80-336	Philosophy of Law	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9

Area 2: Philosophy of Mind/Language/Metaphysics — 9 units

One of the following:

80-180	Nature of Language: An Introduction to Linguistics	9
80-270	Problems of Mind and Body: Meaning and Doing	9
80-271	Mind and Body: The Objective and the Subjective	9
80-276	Philosophy of Religion	9
80-280	Linguistic Analysis	9
80-282	Phonetics and Phonology I	9
80-283	It Matters How You Say It	9
80-285	Natural Language Syntax	9
80-286	Words and Word Formation: Introduction to Morphology	9
80-287	Language Variation and Change	9
80-288	Intonation: The Meaning of Linguistic Tunes	9
80-381	Meaning in Language	9
80-382	Phonetics and Phonology II	9
80-383	Language in Use	9
80-384	Linguistics of Turkic Languages	9
80-385	Linguistics of Germanic Languages	9
80-388	Linguistic Typology: Diversity and Universals	9
80-484	Language and Thought	9
80-488	Acoustics of Human Speech: Theory, Data, and Analysis	9

Area 3: Logic/Philosophy of Mathematics — 9 units

One of the following:

80-210	Logic and Proofs	9
80-211	Logic and Mathematical Inquiry	9
80-212	Arguments and Logical Analysis	9
80-310	Formal Logic	9
80-311	Undecidability and Incompleteness	9
80-312	Mathematical Revolutions	9
80-315	Logics for Knowledge and Belief	9
80-411	Proof Theory	9
80-413	Category Theory	9
80-419	Interactive Theorem Proving	9
80-514	Categorical Logic	9

Area 4: Epistemology/Methodology — 9 units

One of the following:

80-150	Nature of Reason	9
80-201	Knowledge and Justified Belief	9
80-208	Critical Thinking	9
80-220	Philosophy of Science	9
80-221	Philosophy of Social Science	9
80-226	The Nature of Scientific Revolutions	9
80-261	Experience, Reason, and Truth	9
80-305	Game Theory After Spring 2023	9
80-306	Decision Theory	9
80-324	Philosophy of Economics	9
80-325	Foundations of Causation and Machine Learning	9
80-405	Game Theory Prior to Fall 2023	9
80-516	Causality and Machine Learning	9
80-521	Seminar on Formal Epistemology: Belief and Evidence	9
80-524	Topics in Formal Epistemology: Topological Philosophy of Science	9

Area 5: History of Philosophy — 18 units

Two of the following:

80-150	Nature of Reason	9
80-226	The Nature of Scientific Revolutions	9
80-250	Ancient Philosophy	9
80-251	Modern Philosophy	9
80-252	Kant	9
80-253	Continental Philosophy	9
80-254	Analytic Philosophy	9
80-551	Seminar on History of Philosophy: Smith and Hume	9
80-261	Experience, Reason, and Truth	9
80-350	Adam Smith	9
80-358	Hume	9
80-365	Ramsey	9

Area 6: Elective — 27 units

Three other philosophy courses, or appropriate courses from other departments, with the permission of the Academic Program Manager.

Sample Curricula

Here are four sample curricula, reflecting different emphases.

1. For an emphasis on Law & Social Policy, a student might take:

Area 1		
80-335	Social and Political Philosophy	9
Area 2		
80-180	Nature of Language: An Introduction to Linguistics	9
Area 3		
80-211	Logic and Mathematical Inquiry	9
Area 4		
80-208	Critical Thinking	9
Area 5		
80-150	Nature of Reason	9
80-250	Ancient Philosophy	9
Area 6		
80-336	Philosophy of Law	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9

2. For an emphasis on Philosophy of Science, a student might take:

Area 1		
80-136	Social Structure, Public Policy & Ethics	9
Area 2		
80-270	Problems of Mind and Body: Meaning and Doing	9
Area 3		
80-211	Logic and Mathematical Inquiry	9
Area 4		
80-220	Philosophy of Science	9
or 80-221	Philosophy of Social Science	
Area 5		
80-250	Ancient Philosophy	9
80-226	The Nature of Scientific Revolutions	9
Area 6		
80-150	Nature of Reason	9
80-221	Philosophy of Social Science	9
80-524	Topics in Formal Epistemology: Topological Philosophy of Science	9

3. For an emphasis on Ethics and Social Philosophy, a student might take:

Area 1		
80-130	Introduction to Ethics	9
Area 2		
80-276	Philosophy of Religion	9
Area 3		
80-211	Logic and Mathematical Inquiry	9
Area 4		
80-221	Philosophy of Social Science	9
Area 5		
80-250	Ancient Philosophy	9
80-251	Modern Philosophy	9
Area 6		
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9
80-348	Health, Human Rights, and International Development	9

4. For an emphasis on Philosophy of Mind, a student might take:

Area 1		
80-130	Introduction to Ethics	9
Area 2		
80-270	Problems of Mind and Body: Meaning and Doing	9
Area 3		
80-211	Logic and Mathematical Inquiry	9
Area 4		
80-201	Knowledge and Justified Belief	9
Area 5		
80-251	Modern Philosophy	9
80-252	Kant	9
Area 6		
80-521	Seminar on Formal Epistemology: Belief and Evidence	9
80-261	Experience, Reason, and Truth	9
80-271	Mind and Body: The Objective and the Subjective	9

Additional Major

Students who wish to pursue an additional major in Philosophy must fulfill the same departmental requirements as primary majors in Philosophy. Students can double count any course for the major with another major or minor.

The Master of art in Philosophy

The Philosophy M.A. (https://www.cmu.edu/dietrich/philosophy/graduate/masters/philosophy/) provides exciting opportunities to pursue postgraduate studies in Philosophy for students with a degree in Philosophy who wish to continue their work in a more focused and advanced way, as well as for students with a degree in another field who wish to add a concentration in Philosophy. Students in this program will develop an understanding of a wide variety of philosophical subfields. The flexible course of study can be tailored to a student's interests and background. Students are expected to complete a Master’s thesis by the end of their second year, though a purely course-based option is also available for students who do not wish to continue in academia.

The course of study for the 5 (https://www.cmu.edu/dietrich/philosophy/graduate/5th-year-masters.html)th year M.A. in Philosophy is very flexible, and can be tailored to a student's interests and background. For more information, please contact the Academic Program Manager.

Philosophy Department Minors

The Philosophy Department offers six minors, and the requirements are designed to be flexible and to allow students to tailor courses to their special interests, while providing some breadth.

- Ethics
- Linguistics
- Logic & Computation
- Philosophy
- Rationality, Uncertainty, and Choice: Formal Methods (RUC)
- Societal & Human Impacts of Future Technologies (SHIFT)

The Minor in Ethics

The Minor in Ethics introduces students to central ethical concepts and theories proposed and defended by the great philosophers of the past; it provides an understanding of how these theories and concepts can be applied to practical problems. This background in ethical theory and its applications should help students to respond more sensitively and appropriately to the new and unavoidable ethical problems that technologies, businesses, unions, and branches of government must face.

Ethics minors must complete five philosophy courses in the areas listed below. All five required courses must be taken for a letter grade and passed with a grade of a "C" or above, except 80-500 Undergraduate Internship, which may be taken pass/fail.

Ethics Core Courses 27 units

Complete three courses from any of the following areas with at least two courses at the 200-level or higher.

		Units
80-130	Introduction to Ethics	9
80-135	Introduction to Political Philosophy	9
80-136	Social Structure, Public Policy & Ethics	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-246	Moral Psychology	9
80-249	AI, Society, and Humanity	9
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9
80-336	Philosophy of Law	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9

Ethics Electives 18 units

Complete two courses at the 200-level or higher. These courses may be additional courses from Ethics Core list above.

		Units
80-234	Race, Gender, and Justice	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-246	Moral Psychology	9
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9
80-336	Philosophy of Law	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9

The Minor in Linguistics

Linguistics is the scientific study of human language. The central goal of the Linguistics Program is to provide students with the analytical skills and linguistic concepts needed to understand language scientifically, whether formally, as researchers, or informally, as participants in daily linguistic interactions. The foundation of the Linguistics Minor is a set of rigorous core courses, informed by contemporary approaches to the study of linguistic form and meaning. The Core courses cover the principal domains of linguistic analysis: phonetics and phonology, syntax, and meaning. Students then move on to the Extended Core, which includes more advanced courses as well as courses on a wider range of topics, such as intonation and language variation. All courses counted towards the minor must be taken for a letter grade and passed with a grade of "C" or above.

Core (27 units)

Required		Units
80-180	Nature of Language: An Introduction to Linguistics	9

Select 2 from the following 3 options		Units
80-282	Phonetics and Phonology I	9
80-280	Linguistic Analysis	9
or 80-285	Natural Language Syntax	
80-381	Meaning in Language	9
or 80-383	Language in Use	

Extended Core: Choose 3 courses (27 units) from the Extended Core and/or additional courses from Core.

Extended Core		Units
80-283	It Matters How You Say It	9
80-286	Words and Word Formation: Introduction to Morphology	9
80-287	Language Variation and Change	9
80-288	Intonation: The Meaning of Linguistic Tunes	9
80-382	Phonetics and Phonology II	9
80-384	Linguistics of Turkic Languages	9
80-385	Linguistics of Germanic Languages	9
80-388	Linguistic Typology: Diversity and Universals	9
80-488	Acoustics of Human Speech: Theory, Data, and Analysis	9

The Minor in Logic and Computation

The Minor in Logic and Computation provides students with general course work in logic, the theory of computation, and philosophy. Students must complete six courses, among them the following three core courses. All courses counted towards the minor must be taken for a letter grade and passed with a grade of "C" or above.

Logic and Computation Core Courses — 27 units

		Units
80-150	Nature of Reason	9
80-211	Logic and Mathematical Inquiry	9
or 80-210	Logic and Proofs	
80-310	Formal Logic	9
or 80-311	Undecidability and Incompleteness	

Logic and Computation Electives — 27 units

Students must take two courses in the Philosophy Department at the 300-level or higher, in subjects related to logic and computation. And an additional course at the 300-level or higher in an area that uses logical and computational tools, such as philosophy, computer science, linguistics, mathematics, psychology, or statistics. The choice of electives must be approved by the Academic Program Manager.

The Minor in Philosophy

The Minor in Philosophy requires five courses and gives students a broad philosophical foundation, requiring one course in Logic/Methodology, two courses in the History of Philosophy and two Philosophy electives. The minor complements any primary major from around the University. All courses counted towards the minor must be taken for a letter grade and passed with a grade of "C" or above.

Logic/Methodology Requirements — 9 units

Complete one course:		Units
80-210	Logic and Proofs	9
80-211	Logic and Mathematical Inquiry	9
80-220	Philosophy of Science	9
80-221	Philosophy of Social Science	9
80-226	The Nature of Scientific Revolutions	9
80-310	Formal Logic	9
80-311	Undecidability and Incompleteness	9
80-312	Mathematical Revolutions	9
80-315	Logics for Knowledge and Belief	9
80-324	Philosophy of Economics	9
80-325	Foundations of Causation and Machine Learning	9
80-365	Ramsey	9
80-411	Proof Theory	9
80-413	Category Theory	9
80-514	Categorical Logic	9
80-516	Causality and Machine Learning	9
80-521	Seminar on Formal Epistemology: Belief and Evidence	9

History of Philosophy Requirements — 18 units

Complete two courses:		Units
80-150	Nature of Reason	9
80-226	The Nature of Scientific Revolutions	9
80-250	Ancient Philosophy	9
80-251	Modern Philosophy	9
80-252	Kant	9
80-253	Continental Philosophy	9
80-254	Analytic Philosophy	9
80-261	Experience, Reason, and Truth	9
80-350	Adam Smith	9
80-551	Seminar on History of Philosophy: Smith and Hume	9
80-358	Hume	9
80-365	Ramsey	9

Philosophy Electives — 18 units

Students must complete 18 units in the Philosophy department at the 200-level or higher. The choice of electives must be approved by the Academic Program Manager.

The Minor in Rationality, Uncertainty, and Choice: Formal Methods (RUC)

Students pursuing the minor in Rationality, Uncertainty, and Choice: Formal Methods (RUC) will learn interdisciplinary philosophical and mathematical approaches to reasoning about uncertainty and decision making in both individual and group contexts.

The RUC minor consists of three core requirements in **Game Theory, Decision Theory**, and a choice between the **Decision Analysis** and **Decision Models and Games** from the Department of Social and Decision Sciences. Students will then take 3 elective courses from two elective categories. Electives are intended to show how key concepts from the RUC core can be applied across many disciplines. The RUC minor uniquely complements majors from across Carnegie Mellon University and extends to fields such as economics and computer science. All courses counted towards the minor must be taken for a letter grade and passed with a grade of "C" or above.

Core Requirements

Complete all of the following:		Units
80-305	Game Theory	9
80-306	Decision Theory	9

88-223	Decision Analysis	12
or 88-312	Decision Models and Games	

Note: Students must complete three elective courses from the following two categories and must complete at least one course in each category.

Elective Category 1: Formal Foundations		9-18 units
80-201	Knowledge and Justified Belief	9
80-208	Critical Thinking	9
80-210	Logic and Proofs	9
80-315	Logics for Knowledge and Belief	9
80-325	Foundations of Causation and Machine Learning	9
80-516	Causality and Machine Learning	9
80-521	Seminar on Formal Epistemology: Belief and Evidence	9
80-524	Topics in Formal Epistemology: Topological Philosophy of Science	9
88-223	Decision Analysis	12
88-312	Decision Models and Games	9
88-379	Data-Driven Decision Analysis	9

Elective Category 2: Theory and Applications		9-18 units
80-246	Moral Psychology	9
80-249	AI, Society, and Humanity	9
80-252	Kant	9
80-255	Pragmatism: Making Ideas Work	9
80-261	Experience, Reason, and Truth	9
80-324	Philosophy of Economics	9
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9

The Minor in Societal & Human Impacts of Future Technologies (SHIFT)

Students pursing the SHIFT minor will gain the skills, knowledge, and experience to successfully take on roles in integrated, multidisciplinary analyses of current and near-future computational technologies. The SHIFT minor requires eight total courses, with no limit to double-counting with other majors or minors. All courses counted towards the minor must be taken for a letter grade and passed with a grade of "C" or above.

Core Courses (2 courses, 10 to 18 units total)		Units
80-249	AI, Society, and Humanity	9
80-445	Shift Capstone Experience	1-9

Area Courses (6 courses, 54 units total)
Note: Five of the six Area Courses must be taken in different departments

Technology area (18 units)
Courses that build basic technological competence, and teach concepts and frameworks that provide high-level understanding of computational technologies, including their possibilities and limits.

Complete two courses		Units
05-317	Design of Artificial Intelligence Products	12
05-318	Human AI Interaction	12
05-320	Social Web	12
05-452	Service Design	12
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
16-467	Introduction to Human Robot Interaction	12
17-303	Cryptocurrencies, Blockchains and Applications	9
17-313	Foundations of Software Engineering	12
17-331	Information Security, Privacy, and Policy	12
17-333	Privacy Policy, Law, and Technology	9
17-355	Program Analysis	12
36-202	Methods for Statistics & Data Science	9
67-250	The Information Systems Milieux	9
88-300	Programming and Data Analysis for Social Scientists	9

Social & Behavioral Sciences area (18 units)
Courses that teach the concepts and frameworks of social and behavioral sciences (e.g., economics, psychology, sociology), including methods and analyses such as experimental design and quantitative and qualitative data analysis.

Complete two courses		Units
05-413	Human Factors	9
17-224	Influence, Persuasion, and Manipulation Online	9
36-200	Reasoning with Data	9
70-311	Organizational Behavior	9
70-321	Negotiation and Conflict Resolution	9
70-341	Team Dynamics and Leadership	9
73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9
84-266	Research Design for Political Science	9
84-267	Data Science for Political Science	9
84-369	Decision Science for International Relations	9

Ethics, Policy & Design Area (18 units)
Courses that teach core concepts and frameworks to address and analyze ethical, policy, and design challenges relevant to current and near-future computational technologies.

Complete two courses		Units
05-413	Human Factors	9
08-200	Ethics and Policy Issues in Computing	9
16-161	ROB Seminar: Artificial Intelligence and Humanity	9
17-224	Influence, Persuasion, and Manipulation Online	9
36-200	Reasoning with Data	9
51-173	Human Experience in Design	9
51-241	How People Work	9
51-371	Futures I	4.5
51-373	Futures II	4.5
51-382	Design Center: Design for Social Innovation	9
70-311	Organizational Behavior	9
70-321	Negotiation and Conflict Resolution	9
70-332	Business, Society and Ethics	9
70-341	Team Dynamics and Leadership	9
70-364	Business Law	6
73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9
79-175	Moneyball Nation: Data in American Life	9
79-234	Technology and Society	9
79-302	Killer Robots? The Ethics, Law, and Politics of Drones and A.I. in War	9
80-130	Introduction to Ethics	9
80-135	Introduction to Political Philosophy	9
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9
84-266	Research Design for Political Science	9
84-267	Data Science for Political Science	9
84-275	Comparative Politics	9
84-319	Civil-Military Relations	9
84-325	Contemporary American Foreign Policy	9
84-369	Decision Science for International Relations	9
84-370	Nuclear Security & Arms Control	9
84-372	Space and National Security	9
84-373	Emerging Technologies and International Law	9
84-380	US Grand Strategy	9
84-386	The Privatization of Force	9
84-387	Remote Systems and the Cyber Domain in Conflict	9
84-389	Terrorism and Insurgency	9
84-390	Social Media, Technology, and Conflict	9
84-405	The Future of Warfare	9
88-221	Markets, Democracy, and Public Policy	9

Faculty

JEREMY AVIGAD, Professor of Philosophy – Ph.D., University of California, Berkeley; Carnegie Mellon, 1996–

STEVEN AWODEY, Professor of Philosophy – Ph.D., University of Chicago; Carnegie Mellon, 1997–

ADAM BJORNDAHL, Associate Professor of Philosophy – Ph.D., Cornell University; Carnegie Mellon, 2014–

CHRISTINA BJORNDAHL, Assistant Teaching Professor – Ph.D., Cornell University; Carnegie Mellon, 2014–

SIMON CULLEN, Assistant Teaching Professor – Ph.D., Princeton University; Carnegie Mellon, 2018–

ATOOSA KASIRZADEH, Assistant Professor of Philosophy – Ph.D., University of Toronto; Carnegie Mellon, 2024–

KEVIN T. KELLY, Professor of Philosophy – Ph.D., University of Pittsburgh; Carnegie Mellon, 1985–

ALEX JOHN LONDON, K&L Gates Professor of Ethics and Computational Technologies – Ph.D., University of Virginia; Carnegie Mellon, 2000–

KRZYSZTOF MIERZEWSKI, Assistant Professor – Ph.D., Stanford University; Carnegie Mellon, 2020–

AYDIN MOHSENI, Assistant Professor of Philosophy – Ph.D., University of California, Irvine; Carnegie Mellon, 2024–

JOSEPH RAMSEY, Special Faculty and Director of Research Computing – Ph.D., University of California, San Diego; Carnegie Mellon, 2006–

RICHARD SCHEINES, Professor of Philosophy, The Bess Family Dean's Chair of the Dietrich College of Humanities and Social Sciences – Ph.D., University of Pittsburgh; Carnegie Mellon, 1987–

TEDDY I. SEIDENFELD, Herbert A. Simon Professor of Philosophy and Statistics – Ph.D., Columbia University; Carnegie Mellon, 1985–

WILFRIED SIEG, Patrick Suppes Professor of Philosophy – Ph.D., Stanford University; Carnegie Mellon, 1985–

MANDY SIMONS, Professor of Philosophy – Ph.D., Cornell University; Carnegie Mellon, 1998–

JOEL SMITH, Distinguished Career Teaching Professor of Philosophy – Ph.D., University of Pittsburgh; Carnegie Mellon, 2000–

PETER L. SPIRTES, Professor of Philosophy, Marianna Brown Dietrich Professor and Head of Philosophy – Ph.D., University of Pittsburgh; Carnegie Mellon, 1987–

DANIELLE WENNER, Associate Professor of Philosophy – Ph.D., Rice University; Carnegie Mellon, 2013–

THOMAS WERNER, Associate Teaching Professor of Philosophy – Ph.D., Rutgers University; Carnegie Mellon, 2003–

WAYNE WU, Professor, Philosophy and the Neuroscience Institute – Ph.D., University of California, Berkeley; Carnegie Mellon, 2010–

FRANCESCA ZAFFORA BLANDO, Assistant Professor of Philosophy – Ph.D., Stanford University; Carnegie Mellon, 2020–

KUN ZHANG, Associate Professor of Philosophy – Ph.D., The Chinese University of Hong Kong; Carnegie Mellon, 2015–

KEVIN ZOLLMAN, Professor of Philosophy, Herbert A. Simon Professor of Philosophy and Social and Decision Sciences – Ph.D., University of California, Irvine; Carnegie Mellon, 2009–

Courtesy

FRANK PFENNING , Professor, Computer Science Department – Ph.D., Carnegie Mellon University ; Carnegie Mellon, 2002–

VINCENT CONITZER, Professor, Computer Science Department – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2022–

Special Faculty

DERRICK GRAY, Special Faculty – Senior Lecturer – Ph.D., Rice University; Carnegie Mellon, 2013–

MARIO GÜNTHER, Visiting Assistant Professor – Ph.D., Ludwig Maximilian University of Munich; Carnegie Mellon, 2024–

Emeriti Faculty

ROBERT CAVALIER, Teaching Professor (Emeritus) – Ph.D., Duquesne University; Carnegie Mellon, 1987–

CLARK GLYMOUR, Alumni University Professor of Philosophy (Emeritus) – Ph.D., Indiana University; Carnegie Mellon, 1984–

DANA S. SCOTT, Hillman University Professor of Mathematical Logic, Computer Science and Philosophy (Emeritus) – Ph.D., Princeton University; Carnegie Mellon, 1981–

Department of Philosophy Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes *(*https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/*) each semester for course offerings and for any necessary pre-requisites or co-requisites.*

80-100 Introduction to Philosophy

All Semesters: 9 units
Even philosophers have a hard time explaining what exactly philosophy is. Instead of attempting a definition, one might instead list some of the questions philosophers try to answer. Like most other academic fields, philosophy has its own sub-disciplines, and each of these has its own questions it tries to answer. In this course, we will be looking at questions from several of these areas of philosophy, including: What is the mind? Do we have free will? What does the answer to that question mean for practices of reward and punishment? Is morality relative? What, if anything, is its connection to religion? How can I know the right thing to do? How can I know anything? This class isn't a historical introduction to philosophy, and we will be jumping around through history and subjects as we please, concerned only with interesting questions and good answers. As a whole, the course will strongly emphasize some of the basic skills of doing just about any kind of philosophy: how to recognize and understand arguments, how to evaluate them, and how to construct your own. As it turns out, these are skills you need to successfully navigate your way through just about any field of study and any career. This course will include a fair amount of writing, but you'll be getting lots of help from me, from your TA, and even from your peers.

80-101 Dangerous Ideas in Science and Society

Fall and Spring: 9 units
Do cancel culture and "wokeness" stifle free speech on campus? When should campus speakers be protested or disinvited? Should race be considered in college admissions? Should we use genetic engineering to create super-intelligent babies? Under what circumstances, if any, is abortion permissible? When, if ever, can a doctor kill a newborn baby or a dying patient? If we can in the future, should we end human aging, allowing people to live for thousands of years? Does civilian gun ownership make people safer, and if not, should it be allowed anyway? Is the case for defunding the police compelling? Should the United States open its borders to more immigrants? Has neuroscience shown that free will is an illusion? Could a digital computer become sentient? What is the probability that we are living in a computer simulation? Is it rational to believe in God in a world that contains so much suffering? These are some of the toughest, most pressing questions of current social, moral, and philosophical inquiry. Philosophers address them by producing intricate and often beautiful arguments. In this course, you will assess those arguments and produce your own. You will learn how to have challenging, productive, and respectful discussions across political and moral differences. You will learn to think like a philosopher - to strip an argument presented in prose to its essentials and plainly expose its structure. This course will improve the clarity and rigor of your own thinking and writing. It will put you in a position to make progress on hard questions like those mentioned above. And it will improve your ability to crisply convey your ideas - an ability that will serve you well not just in class, but also in daily life.

80-130 Introduction to Ethics

Fall: 9 units
Philosophical ethics, or moral philosophy, covers a lot of ground. It asks and tries to answer questions like: What's good in life? What matters? What should I (and others) do? How should I (and others) act? What kinds of things out there must be treated ethically? Do we have moral duties to (at least some) non-human animals? Is morality subjective? Are there actually any objective moral truths? Morally speaking, what (if anything) is the difference between killing someone, and simply letting them die? In trying to answer these questions (and others), we'll engage in some wonderfully weird thought experiments, class discussions, smaller group discussions, debates, etc. We'll study and critique several moral theories which try to explain and help guide our moral judgments, and we'll try to apply these theories to real-life moral controversies. Past classes covered topics including drug prohibition, abortion, euthanasia, and physician-assisted suicide. This is an introductory philosophy class, so you'll be learning how to read, critique, do, and write philosophy generally, not just ethics. Considerable time and effort, both in lectures and in recitations, will be spent helping you learn to recognize and evaluate philosophical arguments, as well as empowering you to create, improve, and defend your own arguments in class assignments.

80-135 Introduction to Political Philosophy

Spring: 9 units
At the heart of political philosophy lie fundamental questions such as: What constitutes a just society? How, and under what circumstances do individuals incur political obligations to a particular state? This course provides a systematic investigation of the way such questions are answered by dominant schools of liberal political theory, such as the social contract tradition, utilitarianism and libertarianism. Later we will introduce critiques from socialist, and feminist theorists. Readings are drawn from classic works by authors such as Plato, Hobbes and Locke, and from the works of more contemporary theorists like Rawls, and Nozick.

80-136 Social Structure, Public Policy & Ethics

Intermittent: 9 units
The course will consider ethical questions surrounding social structure and public policy. It will analyze the role of political institutions and individual citizens in dealing with some of the greatest challenges facing our world: Global health crises, the spread of (and threats to) democracy worldwide, and world poverty. Some of the questions we will consider include: Are developed countries obligated to ameliorate poverty by providing foreign aid? What is democratic governance, and what do democratic representatives owe to their constituents? Should wealthy nations and corporations assist in the fight against life-threatening diseases worldwide? The course uses ethical and political theory, case studies, and empirical evidence to consider these questions.

80-150 Nature of Reason

Spring: 9 units
This course provides an accessible introduction to the historical development of philosophical ideas about the nature of reasoning and rationality (with a focus on mathematics and the sciences), from ancient to modern times. The first part of the course traces the search for deductive methods for obtaining certain knowledge, starting with Aristotle and Euclid all the way to the work of Boole and Frege in the 19th century. The second part of the course considers the history of skepticism about empirical knowledge, covering Plato, Descartes, Pascal, and Hume, along with replies to skepticism in the works of Bayes and Kant. The third part of the course discusses theories of the nature of the mind and mental processes, culminating in the computational conception of the mind that underlies contemporary cognitive science.

80-180 Nature of Language: An Introduction to Linguistics

Fall and Spring: 9 units
Language is used to talk about the world or to describe it, but how do we go about describing language itself? Linguistics is the name given to the science of language, whose task it is to give such a description. The discipline of linguistics has developed novel tools for describing and analyzing language over the last two hundred years and in this course we learn what these tools are and practice applying them. Sub-areas of linguistics which we study include phonetics (the study of speech sounds), phonology (the study of sound systems), morphology (the study of parts of words), and syntax (the study of combinations of words). Furthermore, we highlight various respects in which language and linguistics intersects with societal issues. The methods of linguistics are useful in the study of particular languages and in the study of language generally, so this course is useful for students of foreign languages as well as those interested in going on to study language acquisition, psycholinguistics, sociolinguistics, philosophy of language, and computer modeling of language.

80-201 Knowledge and Justified Belief

Intermittent: 9 units
Knowledge acquisition is central to the university's mission. The sciences seek knowledge of nature. Statistics concerns methods for finding and establishing scientific knowledge. Machine learning concerns the automated generation of knowledge. Database theory concerns the maintenance of knowledge. But then what are knowledge, justified belief, truth, and evidence, and how do all of those concepts fit together? The branch of philosophy that studies those questions is called epistemology, which just means "study of knowledge". This class confronts the central epistemological questions. Topics include the analysis of knowledge and justification (what are they?), skepticism (the justifiability of beliefs that goes beyond the data available), and the relationship between knowledge and deductive logic (are the consequences of knowledge knowable?). The proposed answers involve a subtle interplay of logic, probability, causation, and counterfactual reasoning. The course is self-contained, so there are no prerequisites.

80-207 Philosophy & Literature: Tolkien, Lewis, and the Inklings

Intermittent: 9 units
Does literature simply "dress up," or even distort, the claims of reason? Or can literature illuminate certain truths that philosophy does not (or cannot) express? Tackling this "ancient quarrel" between the disciplines, this course explores the work of the Inklings, a group of early 20th century Oxford thinkers committed to a strong version of the thesis that literature can articulate, even "create," unique and irreducible kinds of truth and meaning. We examine the creative and philosophical work of the four principal members of the Inklings (C.S. Lewis, J.R.R. Tolkien, Owen Barfield, and Charles Williams) and take up their debates in the work of later scholars, such as Martha Nussbaum, Nathan A. Scott, Douglas Hedley, and Judith Wolfe. The first half of this course examines the philosophical writings of the Inklings on problems of ancient and modern philosophy alongside questions of literary genre and form. In the second half, we bring these philosophical frameworks to bear in close readings of some of the Inklings' most famous works, including The Chronicles of Narnia and The Lord of the Rings.

80-208 Critical Thinking

Intermittent: 9 units
This course is an introduction to practical reasoning. The course will contain an elementary introduction to concepts important for reasoning and decision making, such as validity, probability, and utilities. Students will extensively practice critically analyzing and evaluating a wide variety of arguments found in newspapers, magazines, and elementary accounts of scientific reasoning. In order to help students develop the skills to analyze and evaluate arguments, the course will introduce several software packages recently developed at CMU that help students diagram arguments and causal reasoning; these packages have been shown to improve students critical reasoning skills. In addition, students will learn about a wide variety of statistical, logical, psychological, and causal fallacies that are used to mislead people.

80-210 Logic and Proofs

All Semesters: 9 units
Logic and amp; Proofs is a web-based course and introduces students to central issues in modern logic. It is designed for individual learning with rich interactive environments and dynamic intelligent tutoring. The material is presented on-line, and most exercises are done on-line as well. Readings of historical and philosophical character complement the core content. This on-line course is supplemented, indeed given additional grounding, by weekly meetings in very small groups. There, we have collaborative reviews, substantive discussions and critical reflections. The central question of the course is this: How can we analyze the structure of rational discourse or, more specifically, the logical structure of argumentation? An answer to this question requires: (i) uncovering the logical form of statements; (ii) defining the correctness of logical steps; (iii) formulating inference rules for the logical forms; (iv) designing strategies for argumentation with the inference rules. The course takes these steps for both sentential and quantificational logic.

Course Website: https://oli.cmu.edu/courses/logic-proofs/

80-211 Logic and Mathematical Inquiry

Fall: 9 units
Since ancient times, mathematical arguments have served as a paradigm for rational inquiry. We will study fundamental mathematical concepts and informal proofs as they occur in everyday mathematics. We will also use the methods of mathematical logic, which provides formal symbolic languages, to help us understand the structure of a mathematical argument. Finally, we will make use of a new computational "proof assistant," called Lean, to develop fully rigorous, machine-checked proofs.

80-212 Arguments and Logical Analysis

Intermittent: 9 units
Are there rational methods that can further our knowledge? The notion of rational inquiry presupposes that there are appropriate methods for the pursuit of knowledge. In this course, we will investigate the means by which a successful argument justifies its conclusion, as well as various subtle ways in which other arguments fail. The course will explore the use of logic as an instrument in the study of arguments and reasoning, and it will serve as a gentle introduction to the elementary concepts of formal logic. We will take a historically informed approach to studying logic and argumentative fallacies, and we will discover that logical tools and methods are useful for constructing and analyzing arguments in all disciplines, from philosophy and history to psychology and physics. Our goals are to acquire a solid grasp of some fundamental tools of modern logic, and learn how to use them to make our thinking and writing clearer, more precise, and more critical. To this end, our coursework will consist in homework and exams on topics in logic, as well as writing assignments on a variety of topics. This course is intended for students from any discipline who would like to improve their writing and critical thinking skills, as well as students who are interested in learning logic without having had prior contact with the subject.

80-220 Philosophy of Science

Intermittent: 9 units
In this course, we will examine some historical case studies (e.g., the Copernican revolution in astronomy) against which we will assess views pertaining to the significance, justification, and production of scientific knowledge. For example, should scientific theories be understood literally or as computational devices for deriving new predictions? How can universal conclusions ever be justified by a finite data set? Does explanation contribute to a theory's confirmation by the evidence? Does science aim to find the truth? Is probability in the world or only in our minds? Is explanation a matter of finding causes or are causes whatever it is that explains? Is scientific rationality objective or culture-relative?

80-221 Philosophy of Social Science

Spring: 9 units
This course will explore numerous philosophical issues that arise in the practice of various social sciences. One central question of the course is whether we can use traditional scientific reasoning to understand social phenomena, e.g. social inequalities, violence, changes in politics, discriminary practices, ecnomic forcasting, etc. in the same way that we use them to understand natural phenomena, e.g. gases, organisms, protein structure, and planetary orbits. Some of the more specific questions we address are: Because humans possess free will and act with intentions while light rays and planets in motion do not, are we forced to use different kinds of explanations in the two cases? How can we explain social institutions that depend upon cooperation when there considerable pyschological evidence that cooperation doesn't help us in achieving our own personal goals? Whereas natural scientists actively conduct experiments, social scientists can often only collect statistical and qualitative data. Does this difference prevent social scientists from inferring causal relations and laws of social behavior? Is our understanding of social phenomena always value laden given that values are an inherent aspect of social life?

80-226 The Nature of Scientific Revolutions

Fall: 9 units
Science is an ever-changing enterprise. Most scientific advances, though significant, occur within a stable framework of accepted theories and data. A few episodes of change in the history of science involve discarding and replacing fundamental theories of the world. These are often accompanied by significant changes in the vocabulary in which those theories are expressed, the tools used by scientists, the phenomena on which scientists focus, and the kinds of explanations they consider acceptable. A very small number of these episodes change the way humanity views its ability to know the natural world and its place in the universe. The latter two kinds of change in science have often been called "scientific revolutions." We will focus on three such radical transformations: The "Copernican Revolution" (or "the Scientific Revolution") of the 16th and 17th centuries, the Darwinian revolution of the 19th century, and the quantum revolution of the late 19th and 20th centuries. This course has two intertwined components: history of science and philosophy of science. In the historical component, we will examine in some detail the three major scientific revolutions. The philosophical components will help us understand the reasoning involved in scientific theory change. This course does not require detailed knowledge of any of the sciences used in examples of revolutionary change.

80-234 Race, Gender, and Justice

Intermittent: 9 units
Race and gender, along with their interfaces and interactions with such other social identities as sexuality, (dis)ability, and class, structure our experience of almost every aspect of our social and political reality. Philosophers approach these kinds of social identities from a variety of perspectives. They ask what these kinds of social categories really are, what they mean for the ways we live our lives and the ways we perceive and understand the world, how they have (mis)informed our theoretical and practical understanding of the nature of justice and political power, and what is owed to those affected by racial and gendered injustice. This course explores these topics, drawing on tools and perspectives from epistemology, ethics, and especially social and political philosophy.

80-244 Environmental Ethics

Fall: 9 units
In this class, we'll try to figure out what obligations we might have to the natural environment and the non-human living beings within it, as well as what justice requires of us in our use of natural resources given the needs of other human beings. Among other things, we'll spend considerable time on animal ethics: What moral obligations do we have to non-human animals? Is it morally OK to eat them? Does a dog count (morally speaking) as much as a human? Does a factory-farm chicken count as much as a wild endangered tiger? Then, given that many of the most pressing environmental problemslike climate changeare collective action problems, we'll consider why these problems are so sticky, what obligations we have as individuals in dealing with these problems, and what a just collective solution might look like. To that end, we'll examine the processes fueling climate change, we'll look at who is responsible for these processes, and we'll try to determine whether any current proposal to deal with climate change is an effective, just response to the problem.

80-245 Medical Ethics

Spring: 9 units
This course provides a detailed introduction to core ethical issues in medical ethics and public policy. Topics include: the moral responsibilities of health care providers to patients and various third parties such as the government or insurance companies, the status of health as a social good, questions of justice in access to health care, and questions of individual liberty and social responsibility at the ends of life including issues such as cloning, abortion, physician assisted suicide, and the definition of death. We will also examine specific ethical issues in the conduct of medical research and look at the impact of technological innovation on our notions of health, disease, life, death, and the family. While the course engages such substantive ethical issues it also attempts to sharpen students' skills in practical reasoning through argument analysis, analogical reasoning, and the application of theory and principles to particular cases.

80-246 Moral Psychology

Intermittent: 9 units
In this course you will read cutting-edge scientific work on morality and you will learn to interpret it in light of recent lessons from biology and computer science. This course will also introduce you to distinctions that philosophers have found useful for moral-psychological and meta-ethical theorizing. Topics that we may discuss include: the psychology of normative ethics; moral emotions (e.g., disgust, guilt, shame, pride, etc.); the origins of morality in human and nonhuman animals; moral development in babies and children; the role of moral judgment in folk theorizing; and mathematical models of morality inspired by insights from machine learning. However, this course is exploratory and designed to be open-ended. I hope and expect that students will help to determine what we read and discuss.

80-249 AI, Society, and Humanity

Fall: 9 units
AI and robotic technologies are developing rapidly and are increasingly incorporated into decisions, practices, and activities that impact individual and social interests. To ensure that these technologies advance meritorious goals without undermining important values or relationships, stakeholders must be able to understand the diverse ways in which new technologies can impact the lives of individuals and communities, the diverse dimensions on which such impacts can be evaluated and measured and where in the lifecycle of product development these various impacts might be anticipated and addressed. Through a series of case studies of current or near-future AI and robotics technologies students in this course will explore frameworks for assessing, evaluating and regulating novel technologies with the goal of ensuring that they support and advance human interests and social values.

80-250 Ancient Philosophy

Fall: 9 units
This course will cover Ancient Greek philosophy from the pre-Socratics to the later Hellenistic writers. We will prepare the background for Socrates and Plato by studying major Presocratic philosophers such as the Milesians, Heraclitus, and Parmenides, and then dive in to a careful study of some of the central works of Plato and Aristotle. A key theme of the class will be the way in which Socrates, Plato, and Aristotle sought to define philosophy in opposition to sophistry, and how the lessons learned from their confrontation with sophistry informed their ethical and metaphysical thought. The final sections will discuss post-Aristotelian movements such as Epicureanism, Skepticism, and Stoicism.

80-251 Modern Philosophy

Spring: 9 units
This class will focus on the history of Western philosophy in the modern period, with special emphasis on the "early modern" era of roughly 1600-1800. Massive upheavals and conflicts in science, politics, and religion fueled attempts to find new ways of making sense of the world, and we will try to situate our philosophers within this rapidly evolving intellectual context. In particular, we will examine the impact of these changes on two subfields of philosophy: metaphysics (the study of the nature of reality, distinguishing it from mere appearance), and epistemology (roughly, the study of knowledge itself). We will ask, and attempt answers for, questions like: What is knowledge, can we achieve it, and if so, to what extent? To what extent, if any, can our most basic scientific instruments, the human senses, lead us to the true nature of the world? These questions will unavoidably send us down paths into other subfields, like philosophies of mind, of free will, of ethics, and of religion. After reading early modern philosophers like Ren and #233; Descartes, Princess Elizabeth of Bohemia, John Locke, David Hume, and Immanuel Kant, we will turn to some more recent work in the modern and contemporary eras to see what lessons (if any) were learned, and what new approaches (if any) have been taken in the quest for knowledge and reality.

80-252 Kant

Intermittent: 9 units
Immanuel Kant was a CMU sort of person. He was an enthusiastic follower of Isaac Newton, and his approach to fundamental philosophy was: "what would robotics be like from the viewpoint of the robot?" From that starting point, he investigated what would have to be the case for the robot to know anything about its environment. The resulting "critical philosophy" defined the relevant philosophical vocabulary for generations of prominent mathematicians and scientists into the 20th century, and is pivotal background both for both the "analytic" and the "continental" schools of philosophy. This course starts with essential background reading in pre-Kantian, early modern sources, including Descartes. Then it focuses on a detailed reading of Kant's Critique of Pure Reason and related texts. Course requirements include written answers to reading questions and two short paper projects. There are no prerequisites.

80-253 Continental Philosophy

Intermittent: 9 units
This course provides students with an overview of key movements in European Philosophy. The historical background covers Descartes, Kant, Kierkegaard, and Nietzsche. The central tenets of phenomenology and existentialism (e.g., intentionality, Being-in-the-World, Bad Faith) will be discussed in the context of selected works from Husserl, Heidegger, Sartre and Merleau-Ponty. The course will conclude with the background for and current work of Habermas.

80-254 Analytic Philosophy

Intermittent: 9 units
This course examines the revolutionary impact of philosophy at the turn of the 20th century on contemporary thought and progress. By the 1920s some scientists and philosophers became hopeful that the end of the long tradition of philosophical deadlock was finally within reach. Buoyed in particular by Einstein's theory of relativity and the invention of modern logic, they created a new kind of philosophy with the goal of applying logical and empirical methods to philosophical problems. This new approach led to new puzzles and paradoxes, along with a focus on the age old question of what can be known and what is meaningful. The modern fields of linguistics, cognitive science, and information and computer sciences all owe a debt to these sources, as does of course contemporary philosophy. Our quest will be to understand both what authors like Frege, Russell, and the Vienna Circle were up to in the first place, and how their work contributed to the world we live in today.

80-255 Pragmatism: Making Ideas Work

Intermittent: 9 units
American Pragmatism represented an energetic attempt to bridge the divergent cultures of science and the humanities. The movement's founder, C.S. Peirce, was trained in chemistry and worked as a physicist, but he was also deeply concerned with the contemporary philosophical portrayal of science, which distinguished sharply between theoretical knowledge and practice. Peirce responded by constructing a comprehensive philosophy emphasizing the scientific importance of community, fallibility, and action. Pragmatism was developed and popularized by William James, who aspired to be a painter and ended up as an acknowledged founder of modern empirical psychology. James extended Peirce's position by defending the role of values in even the purest of empirical sciences. John Dewey, who is also well-known for his role in education, interpreted science as an evolving social system and developed a theory of aesthetics based on what we now call the psychology of problem solving. The pragmatists made lasting contributions to modern statistics, logic, and social science and their emphases on community, fallibility, action, and value in science are still of primary importance in philosophy and in the ongoing dialogue between the scientific and humanistic cultures.

80-261 Experience, Reason, and Truth

Intermittent: 9 units
A central issue in Western philosophy has been whether reason or experience (or some of both?) provides the foundations for human knowledge. This course explores that question by looking at various "empiricist" vs. "rationalist" debates from the 17th century to the present day. We will focus on the problems encountered in trying to give an adequate account of the our knowledge of the external world, the structure of our minds, and the nature and limitations of human knowledge. The scope of our investigation will extend to the nature of mathematical knowledge, to "thought experiments" in both science and philosophy, and to "nativism" vs. "empiricism" issues in contemporary cognitive science and moral theory. The course has two main goals: (1) to study key metaphysical and epistemological issues surrounding the nature of human knowledge and (2) to help improve our analytical and critical skills by extracting and evaluating various relevant philosophical arguments.

80-270 Problems of Mind and Body: Meaning and Doing

Fall: 9 units
Central to our existence is meaning and our responses to it. We believe and desire things and on the basis of these attitudes, we make things happen. How can meaning exist in a seemingly mindless world? How can the world give rise to a mind capable of agency?This course tackles the mind body problem in respect of explaining meaning and human action. We tackle philosophical problems with serious engagement with empirical work from psychology and neuroscience. Students taking the course will tackle these problems with emphasis on developing analytical abilities.

80-271 Mind and Body: The Objective and the Subjective

Fall: 9 units
This course is about the subjective and the objective. "Subjective" captures the distinctive features that characterize what it means to be a psychological subject. This includes the power to represent, to think, feel, sense and in general to be conscious. Subjective features seem radically different from the physical world of matter and forces, a world that seems meaningless, unthinking and nonconscious. How can the subjective be rooted in the objective? We address this central philosophical problem by engaging philosophy with science. In this course, we will investigate thinking, sensing, imagining, dreaming, hallucinating, mindfulness and self-knowledge. As a result, we will explore how the subjective might be the objective. Students will develop analytical techniques such as conceptual analysis and argument analysis.

80-275 Metaphysics

Intermittent: 9 units
The topical agenda of this course will vary. Typical topics include the problem of personal identity, the nature of human freedom, the nature of the self, the nature of reality and being, the nature of causality, and the question of whether solutions to such problems can be given. Classical as well as contemporary philosophic texts will be studied. For Spring 2011: Issues we will consider, in no particular order, include: Do properties exist? Why should you think there is an external world? What is a number? Why should you think other people have mental states? What are natural kinds? What constitutes the identity of things through time? What constitutes the identity of persons through time? What does determinism mean? Is there freedom of the will? What is possibility? What is necessity? Are there other possible worlds? When does one event cause another, and what does that mean? What could a deity be, and should you think there is one?

80-276 Philosophy of Religion

Intermittent: 9 units
Historically and cross-culturally, philosophy tends to emerge as an effort to understand religion. Whether or not one is a believer, religion can be viewed as a "stress test" of the concepts we bring to our understanding of the mundane world. Can we know that there is an infinite being behind mundane reality? What can we comprehend about such a being? Is morality prior to or subject to that being's will? Can such a being be innocent of our wrong-doing? If there is such a being, are we responsible for anything? All of those questions depend as much on what we mean by possibility, freedom and responsibility as they do on the truth of religion. In this class, we fearlessly confront those questions and, in the Carnegie Mellon spirit, we relate each philosophical reading to relevant issues in science and logic. Since the philosophy of religion literature focuses primarily on a Judeo-Christian context, the class begins with a short survey of the religious contexts of ancient Greece, Hinduism, and Budhism to provide points of reference from which to question Judeo-Christian presuppositions.

80-280 Linguistic Analysis

Spring: 9 units
How do physical events (sounds) or physical objects (marks on paper) create or transmit meaning? Linguistic values are assigned to sounds and marks, based on specific physical features, creating phonemes and graphemes. Juxtapositions of phonemes and graphemes create morphemes, minimal units that hold meaning, with syntax arranging morphemes into sentences, minimal units of information. Further structural changes change the mood of a sentence and give it new function - as a request for information, demand for action, presentation of alternatives, and so on. The goal of this course is to investigate the structure of basic sentences and then the changes to structure by which communicative function is realized. Building on material taught in Nature of Language, this course looks in detail at the syntax of human languages, taking into account cross-linguistic variety.
Prerequisite: 80-180

80-282 Phonetics and Phonology I

Fall: 9 units
This course aims to provide students with practical tools for the study of speech sounds. The first step in this analysis is isolating the speech sounds themselves, for any particular language. Following this, the relation between the articulatory features of sounds and their acoustic properties is examined using spectrograms and other devices. Basic phonological notions are covered, tracing their development in the twentieth century up through optimality theory. In optimality theory, contrast and allophonic variation are explained in terms of an input-output device which selects the most harmonic candidate still faithful to phonemes in the input. The course should be relevant not only to linguistics students, but to students of language generally, with applications to sociolinguistics, child language development, speech recognition technologies, and the study of foreign languages.
Prerequisite: 80-180

80-283 It Matters How You Say It

Spring: 9 units
Why do languages give us multiple ways to say the same thing? Given that in English we can say "My dog ate my homework," why do we sometimes prefer "My homework got eaten by my dog"? Why do we sometimes choose to refer to someone with just a pronoun ("he"), and sometimes choose their full name ("Charles Dickens")? What's the difference between telling someone: "This expensive coffee is tasteless," or telling them: "This tasteless coffee was expensive"? This course is about the choices that languages give us for conveying a particular message, and the communicative effects of those choices. We will see that it is both the words you use and the way you put them together that determines the total communicative effect of your utterance. While the course will focus on English, students will have an opportunity to work on another language of interest in their final project.

80-285 Natural Language Syntax

Spring: 9 units
This course regards modern linguistics as a set of powerful tools for understanding and using language, and among all the subfields of linguistics, syntax as one of the most powerful. There are, however, many approaches to syntax so how should one choose which syntax to study? In 1957, Chomsky published Syntactic Structures, building on earlier research but at the same time providing a novel approach to age-old problems in linguistics, particularly the productivity problem and the learning problem. (How do speakers produce and understand novel sentences, and how do children learn without being taught?) While it is true that the field has progressed far since 1957, Syntactic Structures still stands out for its simplicity and usefulness. In this course we look at how more recent developments in syntax can be reconciled with this earlier approach. Particular focus is on how students can use syntax, in learning other languages and in refining their own use of language.
Prerequisites: 80-180 or 80-284

80-286 Words and Word Formation: Introduction to Morphology

Fall: 9 units
How many words do you know? Is 'gonna' one word or two? How many meanings does 'unlockable' have? If someone can be 'inept', why can't they be 'ept'? In this course we study the lingusitics of words and word formation, known as morphology. We begin by asking what a word is, about the internal structure of words, and how new words are formed. Throughout, we will consider these questions from a cross-linguistic perspective, looking at morphological data from a wide range of languages. We will also consider how morphology interacts with other subfields of linguistics, including phonology, syntax and semantics. Finally, we will survey morphological questions from the perspectives of language acquisition, psychology, and cognitive science.
Prerequisite: 80-180

80-287 Language Variation and Change

Spring: 9 units
We all know that languages differ and change, and that even two people who know the "same" language can sound quite different to each other, use different words, or even different sentence structures. This course takes students on a tour through linguistic difference across languages, within languages, and over time. We will look at how historical linguists reconstruct dead languages, how sociolinguists model language change, and how linguistic typologists assess whether some linguistic features (e.g., word order) are more or less common than others. We will also explore how linguistic variation and change are related to issues of social status and political power, and we'll investigate explanations for variation and change, drawing on literature from computational modelling and psycholinguistics. There is no prerequisite, and no prior linguistic knowledge is assumed.

80-288 Intonation: The Meaning of Linguistic Tunes

Spring: 9 units
Intonation is the melody of speech: how a speaker's pitch changes over the course of an utterance, along with the placement of emphasis, or sentence-level stress. Intonation and stress contribute to the interpretation of utterances in multiple ways. For example, the questions "Did BOB go to the store?" and "Did Bob go to the STORE?" contain the same words, but request different information. Similarly, whether the sentence "Bob went to the store" is interpreted as a statement or as a question, and whether as expressing certainty or uncertainty on the part of the speaker, depends on its intonation. Features of intonation can also convey information about the speaker's attitudes and affect: sarcasm and irony, for example, may be signaled by intonation. The goal of this course is two-fold. First, students will learn about the phonetic correlates of intonation and stress, and learn how to analyze intonation as a system of high and low tones, using the intonation transcription system ToBI. This will enable students to accurately describe the intonation pattern of an utterance. Second, students will learn how intonation is used to convey semantic and pragmatic information. The course will focus primarily on English, but other languages will be explored to serve as a basis of comparison. The course will be of interest to students interested in learning some of the intricacies of face-to-face linguistic communication. Students in the departments of English, Modern Languages, Language Technology, Human-Computer Interaction, and Psychology will find material relevant to their major topics. The course serves as an elective for the Linguistics Major, and is a natural companion to other courses on the expression of linguistic meaning: Meaning in Language, Language in Use, and Syntax and Discourse. The course requires basic background in phonetics.
Prerequisites: 80-283 or 85-385 or 80-488 or 80-180 or 80-284

80-305 Game Theory

Fall: 9 units
Game theory is the study of interactive decision-making: making choices in the context of other agents who are also making choices. Famous examples include the Prisoner's Dilemma (pitting rational self-interest against the benefits of cooperation), and the Cournot duopoly (a basic model of market competition and supply-and-demand). Game theory has been applied to situations as diverse as traffic flow, auctions, the search and competition for scarce resources, and bargaining. This course will develop conceptual and technical facility with the mathematical tools used to model and analyze such situations. We will cover both simultaneous and sequential games and become familiar with a variety of concepts such as strict and weak dominance, randomization, expected utility maximization, never-best responses, non-credible threats, and time discounting. We'll also study solution concepts such as Nash equilibrium, correlated equilibrium, rationalizability, and subgame perfect equilibrium. Throughout the course we will take the opportunity to actually play several of the games we study to help build intuitions and foster insights into the formal mathematical models we develop. Some experience with mathematical methods (definitions, proofs, etc.) will be helpful.

80-306 Decision Theory

Spring: 9 units
This course is an introduction to formal models of choice and decision-making. We begin by examining choice under certainty, developing both qualitative and quantitative models of preference. We then expand our analysis to take into account uncertainty, focusing on the von Neumann-Morgenstern theory of expected utility and Savage's classic axioms. Empirical challenges to models are emphasized throughout, in response to which we will consider a variety of alternative representations of uncertainty (e.g., Dempster-Shafer belief functions, non-unique probability measures) and preference (e.g., framing effects, prospect theory).

80-310 Formal Logic

Fall: 9 units
Among the most significant developments in modern logic is the formal analysis of the notions of provability and logical consequence for the logic of relations and quantification, known as first-order logic. These notions are related by the soundness and completeness theorems: a logical formula is provable if and only if it is true under every interpretation. This course provides a formal specification of the syntax and semantics of first-order logic and then proves the soundness and completeness theorems. Other topics may include: basic model theory, intuitionistic, modal, and higher-order logics.
Prerequisites: 21-127 or 15-251 or 80-210 or 80-211

80-311 Undecidability and Incompleteness

Spring: 9 units
U and amp; I focuses on two fundamental results: the undecidability of logic (established by Alonzo Church and Alan Turing) and the incompleteness of mathematical theories (discovered by Kurt G and #246;del). The proofs of these results require a novel metamathematical perspective, but also striking logical concepts and fascinating mathematical techniques. In this course, the theorems are not just formulated but actually proved. We begin with the axiomatic development of elementary set theory that allows, at the same time, the formal representation of informal mathematics like number theory. With this basis, one can show that syntactic notions concerning set theory are representable in the very theory. It is then easy to prove that set theory is incomplete. To show that logic is undecidable, the crucial concept of computation is introduced via Turing machines. The two central concepts - proof and computation - are fundamental for mathematics, computer science and, in particular, artificial intelligence. The undecidability and incompleteness results are among the most significant contributions of modern logic to the foundations of mathematics. They provide also the beginnings of a deeper understanding of mental processes in cognitive science and, thus, of the human mind. To understand the latter connections, we will read about and discuss historical as well as philosophical aspects of the subject.
Prerequisites: 15-251 Min. grade C or 80-211 Min. grade C or 80-210 Min. grade B or 21-300 Min. grade C or 80-310 Min. grade C

80-312 Mathematical Revolutions

Spring: 9 units
Mathematics is a central part of our intellectual experience. It is connected to sophisticated philosophical perspectives, say, in the work of Plato, Descartes, Leibniz, Kant, as well as in contemporary analytic philosophy; it is equally connected to fundamental views in the sciences, say, in the work of Ptolemy, Galileo, Newton, Einstein, as well as in contemporary cosmology. The common view that mathematics - if not directly "static" - is evolving in a linear fashion, does not withstand historical scrutiny. Indeed, there are many dramatic conceptual changes concerning the very nature and object of mathematics.

80-315 Logics for Knowledge and Belief

Fall: 9 units
Standard logical languages can express negation ("not p"), conjunction ("p and q"), material implication ("if p then q"), quantification ("for all x, p(x)"), etc. But they don't directly capture statements like the following: "Alice knows p." "Henceforth, it will be the case that p." "It ought to be the case that p." "If it had been the case that p, it would have been the case that q." "Everybody knows p." "Everybody knows that everybody knows p." "Infinitely often in the future, p will be true." "After an announcement of p, it will be the case that Alice knows q." "If p is not permitted, then you ought to know that p is not permitted." etc. Modal logic is a very general framework for systematically reasoning about statements like these. This course is an introduction to mathematical modal logic and its applications in philosophy, computer science, linguistics, and economics, with emphasis on epistemic interpretations (i.e., logics for representing and reasoning about knowledge/belief). We begin with a rigorous development of propositional modal logic: the basic language, interpretation in relational structures, axiom systems, proofs, and validity. We prove soundness and completeness of various systems using the canonical model method and study model equivalence and expressivity results. We also consider topological semantics as an alternative to relational semantics, and investigate the connection between the two. In the latter part of the course we turn our attention to more specialized logical systems and their applications, as determined by the interests of the class. Topics may include: quantified modal logic, multi-agent systems and the notion of common knowledge (with applications to game theory), temporal and dynamic logics for (nondeterministic) program execution, logics for reasoning about counterfactuals, public announcement logic, deontic logic, intuitionistic logic, and others.
Prerequisites: 15-251 Min. grade C or 80-211 Min. grade C or 21-127 Min. grade C or 21-128 Min. grade C or 80-212 Min. grade C or 80-210 Min. grade C

80-316 Logic and AI

Intermittent: 9 units
In this course, we will study logical systems that are relevant to, and motivated by, research in artificial intelligence. We will see how key ideas and advances in logic have found (and continue to find) natural applications in AI. More generally, we will see how logic and AI can benefit, and historically have benefited, from each other. A central aim of this course is to understand how logical languages of varying expressive power can be put to use in AI as a tool for representation and reasoning. Some of the topics that we will be focusing on are (1) non-monotonic and default logics, (2) modal logics for reasoning about knowledge/belief, temporal structures, and computation, (3) probabilistic logics (and the relation between logic and probability), (4) logics of graphical causal models and counterfactuals, as well as (5) elements of probabilistic programming and computable probability theory.
Prerequisites: 80-610 or 80-310

80-324 Philosophy of Economics

Intermittent: 9 units
The science of economics has come to occupy a central position in contemporary society. Because of this central position in political decision making, economics is intertwined with a number of other philosophical issues surrounding justice, rights, and fairness. The central theme of this course will be on the arguments in favor and against markets as effective solutions to political problems. This issue will allow us to analyze a wide number of foundational issues in economics including the testability of economic claims, the use of "rationality" postulates, the foundation of the right to property, and measuring the success or failure of an economy.

80-325 Foundations of Causation and Machine Learning

Fall: 9 units
How can we define causality? Does smoking cause cancer? Can one find causality from observational data without temporal information? In our daily life and science, people often attempt to answer such causal questions for the purpose of understanding, proper manipulation of systems, and robust prediction under interventions. In the past decades, interesting advances were made in machine learning, philosophy, statistics, and economics for tackling long-standing causality problems, and a number of researchers have been recognized with the Turing Award (to Pearl in 2012) the Nobel Prize (to Granger in 2003 and to Sims in 2011). This course is primarily concerned with historical and technical developments of modern causality research, focusing particularly on how to discover causality from observational data and how to infer the causal effect of one variable on another. Thinking more broadly, causal analysis is a particular branch of unsupervised multivariate analysis. Accordingly, this course also provides a big picture of the foundations of causation and unsupervised machine learning. We start with unsupervised learning and multivariate statistical analysis problems including factor analysis, principal component analysis, and independent component analysis, and formulate their assumptions, develop their solutions, and study their connections with causal analysis. Finally, we investigate how the causal perspective helps in solving advanced machine learning or artificial intelligence problems, including transfer learning, image-to-image translation, reinforcement learning, and unsupervised deep learning.

80-330 Ethical Theory

Spring: 9 units
This course provides a detailed survey of the structure of prominent theories of normative ethics. The space of possible consequentialist theories is surveyed in detail, allowing students to understand what distinguishes different forms of consequentialism and to assess the relative merits of these theories. The space of non-consequentialist theories is also surveyed, although in slightly less detail. The course engages classic texts from Aristotle, Kant and Mill and contemporary essays by leading philosophers.

80-334 Social and Political Philosophy

Intermittent: 9 units
Political philosophers are interested in whether, and to what extent, government use of coercion can be justified. This question involves many facets, including what gives the government the legitimate authority (if any) to coercively enforce the rules, what limits there are (if any) to the legitimate kinds of rules the government can enforce (and why), what obligations (if any) the government has to the citizens that are governed by its rules, and what claims (if any) citizens of a state can make upon one another. This course provides a systematic investigation of such questions as well as the concepts that are often appealed to in political theory, such as "justice," "equality," and "fairness." Readings will be comprised of classic and contemporary theorists from within the liberal political tradition as well as theorists critical of this tradition and its ability to live up to the lofty ideals it espouses.

80-335 Social and Political Philosophy

Fall: 9 units
Broadly speaking, political philosophers are interested in whether, and to what extent, government use of coercion can be justified, and how formal social and political institutions should be structured in order to be legitimate. Social philosophy encompasses these political questions, but also looks at how individuals should live together and how individual behaviors can impact not only state institutions but also more informal social norms and institutions. This is an advanced course in social and political philosophy, aimed at providing students with an in-depth familiarity with classic and contemporary questions both theoretical and applied.

80-336 Philosophy of Law

Intermittent: 9 units
In recent years, the U.S. legal system has been beset by claims of overcriminalization, racially discriminatory enforcement, and inadequate or unequal protection of individual civil rights. What should we make of these claims, and what, if anything, would be implied by their truth? In seeking to answer these questions, this course will examine the nature of the law and its enforcement. We will begin by discussing the issue of criminalization and whether the expansion of the criminal law is or is not problematic. From there, we will turn to the more foundational questions of what, precisely, the law is, and what its connection to morality is or should be. Are we obligated to obey the law, and if so, why? Finally, we will ask whether it is possible for the law to remain neutral with regards to morality and politics, and whether the supposed "neutrality" of the law may itself be an instrument of oppression. If the legal system lacks the kind of neutrality that many legal theorists claim for it, what (if anything) does that license us (as citizens) to do?

80-348 Health, Human Rights, and International Development

Fall: 9 units
Approximately 767 million people, or more than 10% of the world's population, live in a condition the World Bank refers to as "extreme poverty". Those who live in extreme poverty frequently lack effective access to proper nutrition, adequate shelter, safe drinking water, and sanitation. As a result, they also bear the greatest burdens of famine and epidemic disease and frequently face social and political conditions of unrest and systematic oppression. This course aims to introduce students to the problem of global public health and its intersection with claims of human rights. We will focus on theoretical accounts of human rights and questions arising from them: What constitutes a human right, and on what basis or bases might the existence of human rights be defended? If human rights exist, whose responsibility is it to see that they are defended/provided/not violated, and why? What is the relationship between health deficits and human rights deficits, and what would a "human right to health" look like? Are global institutions such as the protection of strong intellectual property rights consistent with respect for a human right to health?

80-350 Adam Smith

Intermittent: 9 units
Adam Smith is known as the father of economics. Many view Smith as a champion, not just of the science of economics, but of modern libertarian thought. His last book, The Wealth of Nations, is seen as the first defense of the value of free market capitalism. Less well known is Smith's earlier work which presents a altogether different picture. In it, Smith emphases the importance of altruism, empathy, and the value of interpersonal connection. In this course we will investigate the thought of Adam Smith, and find that he is far more complex than often portrayed.

80-358 Hume

Intermittent: 9 units
This course will investigate the philosophy of David Hume. We will focus on his philosophical thought expressed in the book A Treatise of Human Nature. Hume was an influential philosopher who wrote on many issues ranging from skepticism, to ethics, to the philosophy of science, and his views continue to be influential today. In this course we will attempt to understand Hume's philosophy on all of these subjects both to better understand his contribution to the philosophy of his day, but also to see what his arguments can contribute to contemporary thought.

80-365 Ramsey

Intermittent: 9 units
Frank Ramsey's untimely death in 1930, at the age of 26, marked the loss of a versatile and original thinker. During his short life, he made decisive and influential contributions to philosophy, mathematics and economics. The entire core of Ramsey's philosophical and scientific work consists of no more than 15 papers; in all cases they are remarkable essays that changed the intellectual topics they touched. This course will explore Ramsey's seminal contributions to probability and decision theory, philosophical and mathematical logic, the foundations of mathematics, metaphysics, and the philosophy of science. We will read some of Ramsey's original papers as well as more recent work inspired in response to, or as an elaboration on, Ramsey's views. We will see how Ramsey laid the foundations of the theory of subjective probability and decision theory, offered one of the first formulations of a deflationary theory of truth, and inspired contemporary work in philosophical logic (particularly on the logic of conditionals). We will explore Ramsey's influential work in the philosophy of science - his accounts of laws, causality, and the nature of scientific theories - as well as his mathematical contributions to logic and (what is now known as) Ramsey theory. By examining Ramsey's contributions and their impact, the course will give a sense of their important position as quintessential examples of work in the analytic tradition, demonstrating the intellectual fruitfulness of interdisciplinary inquiry into foundational questions and of mathematically informed philosophy.

80-381 Meaning in Language

Fall: 9 units
One of the more elusive topics in the linguistics of natural language is meaning. This is the field of semantics. A key question to answer in semantics is what meaning even is. In this course, we will give an answer to this question, starting with the meaning of basic sentences. These are sentences that describe what is the case. From there, we break sentence meaning into the meaning of words. In the other direction, we consider the meaning of non-basic sentences such as questions and imperatives. We also consider the meaning of complex sentences and sentences that express irrealis. That starts with the subject of negation, with sentences that describe what is not the case. From there we move to sentences used to talk about what could be the case, what will be the case, what could've been the case, and what could never have been the case. A peculiarity of semantics is that the abstract questions we ask yield answers that are highly concrete and practical. But that only makes sense given that language permeates every human activity and it really matters what we mean by what we say.
Prerequisite: 80-180

80-382 Phonetics and Phonology II

Spring: 9 units
One of the central questions of research in human speech is how the patterning of speech sounds (phonology) relates to the articulatory, acoustics, and perceptual (phonetic) properties of speech; this problem is often referred to as the "phonetics-phonology interface". In this course, students will act as co-investigators on a topic at the phonetics-phonology interface, carrying out an acoustic study to test hypotheses that are relevant to phonological research. As co-researchers, students will be involved in all aspects of data collection and analysis. Lessons in phonetics will be designed to train students on the necessary skills and concepts required, including understanding the phonetic correlates of the phenomenon under investigation, as well as data analysis and interpretation of the results. A presentation session will be organized for the end of the semester. In tandem with the phonetic study, related phonological phenomena will be investigated throughout the semester. Students will finish this course with a solid understanding of how to do phonetic research, and an appreciation of how various theoretical frameworks have attempted to account for phonological phenomena. Assessment will take the form of quizzes, take-home problem sets, reflections on the research process, and a final report and presentation.
Prerequisites: 80-180 and 80-282

80-383 Language in Use

Fall: 9 units
In ordinary conversation, what a speaker conveys by the utterance of a sentence may go beyond, or be quite different from, the meaning that could be assigned to the sentence or expression that they use without consideration of the context in which it occurs. For example, the sentence "I have homework" means one thing; but it conveys something more when uttered in answer to the question "Do you want to go see a movie tonight?" In this course, we explore how the systematic study of linguistic meaning can be expanded from the domain of the sentence to the domain of connected, multiparty discourse. This involves taking into account the contributions of context, and of speaker and hearer's beliefs, goals and intentions, to the construction of meaning. This course is one of the set of courses on language and meaning offered by the Program in Linguistics, including in addition to this: 80-283 It Matters How You Say It, 80-288 Intonation, and 80-381 Meaning in Language. Each of these courses can be taken independently; as a set, these courses provide a comprehensive introduction to contemporary approaches to natural language semantics and pragmatics.
Prerequisites: 80-100 or 80-180

80-384 Linguistics of Turkic Languages

Intermittent: 9 units
In this course we look at languages from within a single language group, Turkic. Turkic languages are spoken across continental Asia and include such languages as Turkmen, Tatar, Kazakh, Uighur, and Uzbek. In this course we concentrate especially on Yakut (Sakha) and Azerbaijani. Modern Turkish will provide a reference language. We look at various linguistic systems within each language (phonology, morphology, syntax, and writing systems) both to understand each particular language and to see how the languages are related. We consider the impact of diachronic factors on the synchronic study of language. This course can be seen as an extended case-study for applying concepts and analytical strategies from basic linguistics, as taught in Nature of Language, Phonetics and Phonology, Invented Languages, and other relevant courses.
Prerequisite: 80-180

80-385 Linguistics of Germanic Languages

Intermittent: 9 units
The Germanic languages include English, Dutch, Frisian, German, Pennsylvanisch, Afrikaans, Yiddish, Icelandic and the Scandinavian languages, excluding Finnish. The course will serve as an extended case-study for the application of concepts and analytical strategies taught in basic linguistics courses to some of these languages. Specifically, we take a bottom-up approach to Dutch, Frisian, Icelandic, and Danish, starting with raw language material whenever possible, which we progressively analyze in terms of phonetics and phonology, morphology, and syntax. These case studies lead to comparisons between the languages and insight into their development and divergence over time. We follow this hands-on approach with historical and grammatical overviews, touching on some of the outstanding issues in Germanic linguistics. The approach should also help bring out the relevance of diachronic factors in the synchronic study of language, with historical forms of English being open to investigation, as these often reflect patterns found in contemporary Germanic languages.
Prerequisite: 80-180

80-388 Linguistic Typology: Diversity and Universals

Fall: 9 units
What is the most common word order? What is the rarest consonant? What kinds of case marking are attested in the world's languages? Which linguistic structures tend to co-occur? What can we learn by looking at the rarity of linguistic structures? These are the kinds of questions central to linguistic typology, the study and classification of languages based on their structural properties. In this course we will look at the variety of linguistic structures attested in several linguistic subfields, including phonology, morphology, syntax, and semantics. Understanding linguistic diversity is closely tied with the search for linguistic universals, since there appear to be some ways in which linguistic structures seem to be limited. But what is the nature of those limits (if they truly exist), and what do they tell us? We will also look at methodological issues that arise in comparing languages and forming meaningful generalizations. Prerequisites: 80-180, and one of 80-280, 80-282, 80-285 or permission of the instructor.
Prerequisites: 80-180 and (80-280 or 80-285 or 80-282)

80-405 Game Theory

Spring: 9 units
Game theory is the study of interactive decision-making: making choices in the context of other agents who are also making choices. Famous examples include the "Prisoner's Dilemma" (pitting rational self-interest against the benefits of cooperation), and the "Cournot duopoly" (a basic model of market competition and supply-and-demand). Game theory has been applied to situations as diverse as traffic flow, auctions, the search and competition for scarce resources, and bargaining. This course will develop conceptual and technical facility with the mathematical tools used to model and analyze such situations. We will cover games in strategic and extensive form and games of perfect and imperfect information; we'll also study solution concepts such as Nash equilibrium and rationalizability. Finally, throughout the course we will take the opportunity to actually play several of the games we study to help build intuitions and foster insights into the formal mathematical models we develop.

80-411 Proof Theory

Intermittent: 9 units
An introduction to the general study of deductive systems and their properties. Topics include the natural deduction and sequent calculi; cut-elimination and normalization theorems; metamathematical properties of first-order logic and theories of arithmetic; and conservation theorems.
Prerequisites: 21-300 or 80-310 or 80-311

80-413 Category Theory

Fall: 9 units
Category theory is a formal framework devoted to studying the structural relationships between mathematical objects. Developed in the mid-20th century to attack geometrical problems, subsequent progress has revealed deep connections to algebra and logic, as well as to mathematical physics and computer science. The course emphasizes two perspectives. On one hand, we develop the basic theory of categories, regarded as mathematical structures in their own right. At the same time, we will consider the application of these results to concrete examples from logic and algebra. Some familiarity with abstract algebra or logic required.

80-419 Interactive Theorem Proving

Intermittent: 9 units
Interactive theorem proving involves using computational proof assistants to verify that mathematical proofs are correct, or to verify that hardware and software designs meet their formal specifications. This course uses a new interactive theorem prover, Lean, to explore this new technology and its logical foundations. We will study dependent type theory, a powerful and expressive language for representing mathematical objects, algorithms, and proofs. We will also consider automated methods that can be used in support of formal verification, including propositional, equational, first-order, and higher-order methods, as well as decision procedures for real and integer arithmetic.
Prerequisites: 21-300 or 15-317 or 80-310 or 80-211

Course Website: https://leanprover.github.io/theorem_proving_in_lean/

80-445 Shift Capstone Experience

Spring
The Societal and Human Impacts of Future Technologies capstone experience will be taken in either the fall or spring of the senior year. It is required for all SHIFT minors. The purpose of the capstone experience is for students to demonstrate learning over time within the minor. Key learning experiences include incorporating concepts, ideas, and amp; frameworks from multiple disciplinary perspectives, using disciplinary perspectives in appropriate ways, given their complementary strengths and amp; weaknesses, generating a multidisciplinary (2) of some current or near-future technology, collaborating with people of different disciplinary backgrounds, and communicating a single, integrated analysis of the impacts and amp; opportunities of this novel technology (and amp; recommended actions). SHIFT minors should work with the minor advisor during the Spring of their junior year to design an appropriate capstone experience.

80-447 Global Justice

Spring: 9 units
Until recently, the dominant view of international relations has been that the governments and citizens of one country have no moral obligations to those beyond their borders. With the rapid growth in globalization has come a drastic shift in attitudes about our obligations to those with whom we share global institutions of trade but neither legal systems nor national identities. This course aims to introduce students to the problem of global distributive justice in the context of a globalized world, with emphases on both theoretical accounts of justice and the practical implications of those accounts for important current issues. Theoretical topics will include the nature of justice, the sources and limits of our moral obligations, and how and whether those notions of justice extend to global society; while applied topics will include our obligations with regard to the environment, human rights deficits, the status of women, and global economic policy.

80-449 EHPP Capstone Course

Fall: 12 units
In this Fall 2023 capstone course, Ethics, History, and Public Policy majors will carry out a collaborative or individual research project that examines a compelling current policy issue that can be illuminated with historical research and philosophical and policy analysis. Students will develop an original research report based on both archival and contemporary data and present their results in a public forum at the end of the semester. Please note: this semester we are experimenting with a more flexible set of research options for EHPP students, rather than a single project topic that all students are required to work on. Collaborative projects in groups of 2-3 students are encouraged, but individual projects that integrate historical, ethical, and policy perspectives are permissible too.

80-484 Language and Thought

Spring: 9 units
The goal of this course is to provide students with the opportunity to creatively explore some difficult questions about the relationship between language and thought, questions such as: How does the human capacity to use language relate to the human capacity to think? Does the language that a person speaks affect the way she thinks? If meaning is in the head, how can we succeed in communicating with each other? How is our ability to reason related to our ability to successfully communicate? None of these questions have definite answers; throughout the course, we will draw on work in philosophy, psychology and linguistics to try to understand some of the possible answers that might be entertained. Students in the course should be prepared for extensive reading, writing and peer discussion assignments.

80-488 Acoustics of Human Speech: Theory, Data, and Analysis

Spring: 9 units
In this course, students will learn how to acoustically analyse human speech, and in so doing, will learn about both universal and language-particular acoustic characteristics of human speech. The class, which will comprise both lectures and a lab component, will introduce the basic principles of the physics of sound and how the source spectrum is modified by the vocal tract, but the focus throughout will be towards developing a solid understanding of how to perform the relevant analyses. Each week will introduce a new topic, chosen to exemplify a particular acoustic phenomenon. Lectures for that week will provide the theoretical basis for understanding the phenomenon, both in terms of acoustic theory and in articulatory terms. The lab for that week will provide students with relevant acoustic data to analyse using PRAAT, an open-source software used for acoustic analysis. Potential topics include: What does it mean to say someone speaks with "vocal fry", and how do we measure this? Why do children replace [r] with [w]? How can we compare sounds in two different languages? For example, what are the acoustic characteristics of [r] and [l] in English and Japanese, such that these sounds count as two different sounds in English, but are so similar in Japanese? What makes an [s] so noisy compared to an [f]? What happens to speech sounds when we talk quickly, or when we're sick and our nose is stuffed up? At the conclusion of the course, students will have a solid understanding of the acoustic characteristics of human speech, both in terms of the underlying theory and how to measure such phenomena. Further, they will be able to translate questions about speech into measurable acoustic variables. There is no prerequisite for this course. While technical material will be covered, no background in linguistics, acoustics, physics, or math is assumed, and all required skills will be taught as needed.

80-495 Independent Study

All Semesters
Undergraduate Independent Study Philosophy Department majors.

80-501 Undergraduate Research in Philosophy

Fall and Spring
This course is for students pursuing a research project under the supervision of a faculty member in the Philosophy Department. Time commitments as well as specific requirements, expectations, and deliverables of the research experience must be worked out in advance between the student and the supervising faculty member. The units can vary depending on the scope of the project.

80-514 Categorical Logic

Spring: 9 units
This course focuses on applications of category theory in logic and computer science. A leading idea is functorial semantics, according to which a model of a logical theory is a set-valued functor on a category determined by the theory. This gives rise to a syntax-invariant notion of a theory and introduces many algebraic methods into logic, leading naturally to the universal and other general models that distinguish functorial from classical semantics. Such categorical models occur, for example, in denotational semantics. e.g. treating the lambda-calculus via the theory of cartesian closed categories. Higher-order logic is treated categorically by the theory of topoi. We shall see how this idea connects logic with topology (the models of a theory form a space). A prerequisite for this course is familiarity with basic category theory (as treated in the course 80-413/713).
Prerequisite: 80-413 Min. grade C

Course Website: https://awodey.github.io/catlog/

80-516 Causality and Machine Learning

Fall: 9 units
In the past decades, interesting advances were made in machine learning, philosophy, and statistics for tackling long-standing causality problems, including how to discover causal knowledge from observational data, known as causal discovery, and how to infer the effect of interventions. A number of researchers have been recognized with the Turing Award (to Pearl in 2012) the Nobel Prize (to Granger in 2003 and to Sims in 2011). Furthermore, it has recently been shown that the causal view may facilitate understanding and solving various machine learning or artificial intelligence problems such as transfer learning, semi-supervised learning, disentanglement, and adversarial vulnerability. This course is concerned with understanding causality, learning causality from observational data, and using causality to tackle a class of learning problems. We will particularly focus on two key problems in causality. One is causal discovery. It is well known that "correlation does not imply causality," but we will make this statement more precise by asking what assumptions, what information in the data, and what procedures enable us to successfully recover causal information. Causal influences may take place between the underlying hidden variables, and what we measure may be their reflections; so we will also see how to find the underlying hidden "causal" variables as well as their causal relations by analyzing measured variables. Its implication in unsupervised deep learning will be discussed. The other is how to properly make use of causal information. This includes identification of causal effects, counterfactual reasoning, improving machine learning in light of causal knowledge, and forecasting in complex environments, and we will investigate how the causal perspective helps in domain adaptation, image-to-image translation, and deep reinforcement learning.

80-517 Seminar on Topics in Logic: Algorithmic Randomness

Intermittent: 9 units
What is randomness? One way to think about it is as a property of sequences of, say, events, experimental outcomes, observations, or symbols from some alphabet: a sequence is random if it is unruly, irregular, patternless. This conception of randomness plays a significant role in a variety of fields, including cryptography, information theory, the foundations of probability and statistics, computability theory, and certain computational models of learning. To build some intuition, consider the two binary strings 0010111110 and 0101010101. The first string seems more random-looking than the second. This is because the second string displays an obvious pattern that is very easy to describe and that makes it look highly predictable. But can these intuitions be made precise? Is it possible to provide a rigorous mathematical characterization of the notion of a random sequence? This seminar will provide an introduction to the theory of algorithmic randomnessan active branch of computability theoryaccording to which a sequence is random if it does not display any algorithmically detectable patterns. We will begin by discussing von Mises' theory of collectives, a precursor to the theory of algorithmic randomness; then, we will see how von Mises' work led to the modern computability-theoretic approach to randomness. We will focus on both the mathematical details of the theory of algorithmic randomness and its philosophical consequences. We will pay special attention to the connections between randomness, probability, and the philosophical interpretations of probability. Among the questions that we will address are: What is the relationship between probability and randomness? Is probability more primitive a concept than randomness, or is a precise analysis of randomness needed to understand what probabilities are? Is it possible to define "absolute" randomness? Does randomness have to satisfy any laws?

80-521 Seminar on Formal Epistemology: Belief and Evidence

Spring: 9 units
There has been a flurry of recent work on a variety of modal logics designed for reasoning about knowledge, belief, and evidence, in both static and dynamic contexts. What is the relationship between knowledge and belief? What is the role of evidence and justification? How do we react to new information, update our beliefs, and reason conditionally? These are old questions which modern logical frameworks promise to shed new light on. In this seminar we will read and analyze contemporary papers on these topics, both to gain an understanding of the current state-of-the-art, and to critically assess the extent to which these formal frameworks are genuinely enhancing our understanding of the underlying phenomena of interest.

80-524 Topics in Formal Epistemology: Topological Philosophy of Science

Intermittent: 9 units
When faced with a question concerning learning or scientific method, one habitually reaches for logic and probability theory. But sometimes habits should be questioned. There is increasing awareness, scattered across philosophy, informatics, mathematical statistics, that the the relevant issues are more fundamentally topological. That may sound shocking: what could rubber geometry have to do with learning or inductive inference? The answer is that the set of empirically verifiable propositions over a set of possibilities automatically satisfies the axioms of a topological space over possible worlds. Once that is recognized, there is a systematic translation between topology and familiar concepts and issues in learning, statistics and the the philosophy of science. This seminar will introduce the relevant topological concepts and will explore the methodological correspondences in detail. Topics covered include Hume's problem of induction, the problem of non-refutable theories and paradigm choice, convergence to the truth, simplicity and Ockham's razor, statistical model selection, causal discovery, and computability. The class will place students at the cutting edge of research in this fresh and exciting new area, and will provide them with a high-level, explanatory perspective that unifies much of the detail encountered in standard statistics and machine learning curricula.

80-551 Seminar on History of Philosophy: Smith and Hume

Fall: 9 units
David Hume and Adam Smith are the two most famous and influential figures of a philosophical era called the Scottish enlightenment. They had significant influences on one another and on the development of philosophy and the social sciences. In this class we will read work by both of them on topics related to ethics and the social sciences, and trace some of those ideas to modern philosophical and scientific ideas.

80-595 Senior Thesis

Fall and Spring
Philosophy Department majors writing a senior thesis, and are not participating in the Dietrich College Senior Honors Program, are given the opportunity to engage in original research under the direction of an individual faculty member. Research topics are selected by student.

Department of Psychology

Michael Tarr, Department Head

Erik Thiessen, Director of Undergraduate Education in Psychology

Chante Cox-Boyd, Associate Director of Undergraduate Education in Psychology

Emilie O'Leary, Academic Advisor in Psychology

Crista Crittenden, Academic Advisor in Psychology
www.cmu.edu/dietrich/psychology (http://www.cmu.edu/dietrich/psychology/)

Can newborn infants perceive the world as we do, or is it just "a blooming buzzing confusion"? Do personality, beliefs and social factors influence health? How do scientists and young children make discoveries, and what abilities make these insights possible? How does brain activity reveal differences in thinking? Can computers think the way people do?

These are some of the questions that psychologists at Carnegie Mellon are trying to answer.

For the student who is majoring in Psychology, Cognitive Science or Neuroscience, studying with faculty who are on the leading edge of research on questions like the above can be a very exciting experience.

The Psychology Department at Carnegie Mellon has long been noted as one of the pioneering Psychology Departments in the world, particularly in such areas as cognitive psychology, cognitive science, social psychology, developmental psychology, cognitive neuroscience, and health psychology. The Psychology Department offers 5 majors: B.A. and B.S. degrees in Psychology, as well as a B.S. degree in Cognitive Science and together with the Department of Biological Sciences, a unified B.S. double major in Psychology and Biological Sciences, and an Intercollege major in Neuroscience.

Statement of Community Standards

The Department of Psychology at Carnegie Mellon University strives to be a community that is academically and intellectually rigorous, as well as being diverse, inclusive, and respectful to all of its members. We aspire to promote a collegial professional environment in which all individuals can thrive and do their best work with community support and free from harassment, intimidation, or disrespect. We embrace and champion the following values:

Courtesy and Respect for Individuals

Excellence in the workplace requires an environment that promotes courtesy and civility towards every community member. Courtesy and civility require having mutual respect for one another. Therefore we expect all members of our community to take individual responsibility for:

- Viewing threats, hate speech, and harassment as totally unacceptable in an environment of free exchange of ideas amongst individuals.
- Encouraging all individuals to be respectful of others' views and opinions when expressing their own.
- Communicating with each other in ways that are clear, relevant, timely, constructive, and respectful.
- Making efforts to welcome and get to know all members of our community.
- Taking care of our common spaces rather than assuming that others will do it for us.

Diversity and Inclusion in Our Community

Academic excellence is built on a thriving and diverse community – something that is not possible without respectful treatment of all community members and intentional elimination of barriers to inclusion across groups. Therefore we expect all members of our community to take individual responsibility for:

- Providing mentoring and support for our colleagues.
- Prioritizing recruitment of people from diverse backgrounds into our community.
- Making efforts to be aware of the barriers faced by individuals and, whenever possible, making accommodations to remove or mitigate these barriers.
- Recognizing that with greater power within the academic hierarchy comes greater accountability for our actions and interactions.
- Making efforts to include our colleagues in intellectual and social gatherings during the workday whenever possible and appropriate.

The Major in Psychology

Psychology is a discipline that embraces both biological and social sciences. It is a science concerned with establishing principles and laws regarding the ways in which people think and behave through the scientific study of human behavior.

The orientation of the Carnegie Mellon Psychology curriculum is toward developing highly skilled and knowledgeable graduates. About half of our graduates go on to graduate or professional school. The remainder seek to expand their problem-oriented analytic skills to qualify themselves for job opportunities beyond those typically open to liberal arts students. Using the outcomes tool (https://www.cmu.edu/career/outcomes/post-grad-dashboard.html)created by CMU's Career & Professional Development Center, students have the opportunity to explore where some of our recent graduates have accepted employment and their positions.

Majors in the department are expected not only to learn about findings already established by psychologists, but also to become proficient in the investigation and analysis of behavior. This includes observing behavior, formulating hypotheses, designing experiments to test these hypotheses, running experiments, performing statistical analysis, and writing reports. The department has many resources for students to use in acquiring these skills. For instance, students interested in child development may be involved in the child development laboratory and observational facilities which are a part of the Carnegie Mellon Children's School (https://www.cmu.edu/dietrich/psychology/cs/) which operates under the department's aegis. Students interested in health or clinical psychology might have opportunities to do internships in applied settings, and all Psychology majors have access to extensive computer facilities for data analysis and simulation work. The department also has a state of the art set of undergraduate research laboratories and computer clusters, and through the Scientific Imaging & Brain Research Center, a magnet is in use for conducting brain imaging studies using fMRI.

In addition to formal class work, students are encouraged to participate in research projects where they may register and receive credit for freshmen research experience course 85-198 Research Training: Psychology, 85-506 Readings in Psychology, Fall research experience in 85-507 Research in Psychology or Spring research experience in 85-508 Research in Psychology. In the research in psychology course, the student may work on an ongoing research projects or develop and carry out a new research project with a faculty member. To compliment students research experience, the department requires 85-509 Research in Psychology Practicum, a 1 unit, pass/fail course which provides students with an opportunity to frame their research experience in a broader professional and scholastic perspective. More information on research labs that are recruiting can be found here (https://www.cmu.edu/dietrich/psychology/undergraduate/current-students/research-and-internships/research-opportunities/).

There is university and departmental funding (https://www.cmu.edu/dietrich/psychology/undergraduate/current-students/research-and-internships/undergrad-research-grants.html) available to help support student-initiated research projects and student travel to present research results at scientific meetings and conferences. In the Readings courses, the student reads extensively on a particular topic. The faculty member and student meet to discuss the readings, and the student writes a paper on the topic selected. The Psychology Department Website (http://www.cmu.edu/dietrich/psychology/), provides descriptions of faculty research interests (http://www.cmu.edu/dietrich/psychology/research-areas/) that the student can use in determining who should be approached to supervise a particular research or reading project.

Students interested in gaining field work experience via a number of internship opportunities available to them can receive credit through 85-482 Internship in Psychology, 85-480 Internship in Clinical Psychology or 85-484 Practicum in Child Development. Clinical internships are available with a variety of clinical settings including the prestigious Western Psychiatric Institute (https://www.upmc.com/locations/hospitals/western-psychiatric/?gclsrc=aw.ds&&utm_kxconfid=sws256pg0&utm_source=GOOGLE&utm_medium=cpc&utm_cam

+western
+psychiatric&utm_advertiserid=700000001754524&gclid=EAIaIQobChMI-7Hg6vyD8
and Clinic (the teaching hospital of the Department of Psychiatry at the University of Pittsburgh Medical School). During the internship, students get first-hand experience with different clinical populations. Developmental Practicum experience is available in the department-run CMU Children's School (http://www.cmu.edu/dietrich/psychology/centers-and-facilities/).

If you would like to learn more about the BA and BS in Psychology, please reach out to Crista Crittenden ccritten@andrew.cmu.edu for more information.

Bachelor of Arts in Psychology

Mathematics 10-20 units

21-111-21-112	Calculus I-II	20

or

21-120	Differential and Integral Calculus *	10

*Students who place out of 21-120 with AP credit will have successfully completed the calculus requirement

Statistics Sequence 9 units

36-309	Experimental Design for Behavioral & Social Sciences	9
or 85-309	Statistical Concepts and Methods for Behavioral and Social Science	

Psychology Surveys 27 units

85-102	Introduction to Psychology *	9

Survey Courses - Complete Two		Units
85-104	Psychopathology	9
85-211	Cognitive Psychology	9
or 85-213	Human Information Processing and Artificial Intelligence	
85-219	Foundations of Brain and Behavior	9
85-221	Principles of Child Development	9
85-241	Social Psychology	9
85-251	Personality	9

* Introduction to Psychology cannot be substituted; AP credit does not count towards this requirement

Research Methods 18 units

Complete two courses.		
85-300	Introduction to Research Methods	9
85-310	Research Methods in Cognitive Psychology	9
85-311	Research Methods: Meta-Analysis	9
85-314	Cognitive Neuroscience Research Methods	9
85-320	Research Methods in Developmental Psychology	9
85-330	Analytic Research Methods	9
85-340	Research Methods in Social Psychology	9

Advanced Courses 18 units

Advanced psychology courses exist within four areas (cognitive, cognitive neuroscience, developmental, social and health psychology.) Any advanced content course or seminar in psychology or any psychology course higher than 85-349. Exceptions for the advanced course requirement are: 85-480, 85-482, 85-484, 85-506, 85-507, 85-508, 85-601, 85-602, 66-501, 66-502.

Psychology Breadth, Depth, and Application Electives 27 Units

Three courses from at least two of the Breadth, Depth and Application Categories. Please Consult the psychology department undergraduate website for approved Breadth Electives.

Depth

Any Psychology course between 85-300-85-499.
Exceptions for the course requirement are: 85-480, 85-482, 85-484, 85-506, 85-507, 85-508, 85-601, 85-602, 66-501, 66-50

Application

85-198	Research Training: Psychology	9
85-294	Teaching Assistantship	Var.
85-480	Internship in Clinical Psychology	Var.
85-482	Internship in Psychology	Var.
85-484	Practicum in Child Development	Var.
85-507	Research in Psychology	Var.
85-508	Research in Psychology	Var.
85-601	Senior Thesis	9
85-602	Senior Thesis	9
66-501	Dietrich College Senior Honors Thesis I	9
66-502	Dietrich College Senior Honors Thesis II Must receive a B or higher; 9 units min	9
99-270	Summer Undergraduate Research Apprenticeship	9

Breadth

Any 200 level Psychology survey course.		
85-104	Psychopathology	9
85-105	Hack Your Life	9
85-106	Animal Minds	9
85-107	The Psychology of Video Games	9

or

Choose from a list of courses found outside of the department with departments including Biological Sciences, History, English, HCI, Philosophy, Social Decision Sciences and Statistics. The elective list may change and for the most up to date list please contact either Crista Crittenden ccritten@andrew.cmu.edu or Emilie O'Leary at emilier@andrew.cmu.edu .

Computer Science Requirement

15-110	Principles of Computing	10
or 88-300	Programming and Data Analysis for Social Scientists	
or 15-112	Fundamentals of Programming and Computer Science	

Natural Science Requirement (B.A. 18 units of which include 9 units of Gen Ed Science)

The B.A. in psychology requires one course beyond the General Education requirement in natural science.

These courses can be selected from the following areas:

- 03-XXX Biology*
- 09-XXX Chemistry
- 33-XXX Physics

* Given the growing relevance of biology to psychology, it is strongly recommended to take a course in Biological Sciences

Bachelor of Science in Psychology

Mathematics 10-20 units

21-111-21-112	Calculus I-II	20

or

21-120	Differential and Integral Calculus *	10

***Students who place out of 21-120 with AP credit will have successfully completed the calculus requirement**

Statistics Sequence 9 units

36-309	Experimental Design for Behavioral & Social Sciences	9
or 85-309	Statistical Concepts and Methods for Behavioral and Social Science

Computer Science Requirement 10 units

15-110	Principles of Computing	10
or 88-300	Programming and Data Analysis for Social Scientists	
or 15-112	Fundamentals of Programming and Computer Science	

NATURAL SCIENCE REQUIREMENT (B.S. 27 UNITS OF WHICH INCLUDE 9 UNITS OF GEN ED SCIENCE)

The B.S. in psychology requires two courses beyond the General Education requirement in natural science.

- 03-xxx Biology*
- 09-xxx Chemistry
- 33-xxx Physics

* Given the growing relevance of biology to psychology, it is strongly recommended to take at least one course in Biological Sciences

Additional Major in Psychology

In order to complete an additional major in Psychology, a student must fulfill all of the Psychology major requirements within the department -- in other words, the breadth requirement, computing requirement, three survey courses, two research methods courses, and two advanced courses. These courses must include at least 81 units, plus calculus prerequisites and the 36-200 statistics course or equivalent and 36-309/85-309 . In addition, psychology additional major candidates must complete one science course beyond the GenEd requirement if required for college.

Concentrations within the Psychology Major

Students who wish to focus their Psychology program on a specific area can do so either by the careful selection of Psychology elective courses focusing on their area of interest or by pursuing one of the following concentrations. Concentrations are not a required part of the major.

Please reach out to Crista Crittenden ccrittenden@andrew.cmu.edu to declare the concentration. The declared concentration will appear in Stellic. The completion of a concentration will be recognized in the Psychology Graduation Program.

Health-Psychology Concentration

For Psychology majors who wish to have a focus of their study on Health Psychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

As part of the natural science requirement, choose two of the following		Units
03-121	Modern Biology	9
03-132	Basic Science to Modern Medicine	9
03-133	Neurobiology of Disease	9
03-135	Structure and Function of the Human Body	9
As part of the psychology breadth requirement:		
85-219	Foundations of Brain and Behavior	9
85-241	Social Psychology	9
As part of the psychology Research Methods requirements:		
85-340	Research Methods in Social Psychology	9
As part of the advanced coursework in psychology requirement, at least two of the following:		
85-358	Pro-Social Behavior	9
85-422	Clinical Psychology: Science and Practice	9
85-442	Health Psychology	9
85-443	Social Factors and Well-Being	9
85-446	Psychology of Gender	9
As part of the Breadth, Depth and Application requirement, at least one of the following		
85-480	Internship in Clinical Psychology	9
85-507	Research in Psychology	9
85-508	Research in Psychology	9
85-482	Internship in Psychology	9
or an additional advanced psychology seminar from the list above		

Cognitive-Neuroscience Concentration

For Psychology majors who wish to have a focus of their study be on Cognitive Neuroscience, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

As part of the natural science requirement, choose two of the following		Units
03-121	Modern Biology	9
03-363	Systems Neuroscience	9
03-366	Neuropharmacology: Drugs, Brain and Behavior	9

As part of the psychology Breadth requirement:		
85-211	Cognitive Psychology	9
85-219	Foundations of Brain and Behavior	9

As part of the Research Methods requirement:		
85-310	Research Methods in Cognitive Psychology	9
85-314	Cognitive Neuroscience Research Methods	9

As part of the advanced coursework in psychology requirement, at least two of the following:		
85-351	What is Attention?	9
85-356	Expertise: The cognitive (neuro)science of mastering almost any skill	9
85-359	Introduction to Music Cognition Research	9
85-370	Perception	9
85-382	The Psychology and Neuroscience of Consciousness	9
85-385	Auditory Perception: Sense of Sound	9
85-407	How the Brain Makes Meaning	9
85-408	Visual Cognition	9
85-414	Cognitive Neuropsychology	9
85-419	Introduction to Parallel Distributed Processing	9
85-432	Data Science for Psychology and Neuroscience	9
85-435	Biologically Intelligent Exploration	9

As part of the Breadth, Depth and Application requirement, at least one of the following		
85-507	Research in Psychology	Var.
85-508	Research in Psychology	Var.
88-342	The Neuroscience of Decision Making	9
Or an additional advanced psychology seminar from the list above		

Learning and Developmental Psychology Concentration

For Psychology majors who wish to have a focus of their study be on Behavior and Developmental Psychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

As part of the B.S. science requirement, choose one of the following		Units
03-125	Evolution	9
03-121	Modern Biology	9
03-365	Neural Correlates of Learning and Memory	9

As part of the psychology Breadth requirement:		
85-211	Cognitive Psychology	9
85-221	Principles of Child Development	9

As part of the psychology Research Methods Requirement:		
85-310	Research Methods in Cognitive Psychology	9
85-320	Research Methods in Developmental Psychology	9

As part of the advanced coursework in psychology requirement, at least two of the following:		
85-343	Children, Race, and Racism	9
85-351	What is Attention?	9
85-354	Infant Language Development	9
85-360	Origins of Intelligence	9
85-363	Attention, Its Development and Disorders	9
85-375	Crosscultural Psychology	9
85-394	Development in Context: Applying Theory and Research to Support Thriving	9
85-407	How the Brain Makes Meaning	9
85-408	Visual Cognition	9
85-418	Infant development: Inside the Mind of Babies	9

As part of the Breadth, Depth and Application requirement, at least two of the following		
85-294	Teaching Assistantship	Var.
85-484	Practicum in Child Development	Var.
85-507	Research in Psychology	Var.
85-508	Research in Psychology	Var.
05-291	Learning Media Design	12
05-418	Design Educational Games	12
57-331	Principles of Education	9
Or an additional advanced psychology seminar from the list above		

Cognitive Psychology Concentration

For Psychology majors who wish to have a focus of their study be on Cognitive Psychology and/or Cognitive Modeling, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

As part of the B.S. science requirement:		Units
03-121	Modern Biology	9

As part of the psychology Breadth requirement:		
85-211	Cognitive Psychology	9

As part of the psychology Research Methods requirement:		
85-310	Research Methods in Cognitive Psychology	9

As part of the advanced coursework in psychology requirement, at least two of the following:		
85-351	What is Attention?	9
85-356	Expertise: The cognitive (neuro)science of mastering almost any skill	9
85-359	Introduction to Music Cognition Research	9
85-360	Origins of Intelligence	9
85-363	Attention, Its Development and Disorders	9
85-370	Perception	9
85-385	Auditory Perception: Sense of Sound	9
85-395	Applications of Cognitive Science	9
85-407	How the Brain Makes Meaning	9
85-408	Visual Cognition	9
85-412	Cognitive Modeling	9
85-414	Cognitive Neuropsychology	9
85-419	Introduction to Parallel Distributed Processing	9
85-421	Language and Thought	9
85-435	Biologically Intelligent Exploration	9

As part of the Breadth, Depth and Application requirement, at least one of the following		
85-507	Research in Psychology	Var.
85-508	Research in Psychology	Var.
05-391	Designing Human Centered Software	12
05-413	Human Factors	9
80-305	Game Theory	9
80-484	Language and Thought	9
Or an additional advanced psychology seminar		

Social-Personality Psychology Concentration

For Psychology majors who wish to have a focus of their study be on Social and/or Personality Psychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

As part of the Psychology Breadth requirement:		Units
85-104	Psychopathology	9
85-241	Social Psychology	9
85-251	Personality	9

As part of the Psychology Research Methods requirement:		
85-340	Research Methods in Social Psychology	9

As part of the advanced coursework in psychology requirement, at least two of the following:		
85-350	Psychology of Prejudice	9
85-358	Pro-Social Behavior	9
85-375	Crosscultural Psychology	9
85-377	Attitudes and Persuasion	9
85-442	Health Psychology	9
85-443	Social Factors and Well-Being	9

85-444	Relationships	9
85-446	Psychology of Gender	9

As part of the Breadth, Depth and Application requirement, at least one of the following		
85-507	Research in Psychology	Var.
85-508	Research in Psychology	Var.
85-482	Internship in Psychology	Var.
05-320	Social Web	12
Or an additional advanced psychology seminar from the list above		

Clinical/Counseling Psychology Concentration

For Psychology majors who wish to have a focus of their study be on Clinical/Counseling Psychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

One of the following:		
03-133	Neurobiology of Disease	9
03-366	Neuropharmacology: Drugs, Brain and Behavior	9
09-303	Hooked: The Molecular Basis of Addiction	6

As part of the Psychology Breadth requirement at least two of the following:		Units
85-221	Principles of Child Development	9
85-241	Social Psychology	9
85-251	Personality	9

Required coursework:		
85-104	Psychopathology	9
85-422	Clinical Psychology: Science and Practice	9
85-480	Internship in Clinical Psychology	9

As part of the Psychology Research Methods requirements at least one of the following:		
85-320	Research Methods in Developmental Psychology	9
85-340	Research Methods in Social Psychology	9

As part of the advanced coursework in psychology requirement, at least two of the following:		
85-343	Children, Race, and Racism	9
85-358	Pro-Social Behavior	9
85-363	Attention, Its Development and Disorders	9
85-375	Crosscultural Psychology	9
85-377	Attitudes and Persuasion	9
85-442	Health Psychology	9
85-443	Social Factors and Well-Being	9
85-444	Relationships	9
85-446	Psychology of Gender	9

Neuroscience Major

The Psychology Department at Carnegie Mellon University has a major focus on the role of the brain and nervous system in cognition and behavior, including biological approaches involving the health impact that arises from the interaction of behavior with the nervous, endocrine, and immune systems. These interests are manifested in faculty research (http://www.cmu.edu/dietrich/psychology/research-areas/), departmental and university centers that operate from or heavily involve the department (e.g., the Center for Cognitive Brain Imaging (http://www.ccbi.cmu.edu/), and the Center for the Neural Basis of Cognition (http://www.cnbc.cmu.edu/)) as well as undergraduate coursework (http://www.cmu.edu/dietrich/psychology/undergraduate/) and graduate coursework.

For undergraduates, there are a number of ways in which students with an interest in these approaches can pursue that interest in an organized fashion. Major requirements for the Bachelor of Science in Neuroscience can be found under Intercollege Programs (p. 891).

Carnegie Mellon University recently launched *BrainHub* – an initiative designed to leverage its core strengths in cognitive science, engineering, and computer science, and our emerging excellence in biological sciences, to harness the technology that helps the world explore brain and behavior. Students will be able to take advantage of exciting opportunities such as lectures hosted on various topics, newly funded CMU campus research projects trying to answer pressing questions in brain science and the many global partnerships with other institutions all with the same motivating goal to enhance and increase research in brain sciences.

Finally, for any interested student, there is a Minor in Cognitive Neuroscience (p. 478) available through the Psychology department.

The Major in Cognitive Science

The Psychology Department offers a B.S. degree in Cognitive Science. The field of cognitive science has grown out of increasingly active interaction among psychology, linguistics, artificial intelligence, philosophy, and neuroscience. All of these fields share the goal of understanding intelligence. By combining these diverse perspectives, students of cognitive science are able to understand cognition at a deep level. Because this major is administered by the Psychology Department, it focuses on human cognition and the experimental study of the human mind as illuminated by the techniques of the above disciplines.

Cognitive Science Curriculum

The Cognitive Science major is only offered as a B.S. degree. Candidates should complete before the junior year the calculus requirement 21-120

(or alternatively 21-111/21-112) and a statistics sequence (36-200 or equivalent and if possible, 36-309/85-309). In addition, candidates complete 15-112 Fundamentals of Programming and Computer Science, as their departmental computing course.

Because of the number and sequential nature of required courses, prospective Cognitive Science majors are encouraged to begin course work for the major prior to junior year. In particular, completion of calculus, 36-200, and 85-211 or 85-213 before the junior year will enable students to complete one of the following 85-310/85-314/85-330and 36-309/85-309 and by the Fall semester of their sophomore or junior year and, if interested, to then take advantage of research opportunities in the department. The Psychology Department (https://www.cmu.edu/dietrich/psychology/undergraduate/current-students/research-and-internships/research-opportunities/) website has more information regarding research for credit opportunities available to undergraduates.

Computing Prerequisite 10 units

15-112	Fundamentals of Programming and Computer Science	12

Mathematics 29-30 units

21-111-21-112	Calculus I-II	20
or		
21-120	Differential and Integral Calculus *	10
21-127	Concepts of Mathematics	12

*Students who place out of 21-120 will have fulfilled the calculus requirement

.

Statistics Sequence 18 units

36-200	Reasoning with Data	9
36-309	Experimental Design for Behavioral & Social Sciences	9
or 85-309	Statistical Concepts and Methods for Behavioral and Social Science	

Computational/Cognitive Modeling Core 29–31 units

Two of the following:		Units
15-122	Principles of Imperative Computation	12
15-150	Principles of Functional Programming	12
15-251	Great Ideas in Theoretical Computer Science	12

Plus one of the following:		Units
85-412	Cognitive Modeling	9
85-419	Introduction to Parallel Distributed Processing	9
85-435	Biologically Intelligent Exploration	9

Cognitive Psychology Core 27 units

		Units
85-211	Cognitive Psychology	9
or 85-213	Human Information Processing and Artificial Intelligence	

Plus two of the following, one of which need to be 85-xxx:		Units
85-219	Foundations of Brain and Behavior	9
or 85-106	Animal Minds	
or 80-180	Nature of Language: An Introduction to Linguistics	
85-351	What is Attention?	9
85-359	Introduction to Music Cognition Research	9
85-370	Perception	9
85-375	Crosscultural Psychology	9
85-382	The Psychology and Neuroscience of Consciousness	9
85-385	Auditory Perception: Sense of Sound	9
85-395	Applications of Cognitive Science	9
85-407	How the Brain Makes Meaning	9
85-408	Visual Cognition	9
85-414	Cognitive Neuropsychology	9
85-421	Language and Thought	9
80-381	Meaning in Language	9
80-310	Formal Logic	9
80-315	Logics for Knowledge and Belief	9
80-383	Language in Use	9
05-413	Human Factors	9
11-344	Machine Learning in Practice	12

Cognitive Science Concentration

(3 courses, concentration approval required)

These three courses are chosen in conjunction with your advisor to form a coherent area of concentration from the course list under "Cognitive Science Concentration" in the current Undergraduate Catalog. Before proceeding with the choice of courses, students must fill out the concentration form, obtained from Emilie O'Leary in Baker Hall 339, with a description of the concentration area and the planned set of three courses. Courses not represented on the list may, with pre-approval of advisor and department, be used to satisfy part of this requirement. **The three courses are not required to be within any single category below but be coherent within the major and the focus may vary across disciplinary boundaries.** Courses taken for the major requirements can not be double counted in the concentration.

Computer Science

16-385	Computer Vision	12
15-453	Formal Languages, Automata, and Computability	9
15-213	Introduction to Computer Systems	12

Psychology

85-219	Foundations of Brain and Behavior	9
85-354	Infant Language Development	9
85-360	Origins of Intelligence	9
85-363	Attention, Its Development and Disorders	9
85-370	Perception	9
85-375	Crosscultural Psychology	9
85-385	Auditory Perception: Sense of Sound	9
85-395	Applications of Cognitive Science	9
85-351	What is Attention?	9
85-359	Introduction to Music Cognition Research	9
85-382	The Psychology and Neuroscience of Consciousness	9
85-408	Visual Cognition	9
85-412	Cognitive Modeling	9
85-414	Cognitive Neuropsychology	9
85-419	Introduction to Parallel Distributed Processing	9
85-421	Language and Thought	9
85-432	Data Science for Psychology and Neuroscience	9

Philosophy

80-210	Logic and Proofs	9
80-211	Logic and Mathematical Inquiry	9
80-220	Philosophy of Science	9
80-249	AI, Society, and Humanity	9
80-254	Analytic Philosophy	9
80-255	Pragmatism: Making Ideas Work	9
80-270	Problems of Mind and Body: Meaning and Doing	9
80-271	Mind and Body: The Objective and the Subjective	9
80-310	Formal Logic	9
80-311	Undecidability and Incompleteness	9

Human Computer Interaction

05-317	Design of Artificial Intelligence Products	12
05-320	Social Web	12
05-333	Gadgets, Sensors and Activity Recognition in HCI	12
05-430	Programming Usable Interfaces	15
05-418	Design Educational Games	12
05-413	Human Factors	9
05-410	User-Centered Research and Evaluation	12
05-738	Evidence-Based Educational Design	12

Linguistics

80-180	Nature of Language: An Introduction to Linguistics	9
80-280	Linguistic Analysis	9
80-315	Logics for Knowledge and Belief	9
76-385	Introduction to Discourse Analysis	9

Machine Learning

10-301	Introduction to Machine Learning	12
10-335	Art and Machine Learning	12
11-344	Machine Learning in Practice	12
11-411	Natural Language Processing	12

Decision Sciences

88-275	Bubbles: Data Science for Human Minds	9
88-302	Behavioral Decision Making	9
88-231	Thinking in Person vs. Thinking Online	9
88-230	Human Intelligence and Human Stupidity	9
88-223	Decision Analysis	12
88-120	Reason, Passion and Cognition	9

Neurosciences

03-133	Neurobiology of Disease	9
03-365	Neural Correlates of Learning and Memory	9
03-366	Neuropharmacology: Drugs, Brain and Behavior	9
86-375	Computational Perception	9
03-362	Cellular Neuroscience	9
03-363	Systems Neuroscience	9
42-202	Physiology	9
15-386	Neural Computation	9
15-883	Computational Models of Neural Systems	12
03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	9
03-360	Genomics and Epigenetics of the Brain	9

Science Requirement

The Cognitive Science program requires two additional science courses beyond Dietrich College's General Education requirements or additional majors or minors declared.

These can be selected from any one of the following areas.	
03-xxx	Biology *
09-xxx	Chemistry
33-xxx	Physics

* Those interested in a cognitive neuroscience focus are recommended to take biology courses, including if possible, 03-362, or 03-363.

Additional Major in Cognitive Science

In order to complete a double major in Cognitive Science, a student must fulfill the major requirements as listed under the Cognitive Science major. These include the programming requirement (15-112), the Mathematics and Statistics prerequisites, Computational/Cognitive Modeling Core, The Cognitive Psychology Core, the Cognitive Science Concentration Requirement, and the Supplementary Science Requirement. Students will be assigned a department advisor to help plan their program of studies in Cognitive Science.

Unified Double Major in Psychology & Biological Sciences

Veronica Hinman, *Department Head, Biological Sciences*

Susanne Ferber, *Department Head, Psychology*

This major is intended to reflect the interdisciplinary nature of current research in the fields of biology and psychology, as well as the national trend in some professions to seek individuals broadly trained in both the social and natural sciences.

Note: Students entering from the Dietrich College of Humanities and Social Sciences will earn a Bachelor of Science in Psychology and Biological Sciences. Students in the Mellon College of Science will earn a Bachelor of Science in Biological Sciences and Psychology.

Depending on a student's home college (DC or MCS), General Education (GenEd) requirements will be different. GenEd requirements for DC (p. 353) and MCS (p. 560) are found on their respective Catalog pages.

Degree Requirements:

Biological Sciences		Units
03-151	Honors Modern Biology	10
or 03-121	Modern Biology	
03-201	Undergraduate Colloquium for Sophomores *Only required for MCS Students	2
03-220	Genetics	9
or 03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	
03-231	Honors Biochemistry	9
03-320	Cell Biology	9
03-343	Experimental Techniques in Molecular Biology	12
03-411	Topics in Research	1
03-412	Topics in Research	1
03-xxx	General Biology Elective [1]	9
03-3xx	Advanced Biology Elective [1]	18
Total Biology units		**80**

[1] Please see description and requirements for electives under the B.S. in Biological Sciences section of this Catalog.

Mathematics, Statistics, Physics and Computer Science		Units
21-120	Differential and Integral Calculus	10
21-124	Calculus II for Biologists and Chemists	10
or 21-122	Integration and Approximation	
36-200	Reasoning with Data	9
36-309	Experimental Design for Behavioral & Social Sciences	9
or 85-309	Statistical Concepts and Methods for Behavioral and Social Science	
33-121	Physics I for Science Students [3]	12
or 33-141	Physics I for Engineering Students	
15-110	Principles of Computing	10-12
or 15-112	Fundamentals of Programming and Computer Science	
99-101	Core@CMU	3
Total Science units		**63-65**

[3] MCS students must also complete 33-122 Physics II for Biological Sciences & Chemistry Students.

Chemistry		Units
09-105	Introduction to Modern Chemistry I	10
09-106	Modern Chemistry II	10
09-217	Organic Chemistry I	9
09-218	Organic Chemistry II	9
09-207	Techniques in Quantitative Analysis	9
09-208	Techniques for Organic Synthesis and Analysis	9
Total Chemistry units		**56**

Psychology Courses		Units
85-102	Introduction to Psychology	9
85-219	Foundations of Brain and Behavior	9
85-xxx	Survey Psychology Courses *	18
85-310	Research Methods in Cognitive Psychology	9
or 85-300	Introduction to Research Methods	
or 85-314	Cognitive Neuroscience Research Methods	
or 85-320	Research Methods in Developmental Psychology	
or 85-330	Analytic Research Methods	
or 85-340	Research Methods in Social Psychology	
85-3xx	Advanced Psychology Electives	18
Total Psychology units		**63**

* Excluding 85-104 Psychopathology

Additional Advanced Elective 9 units

(Choose one of the following courses)		
85-3xx	Advanced Psychology Elective	9
or		
03-3xx	Advanced Biology Elective	9

Additional Laboratory or Research Methods 9-12 units

(Choose one of the following courses)		
03-344	Experimental Biochemistry	12
03-345	Experimental Cell and Developmental Biology	12
03-346	Experimental Neuroscience	12
85-310	Research Methods in Cognitive Psychology	9
85-314	Cognitive Neuroscience Research Methods	9
85-320	Research Methods in Developmental Psychology	9
85-330	Analytic Research Methods	9
85-340	Research Methods in Social Psychology	9

Elective Units	Units
Free Electives	33-36
MCS Nontechnical Breadth or DC General Education requirements	36-48
Total Elective units	**69-84**

Minimum number of units required for degree: 360

Minors in Psychology and Cognitive Neuroscience

Minor in Psychology 72 units

I. Introductory course		
85-102	Introduction to Psychology *	9

*A survey course can be taken in place of 85-102.

II. Area Survey courses		
Complete one course		
85-104	Psychopathology	9
85-211	Cognitive Psychology	9
or 85-213	Human Information Processing and Artificial Intelligence	
85-219	Foundations of Brain and Behavior	9
85-221	Principles of Child Development	9
85-241	Social Psychology	9
85-251	Personality	9

III. Statistics		
36-200	Reasoning with Data	9

36-309	Experimental Design for Behavioral & Social Sciences	9
or 85-309	Statistical Concepts and Methods for Behavioral and Social Science	

27 unitsUpper Level Courses

Complete three courses from categories IV and V, with at least one course from each.

IV. Research Methods Courses * (minimum 9 units)		
85-300	Introduction to Research Methods	9
85-310	Research Methods in Cognitive Psychology	9
85-314	Cognitive Neuroscience Research Methods	9
85-320	Research Methods in Developmental Psychology	9
85-330	Analytic Research Methods	9
85-340	Research Methods in Social Psychology	9

* Prerequisites for all Research Methods courses: 36-309/85-309 and the appropriate survey course, except 85-300 which has a pre req of 36-200 and a survey course.

V. Advanced courses (minimum 9 units)

Advanced psychology courses exist within four areas (cognitive, cognitive neuroscience, developmental, social and health psychology.) Any advanced content course or seminar in psychology or any psychology course higher than 85-350. Exceptions for the advanced course requirement are: 85-480, 85-482, 85-484, 85-484, 85-506, 85-507, 85-508, 85-601, 85-602, 66-501, 66-502.

Psychology Elective - Anything with 85-XXX number can be used 9 units

Minor in Cognitive Neuroscience 63 units

The minor in Cognitive Neuroscience offered by the Department of Psychology is similar to the Neuroscience Minor offered by the Department of Biological Sciences. The differences between the two forms of the minor are determined by one required course, and additionally, by the students' choice of distribution electives. The requirements for the Cognitive Neuroscience Minor include 7 courses: four required courses, and three distribution and elective courses.

Because of the curriculum within this minor may overlap with some degree requirements, no more than 2 courses fulfilling Neuroscience or Cognitive Neuroscience Minor requirements may count towards a student's major or other minor requirements.

Cognitive Neuroscience Curriculum

Required Coursework

03-121	Modern Biology	9
03-363	Systems Neuroscience	9
85-219	Foundations of Brain and Behavior	9
or 03-161	Molecules to Mind	
85-211	Cognitive Psychology	9

Distribution Requirements

Three courses, including at least 1 from each of the following categories

Approaches to Cognitive Neuroscience		
85-213	Human Information Processing and Artificial Intelligence	9
85-314	Cognitive Neuroscience Research Methods	9
85-382	The Psychology and Neuroscience of Consciousness	9
85-407	How the Brain Makes Meaning	9
85-408	Visual Cognition	9
85-412	Cognitive Modeling	9
85-414	Cognitive Neuropsychology	9
85-419	Introduction to Parallel Distributed Processing	9
85-435	Biologically Intelligent Exploration	9
15-386	Neural Computation	9
86-375	Computational Perception	9
85-432	Data Science for Psychology and Neuroscience	9

Cognitive Neuroscience Electives		
03-133	Neurobiology of Disease	9
03-362	Cellular Neuroscience	9
03-365	Neural Correlates of Learning and Memory	9

The Honors Program

The Honors Program provides recognition of outstanding performance by students in the Psychology department. Participation enables students to pursue their own research ideas through completion of an honors thesis. The honors thesis is completed during the senior year. By completing a thesis, the student earns 18 units of credit and qualifies for graduation with “College Honors.” To qualify for the Honors Program, the student must maintain a quality point average of at least 3.50 in the major and 3.25 overall. More information on the Honor program can be found here (http://www.cmu.edu/dietrich/undergraduate/programs/shp/).

A year long departmental senior thesis course exists (66-501 and 66-502) for students interested in pursuing a sizable research project who do not qualify for the honors program. More information can be obtained by contacting Emilie O'Leary at emilier@andrew.cmu.edu.

Faculty

JOHN R. ANDERSON, Richard King Mellon University Professor of Psychology and Computer Science – Ph.D., Stanford University; Carnegie Mellon, 1978–

JESSICA CANTLON, Ronald J. and Mary Ann Zdrojkowski Associate Professor of Developmental Neuroscience – PhD, Duke University; Carnegie Mellon, 2007–

SHARON CARVER, Teaching Professor, Psychology; Associate Dean of Student Affairs, Dietrich College – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1993–

CHANTE COX-BOYD, Associate Teaching Professor – Ph.D., University of North Carolina at Chapel Hill; Carnegie Mellon, 1999–

DAVID CRESWELL, Professor – Ph.D., University of California, Los Angeles; Carnegie Mellon, 2008–

KASEY CRESWELL, Associate Professor – Ph.D., University of Pittsburgh; Carnegie Mellon, 2012–

BROOKE C. FEENEY, Professor – Ph.D., State University of New York at Buffalo; Carnegie Mellon, 2001–

SUSANNE FERBER, Department Head – Ph.D, University of Osnabruck; Carnegie Mellon, 2000–

ANNA FISHER, Associate Professor – Ph.D., The Ohio State University; Carnegie Mellon, 2006–

VICKI S. HELGESON, Professor – Ph.D., University of Denver; Carnegie Mellon, 1990–

LAURIE HELLER, Teaching Professor – Ph.D., University of Pennsylvania; Carnegie Mellon, 2009–

MARCEL A. JUST, D. O. Hebb University Professor of Psychology – Ph.D., Stanford University; Carnegie Mellon, 1972–

ROBERTA KLATZKY, Charles J. Queenan Jr., University Professor of Psychology – Ph.D., Stanford University; Carnegie Mellon, 1993–

KENNETH R. KOEDINGER, Hillman Professor & METALS Program Director – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2001–

PHOEBE LAM, Assistant Professor – PhD, Northwestern University; Carnegie Mellon, 2023–

MARSHA C. LOVETT, Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2000–

BRIAN MACWHINNEY, Teresa Heinz Professor of Cognitive Psych – Ph.D., University of California, Berkeley; Carnegie Mellon, 1981–

BRADFORD MAHON, Associate Professor – PhD, Harvard University ; Carnegie Mellon, 2009–

KODY MANKE, Assistant Teaching Professor – Ph.D, Standford University; Carnegie Mellon, 2016–

DAVID PLAUT, Professor of Psychology – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1994–

DAVID RAKISON, Associate Professor – D.Phil., University of Sussex; Carnegie Mellon, 2000–

MICHAEL TARR, Professor, Kavčić-Moura Professor of Cognitive and Brain Science – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2009–

ERIK D. THIESSEN, Associate Professor, Director of Undergraduate Education in Psychology – Ph.D., University of Wisconsin, Madison; Carnegie Mellon, 2004–

MICHAEL TRUJILLO, Assistant Professor – PhD, Virginia Commonwealth University; Carnegie Mellon, 2018–

JONATHAN TSAY, Assistant Professor – Ph.D., UC Berkeley; Carnegie Mellon, 2023–

TIMOTHY VERSTYNEN, Associate Professor and Co Director of the CMU-Pitt BRIDGE Center – Ph.D., University of California, Berkeley ; Carnegie Mellon, 2006–

Department of Psychology Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes *(*https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/*) each semester for course offerings and for any necessary pre-requisites or co-requisites.*

85-102 Introduction to Psychology

Fall and Summer: 9 units
The world is a crazy, confusing place. Much of what we encounter is ambiguous, dynamic, and misleading. Somehow, we have to make sense of it. This class is about how we do that. The course provides an overview of the major areas of scientific psychology, exploring the models of our mind, brain, and behavior that explain wide areas of human (and non-human) functioning. Topics range from neuroscience and the biological basis of behavior, to memory and thought, to social interaction and psychological development over the lifespan, to abnormal psychology, psychopathology, and treatment. Tuesday and Thursday lectures provide a broad survey of topics and findings in psychology. In recitation sections students get hands on experiencing thinking about psychological science by designing and running psychological studies and discussing the real world implications of the concepts they have investigated. While all sections will be completing the same activities, some of the sections are themed. Themed sections will frame the discussion in the context of the theme, thus allowing students in those sections to better appreciate the links between the work being done in the class and the theme of that section. However, the core material will be the same and all sections will prepare students equally well for exams and upper division courses. General (unthemed) sections will sample across themes and topics, rather than being focused on a single theme.
At the end of this course, students will not only be more knowledgeable about psychology, but be able to apply their knowledge about psychology to be better thinkers, learners, and consumers of information in general.
Themed sections: Design - Register through Design Medicine, health, and Biosciences - Section I Decision Science, business, and economics - Section A

85-104 Psychopathology

Fall: 9 units
This course provides an introduction to the science and practice of psychopathology. Students will examine definitions of psychopathology in a historical and contemporary context, explore issues relevant to diagnosis and patient care, and be introduced to various diagnostic categories for psychological disorders. Students will also learn about potential determinants of and treatments for psychological disorders in the context of major theories and empirical findings in the field. Emphasis will be placed on three major paradigms in psychopathology: genetics, neuroscience, and cognitive behavioral. An assigned memoir, case studies, and short video clips will be used to illustrate the human side of mental illness.

85-105 Hack Your Life

Spring: 9 units
Hack your life! College offers a new opportunity to hack your life to explore who you are, how you learn, and how you can take better care of yourself. This course will give you the opportunity to fully explore the CMU student experience, the science of learning, and to explore issues central to students (e.g., resilience, social connections, mental health, sleep). Much of this course will focus on providing discussion, strategies, and practices around how you can live a better life, and nurture your happiness and health.

85-106 Animal Minds

Intermittent: 9 units
With intricate cultures, impressive technology, and layered social lives, humans seem to stand apart from their animal kin. However, humans and non-human animals share many aspects of their mental lives, and, upon closer inspection, some animals even reveal cognitive abilities far beyond the capacities of humans. Through comparing and contrasting human and non-human cognition, we can learn about human psychological uniqueness and its evolutionary origins, and fundamental properties of cognitive processes in general

85-107 The Psychology of Video Games

Intermittent: 9 units
This course will explore how the features of video game design and use relate to characteristics of human psychology. We will discuss design and use issues such as microtransactions, online gaming communities, and reward/scoring, and try to understand how these features are (or are not!) well suited to the human mind, with a particular focus on learning, memory, attention, and perception. Student presence will sometimes be required but many course sessions will be asynchronous.

85-120 Demystifying Freud and the Discipline of Psychology

Intermittent: 3 units
Regardless of discipline, an understanding of human thought and behavior is essential in navigating one's environment and work. Psychology, the science that can guide this understanding, is often misunderstood by the general public. Throughout the world, when psychology is mentioned, the name that often comes to mind is Sigmund Freud. Many of the misconceptions regarding psychology started with misinterpretations of Freud's work and concepts. Using Freud's most well-known concepts, this course will introduce students to what psychology is, and what it isn't - in hopes of illustrating what use psychological principles can be in a plethora of academic disciplines. In particular, students will learn how to apply these principles to modern day research settings with a specific focus on health and well-being research. Students will not only gain insight into their own academic and career paths, but into their own personality and health as well. Course work will consist of class attendance, weekly course readings and online discussions, one exam, and a final paper.

85-150 Cognitive Science at CMU and beyond

All Semesters: 9 units
This course provides an introduction to the broad field of Cognitive Science, with a particular emphasis on psychological methods and the role of memory in cognition. In addition to giving students a sense of some of the applied areas that use Cognitive Science research, this course gives a sampling of research questions and phenomena to help decide whether this might be a good choice for a major or minor while studying at Carnegie Mellon. Topics that will be discussed include attention, perception, cognitive illusions, memory, language acquisition and skill acquisition. There is an emphasis of the applications of cognitive science to real life situations, for example, best practices for learning in an academic setting. The course will also provide the opportunity to learn about the scientific method and collect data by running an experiment (online, on a computer). The class meets twice per week for 1.5 hours for each class. The plan is to focus more on lecture and discussion of readings on Tuesday and focus more on teaching new skills such as experimental design, data analysis and running experiments on Thursday.

85-198 Research Training: Psychology

Fall and Spring: 9 units
See course url and click on (forms and guides informational handout page) then click on current freshman-sophmore research training courses for listing of research training course descriptions.

Course Website: https://www.cmu.edu/dietrich/students/undergraduate/programs/research-training-program.html

85-211 Cognitive Psychology

Fall and Spring: 9 units
This course focuses on the fascinating way that the brain processes the world and allows us to interact with it. Aside from covering the major topics in cognitive psychology (language, memory, visual processing, attention and cognitive control), it includes an introduction to some of the most recent approaches to studying human cognition. The course is set up to highlight the connection between cognitive studies and skills in various majors such as computer science, math, statistics, and medicine. It is also structured to foster the necessary skills for the critical analysis of complex problems.

85-213 Human Information Processing and Artificial Intelligence

Fall: 9 units
This course will review the information-processing challenges that humans face. We will discuss how these challenges are dealt with in the domains of attention, perception, memory, problem solving, reasoning, decision-making, and language. We will compare and contrast how these challenges are dealt with by humans and artificial intelligence applications. The course will include a number of programming projects that try to solve specific information-processing demands that occur in particular tasks and simulate human information processing. Student must have taken or currently be taking 15-122 or 15-150. If you will be taking 15-122 or 15-150 as a co req for this course, please contact Emilie O'Leary emilier@andrew.cmu.edu to be registered.
Prerequisites: 15-150 or 15-122

85-219 Foundations of Brain and Behavior

Fall: 9 units
This course provides a general introduction to the neural foundations of behavior. Topics will cover cognitive, perceptual, motor, social, and affective aspects of behavior. Each topic will be addressed at multiple scales, from single neurons and their interactions, to brain systems, to computational principles, and to real-world behaviors. While the focus will be on foundational principles and mechanisms (including some pretty cool case studies, illusions, anecdotes, etc.), there will also be some effort given to integrating current advances in computational cognitive neuroscience, including both the applications of modern AI to understanding biological systems and how principles drawn from biological systems might inform or improve artificial systems. Students are expected to regularly attend and participate in class.

85-221 Principles of Child Development

Fall and Spring: 9 units
This course is about normal development from conception through adolescence. Topics include physical, perceptual, cognitive, emotional and social development. Students will learn facts about children at various points in development, theories about how development works, and research methods for studying development in infants and children. Students will be encouraged to relate the facts, theories and methods of developmental psychology to everyday problems, social issues and real world concerns.

85-232 Thinking in Person vs. Thinking Online

Fall: 9 units
Being online changes how we think. Different media lead us to ask different questions, remember (or forget) different information, attend to different details, and interact with other people in different ways. These types of thinking aren't inherently better or worse, but they may be better or worse for facilitating specific goals. Too often, we use a particular medium/technology without considering how it will influence our thinking. This can lead us to be less efficient or less effective at a task than we otherwise might be, or can qualitatively change the nature of our outcomes. In this class, we will explore how the media we use affects the character of our thinking, so as to enable students to make mindful and deliberate choices about how to interact with media in ways that support the type of thinking desired and appropriate for their goals. Moreover, we will examine how to optimize media for specific goals in important applied domains, such as education, medicine, policy, child-rearing, and dating.

85-241 Social Psychology

Fall and Spring: 9 units
The focus of this course will be on how peoples behavior, feelings and thoughts are influenced or determined by their social environment. The course will begin with lectures and readings on how social psychologists go about studying social behavior. Next, various topics on which social psychologists have done research will be covered. These topics will include: person perception, prejudice and discrimination, the nature of attitudes and how attitudes are formed and changed, interpersonal attraction, conformity, compliance, altruism, aggression, group behavior, and applications of psychology to problems in health care, law, politics, and the environment. Through readings and lectures on these topics, students will also be exposed to social psychological theories.

85-250 Hack Your Life: The Science and Practices of Student Health and Well-Being

All Semesters: 9 units
College offers a new opportunity to hack your life to explore who you are, how you learn, and how you can take better care of yourself. This course will give you the opportunity to fully explore the CMU student experience, the science of learning, and to explore issues central to students (e.g., resilience, social connections, mental health, sleep). Much of this course will focus on providing discussion, strategies, and practices around how you can live a better life, and nurture your happiness and health.

85-251 Personality

Intermittent: 9 units
The primary purpose of personality psychology is to understand human uniqueness and #8212;how and why it is that one person differs from others, in terms of the ways that they thinks, feels, and acts. Students in the course will be exposed to several broad theoretical perspectives, each of which attempts to capture and understand the origins and consequences of individual distinctiveness from a slightly different vantage point. Included among these approaches are the dispositional or trait, psychoanalytic, learning, humanistic, and cognitive self regulation perspectives. This is a survey course and is intended to provide students with a broad background of theory and research in the area. Class meetings consist primarily of lecture, but there is some discussion too. Students will be given the opportunity to assess their own personalities during the course. A consistent theme throughout the course is the relationships between aspects of one's personality and physical health.

85-252 Intro to Health Psychology: SES and Health Inequalities

All Semesters: 3 units
Health Disparities exist in many countries around the world. For years researchers have sought to determine the root cause of these disparities and to explain why some people live significantly longer, healthier lives than others. Both mortality and morbidity rates can be related to ones' place in society and one's interactions with others. This course is designed to critically examine the social factors research has found to impact individual and population health experiences. We will focus specifically on those factors that comprise one's socioeconomic status. Students in the course will learn how money and access to health services are not the only factors that matters when it comes to one's health.

85-258 Intro to Health Psychology: Stigma and Its Consequences

All Semesters: 3 units
This course will introduce students to theoretical and empirical psychological research on prejudice and social stigma. The topics covered will include examinations of why individuals stigmatize: exploring cognitive, evolutionary, self, and system justification explanations. The course will examine the consequences of stigmatization for low-status groups (e.g., stereotype threat, dis-identification, internalization, health outcomes). We will explore the role of stigma in intergroup interactions and variation in the experience of stigma. Specific course topics will include the meaning of stigma, why people stigmatize, the physiological, cognitive-affective and social behavioral processes linking stigma and health outcomes, and moderators of stigma.

85-261 Psychopathology

Intermittent: 9 units
The study of psychopathology is not an exact science; nor are there many clear-cut parameters with which to differentiate "normal" and "abnormal" behavior. This course will focus on learning about and understanding the range of behaviors which fall within the province of "abnormal" psychology. Its approach will be descriptive, empirical, theoretical, and conceptual. Students will examine definitions of "abnormality" in a historical and contemporary context, explore issues relevant to diagnosis and patient care, be introduced to various psychological diagnostic categories, and develop an appreciation of the range of empirically-supported treatments for these disorders.

85-265 Introduction to Research Methods

All Semesters: 9 units
No course description provided.

85-271 Animal Minds

All Semesters: 9 units
With intricate cultures, impressive technology, and layered social lives, humans seem to stand apart from their animal kin. However, humans and non-human animals share many aspects of their mental lives, and, upon closer inspection, some animals even reveal cognitive abilities far beyond the capacities of humans. Through comparing and contrasting human and non-human cognition, we can learn about human psychological uniqueness and its evolutionary origins, and fundamental properties of cognitive processes in general

85-281 Introduction to Clinical Psychology

Spring: 9 units
This course is designed to introduce students to a wide variety of concepts in the area of clinical psychology. We will explore clinical psychology in an historical perceptive, ethics related to the practice of psychology, and various theories of psychotherapy (Incluing psychoanalytic, psychodynamic, existential, and cognitive behavioral). Also, we will look at group theories underlying group therapy and family/systems therapy.
Prerequisites: 85-251 or 85-261

85-294 Teaching Assistantship

Intermittent
This course is designed to provide students with an apprenticeship in the practice of teaching through one-on-one interaction with a faculty member in the design, administration, and teaching of a course. The student should have previous coursework in the topic domain of the course to ensure that they have the basic skills and background necessary to contribute to the course. The Teaching Assistantship will be supervised by a faculty member, and should result in a concrete, measurable contribution to a course (such as the design of assignments or exams) and/or a reflection on the practical and pedagogical considerations of course design (such as a paper). It is the student's responsibility to make independent arrangement for independent course study courses with individual faculty members. This should be done the semester before a student wishes to register for one of these courses. The course may be taken for any number of units up to 9, depending on the amount of work done.

Course Website: https://tinyurl.com/2encx2n3 (https://tinyurl.com/2encx2n3/)

85-300 Introduction to Research Methods

All Semesters: 9 units
The overall goal of this course is to help you transform from being consumers of research knowledge to being evaluators and producers of it. This course provides (a) hands-on exploration of fundamental concepts in research design, statistical analysis, scientific writing, and ethics; (b) skills necessary for designing, conducting, analyzing, and disseminating an observational study; and (c) skills for critically evaluating psychological research and mainstream media reports of it.
Prerequisites: (85-104 or 85-219 or 85-251 or 85-221 or 85-241 or 85-102 or 85-213 or 85-211) and 36-200

85-309 Statistical Concepts and Methods for Behavioral and Social Science

Spring: 9 units
Research in the Social Sciences is a project of understanding the ways in which people are similar while grappling with the ways in which they are different. Statistical methods are a powerful tool for managing the tension between the two. This course introduces the statistical methods most commonly used in in the social sciences, as well as their implementation in the R programming language. Topics involve exploratory data analysis, sampling and randomization, hypothesis testing, and power analysis.
Prerequisites: 36-201 or 36-200

85-310 Research Methods in Cognitive Psychology

Fall and Spring: 9 units
This is a course in which students develop the research skills associated with cognitive psychology and cognitive science. Students learn how to design and conduct experiments, and analyze and interpret the data they collect. The course covers a variety of experimental designs, e.g., factorial, Latin Squares. Analyses of response times, qualitative data, and signal detection are also covered. Cognitive modeling will also be discussed. Topics include mental imagery, memory, and perception. The class format consists of lectures, discussions and student presentations.
Prerequisites: (85-211 and 36-309) or (85-213 and 36-309) or (85-211 and 85-309) or (85-309 and 85-213)

85-311 Research Methods: Meta-Analysis

Intermittent: 9 units
The scientific process is inherently cumulative: Scientific understanding moves forward by building on the theories, methods, and findings of individual research. The broad aim of this course is to teach you a set of practical tools called meta-analysis for synthesizing existing research.
Prerequisites: 85-320 or 85-330 or 85-314 or 85-340 or 85-310 or 85-300

85-314 Cognitive Neuroscience Research Methods

Intermittent: 9 units
This is a hands-on laboratory course designed to foster basic skills in the empirical approaches used in cognitive neuroscience research. Students will learn how to evaluate which cognitive neuroscience method is best suited to a research question, basic experimental design and analysis, and how to formally present empirical results. The course will focus on functional MRI, but will also cover structural MRI (diffusion imaging) and EEG, and survey various other methods. Students will work with actual datasets using the current software used by cognitive neuroscience researchers.
Prerequisites: (36-309 or 85-309) and (85-219 or 85-211)

85-316 Research Methods in Health Psychology

Spring: 9 units
TBA

85-320 Research Methods in Developmental Psychology

Fall and Spring: 9 units
This is a laboratory course, in which the student will have direct experience working with children, as well as writing research reports and designing and critiquing research in child development. The purpose of the course is to develop research expertise that will assist the student both in carrying out research and in evaluating the research of others. Special emphasis will be given to the unique methodological problems associated with the study of development. Students must be sure they are also available to attend the Children's School during specific blocks in addition to the class meeting times. Testing times will be Monday- Thursday with 3 year old testing times being from 8:45-9:30am, 10:20-12:15pm. 4 year old testing times from 8:30-9:15am, 10:05-12:20pm, 1:10-2:20pm. Ks testing times being 8:45-9:45am, 10:15-11:15am,1:15-2:25pm, student need to be available for one time slot from each age.
Prerequisites: (85-309 and 85-221) or (36-309 and 85-221)

85-330 Analytic Research Methods

Intermittent: 9 units
This class will teach students how to apply six major non-experimental research methods used in analytic behavioral analysis. Protocol Analysis. This method is used to study patterns and changes in problem-solving and their matches to theoretical models, including computational models. Corpus Analysis. This method is used to isolate patterns of behavioral and communication usage and change, as revealed through the study of the world-wide web and large computerized databases such as CHILDES, TalkBank, or the British National Corpus. Tools here include text searches and data-mining. Conversation Analysis. This is a microanalytic method used to examine sequencing, repair, and orientation in closely transcribed recordings of spoken interactions, as made available through systems such as the CABank database, as well as recorded programs on YouTube and elsewhere. Coding Systems. This approach seeks to capture interactional and behavioral structures in writing, teaching, interview, and other interactions. Here, there will be a special emphasis on the coding of instructional interactions. Gesture Analysis. This microanalytic method seeks to track patterns in gestural and nonverbal communication, often in association with spoken messages. Profile Analysis. This approach studies differences across learners at various ages and ability levels and group differences involving aphasia, autism, stuttering, dementia, and other individual differences. Students will work with data already available from previous studies, and will also learn to collect their own new datasets. Although the data being examined have been generated through naturalistic processes, they can be analyzed quantitatively using time-series analyses, non-parametric statistics, error matrices, and neural network simulations. In these various analyses, we will also consider how behavioral patterns are shape
Prerequisites: 36-200 or 36-201

85-340 Research Methods in Social Psychology

Fall and Spring: 9 units
This course is designed to provide students with the necessary knowledge to evaluate research, make transitions between theory and the operations that test the theory, and to design and carry out original research. Topics will include the nature of proof and causal inference, manipulation of indepen-dent variables, measurement of dependent variables, questionnaire design, experimental ,and quasi-experimental, design and ethical issues involved in doing research. Survey, observational and experimental techniques as applied in both field and laboratory settings will be covered. Students will be expected to criticize completed research. They are also expected to design measures and complete their own original studies. During the course of the semester students will also be expected to design and carry out an original research project as well.
Prerequisites: (85-251 and 36-309) or (36-309 and 85-241) or (85-309 and 85-241) or (85-309 and 85-241)

85-343 Children, Race, and Racism

Intermittent: 9 units
Millions of children grow up in racialized societies societies that are organized along racial lines historically, politically, and economically. How do children growing up in racialized societies come to understand race? How do children learn racism? How do children develop resilience in the face of racism? These are some of the questions we will address in this course through a combination of reading primary empirical and theoretical articles in psychology and class discussion.
Prerequisites: 85-221 or 85-104 or 85-251 or 85-241 or 85-102 or 85-219 or 85-211

85-345 Meaning in Mind and Brain

Intermittent: 9 units
What does it mean to say that an object, word, event or sentence means something? What is the nature of semantic representations that are activated in the brain during comprehension, and how are they related to perceptual, linguistic, mnemonic and motor representations? How do these representations emerge over the course of development, and how can they be selectively impaired by brain damage? This course examines these and related questions by drawing on findings from a broad range of methodologies, including developmental studies of young children, behavioral studies of adults, neuropsychological studies of brain-damaged patients, neurophysiology and functional brain imaging, and computational modeling. The course will take a seminar format in which students read, present and discuss the current literature.
Prerequisites: 85-213 or 85-211 or 85-219

85-347 Stress and Health Across the Lifecourse

Intermittent: 9 units
This seminar is designed to delve deeper into the topic of stress and health with a life course perspective. The aims of this course is to help students develop the conceptual and methodological skills necessary for interpreting empirical studies (as well as claims in pop culture) in this area of research and to understand the critical roles of time and timing. To facilitate these goals, the course will combine brief lectures, discussion of readings, oral presentations, and writing.

85-350 Psychology of Prejudice

Spring: 9 units
This course is devoted to the study of both traditional and more modern forms of prejudice and discrimination and the psychological processes that can arise from categorizations and stereotyping. The class provides an overview of the cognitive and emotional underpinnings of prejudice and discrimination as it pertains to many forms of inequality. Its goal is to examine social differences and social inequality in many areas of society. The psychological theories underlying these behaviors will be examined as well as their impact on the lives of stigmatized individuals. In addition to the traditional forms of prejudice based on such things as race, gender and age, other inequalities that result from less traditional groupings such as social class, appearance, and disability will be explored. Research on issues of social identity, intergroup relations and the reduction of prejudice will be examined through readings and class activities.
Prerequisite: 85-241

85-351 What is Attention?

Intermittent: 9 units
For over a century, scientists have claimed that no one knows what attention is yet the past half-century has seen over 40 thousand publications with "attention" in the title. What gives? The primary goals of this course are first to show that we know what attention is and second, to demonstrate how to construct an important type of explanation in cognitive science. We investigate classics in the field and engage cutting edge research, in psychology, neuroscience, and even philosophy. One project will be cleaning house (theory and concepts). At the same time, in identifying the functional nature of attention, we unify different levels of analysis to construct a comprehensive account of what attention is, linking behavior, algorithms and neuroscience. We use this account to tackle various issues: different targets and forms of attention, attention and memory, the difference between attention and priming, attention's relation to behavior, attention and consciousness, executive control, attention's dependence on reward and learning, the developmental biology of attention, disorders of attention, attention and expertise, attention and implicit bias among other topics. Attention forms the foundation of our understanding of many other areas (arguably, it forms the foundation of life). The course will be based on drafts of the forthcoming second edition of the instructor's book, Attention (Routledge, 2014). We will also, hopefully, have guest lecturers from outside of CMU.
Prerequisites: 85-211 or 85-219

85-352 Evolutionary Psychology

Intermittent: 9 units
This course will cover both the fundamentals of evolutionary psychology, including the theories of natural and sexual selection, with the overarching aim of providing an overview of the field at an advanced level. We will examine the relevance of evolutionary thinking to a range of psychological phenomena including problems of survival, long-term mating strategies, short-term sexual strategies, parenting, kinship, cooperative alliances, aggression and warfare, conflict between the sexes, and prestige, status, and social dominance. We will also examine evolutionary approaches to sensation and perception, development, consciousness, cognition, language, and abnormal behavior. Juniors and Seniors only or permission of instructor. Pre req: 85-102, 85-211, 85-221, 85-241 or 85-251
Prerequisites: 85-102 or 85-211 or 85-251 or 85-241 or 85-221

85-353 Mindfulness: Science and Practice

Intermittent: 9 units
This course will focus on blending first-person experience with mindfulness practices (including mindfulness meditation) and learning about the scientific research on mindfulness. Students will engage in guided mindfulness exercises, develop a daily mindfulness practice, and try out different mindfulness training traditions. In addition, much of this course will be focused on applying a critical eye to the theory, measures, mechanisms, and effects of mindfulness (and mindfulness training interventions) across multiple domains cognition, social processes, behavior, biological mechanisms, and health. As such, this will be a small seminar course focused developing first-person experiences of mindfulness and on discussing the debates and opportunities related to the emerging science of mindfulness.
Prerequisites: 85-340 or 85-310 or 85-320 or 85-314

85-354 Infant Language Development

Intermittent: 9 units
While adults struggle to learn languages, almost all infants acquire language with seemingly little effort. This course examines infants' learning abilities and language milestones with a focus on several different theoretical accounts of language development, and the way empirical data can be used to assess those theories. The course is reading intensive, and evaluation will be based on both written assignments and oral participation.
Prerequisites: 85-211 or 85-221

85-356 Expertise: The cognitive (neuro)science of mastering almost any skill

Intermittent: 9 units
Though some of us struggle to hold a phone number in memory long enough to dial, Lu Chao recited 67,890 digits of pi from memory in 2005. With effort and effective strategies, human perception and cognition can reach great heights. But, even without much intentional practice, most people effortlessly recognize lyrics from hundreds of songs and faces of thousands of people. How does the human brain develop expertise across domains as diverse as music perception and performance, memory, sports, face recognition, and skills like chess? How do experts 'hack their brain' to achieve unusual levels of performance? Is talent made, or is it inborn? Can we capitalize on cognitive science and neuroscience to become better at math, wine tasting, medical diagnosis, or computer programming? In this course, we will work together to answer these questions while learning how to critically evaluate, synthesize, and communicate peer-reviewed research.

Prerequisites: 85-211 or 85-219

85-357 Navigating Race and Identity in America: The Role of Psychology in Racial Intera

Intermittent: 9 units
How have social institutions and historical factors led to the belief systems and stereotypes that shape how race is experienced in American society, and how do these belief systems affect the way individuals within racial groups come to view and define themselves? This course will serve as an introduction to how people's psychologyhow they think, feel, and actshapes their experience of race and identity in America. After a brief discussion about the structural and systemic origins of the racial status quo, we will examine the way that individuals navigate the social and racial landscape of modern-day America. Complementing courses that take sociological approaches to race in America, this course will focus on how individuals' perceptions and thoughts about the world affect how they interpret and respond to social situations. For example, the course will address: how stereotypes about one's race or identity can cause individuals to feel threatened, and can undermine health, feelings of belonging, and academic performance how an individual's concerns about the thoughts and beliefs of others can radically affect identity formation, particularly during adolescence how individuals have to navigate multiple cultural identities, especially as minority group members contending with mainstream ideas that differ from their own how majority group members (e.g., Whites) view their role in racial systems, and how they deal with concerns about being or appearing prejudiced how interventions can use social psychological concepts to mitigate negative outcomes of racial inequality We will then use our understanding of these concepts to examine and consider different racial situations thoughout American society and to understand how individuals navigate and experience race and identity. Throughout the course, we will watch films, read literature, and analyze music and art that reflect the experience of race and identity.

85-358 Pro-Social Behavior

Fall: 9 units
This course is an advanced seminar that focuses on social psychological research involving the examination of pro-social behavior. A heavy emphasis will be placed on classic research on helping (which investigates how, when, and why we help strangers), as well as the wide body of literature on social support (which investigates how we help, and seek help from, those who are closer to us). Research on both help-seeking and help-provision will be covered, as well as the implications of this type of pro-social behavior for relationships and health. The course also will cover research on other types of pro-social behavior such as empathy, altruism, forgiveness, and cooperation. This is an advanced seminar in which you will be expected to read original research articles and chapters on assigned topics and come to class prepared to discuss the material. Readings will consist of theoretical and empirical articles from psychology journals and related sources. Additional course requirements will involve short, weekly writing assignments, student presentations of research articles, and a written research proposal. Over the course of the semester, students will design and carry out a small-scale, original investigation on a topic of interest.
Prerequisites: 85-330 or 85-340 or 85-314 or 85-320 or 85-310 or 85-311

85-359 Introduction to Music Cognition Research

Intermittent: 9 units
This course explores the roles of cognitive processes in the experience of music with a focus on carrying out a collaborative laboratory project in order to understand first-hand the challenges of the experimental study of music. In readings, lectures, discussions, and demonstrations we will become acquainted with the relevant psychological theories of perception, memory and learning, and review and critically analyze selected experimental findings on the psychology of music. We will examine the use of psychological principles (e.g. Gestalt laws of perception, limitations on working memory, categorical perception, chunking, schemas, modularity) to explain musical phenomena. The emphasis will be on applying an experimental approach to music perception and cognition, but we will also consider ongoing debates about larger issues (such as musics adaptive value to the human species, and the determinants of musical taste).
Prerequisite: either Harmony 1 or Cognitive Psychology or introduction to psychology or an intro level statistics or by instructor permission.
Prerequisites: (36-200 and 85-102) or (36-200 and 85-211)

85-360 Origins of Intelligence

All Semesters: 9 units
The nature and origins of human intelligence is a much-debated topic. Questions about the evolution and development of intelligence in humans, how intelligence compares among animals, the basis of intelligence in the brain, how to create intelligence in machines, the role of genes and experience, and individual variability in intelligence are all areas of vigorous scientific inquiry. Popular "folk" views of intelligence (that may be misguided or incorrect) have shaped all levels of society from parenting to politics. There is no universally accepted definition of human intelligence but one conceptualization is 'the ability to remember, reason, plan, and solve novel problems". This course will explore scientific and popular views of the origins of intelligence. The approach will be to read popular science articles and books that deal with intelligence in humans, animals, and machines and locate the primary scientific work on which those claims are made in order to evaluate the rigor and validity of intelligence theories. The course assignments will primarily consist of oral and written critiques of theories and data on the science of intelligence.

85-362 Seminar on Addiction

Intermittent: 9 units
This seminar will explore various topics central to the study of drug addiction, with a primary emphasis on psychological and neurobiological theories of drug addiction. We will also discuss research and clinical techniques related to the assessment, diagnosis, and treatment of substance use disorders and related problems. Emphasis will be on alcohol and tobacco, but other drugs will be discussed as well. The main course objective is to provide a unifying model for understanding the fundamental aspects of addiction.
Prerequisites: 85-310 or 85-340 or 85-320 or 85-314

85-363 Attention, Its Development and Disorders

Intermittent: 9 units
TThis seminar will discuss a broad range of topics pertaining to the study of human attention, including: theoretical frameworks and biological foundations of human attention; interrelationship between attention and other aspects of cognition (such as perception, memory, and executive functions); development of attention in infancy and childhood; biological and psychological foundations of attention disorders. Students will be expected to read original research articles, lead and participate in class discussions, and complete a term paper.
Prerequisites: 85-221 or 85-211

85-370 Perception

Fall: 9 units
Perception, broadly defined, is the construction of a representation of the external world for purposes of thinking and acting. Although we often think of perception as the processing of inputs to the sense organs, the world conveyed by the senses is ambiguous, and cognitive and sensory systems interact to interpret it. In this course, we will examine the sensory-level mechanisms involved in perception by various sensory modalities, including vision, audition, and touch. We will learn how sensory coding interacts with top-down processing based on context and prior knowledge and how perception changes with learning and development. We will look at methods of psychophysics, neuroscience, and cognitive psychology. The goals include not only imparting basic knowledge about perception but also providing new insights into everyday experiences.

85-375 Crosscultural Psychology

Intermittent: 9 units
Human beings share a common genetic inheritance, but our cultural institutions differ in a bewildering variety of ways. This course explores the many different cultural expressions of basic human cognitive and social abilities and needs, We will look at cultural variations in child rearing, mother-child attachment, language socialization, categorization, reasoning, problem-solving, architecture, music, politics, warfare, food-gathering, sex roles, mental disorders, and altered states of consciousness, all with the goal of understanding how the shape of social systems and symbolic expression reflects the economic and adaptive needs of the culture and its people. Among the approaches to these phenomena we will consider are symbolic interaction, cognitive anthropology, dialectic materialism, and modern ethnology.
Prerequisites: 85-211 or 85-198 or 85-102 or 85-100 or 85-219 or 85-241 or 85-221 or 85-261 or 85-251

85-377 Attitudes and Persuasion

Intermittent: 9 units
This advanced undergraduate course will focus on the topic of attitude change and how various persuasive techniques are used to shape human response. The dynamics of propaganda and what makes the techniques effective on social and consumer decisions will be addressed. The primary goals of the course are to 1) understand the dynamics of attitude change; 2) explore the mechanism by which attitude change techniques operate and 3) examine relevant theories and research in persuasion. Examples of topics covered include the origins of attitudes, how attitudes influence judgments, social power and attitude change, and how individual decisions are influenced by the mass media. Classic and contemporary research in the area of persuasion will be examined in the form of course readings and assignments.
Prerequisite: 85-241

85-380 In Search of Mind: The History of Psychology

Intermittent: 9 units
This course will focus on three aspects of the origin and growth of experimen-tal psychology. The first is the prehistory of psychology, where the connection of the discipline to the development of modern science, and in particular, its origins in philosophy and physiology, is examined. The second focus of the course is on the different approaches and attempts to define the field that have contested for dominance during much of the life of the discipline. The final major focus of the course is on the modern period (roughly the last forty years) where the influences that brought about the modern counter-revolution in psychology will be examined, and where some conjecture about likely future directions will occur. Two prior courses in psychology.

85-382 The Psychology and Neuroscience of Consciousness

Intermittent: 9 units
This course will explore consciousness as a scientific problem. It aims to dispel obscurity and mystery to make clear how consciousness can be illuminated empirically and theoretically without losing site of the "phenomenal". We begin with isolating the basic phenomenon, delve into the conceptual and philosophical background dividing access from phenomenal consciousness, and discuss methods for tracking consciousness. We will then identify two clear questions about 'generic' and 'specific' consciousness. On generic consciousness, we shall explore a set of empirical theories of consciousness and the evidence that supports them. This will include recurrent processing theory, global workspace theory, and higher-order theory among others. On specific consciousness, we will look at neural correlates and experimental interventions to test causal claims about how consciousness arises from the brain, with specific emphasis on sensory consciousness and the role of information and representation. Special topics will likely include the attention in consciousness, consciousness and agency, vegetative state, unconscious sensory processing in normal and lesioned brains, split brain phenomena and abnormal consciousness in psychiatric disorders such as schizophrenia. If possible, we will have a few guest lectures by local experts.
Prerequisites: 85-213 or 85-211 or 85-219

85-385 Auditory Perception: Sense of Sound

Intermittent: 9 units
This course explores how our sense of hearing allows us to interact with the world. Students will learn about basic principles of sound, spatial sound, sound quality, hearing impairment, auditory perception, interactions with other modalities, and auditory cognition. Topics may also include musical acoustics, basic auditory physiology, sound-semantic associations, acoustic analysis, and sound-making gestures. We will consider not only simple laboratory-generated signals, but also more complex sounds such as those in our everyday environment, as well music and speech. Students will gain some in-class experience with generating sounds and analytic listening. After students reach a sophisticated level of understanding of the auditory fundamentals, they will apply their knowledge to the study of several current issues in auditory research.
Prerequisites: 85-102 or 85-211

85-391 Psychology of Sleep

Intermittent: 9 units
This course is ONLY offered at Carnegie Mellon in Qatar. This course is an advanced seminar that focuses on the biology, psychology, and social factors of sleep and dreaming. The course will go over the history behind the scientific study of sleep, as well as the cultural and psychological underpinnings of dreaming. Students will also delve into the neuroscience and abnormal psychology of sleep. Emphasis will be placed on reading, presenting and analyzing empirical research articles. Students will also be required to fill out sleep logs and a dream diary, culminating in a final research paper analyzing their semester long sleep patterns and dreams based on research discussed in class.
Prerequisites: 85-102 and 85-211

85-392 Human Expertise

Intermittent: 9 units
The process of becoming an expert involves many changes, some quantitative and some qualitative. This course will provide an up-to-date account of the theory and data concerning the development of expertise. Questions addressed include the following. What does it take to become an expert? Are experts born or made? Is the process of acquiring expertise common across different domains from music to sports to science? Research studied in the course will employ a variety of methodologies, from case studies to protocol analysis to computational modeling.
Prerequisites: 85-211 or 85-213

85-393 Memory: Models & Mechanisms

Intermittent: 9 units
This course will provide a basic understanding of human memory, covering both the many phenomena that have been studied over the years and also how theories have placed these phenomena within a general human cognitive system. The course will treat data and theory as equally important. Theory without empirical evidence is vacuous. Data without an explanatory mechanism is also unsatisfying. The course will cover many of the major principles of human memory starting with how information from the environment is encoded, processed and stored in memory. We will focus on how working memory (think of it as the Human CPU) affects how we encode and retrieve information from memory and what the limits are on this processing machinery. Theories of learning and the mechanisms involved in acquiring information as well as theories of forgetting will be examined in depth, along with variables that affect ease of encoding and obstacles to retrieval. The course will also focus on illusions of memory, how and why human memory is vulnerable to illusions and produces memory distortions. Most phenomena will be discussed in the context of theoretical explanations. Students will also learn about modeling approaches and how the various phenomena have been understood with different theoretical accounts. As a final project each student will develop a model to account for a phenomenon. This will either be fit to an existing body of data, or will take an existing theory, generate a new prediction based on that theory, and design an experiment to test whether the theory is supported or not (the experiment will not be run, but the design and predictions should be clear enough that it could be).
Prerequisite: 85-219

85-394 Development in Context: Applying Theory and Research to Support Thriving

Intermittent: 9 units
This course is an advanced seminar that focuses on synthesizing theory and research in developmental psychology and learning sciences so that proposed interventions to support children's development can be designed and evaluated. Theory and research relevant to cognitive, social emotional, and physical development can be applied to facilitate children's thriving in learning, belonging, mental health, and physical health, etc. Students will have an opportunity to select a particular age group and context for focus of independent literature review, a midterm interview project, and a final proposal for research-based intervention.

85-395 Applications of Cognitive Science

Spring: 9 units
The famous psychologist George Miller once said that Psychology should "give itself away." The goal of this course is to look at cases where we have done so and #8212; or at least tried. The course focuses on applications that are sufficiently advanced as to have made an impact outside of the research field per se. That impact can take the form of a product, a change in practice, or a legal statute. The application should have a theoretical base, as contrasted, say, with pure measurement research as in ergonomics. Examples of applications are virtual reality (in vision, hearing, and touch), cognitive tutors based on models of cognitive processing, phonologically based reading programs, latent semantic analysis applications to writing assessment, and measurses of consumers' implicit attitudes. The course will use a case-study approach that considers a set of applications in detail, while building a general understanding of what it means to move research into the applied setting. The questions to be considered include: What makes a body of theoretically based research applicable? What is the pathway from laboratory to practice? What are the barriers - economic, legal, entrenched belief or practice? The format will emphasize analysis and discussion by students.
Prerequisites: 85-251 or 85-102 or 85-241 or 85-221 or 85-211 or 85-219 or 85-104

85-401 Introduction to Noninvasive Brain Imaging

Spring: 9 units
In the past the understanding of the brain's structure and function was limited by the need to access the brain via surgery and postmortem examination. In recent decades, advances in the fields of biology, psychology, physics, and engineering, have led to a slew of noninvasive methods for looking at the brain structure and function. These methods have become widespread in both clinical and research settings. This course will provide a survey of some of the most prominent of these neuroimaging methodologies, their advantages and disadvantages, and examples of their use. Topics covered include electroencephalography (EEG), computed tomography (CT), functional near-infrared spectroscopy (fNIRS), positron emission tomography (PET) and magnetic resonance imaging (MRI). Pre reqs listed or by permission of the course instructor.
Prerequisites: 03-121 or 85-219 or 85-102 or 03-151

85-402 Multilevel Modeling

Intermittent: 9 units
This course introduces a number of expressions of multilevel modeling that are now in common use in all the major branches of psychology, as well as in education and other sciences. The course balances conceptual understanding of MLM with practical, lab-based application. A working knowledge of R or SAS statistical software will be advantageous but not required.
Prerequisites: 36-309 or 85-309

85-406 Autism: Psychological and Neuroscience Perspectives

Fall: 9 units
Autism is a disorder that affects many cognitive and social processes, sparing some facets of thought while strongly impacting others. This seminar will examine the scientific research that has illuminated the nature of autism, focusing on its cognitive and biological aspects. For example, language, perception, and theory of mind are affected in autism. The readings will include a few short books and many primary journal articles. The readings will deal primarily with autism in people whose IQ's are in the normal range (high functioning autism). Seminar members will be expected to regularly enter to class discussions and make presentations based on the readings. The seminar will examine various domains of thinking and various biological underpinnings of brain function, to converge on the most recent scientific consensus on the biological and psychological characterization of autism. There will be a special focus on brain imaging studies of autism, including both structural (MRI) imaging of brain morphology and functional (fMRI and PET) imaging of brain activation during the performance of various tasks.
Prerequisites: 85-429 or 85-219 or 85-213 or 85-211 or 85-355

85-407 How the Brain Makes Meaning

Intermittent: 9 units
Conceptual knowledge underpins all aspects of everyday experience, from language, to thinking, to recognizing familiar objects, people and places. This seminar will survey major theories and findings about how the brain represents 'meaning.' The course will emphasize research using neuropsychological methods in brain-damaged patients and functional neuroimaging in healthy participants. Students will read primary empirical and theoretical review articles to develop an understanding of both classic findings and recent discoveries about how the human brain represents meaning.
Prerequisites: (85-219 or 85-211) and (36-201 or 36-200)

85-408 Visual Cognition

Intermittent: 9 units
Recognizing an object, face or word is a complex process which is mastered with little effort by humans. This course adopts a three-pronged approach, drawing on psychological, neural and computational models to explore a range of topics including early vision, visual attention, face recognition, reading, object recognition, and visual imagery. The course will take a seminar format.
Prerequisites: 85-213 or 85-211 or 85-219

85-409 Stigma and its Consequences

All Semesters: 9 units
This seminar will introduce students to theoretical and empirical psychological research on prejudice and social stigma. The topics covered will include examinations of why individuals stigmatize: exploring cognitive, evolutionary, self, and system justification explanations. The course will examine the consequences of stigmatization for low-status groups (e.g., stereotype threat, dis-identification, internalization, health outcomes). We will explore the role of stigma in intergroup interactions and variation in the experience of stigma. Specific course topics will include the meaning of stigma, why people stigmatize, the physiological, cognitive-affective and social behavioral processes linking stigma and health outcomes, and moderators of stigma.

85-412 Cognitive Modeling

Spring: 9 units
This course will be concerned with modeling of agent behavior in a range of applications from laboratory experiments on human cognition, high-performance simulations such as flight simulators, and video game environments. The first half of the course will teach a high-level modeling language for simulating human perception, cognition, and action. The second half of the course will be a project in which students develop a simulated agent or agents for the application of their choice.
Prerequisites: 15-251 or 15-210 or 15-150 or 15-122

85-414 Cognitive Neuropsychology

Spring: 9 units
This course will review what has been learned of the neural bases of cognition through studies of brain-damaged patients as well as newer techniques such as brain stimulation mapping, regional metabolic and blood flow imaging, and attempt to relate these clinical and physiological data to theories of the mind cast in information-processing terms. The course will be organized into units corresponding to the traditionally-defined subfields of cognitive psychology such as perception, memory and language. In each area, we will ask: To what extent do the neurological phenomena make contact with the available cognitive theories? When they do, what are their implications for these theories (i.e., Can we confirm or disconfirm particular cognitive theories using neurological data?)? When they do not, what does this tell us about the parses of the mind imposed by the theories and methodologies of cognitive psychology and neuropsychology?
Prerequisites: 85-219 or 85-211

85-417 Multilingual Minds and the Brain

Fall: 9 units
Does multilingualism change your mind, literally and figuratively? In this course, we will examine several topics related to the differences between mono- and multilinguals. First, how juggling several languages in one brain may "train" certain skills so the multilingual mind processes information differently, even when that information is not language related. Second, how patterns of neural activation may also differ in mono- and multilinguals, changing language processing at that level. Third, how contexts of use and acquisition of different languages may affect how we process information in each one, changing how one makes decisions in each language they speak. We will use original sources to try and answer that initial question. Further, we will analyze published research and propose ways of developing it further.
Prerequisites: 85-320 or 85-340 or 85-330 or 85-310 or 85-309 or 36-309

85-418 Infant development: Inside the Mind of Babies

Intermittent: 9 units
This course will provide an overview of development in infancy with a focus on the emerging mind. A basic knowledge of developmental issues is assumed. We will cover the key aspects of infancy but with a primary focus on perception (seeing), cognition (thinking), and action (doing). Each week, students will be required to read a chapter in a textbook as well as short advanced empirical paper, often with conflicting accounts of a phenomenon. The instructor will introduce the key concepts, issues, and lines of research, but in each case students are expected to take an active role in discussing and developing ideas about the topic under consideration. Research methods specific to the study of infant development will be emphasized. Major issues that will be discussed include theories of developmental change, continuity in development, the nature of the psychological mechanism that underpin change, the relative contributions of heredity and environment, and the notion that all change occurs through a series of development cascades.
Prerequisite: 85-221

85-419 Introduction to Parallel Distributed Processing

Spring: 9 units
This course provides an overview of Parallel-Distributed-Processing/neural-network models of perception, memory, language, knowledge representation, and learning. The course consists of lectures describing the theory behind the models as well as their implementation, and their application to specific empirical domains. Students get hands-on experience developing and running simulation models.
Prerequisites: 21-112 or 21-120 or 21-111 or 21-115 or 21-124

85-421 Language and Thought

Intermittent: 9 units
This course allows the student to explore ways in which the mind shapes language and language shapes the mind. Why are humans the only species with a full linguistic system? Some of the questions to be explored are: What kinds of mental abilities allow the child to learn language? What are the cognitive abilities needed to support the production and comprehension of sentences in real time? How do these abilities differ between people? Are there universal limits on the ways in which languages differ? Where do these limitations come from cognition in general or the specific language facility? Why is it so hard to learn a second language? Are there important links between language change and cultural change that point to links between language and culture?
Prerequisites: 80-150 or 85-213 or 85-211 or 80-180

85-422 Clinical Psychology: Science and Practice

Spring: 9 units
In this course, students will be exposed to the science and practice of clinical psychology, with a particular emphasis on the synergistic relationship between clinical psychological research and clinical practice. We will focus on the four major activities that clinical psychologists engage in (research, assessment, diagnosis, and psychotherapy). Students will learn about the clinical characteristics of major psychological disorders and the empirically-validated treatments available for these conditions. We will make frequent use of research findings and the scientific method to evaluate and understand concepts in clinical psychology. Critical thinking will be emphasized as we explore the scientific strengths and limitations of various treatments for psychological disorders. This course is designed to be a smaller seminar course for juniors and seniors considering graduate school in clinical psychology.
Prerequisites: 85-261 or 85-310 or 85-340 or 85-314 or 85-104 or 85-320

85-423 Cognitive Development

Intermittent: 9 units
The general goals of this course are that students become familiar with the basic phenomena and the leading theories of cognitive development, and that they learn to critically evaluate research in the area. Piagetian and information processing approaches will be discussed and contrasted. The focus will be upon the development of childrens information processing capacity and the effect that differences in capacities have upon the childs ability to interact with the environment in problem solving and learning situations.
Prerequisite: 85-221

85-424 Hemispheric Specialization: Why, How and What?

Intermittent: 9 units
The brain is divided into two hemispheres, raising a host of questions about brain organization, hemispheric specialization and laterality. Despite all the research devoted to these questions, our understanding of the behavioral significance and neural basis of laterality remains limited. This course will address the questions of "why", "how" and "what". We will review the latest data and empirical results but will also develop a coherent theoretical perspective, moving from molecular, genetic and evolutionary considerations to cognitive and clinical factors in the understanding of one of the most fascinating phenomena in neuroscience, neuropsychology, psychiatry, neurology, and cognitive sciences. In addition to tackling a major text in the field (The Two Halves of the Brain Edited by Hugdahl and Westerhausen), we will read the latest papers in the field. The class will be almost entirely discussion-based and students will be responsible for doing the readings ahead of time and being prepared for the discussion.
Prerequisites: 85-251 or 85-221 or 85-241

85-425 Child Psychopathology and Treatment

Intermittent: 9 units
The first half of this course will focus on understanding the etiology and epidemiology of child and adolescent psychopathology. Special emphasis will be placed on conditions that are first diagnosed during childhood (e.g., ADHD, Autism, Eating Disorders) as well as understanding how child and adult psychopathology differ. The second half of this course will focus on treatment interventions for youth with psychopathology. Students will learn about how interventions for adults with psychopathology are altered to be developmentally appropriate for children, and methods of intervention commonly used with children but less so with adults(e.g., family therapy, play therapy). For students who have completed abnormal psychology and the psychology breadth requirement but not the other course pre-requisite, 85102, please see Theresa Kurutz to register for this course in BH 343.
Prerequisites: 85-261 and 85-102

85-426 Learning in Humans and Machines

Spring: 9 units
This course explores how probabilistic methods can help to explain cognition and to develop intelligent machines. The applications discussed include perception, language, memory, categorization, reasoning, decision-making, and motor control.
Prerequisite: 15-112

85-427 Metacognition: thinking about one's own thinking

Intermittent: 9 units
The course focuses on understanding metacognition, the marvelous ability of humans to inspect, understand, and regulate their own cognition. How do we know what we do or do not know? How good are we at estimating the accuracy of our memories of the past? How about what we will remember or forget in the future? Can we use such knowledge to do better? The study of metacognition provides an answer to these and many more questions. In other words, metacognition is the path to better knowing yourself.
Prerequisites: 85-211 or 85-219

85-429 Cognitive Brain Imaging

Spring: 9 units
This seminar will examine how the brain executes higher level cognitive processes, such as problem-solving, language comprehension, and visual thinking. The topic will be addressed by examining what recent brain imaging studies can tell us about these various kinds of thinking. This new scientific approach has the potential of providing important information about how the brain thinks, indicating not only what parts perform what function, but also how the activity of different parts of the brain are organized to perform some thinking task, and how various neurological diseases (e.g. aphasia, Alzheimer's) affect brain activity. A variety of different types of thinking will be examined, including short-term working memory storage and computation, problem solving, language comprehension, visual thinking. Several different technologies for measuring brain activity (e.g. PET and functional MRI and also some PET imaging) will be considered, attempting to relate brain physiology to cognitive functioning. The course will examine brain imaging in normal subjects and in people with various kinds of brain damage.
Prerequisites: 85-419 or 85-414 or 85-412 or 85-213 or 85-211

85-432 Data Science for Psychology and Neuroscience

Intermittent: 9 units
This course will cover advanced topics in statistics and experimental design necessary for applied research in modern psychology, including information design, exploratory data analysis, data visualization, nonparametric statistics, data and inference errors (multicollinearity, overfitting, Simpson's and Robinson's paradox), sanitization (data anonymization, de-identification), and linear models (including conditional process models). Students will get hands on experience with simulating, analyzing, and visualizing data in the R statistical environment.
Prerequisites: 85-309 or 36-309

85-435 Biologically Intelligent Exploration

Intermittent: 9 units
Humans and other mammals exhibit a high degree of control when selecting actions in noisy contexts, quickly adapting to unexpected outcomes in order to better exploit opportunities arising in the future. This course will explore both the cognitive and neurobiological systems of adaptive decision-making, through a mixture of readings, lectures, and hands-on modeling projects (in Python and Matlab).
Prerequisites: (85-211 or 85-213) and (21-111 or 21-115 or 21-120)

85-438 Educational Goals, Instruction, and Assessment

Fall: 9 units
This course will meet in TQ 1308 The aim of this course is to teach students how to develop educational goals based on a detailed task analysis of the knowledge, skills, and dispositions required for mastery of a particular aspect of a domain. Goals for early childhood, elementary, middle school, and high school will be discussed and related to the state and national standards. A comprehensive understanding of student achievement will be developed. The importance of matching the instructional program and its assessment to goals will be discussed and demonstrated. Assessment that focuses on covering the full range of specified goals will be studied along with diverse approaches for valid assessment. Other topics include making instructional material choices, funding, classroom management, ethics, and relation to system-level policies. Assignments will emphasize linking goals - instruction assessment. A term project will consist of an in-depth study of one central unit in a discipline or grade level. This course will meet in TQ 1308

85-442 Health Psychology

Intermittent: 9 units
This course is concerned with how behavior and psychological states influence the development of and recovery from disease. The class provides an overview of existing psychological and epidemiological data on the relationship between behavior and disease and addresses the issue of how behavior, emotion and cognition can influence the disease processes. Topics include: measures and concepts, stress and disease, stress and coping, personal control, helplessness and disease, social support and health, reactivity to stress, behavior and hypertension, coronary heart disease, infectious diseases and immune function, and the effectiveness of behavioral interventions in health.
Prerequisites: 36-200 and (85-221 or 85-219 or 85-211 or 85-102 or 85-104 or 85-251 or 85-241)

85-443 Social Factors and Well-Being

Intermittent: 9 units
This course will focus on the role that our social environment plays in our feelings of well-being and in the maintenance of our mental and physical health. Topics to be discussed include marriage, widowhood, loneliness, social support, social participation, social aspects of personality (e.g., social anxiety, extraversion, agreeableness, and hostility), social stressors (betrayal and conflict), discrimination, and socioeconomic status. We will consider how each social factor develops, the extent to which we can alter it or its effects on our lives, and how it influences our overall well-being.

85-444 Relationships

Fall: 9 units
The primary goal of this course is to introduce you to social psychological theory and research on the topic of relationships. Although a variety of relationship phenomena will be discussed, a heavy emphasis will be placed on research that addresses fundamental processes in close relationships. The coverage of material will include a review of historical roots and classic approaches to the scientific study of relationships, as well as exciting new research and theory on particular subtopics. The majority of class time is spent discussing and evaluating recent research. Special emphasis also is given to learning and critically evaluating the methodological tools that are used to study close relationships. This is an advanced seminar in which students will be expected to read original research articles and chapters on assigned topics and come to class prepared to discuss the material. Readings will consist of theoretical and empirical articles from psychology journals and related sources. Additional course requirements will involve short, weekly writing assignments, student presentations of research articles, and a written research proposal. Over the course of the semester, students will design and carry out a small-scale, original investigation on a relationships topic of interest.
Prerequisites: 85-330 or 85-314 or 85-311 or 85-310 or 85-320 or 85-300 or 85-340

85-446 Psychology of Gender

Spring: 9 units
This course is devoted to the investigation of psychological gender rather than biological sex. That is, sex differences will be explored from a social psychological (e.g., socialization) perspective. Implications of both male gender role and female gender role in the areas of relationships and health will be the course focus.
Prerequisites: 85-241 or 85-251

85-480 Internship in Clinical Psychology

All Semesters
This course allows students to gain applied clinical experience in a mental health setting. Students will work alongside psychology professionals at designated field placements. This course is designed to help students apply and expand their knowledge of clinical psychology and to develop appropriate professional work standards. Students will spend the majority of their time (8 hours per week) in an applied clinical setting, with a one hour per week supervision meeting with Dr. Creswell. Instructor permission is required, 85-104 Psychopathology can be taken as either a pre req or a co req. Please contact Dr. Kasey Creswell.
Prerequisites: 85-261 Min. grade B or 85-104 Min. grade B

85-481 Seminar in Intervention

Intermittent: 9 units
This course is an introduction to the therapeutic process. Students will be introduced to a variety of therapeutic approaches and techniques (e.g. Solution-Focused, Cognitive, Client Centered, etc.) and will have the opportunity to learn the basic skills associated with each (e.g. Cognitive Restructuring, Mirroring, Empathic Highlighting, etc.). Instruction will entail a mix of discussion and demonstration, and there will be a heavy emphasis on in-class practice of these skills.

85-482 Internship in Psychology

Fall and Spring
The Internship in Psychology is designed to enable students to gain experience in professional settings related to their studies in Psychology and earn credit for the intellectual work involved. It is the students responsibility to locate an internship site and on-site supervisor, as well as to identify a CMU faculty sponsor. The student registers for the internship by submitting a completed internship form to Emilie O'Leary emilier@andrew.cmu.edu.

85-483 Internship in Psychology - Mini

Fall and Spring
The Internship in Psychology is designed to enable students to gain experience in professional settings related to their studies in Psychology and earn credit for the intellectual work involved. It is the students responsibility to locate an internship site and on-site supervisor, as well as to identify a CMU faculty sponsor. The student registers for the internship by submitting a completed internship form to Lauren McCarthy (laurenmc@andrew.cmu.edu).

85-484 Practicum in Child Development

Fall and Spring
This guided field experience is designed to help students deepen their understanding of developmental psychology by assisting in a preschool or kindergarten classroom and discussing the ways that their experiences relate to the theories they have learned previously and to new readings. Each student will individually schedule a consistent 6 hours per week helping in a Children's School classroom (preferably 2 or 3 chunks of time). Classroom duties will include working one-on-one and with small groups of students as they do puzzles, art projects, dramatic play, etc., as well as helping with snack, playground supervision, classroom cleanup, and storytime. Each student will be expected to keep a journal 1) relating general experiences to developmental theories and 2) documenting the development of a particular child during the semester. All students will meet for a 1 hour weekly discussion with the director. Discussion topics and related readings will be selected collaboratively, based on issues/questions raised by the group's observations and discussions. This course is typically 9 units, but may be negotiable between 3 and 9.
Prerequisite: 85-221

85-501 Readings in Developmental psychology

Intermittent: 9 units
tba please reach out to Emilie O'Leary emilier@andrew.cmu.edu

85-505 Readings In Psychology

All Semesters
As the name implies, the emphasis in the Reading course is on reading articles and books in some specified area. The students work in the course must lead to the production of a written paper which will be read by the instructor directing the readings. Often the reading is related to a research project which the student may wish to conduct. Readings courses have also been used to give students an opportunity to receive instruction in areas which are not included elsewhere in our course listing. The course may be taken for any number of units up to 9, depending upon the amount of work to be done.

85-506 Readings in Psychology

Fall and Spring
As the name implies, the emphasis in the reading course is on reading articles and books in some specified area. The students work in the course must lead to the production of a written paper which will be read by a psychology faculty instructor directing the readings. Often the reading is related to a research project which the student may wish to conduct. Reading courses have also been used to give students an opportunity to receive instruction in areas which are not included elsewhere in our course listing. The course may be taken for any number of units up to 9, depending upon the amount of work to be done. This course is special permission and can only be added in consultation with a psychology faculty member and registered by the Undergraduate administrator, Emilie O'Leary emilier@andrew.cmu.edu.

85-507 Research in Psychology

Fall
This course may include field study, applied work, or laboratory research. The student should have previous training in the basic research skills that will be used in his/her project, especially statistical methods and experimental design. Independent Research Projects will be supervised by a faculty member and must result in a written paper. It is the students responsibility to make arrangements for independent study courses with individual faculty members. This should be done the semester before a student wishes to register for one of these courses. The course may be taken for any number of units up to 12, depending upon the amount of work to be done. Please contact the CMU psychology faculty member you wish to work with to get approval to enroll then email Emilie Rendulic at emilier@andrew.cmu.edu in order to be registered for the course.

85-508 Research in Psychology

Spring
This course may include field study, applied work, or laboratory research. The student should have previous training in the basic research skills that will be used in his/her project, especially statistical methods and experimental design. Independent Research Projects will be supervised by a faculty member and must result in a written paper. It is the students responsibility to make arrangements for independent study courses with individual faculty members. This should be done the semester before a student wishes to register for one of these courses. The course may be taken for any number of units up to 12, depending upon the amount of work to be done.

85-509 Research in Psychology Practicum

Fall and Spring: 1 unit
All students registered for research units via 85-198 or 85-507/508 * to register, in addition, for this 1 unit course. This course will meet every other week (online, at a time to be determined by survey). This course will provide students with an opportunity to frame their research experience in a broader professional and scholastic perspective, as well as an opportunity to get feedback on ongoing research experiences. Topics to be covered include professional development, protections for researchers and participants (including Title IX), problem solving, and communication. Students will complete short homework assignments in relation to each topic as a way of maintaining engagement with the course materials, as well as brief written assignments reflecting on their research experience. Students will be connected with resources like the Global Communications Center and the Career and Professional Development Center to help students contextualize their research experience in ways that contribute to their ongoing professional aspirations.

85-601 Senior Thesis

Fall
This course is intended for senior Psychology or Cognitive Science majors who wish to conduct a research project under the direction of a faculty advisor. The project topic is to be selected jointly by the student and the advisor. The project will culminate in a senior paper which will be presented to the Department Head at the end of Fall Semester. Prerequisite: Grade of B or better in a previous research course required to enter, grade of B or better in first semester of senior thesis course required to complete, and permission of instructor. A formal proposal is required in the first semester. This course differs from the Honors Thesis sequence (66-501,502) in that it does not require Honors standing in HSS (i.e., there are no QPA requirements). This course differs from Research in Psychology (85-507,508) in that the student's original contribution to the research is expected to be more substantial, and in that a final written report of the project is to be presented to the Department.

85-602 Senior Thesis

Spring
This course is intended for senior Psychology or Cognitive Science majors who wish to conduct a research project under the direction of a faculty advisor. The project topic is to be selected jointly by the student and the advisor. The project will culminate in a senior paper which will be presented to the Department Head at the end of Fall Semester. Prerequisite: Grade of B or better in a previous research course required to enter, grade of B or better in first semester of senior thesis course required to complete, and permission of instructor. A formal proposal is required in the first semester. This course differs from the Honors Thesis sequence (66-501,602) in that it does not require Honors standing in HSS (i.e., there are no QPA requirements). This course differs from Research in Psychology (85-507,508) in that the student's original contribution to the research is expected to be more substantial, and in that a final written report of the project is to be presented to the Department.

85-730 Analytic Research Methods

Intermittent: 12 units
This class will teach students how to apply six major non-experimental research methods used in analytic behavioral analysis. Protocol Analysis. This method is used to study patterns and changes in problem-solving and their matches to theoretical models, including computational models. Corpus Analysis. This method is used to isolate patterns of behavioral and communication usage and change, as revealed through the study of the world-wide web and large computerized databases such as CHILDES, TalkBank, or the British National Corpus. Tools here include text searches and data-mining. Conversation Analysis. This is a microanalytic method used to examine sequencing, repair, and orientation in closely transcribed recordings of spoken interactions, as made available through systems such as the CABank database, as well as recorded programs on YouTube and elsewhere. Coding Systems. This approach seeks to capture interactional and behavioral structures in writing, teaching, interview, and other interactions. Here, there will be a special emphasis on the coding of instructional interactions. Gesture Analysis. This microanalytic method seeks to track patterns in gestural and nonverbal communication, often in association with spoken messages. Profile Analysis. This approach studies differences across learners at various ages and ability levels and group differences involving aphasia, autism, stuttering, dementia, and other individual differences. Students will work with data already available from previous studies, and will also learn to collect their own new datasets. Although the data being examined have been generated through naturalistic processes, they can be analyzed quantitatively using time-series analyses, non-parametric statistics, error matrices, and neural network simulations. In these various analyses, we will also consider how behavioral patterns are shape

85-747 Stress and Health Across Lifecourse

Intermittent
This seminar is designed to delve deeper into the topic of stress and health with a life course perspective. The aims of this course is to help students develop the conceptual and methodological skills necessary for interpreting empirical studies (as well as claims in pop culture) in this area of research and to understand the critical roles of time and timing. To facilitate these goals, the course will combine brief lectures, discussion of readings, oral presentations, and writing.

85-753 Mindfulness: Science and Practice

Intermittent
This course will focus on blending first-person experience with mindfulness practices (including mindfulness meditation) and learning about the scientific research on mindfulness. Students will engage in guided mindfulness exercises, develop a daily mindfulness practice, and try out different mindfulness training traditions. In addition, much of this course will be focused on applying a critical eye to the theory, measures, mechanisms, and effects of mindfulness (and mindfulness training interventions) across multiple domains cognition, social processes, behavior, biological mechanisms, and health. As such, this will be a small seminar course focused developing first-person experiences of mindfulness and on discussing the debates and opportunities related to the emerging science of mindfulness.

85-762 Seminar on Addiction

Fall: 9 units
This seminar will explore various topics central to the study of drug addiction, with a primary emphasis on psychological and neurobiological theories of drug addiction. We will also discuss research and clinical techniques related to the assessment, diagnosis, and treatment of substance use disorders and related problems. Emphasis will be on alcohol and tobacco, but other drugs will be discussed as well. The main course objective is to provide a unifying model for understanding the fundamental aspects of addiction.

85-765 Cognitive Neuroscience

Intermittent: 9 units
This course will cover fundamental findings and approaches in cognitive neuroscience, with the goal of providing an overview of the field at an advanced level. Topics will include high-level vison, spatial cognition, working memory, long-term memory, learning, language, executive control, and emotion. Each topic will be approached from a variety of methodological directions, for example, computational modeling, cognitive assessment in brain-damaged humans, non-invasive brain monitoring in humans, and single-neuron recording in animals. Lectures will alternate with sessions in seminar format. Prerequisites: Graduate standing or two upper-level psychology courses from the areas of developmental psychology, cognitive psychology, computational modeling of intelligence, neuropsychology or neuroscience.

85-793 Memory: Models & Mechanisms

Intermittent
This course will provide a basic understanding of human memory, covering both the many phenomena that have been studied over the years and also how theories have placed these phenomena within a general human cognitive system. The course will treat data and theory as equally important. Theory without empirical evidence is vacuous. Data without an explanatory mechanism is also unsatisfying. The course will cover many of the major principles of human memory starting with how information from the environment is encoded, processed and stored in memory. We will focus on how working memory (think of it as the Human CPU) affects how we encode and retrieve information from memory and what the limits are on this processing machinery. Theories of learning and the mechanisms involved in acquiring information as well as theories of forgetting will be examined in depth, along with variables that affect ease of encoding and obstacles to retrieval. The course will also focus on illusions of memory, how and why human memory is vulnerable to illusions and produces memory distortions. Most phenomena will be discussed in the context of theoretical explanations. Students will also learn about modeling approaches and how the various phenomena have been understood with different theoretical accounts. As a final project each student will develop a model to account for a phenomenon. This will either be fit to an existing body of data, or will take an existing theory, generate a new prediction based on that theory, and design an experiment to test whether the theory is supported or not (the experiment will not be run, but the design and predictions should be clear enough that it could be).

85-851 Personality and Health

Intermittent
The general purpose of this course is to examine possible connections between personality and physical well-being. Material will be presented at the outset of the semester that is designed to enable students to understand more fully how psychologists think about the concept of personality (what it is and what it does for us), how it is assessed, and how personality and health psychologists do research on the topic. As the semester progresses, we will explore and discuss research that links certain aspects of personality to health, illness, and mortality. The list of personality characteristics to be considered includes (but is not necessarily limited to) optimism/pessimism, conscientiousness, hostility, trait positive and negative affect, life purpose, and chronic goal adjustment strategies. As time permits, select person variables will also be considered, e.g., the impact of depressive mood on health. Class time will be largely taken by discussion of original research papers. Different sets of students will be responsible for leading these discussions. Grades will be based on a combination of class participation, quality of paper presentations, and performance on a final research paper.

Department of Social and Decision Sciences

Location: Porter Hall 208
www.cmu.edu/dietrich/sds (http://www.cmu.edu/dietrich/sds/)

The Department of Social and Decision Sciences is a multidisciplinary department that offers undergraduate programs that focus on decision making using a broad set of social science approaches. Theoretical and empirical work is seamlessly combined with the practical skills needed to excel in key decision making roles in the public, private, and non-profit sectors and in advanced graduate studies. Our students learn how to combine standards of rationality with the realities of human and organizational behavior and to apply these lessons across a wide variety of endeavors, ranging from government service to leadership positions consulting, marketing, data science, and other sectors.

The department offers undergraduate majors in Behavioral Economics, in Decision Science, and in Policy and Management. Each major includes a distinct set of required and elective courses. Course offerings leverage faculty strength in behavioral decision making, behavioral economics, and behavioral science approaches to public policy to produce a unique curriculum.

Our faculty is committed to the academic success and growth of our students and many of our undergraduates work with faculty on research projects and internships. The directors of the majors are easily accessible and encourage students to talk with them about their curriculum, progress, and available opportunities. Our academic advisors are committed to working with each individual student to help them create, clarify, and meet their goals.

The Department of Social and Decision Sciences has long been recognized as a global nexus of decision science expertise, offering undergraduate programs that are available at few other universities. Our cohesive majors combine theory and practice allowing our graduates to excel in a range of professions or in the pursuit of advanced studies.

The Major in Behavioral Economics

Peter Schwardmann, *Faculty Director*
Location: Porter Hall 319F
schwardmann@andrew.cmu.edu (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/departmentofsocialanddecisionsciences/schwardmann@andrew.cmu.edu)

Lizzy Stoyle, *Senior Academic Advisor*
Location: Porter Hall 208G
estoyle@andrew.cmu.edu
Schedule an appointment: https://go.oncehub.com/LizzyStoyle (https://go.oncehub.com/LizzyStoyle/)

The field of Behavioral Economics (BE) integrates perspectives from Economics and Psychology to better understand how people make consequential decisions and to leverage this understanding to improve the design of the policies, programs, and institutions that govern such behavior. The last decade has witnessed an explosion of interest in BE among governments and organizations, around the world, including here in the United States. On the policy front, this has led to the formation of government “nudge” units charged with applying BE principles to policy areas such as education, criminal justice, taxation, social benefit programs, consumer protection, and unemployment. Organizations have also aggressively sought to apply BE to encourage employee productivity, improve employee health and financial wellness, reshape managerial and hiring decisions, and to better understand and engage consumers.

The faculty in the Department of Social and Decision Sciences (SDS) has long stood at the forefront of research and teaching in BE. Our faculty has developed a reputation for working closely with governments and firms to help apply BE to address a range of issues such as predatory lending and consumer protection, bias among institutional investors, employee reward and incentive programs, behavioral barriers to retirement savings, participation in social service programs, medical adherence, pre-trial detainment of defendants, and gender and racial inequality in the workplace.

The new major of BE-- the first of its kind among US undergraduate institutions--was designed to rigorously train students in the field of Behavioral Economics and to encourage them to critically consider its relevance to policy and organizations. The major emphasizes both theory and the practical promise of BE to solve problems of importance to policy makers and organizations through the largest undergraduate selection of BE courses of any university in the world. Towards this end, students will learn to collect original data, design field and laboratory experiments, analyze data and draw causal inferences, and develop interventions to improve economic outcomes and decisions. The core requirements include courses in Economics, Psychology, Behavioral Economics, and quantitative methods- including experimental design and econometrics. Students who complete the major will be well positioned to enter the private sector in a role involving data or people analytics, marketing, corporate strategy, or human resources, to enter the public sector, or to enter a wide range of graduate degree programs.

Prerequisites

All Behavioral Economics majors must complete mathematics and statistics prerequisites (see below), by the end of the sophomore year.

Mathematics Prerequisite		Units
21-111-21-112	Calculus I-II	10-20
or 21-120	Differential and Integral Calculus	

Statistics Prerequisite		Units
36-200	Reasoning with Data	9

Curriculum

The core curriculum in Behavioral Economics consists of three Behavioral Economics courses, two Economic courses, two Psychology courses, three quantitative courses, and one project course.

Behavioral Economics Courses		Units
88-360	Behavioral Economics	9
88-365	Behavioral Economics and Public Policy	9
88-367	Behavioral Economics & Field Experiments in Organizations	9
		27

Economics Courses		Units
73-102	Principles of Microeconomics	9
or 73-104	Principles of Microeconomics Accelerated	
Second-Level Economics Course*		
88-221	Markets, Democracy, and Public Policy	9
or 73-103	Principles of Macroeconomics	
or 73-155	Models, Math, and Markets	
or 73-230	Intermediate Microeconomics	
or 73-328	Health Economics	
or 73-347	Game Theory Applications for Economics and Business	
or 73-359	Benefit-Cost Analysis	
or 73-408	Law and Economics	
or 73-421	Emerging Markets	
or 73-427	Sustainability, Energy, and Environmental Economics	
		18

* Second-Level Economics course CANNOT double count with the Economics Elective course.

Psychology Courses*		Units
88-120	Reason, Passion and Cognition **	9
88-130	Behavioral Economics for Life	9
or 88-302	Behavioral Decision Making	
		18

* Students can elect to take ***88-120 Reason, Passion and Cognition*** & ***88-130 Behavioral Economics for Life*** OR ***88-120 Reason, Passion and Cognition*** & ***88-302 Behavioral Decision Making***.
PLEASE NOTE: Students who have completed ***88-302 Behavioral Decision Making*** OR ***88-360 Behavioral Economics*** cannot take ***88-130 Behavioral Economics for Life***.

** 88-120 Should be taken in the first or sophomore year.

Quantitative Methods Courses		Units
36-202	Methods for Statistics & Data Science	9
88-251	Empirical Research Methods	9
88-252	Causal Inference: from Data to Decisions	9
or 73-274	Econometrics I	
		27

Senior Project Course		Units
88-453	Behavioral Economics Capstone	9
		9

ELECTIVES **36 units**

Complete at least 27 units from the following categories. Students MUST take one elective from the Economics category, and another from the Behavioral Economics category. The third elective may be chosen from either the Behavioral Economics or Psychology categories. Note that not all elective courses are offered every year.

Economics*		Units
88-323	Policy in a Global Economy	9
73-103	Principles of Macroeconomics	9
73-155	Models, Math, and Markets	9
73-230	Intermediate Microeconomics **	9
73-328	Health Economics	12
73-347	Game Theory Applications for Economics and Business	9
73-359	Benefit-Cost Analysis	9
73-408	Law and Economics	9
73-421	Emerging Markets ***	9
73-427	Sustainability, Energy, and Environmental Economics	9

* ANY 73-3XX or 73-4XX courses be counted as an economic elective course. Consult the Academic Advisor for more information about this process. NOTE: The Economics Elective course CANNOT double count with the Second-Level Economics core requirement.
** Requires additional Math beyond 21-112 or 21-120.
*** 73-421 has a required prerequisite of 73-103 Principles of Macroeconomics, which is NOT a course requirement for the BE major.

Behavioral Economics		Units
88-234	Negotiation: International Focus	9
88-235	Negotiation: Strategies and Behavioral Insights	9
88-255	Strategic Decision Making	9
88-261	Health Policy and Decision Making	9
88-275	Bubbles: Data Science for Human Minds	9
88-300	Programming and Data Analysis for Social Scientists	9
88-366	Behavioral Economics of Poverty and Development	9

Psychology		Units
88-230	Human Intelligence and Human Stupidity	9
88-231	Thinking in Person vs. Thinking Online	9
88-285	Deconstructing and Dismantling Discrimination	9
88-290	Confessions, Lies, and Gossip	9
88-344	Systems Analysis: Environmental Policy	9
88-312	Decision Models and Games	9
70-311	Organizational Behavior	9
70-385	Consumer Behavior *	9
70-443	Digital Marketing and Social Media Strategy	9
85-350	Psychology of Prejudice	9
85-358	Pro-Social Behavior	9
85-375	Crosscultural Psychology	9
85-377	Attitudes and Persuasion	9
85-442	Health Psychology	9
85-446	Psychology of Gender	9

* 70-385 has a required prerequisite of 70-381 Marketing 1, which is NOT a course requirement for the BE major.

```
Note: Some courses have additional prerequisites.
```

Elective	Elective	Elective	Elective
Elective	Elective	Elective	Elective

* Should be taken as the first course in Behavioral Economics major sequence. It is intended for students in their first or second year. It may be taken as late as the junior year.
** Senior Honors Thesis may be substituted in the Spring term for 88-453 Behavioral Economics Capstone, which is only offered in the Fall term.

This is presented as a recommended plan for completing major requirements. The major can be completed in as few as two years (not that it must be), but students may not have time for other opportunities such as additional majors or study abroad. Students may declare their major as early as the third week of the spring semester in the first-year. Students who are planning to attend the Washington Semester Program, to study abroad, to apply for the Heinz Accelerated Masters Program, or to pursue an additional major/minor may have a very different curriculum map and should consult early – and often – with the Behavioral Economics Academic Advisor.

Additional Major

Students who elect Behavioral Economics as an additional major must fulfill all of the requirements of the Behavioral Economics major.

Additional majors cannot count BE electives toward simultaneously fulfilling requirements for another major or minor. Students who are interested in an additional major in Behavioral Economics should consult the Behavioral Economics Academic Advisor for guidance.

Students pursuing Decision Science with an additional major in Behavioral Economics may only count 36-202 , 73-102, 88-120, 88-251 and 88-302 toward the completion of both majors.

Students pursuing Policy and Management with an additional major in Behavioral Economics may only count 36-202, 73-102 and 88-251 toward the completion of both majors.

The Major in Decision Science

The interdisciplinary field of Decision Science seeks to understand and improve the judgment and decision making of individuals, groups, and organizations. Qualified graduates can continue to PhD programs in Decision Science or related fields (e.g., psychology, business), pursue professional degrees (e.g., MBA, MD, JD, MPH), or take professional positions in business, government, consulting, or the non-profit sector. Students work with faculty and the Academic Advisor to tailor their education to their personal needs and interest.

Carnegie Mellon is one of the leading centers for the study of Decision Science - and offers the only undergraduate major that integrates analytical and behavioral approaches to decision making. Our faculty are involved in applying Decision Science in a wide variety of areas, allowing them to share practical experiences with students. These applications include use of decision aids (e.g., effects on cognitive processes of using technology), medical decision making (e.g., harnessing decision principles to design interventions to promote healthy behavior), risk management (e.g., assessing and communicating the risks of climate change), marketing (e.g., understanding the effects of inter-temporal choice on purchasing decisions), and business (e.g., identifying unrecognized conflicts of interest).

Decision Science is grounded in theories and methods drawn from psychology, economics, philosophy, statistics, and management science. Courses in the major cover the three aspects of decision science: (a) normative analysis, creating formal models of choice; (b) descriptive research, studying how cognitive, emotional, social, and institutional factors affect judgment and choice, and (c) prescriptive interventions, seeking to improve judgment and decision making. In addition to gaining a broad education in the principles of judgment and decision making, Decision Science majors gain broadly applicable skills in research design and analysis and in application of research findings to behavioral problems in consumer, organizational, and public policy arenas..

The core courses present fundamental theories and results from the study of decision making, along with their application to real-world problems. They introduce students to methods for collecting and analyzing behavioral data. For example, students learn to conduct surveys (e.g., uncovering consumer or managerial preferences), design experiments (e.g., evaluating theories, comparing ways of presenting information), and evaluate the effectiveness of interventions.

The elective courses provide students with additional knowledge in areas of decision making that meet their personal, intellectual, and career goals. These courses are organized into six clusters: biological and behavioral aspects of decision making, managerial and organizational aspects, philosophical and ethical perspectives, economic and statistical methods, public policy, and research methods. Students can concentrate in one area or spread their studies across them. In addition to coursework, the department offers research opportunities for interested and qualified students. Participating in research helps students to extend their mastery of decision science, discover whether a research career is right for them, and get to know faculty and graduate students better.

Prerequisites

All Decision Science majors must complete mathematics, statistics, and analytic methods prerequisites (see below), by the end of the sophomore year.

Mathematics Prerequisite		Units
21-111-21-112	Calculus I-II	10-20
or 21-120	Differential and Integral Calculus	

Statistics Prerequisite		Units
36-200	Reasoning with Data	9

Students must take one course from the following set (or an approved alternative). Students may not count a course used to fulfill the Mathematics Prerequisite as also filling the Analytic Methods Prerequisite. Students may not count a course used to fulfill the Analytic Methods Prerequisite as also filling a Decision Science elective.

Analytic Methods Prerequisite		Units
21-122	Integration and Approximation	10
or 21-256	Multivariate Analysis	
or 21-257	Models and Methods for Optimization	
or 36-309	Experimental Design for Behavioral & Social Sciences	
or 36-401	Modern Regression	
or 36-410	Introduction to Probability Modeling	
or 80-210	Logic and Proofs	
or 80-211	Logic and Mathematical Inquiry	
or 80-315	Logics for Knowledge and Belief	
or 88-252	Causal Inference: from Data to Decisions	
or 88-300	Programming and Data Analysis for Social Scientists	

Curriculum

The core curriculum in Decision Science consists of five courses providing the theoretical perspectives of Decision Science, two courses in research methods, and one capstone.

Theoretical Perspectives		Units
73-102	Principles of Microeconomics	9
or 73-104	Principles of Microeconomics Accelerated	
85-102	Introduction to Psychology	9
88-120	Reason, Passion and Cognition *	9
88-223	Decision Analysis	12
88-302	Behavioral Decision Making	9
		48

* 88-120 should be taken in the freshman or sophomore year.

Statistical Research Methods (select one course)*		Units
36-202	Methods for Statistics & Data Science	9
or 36-309	Experimental Design for Behavioral & Social Sciences	
or 85-309	Statistical Concepts and Methods for Behavioral and Social Science	
*** Be sure to consult with your Decision Science advisor to discuss which course will best fit your plans and goals.**		**9**

SDS Research Methods		Units
88-251	Empirical Research Methods	9
		9

Electives 45 units

Complete at least 45 units of courses from the following list. Note that additional courses (most typically 88xxx courses) are occasionally added. **For the most up to date list of approved electives (and additional information about the courses), see the SDS website (https://www.cmu.edu/dietrich/sds/undergraduate/).**

Although the Decision Science major doesn't explicitly require students to take a capstone course, students who want to have real-world, professional experience should register for 88-454 Decision Science Capstone (this will count as one of the electives).

At least three of these courses (27 units) must be Department of Social and Decision Sciences courses (88-xxx) from the approved list.

88-150	Managing Decisions	9
88-221	Markets, Democracy, and Public Policy	9
88-230	Human Intelligence and Human Stupidity	9
88-231	Thinking in Person vs. Thinking Online	9
88-234	Negotiation: International Focus	9
88-235	Negotiation: Strategies and Behavioral Insights	9

88-252	Causal Inference: from Data to Decisions *	9
88-261	Health Policy and Decision Making	9
88-262	Medical Decision Making	9
88-275	Bubbles: Data Science for Human Minds	9
88-285	Deconstructing and Dismantling Discrimination	9
88-290	Confessions, Lies, and Gossip	9
88-300	Programming and Data Analysis for Social Scientists	9
88-312	Decision Models and Games	9
88-342	The Neuroscience of Decision Making	9
88-344	Systems Analysis: Environmental Policy	9
88-360	Behavioral Economics	9
88-365	Behavioral Economics and Public Policy	9
88-366	Behavioral Economics of Poverty and Development	9
88-367	Behavioral Economics & Field Experiments in Organizations	9
88-372	Social and Emotional Brain	9
88-379	Data-Driven Decision Analysis	9
88-451	Policy Analysis Senior Project	12
88-452	Policy Analysis Senior Project	12
88-454	Decision Science Capstone	9
70-311	Organizational Behavior	9
70-332	Business, Society and Ethics	9
70-381	Marketing I	9
70-443	Digital Marketing and Social Media Strategy	9
70-460	Mathematical Models for Consulting	9
73-265	Economics and Data Science	9
80-221	Philosophy of Social Science	9
80-324	Philosophy of Economics	9
84-369	Decision Science for International Relations	9
85-375	Crosscultural Psychology	9
85-442	Health Psychology	9

Note: Some courses have additional prerequisites.

* 88-120 should be taken as the first course in the Decision Science sequence. It is intended for students in their first or second year; it is offered in Fall and Spring semesters. It may be taken as late as the junior year.

This is presented as a recommended plan for completing major requirements. The major can be completed in as few as two years (not that it must be), but students may not have time for other opportunities such as additional majors or study abroad. Students may declare their major as early as the third week of the spring semester in the first year. Students who are planning to attend the Washington Semester Program, to study abroad, to apply for the Heinz Accelerated Masters Program, or to pursue an additional major/minor may have a very different curriculum map and should consult early – and often – with the Decision Science Academic Advisor.

Students are encouraged to consider the Washington Semester Program as part of their education. Suitable courses will be considered as fulfilling requirements of electives in the major. Please send the course syllabus, along with a note explaining how the course addresses fundamental aspects of decision science in one of the six elective categories.

Additional Major in Decision Science

Students who elect Decision Science as an additional major must fulfill all of the requirements of the Decision Science major.

Students pursuing Behavioral Economics with an additional major in Decision Science may only count 36-202, 73-102, 88-120, 88-251 and 88-302 toward the completion of both majors.

Students pursuing Policy and Management with an additional major in Decision Science and may only count 36-202, 73-102, 88-223, and 88-251 toward the completion of both majors.

Additional majors cannot count menu electives toward simultaneously fulfilling more than one major or minor. Students who are interested in an additional major in Decision Science should see the Academic Advisor of the Decision Science program.

The Major in Policy and Management

Peter Schwardmann, *Faculty Director*
Location: Porter Hall 319F
schwardmann@cmu.edu (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/departmentofsocialanddecisionsciences/schwardmann@cmu.edu)

Connie Angermeier, *Senior Academic Program Manager and Advisor*
Location: Porter Hall 208H
cla2@andrew.cmu.edu
Schedule an appointment: https://go.oncehub.com/ConnieAngermeier (https://go.oncehub.com/ConnieAngermeier/)

The Policy and Management major prepares students for key decision-making and management roles in government, non-profit organizations, and business. The major emphasizes analytical approaches to decision making, practical management skills, and empirical techniques necessary for graduates to excel in the public and private sectors. The multidisciplinary curriculum merges frontier knowledge on the ideals of decision making, policy, and data analysis, as well as the realities of individual behavior within various institutional settings that must be confronted if high-quality outcomes are to be attained.

The major is comprised of three required core areas taken by all Policy and Management majors, a capstone course, plus one of four concentration areas to be chosen by the student.

The three core areas are as follows:

The *Policy Core* gives students applied economic training and policy analysis experience. Students will gain an analytical understanding of some of the biggest domestic and global economic policy challenges, and gain an appreciation of the economic analysis of complex decisions, as well as the trade-off between economic and political-based decision making.

The *Management Core* focuses on real-world applications of decision making. Students will develop an understanding of effective negotiation strategies and tactics, and identify the barriers and the psychological factors that may prevent decision-makers from reaching wise agreements. The courses provide systematic methods for dealing with the complexities that make decisions difficult, ranging from incorporating issues of risk and uncertainty in decision making to dealing with choices that have mutually conflicting objectives. For example, a business or government agency may need to decide on a policy for mitigating the uncertain impacts of air pollution while simultaneously trying to minimize the costs of such a policy on manufacturing. A firm might want to consider the uncertain reductions in security dangers from alternative policies to protect against terrorism.

The *Empirical Core* focuses on key methods for collecting and analyzing data that are needed to make informed decisions. Students learn to use interviews, surveys, experiments, and econometric methods to enhance their ability to test existing, and design new, policies. Students will create statistical models to address questions asked in conceptual, computational, and data-driven investigations.

The required *Capstone* course gives students hands-on experience in a policy-related area. Students work in teams to apply the research and analytical methods learned in their other courses to a real-world problem.

Finally, the *four concentration areas* consist of four courses chosen by the student, in coordination with the Academic Advisor. The concentrations emphasize different aspects of decision making within the major:
(1) Analytics, (2) Policy, (3) Management, and (4) Law. Each of the concentration areas draws upon the research and teaching strength of the Department of Social and Decision Sciences. Additionally, select courses from other areas in the University have been identified and approved as fulfilling elective requirements within the concentrations. More detail will be found in the concentration areas below.

The Policy and Management major provides an excellent combination of theoretical and practical skills for students who intend to seek managerial positions. Because of its strong analytic orientation, it is also an excellent major for those who intend to go on to professional school programs in law, business, or public policy. It is also an appropriate choice for students pursuing graduate degrees in economics, political science, or decision science. One such graduate option is the accelerated master's program offered by the H. J. Heinz III School of Public Policy and Management, in which a student earns both a B.S. in Policy and Management and a M.S. in Public Policy and Management in five years.

Prerequisites

All Policy and Management majors must complete mathematics and statistics prerequisites (see below), by the end of the sophomore year.

Mathematics Prerequisite		Units
21-111-21-112	Calculus I-II	10-20
or 21-120	Differential and Integral Calculus	

Statistics Prerequisite		Units
36-200	Reasoning with Data	9

Curriculum

Policy Core		Units
73-102	Principles of Microeconomics	9
or 73-104	Principles of Microeconomics Accelerated	
88-221	Markets, Democracy, and Public Policy	9
		18

Management Core		Units
88-150	Managing Decisions	9
or 88-255	Strategic Decision Making	
88-223	Decision Analysis	12
88-235	Negotiation: Strategies and Behavioral Insights	9
or 88-234	Negotiation: International Focus	
		30

Empirical Core		Units
36-202	Methods for Statistics & Data Science	9
88-251	Empirical Research Methods	9
88-252	Causal Inference: from Data to Decisions	9
or 88-275	Bubbles: Data Science for Human Minds	
		27

Capstone		
88-451	Policy Analysis Senior Project	12
or 88-452	Policy Analysis Senior Project	
(88452 is offered in fall, 88451 in spring)		

Concentration 36 units

Complete at least 36 units (a minimum of four courses) from the following concentrations of courses. Students are required to declare a concentration before their graduating semester, but are not required to choose a concentration when they initially declare (typically in the freshman or sophomore year). In fact, students are encouraged to take many of the core classes before making their concentration selection so that they can make a well-informed decision.

1. Analytics Concentration (minimum four total courses)		Units
Programming (one course)		**9**
88-300	Programming and Data Analysis for Social Scientists	9
Analytics/Empirical electives (select any two courses)		**18**
88-252	Causal Inference: from Data to Decisions (if not taken in Empirical Core)	9
88-275	Bubbles: Data Science for Human Minds (if not taken in Empirical Core)	9
88-312	Decision Models and Games	9
88-379	Data-Driven Decision Analysis	9
36-303	Sampling, Survey and Society	9
36-315	Statistical Graphics and Visualization	9
70-257	Optimization for Business	9
70-374	Data Mining & Business Analytics	9
70-455	Data Management Fundamentals	9
70-460	Mathematical Models for Consulting	9
90-834	Health Care Geographical Information Systems *	12
Analytics concentration breadth elective (select one course from any of the other three concentrations; must be 88xxx)		**9**

* other Heinz courses may also be approved. Please talk with the P&M advisor for information about getting approval for Heinz course registration.

2. Policy Concentration (minimum four total courses)		Units
Policy electives (select three courses; at least one of the three must be 88xxx)		**27**
88-230	Human Intelligence and Human Stupidity	9
88-261	Health Policy and Decision Making	9
88-285	Deconstructing and Dismantling Discrimination	9
88-323	Policy in a Global Economy	9
88-344	Systems Analysis: Environmental Policy	9
88-365	Behavioral Economics and Public Policy	9
88-366	Behavioral Economics of Poverty and Development	9
88-367	Behavioral Economics & Field Experiments in Organizations	9
88-411	Rise of the Asian Economies	9
36-303	Sampling, Survey and Society	9
73-328	Health Economics	12
80-244	Environmental Ethics	9
84-362	Diplomacy and Statecraft	9
84-389	Terrorism and Insurgency	9
90-443	Urban and Regional Economic Development *	12
Policy concentration breadth elective (select one course from any of the other three concentrations; must be 88xxx)		**9**

* other Heinz courses may also be approved. Please talk with the P&M advisor for information about getting approval for Heinz course registration.

3. Management Concentration (minimum four total courses)		Units
Management electives (select three courses; at least one of the three must be 88xxx)		**27**
88-231	Thinking in Person vs. Thinking Online	9
88-234	Negotiation: International Focus (if not taken in Management Core)	9
88-235	Negotiation: Strategies and Behavioral Insights (if not taken in Management Core)	9
88-341	Team Dynamics and Leadership	9
88-411	Rise of the Asian Economies	9
70-311	Organizational Behavior	9
70-332	Business, Society and Ethics	9
70-342	Managing Across Cultures	9
70-371	Operations Management	9
70-381	Marketing I	9
70-430	International Management	9
94-408	Management Consulting	12
94-423	Measuring Social *	12
Management concentration breadth elective (select one course from any of the other three concentrations; must be 88xxx)		**9**

* other Heinz courses may also be approved. Please talk with the P&M advisor for information about getting approval for Heinz course registration.

4. Law Concentration (minimum four total courses)		Units
Topics of Law (select one course)		**9**
88-281	Topics in Law: 1st Amendment	9
88-284	Topics of Law: The Bill of Rights	9
Law electives (select any two courses)		**18**
88-281	Topics in Law: 1st Amendment (if not used in required)	9
88-284	Topics of Law: The Bill of Rights (if not used in required)	9
70-364	Business Law	6
70-365	International Trade and International Law	9
73-408	Law and Economics	9
76-219	Law & Blame	9
76-450	Law, Culture, and the Humanities	9
76-475	Law, Performance, and Identity	9
79-360	Crime, Policing, and the Law: Historical and Contemporary Perspectives	9
80-447	Global Justice	9
84-373	Emerging Technologies and International Law	9
Law concentration breadth elective (select one course from any of the other three concentrations; must be 88xxx)		**9**

NOTE: Some courses have additional prerequisites.

This is presented as a recommended plan for completing major requirements. Students may declare their major as early as the third week of the spring semester in the first year. Students who are planning to attend the Washington Semester Program, to study abroad, to apply for the Heinz Accelerated Masters Program, or to pursue an additional major/minor may have a very different curriculum map and should consult early – and often – with the Policy and Management Academic Advisor.

Students are encouraged to consider the Washington Semester Program as part of their education. Suitable courses may be considered as fulfilling requirements of concentration electives in the major. Please discuss course selections with the Academic Advisor during the application phase to the program.

Additional Major

Students who elect Policy and Management as an additional major must fulfill all of the requirements of the Policy and Management major. For additional majors in Policy and Management, courses taken as concentration electives may not count toward the student's primary major or other program.

Students pursuing Behavioral Economics, Policy, and Organizations with an additional major in Policy and Management may only count 36-202 , 73-102, and 88-251 (and 88-252, if taken in Empirical Core) toward the completion of both majors.

Students pursuing Decision Science with an additional major in Policy and Management may only count 36-202 , 73-102, 88-223 , and 88-251 toward the completion of both majors.

Additional majors cannot count menu electives toward simultaneously fulfilling more than one major or minor. Students who are interested in an additional major in Policy and Management should see the Academic Advisor of the Policy and Management program.

The Minor in Behavioral Economics

Peter Schwardmann, *Faculty Director*

Lizzy Stoyle, *Senior Academic Advisor*
Location: 208G
estoyle@andrew.cmu.edu
Schedule an appointment: https://go.oncehub.com/LizzyStoyle (https://go.oncehub.com/LizzyStoyle/)

The minor in Behavioral Economics, provides students with a selective survey of disciplinary perspectives. The field of Behavioral Economics (BE) integrates perspectives from Economics and Psychology to better understand how people make consequential decisions and to leverage this understanding to improve the design of the policies, programs, and institutions that govern such behavior. The core requirements include courses in Economics, Psychology, Behavioral Economics, and quantitative methods- including experimental design and econometrics. Students who elect Behavioral Economics as a minor must complete the six core courses and one elective from the elective set (below).

Students may double-count two courses with another major or minor. 73-102 is excluded from this double count policy. The prerequisite course of 36-200 (or its equivalent) is also excluded.

Curriculum

The core curriculum in Behavioral Economics consists of one quantitative course, two Economic courses, one Psychology course, and two Behavioral Economics courses.

CURRICULUM 63

Core Courses 54

Quantitative Methods Core		Units
36-202	Methods for Statistics & Data Science	9

Economics Core		Units
73-102	Principles of Microeconomics	9

or 73-104	Principles of Microeconomics Accelerated	
Second-Level Economics Course		
88-221	Markets, Democracy, and Public Policy	9
or 73-103	Principles of Macroeconomics	
or 73-155	Models, Math, and Markets	
or 73-230	Intermediate Microeconomics	
or 73-328	Health Economics	
or 73-347	Game Theory Applications for Economics and Business	
or 73-359	Benefit-Cost Analysis	
or 73-408	Law and Economics	
or 73-421	Emerging Markets	
or 73-427	Sustainability, Energy, and Environmental Economics	
		18

Psychology Core		Units
88-120	Reason, Passion and Cognition	9

Behavioral Economics Core		Units
88-360	Behavioral Economics	9
88-367	Behavioral Economics & Field Experiments in Organizations *	9
or 88-365	Behavioral Economics and Public Policy	
		18

* Behavioral Economics core courses CANNOT double count with the elective course.

Connie Angermeier, *Senior Academic Program Manager*
Advises Additional Majors and Minors in Decision Science
Location: Porter Hall 208H
cla2@andrew.cmu.edu
Schedule an appointment: https://go.oncehub.com/ConnieAngermeier (https://go.oncehub.com/ConnieAngermeier/)

The minor in Decision Science provides students with a selective survey of disciplinary perspectives. The courses present descriptive and normative approaches to judgment and decision making, as well as some application of theories and results to real-world problems. Students who elect Decision Science as a minor must complete the four core courses (below) and two electives from the elective set (below).

Students may double-count two courses with another major or minor.

Curriculum 57 units

Core Courses 39 units

73-102	Principles of Microeconomics	9
or 73-104	Principles of Microeconomics Accelerated	
88-120	Reason, Passion and Cognition	9
88-223	Decision Analysis	12
88-302	Behavioral Decision Making	9

Elective Courses 18 units

Complete two courses from the following list. At least one of the courses (9 units) must be a Social and Decision Sciences course (88-xxx) from the approved list. Note that additional courses (most typically 88xxx courses) are occasionally added. For the most up to date list of approved electives (and additional information about the courses), see the SDS website (https://www.cmu.edu/dietrich/sds/undergraduate/).

88-150	Managing Decisions	9
88-221	Markets, Democracy, and Public Policy	9
88-230	Human Intelligence and Human Stupidity	9
88-231	Thinking in Person vs. Thinking Online	9
88-234	Negotiation: International Focus	9
88-235	Negotiation: Strategies and Behavioral Insights	9
88-252	Causal Inference: from Data to Decisions	9
88-255	Strategic Decision Making	9
88-261	Health Policy and Decision Making	9
88-262	Medical Decision Making	9
88-275	Bubbles: Data Science for Human Minds	9
88-285	Deconstructing and Dismantling Discrimination	9
88-290	Confessions, Lies, and Gossip	9
88-300	Programming and Data Analysis for Social Scientists	9
88-312	Decision Models and Games	9
88-342	The Neuroscience of Decision Making	9
88-344	Systems Analysis: Environmental Policy	9
88-360	Behavioral Economics	9
88-365	Behavioral Economics and Public Policy	9
88-366	Behavioral Economics of Poverty and Development	9
88-367	Behavioral Economics & Field Experiments in Organizations	9
88-372	Social and Emotional Brain	9
88-379	Data-Driven Decision Analysis	9
88-451	Policy Analysis Senior Project	12
88-452	Policy Analysis Senior Project	12
88-454	Decision Science Capstone	9
70-311	Organizational Behavior	9
70-332	Business, Society and Ethics	9
70-443	Digital Marketing and Social Media Strategy	9
70-460	Mathematical Models for Consulting	9
73-365	Firms, Market Structures, and Strategy	9
80-221	Philosophy of Social Science	9
80-324	Philosophy of Economics	9
84-369	Decision Science for International Relations	9
85-375	Crosscultural Psychology	9

Note: Some courses have additional prerequisites.

The Minor in Policy and Management

Peter Schwardmann, *Faculty Director*
Location: Porter Hall 319F
schwardmann@cmu.edu (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/departmentofsocialanddecisionsciences/schwardmann@cmu.edu)

Connie Angermeier, *Senior Academic Program Manager and Advisor*
Location: Porter Hall 208A
cla2@andrew.cmu.edu
Schedule an appointment: https://go.oncehub.com/ConnieAngermeier (https://go.oncehub.com/ConnieAngermeier/)

Regardless of major, many Carnegie Mellon graduates will face analytical and managerial challenges and responsibilities in their professional lives. Whether these are in their area of expertise or in more general settings, these roles will to some degree require assumption of the responsibility for directing the work of others. The Policy and Management minor is intended for students who expect to need these management concepts and skills.

Students may double-count one course with another major or minor.

Curriculum 57 units

Required Courses 39 units

73-102	Principles of Microeconomics	9
or 73-104	Principles of Microeconomics Accelerated	
88-150	Managing Decisions	9
or 88-255	Strategic Decision Making	
88-221	Markets, Democracy, and Public Policy	9
88-223	Decision Analysis	12

18 unitsElectives

Complete two courses (at least 18 units) from any of the concentrations (Analytics, Policy, Management, and Law). **Courses do not need to be taken from the same concentration.** The courses are listed by their concentration categories as a way to guide students. At least one of the courses (9 units) must be a Social and Decision Sciences course (88-xxx).

Analytics Concentration		
88-252	Causal Inference: from Data to Decisions	9
88-275	Bubbles: Data Science for Human Minds	9
88-300	Programming and Data Analysis for Social Scientists	9
88-312	Decision Models and Games	9
88-379	Data-Driven Decision Analysis	9
36-303	Sampling, Survey and Society	9
36-315	Statistical Graphics and Visualization	9
70-257	Optimization for Business	9
70-374	Data Mining & Business Analytics	9
70-455	Data Management Fundamentals	9
70-460	Mathematical Models for Consulting	9
90-834	Health Care Geographical Information Systems *	12

* other Heinz courses are also approved. Please talk with the P&M advisor for information about getting approval for Heinz course registration

Policy Concentration		Units
88-230	Human Intelligence and Human Stupidity	9
88-261	Health Policy and Decision Making	9
88-285	Deconstructing and Dismantling Discrimination	9
88-323	Policy in a Global Economy	9
88-344	Systems Analysis: Environmental Policy	9
88-365	Behavioral Economics and Public Policy	9
88-366	Behavioral Economics of Poverty and Development	9
88-367	Behavioral Economics & Field Experiments in Organizations	9
88-411	Rise of the Asian Economies	9
36-303	Sampling, Survey and Society	9
73-328	Health Economics	12
80-244	Environmental Ethics	9
84-362	Diplomacy and Statecraft	9
84-389	Terrorism and Insurgency	9
90-443	Urban and Regional Economic Development	12

* other Heinz courses are also approved. Please talk with the P&M advisor for information about getting approval for Heinz course registration

Management Concentration		Units
88-231	Thinking in Person vs. Thinking Online	9
88-234	Negotiation: International Focus	9
88-235	Negotiation: Strategies and Behavioral Insights	9
88-341	Team Dynamics and Leadership	9
88-411	Rise of the Asian Economies	9
70-311	Organizational Behavior	9
70-332	Business, Society and Ethics	9
70-342	Managing Across Cultures	9
70-371	Operations Management	9
70-381	Marketing I	9
70-430	International Management	9
94-423	Measuring Social	12

Law Concentration		Units
88-281	Topics in Law: 1st Amendment	9
88-284	Topics of Law: The Bill of Rights	9
70-364	Business Law	6
70-365	International Trade and International Law	9
73-408	Law and Economics	9
76-219	Law & Blame	9
76-450	Law, Culture, and the Humanities	9
76-475	Law, Performance, and Identity	9
79-360	Crime, Policing, and the Law: Historical and Contemporary Perspectives	9
80-447	Global Justice	9
84-373	Emerging Technologies and International Law	9

Faculty

GRETCHEN CHAPMAN , Professor of Psychology – Ph.D., University of Pennsylvania ; Carnegie Mellon, 2017–

ERIN CARBONE, Visiting Assistant Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2023–

JOHN CONLON, Assistant Professor – Ph.D., Harvard University; Carnegie Mellon, 2024–

SIMON DEDEO, Associate Professor of Social and Decision Sciences – Ph.D., Princeton University; Carnegie Mellon, 2017–

JULIE DOWNS, Professor of Psychology – Ph.D., Princeton University; Carnegie Mellon, 1995–

CHRISTINA FONG, Senior Research Scientist – Ph.D., University of Massachusetts, Amherst; Carnegie Mellon, 2001–

RUSSELL GOLMAN, Associate Professor of Behavioral Economics and Decision Science – Ph.D., The University of Michigan; Carnegie Mellon, 2010–

CLEOTILDE GONZALEZ, Research Professor of Information and Decision Sciences – Ph.D., Texas Tech University; Carnegie Mellon, 2000–

KEVIN JARBO, Assistant Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2021–

MARK S. KAMLET, University Professor of Economics and Public Policy and Provost Emeritus – Ph.D., University of California, Berkeley; Carnegie Mellon, 1978–

GEORGE F. LOEWENSTEIN, Herbert A. Simon University Professor of Economics and Psychology – Ph.D., Yale University; Carnegie Mellon, 1990–

JOHN H. MILLER, Professor of Economics and Social Science – Ph.D., The University of Michigan; Carnegie Mellon, 1989–

LINDA MOYA, Distinguished Service Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2016–

DANEIL OPPENHEIMER, Professor of Psychology – Ph.D., Stanford University; Carnegie Mellon, 2017–

MARK PATTERSON, Assistant Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2019–

SILVIA SACCARDO, Associate Professor of Economics – Ph.D., University of California, San Diego; Carnegie Mellon, 2016–

PETER SCHWARDMANN, Associate Professor of Economics – Ph.D., Toulouse School of Economics; Carnegie Mellon, 2021–

MANASVINI SINGH, Assistant Professor – Ph.D., Emory University; Carnegie Mellon, 2023–

Emeriti Faculty

LINDA BABCOCK, James Mellon Walton Professor of Economics – Ph.D., University of Wisconsin-Madison; Carnegie Mellon, 1988–

PAUL S. FISCHBECK, Professor of Social and Decision Sciences and Engineering and Public Policy – Ph.D., Stanford University; Carnegie Mellon, 1990–

DAVID A. HOUNSHELL, David M. Roderick Professor of Technology and Social Change – Ph.D., University of Delaware; Carnegie Mellon, 1991–

Adjunct Faculty

MATTHEW MEHALIK, Adjunct Instructor – Ph.D., University of Virginia; Carnegie Mellon, 2008–

MARY JO MILLER – J.D., Duquesne University; Carnegie Mellon, 1999–

DAVID RODE, Adjunct Instructor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2022–

Department of Social and Decision Sciences Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes *(*https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/*) each semester for course offerings and for any necessary pre-requisites or co-requisites.*

88-120 Reason, Passion and Cognition

Fall: 9 units
How do we make decisions? Reason, Passion, and Cognition will be an introduction to the psychology of preference, judgment, and choice. Why do people behave in ways that cannot be defended as "rational" - and how do these deviations inform us about the processes that the mind uses to make fast-and-frugal decisions? The course will focus on the ways that cognitive and emotional processes relate to decisions made in the laboratory and in everyday decision making and will be based on rigorous experimental research.

88-130 Behavioral Economics for Life

Fall: 9 units
Are we humans or econs? Econs are analytical, make rational judgments and decisions, are deliberate and patient, and are able to perfectly implement their plans. Humans, however, are influenced by emotions, have systematic biases in their judgment and decision-making, can be impulsive and lack self-control, and often struggle implementing their plans. College students (and professors) are humans and as such we sometimes procrastinate, eat poorly, don't get enough sleep, skip out on going to the gym, make money mistakes, feel lonely, misjudge others, inadvertently discriminate against others, engage in unnecessary conflict, and don't live up to our own ethical standards. This course teaches you the science of behavioral economics-how it developed and is evolving as a field and how it can help you to improve your life now during college and later in your professional life. You will learn about evidence-based behavioral strategies and how they can help you to be happier, healthier and wealthier. You will also have the opportunity to try some of these strategies yourself and reflect on whether to incorporate them into your daily routines.

88-140 Introduction to Sociology

Spring: 9 units
tba

88-150 Managing Decisions

Fall: 9 units
We make decisions constantly, but making good decisions is hard. Future employers will pay handsomely for decisions that are well thought out, defendable, and understandable. How do we decide how to decide? What is a "good" decision? This course will introduce normative decision-making concepts, including how to formulate decision problems and techniques that account for uncertainty and time preference. Students will learn how to place a quantitative value on information. The course will introduce key decision-making concepts using applications from fields such as decision sciences, business and economics, and public policy. Although prior knowledge of Microsoft Excel spreadsheets is not required, prior familiarity with Excel and a general level of numeracy will be useful.

88-198 Research Training: Social and Decision Sciences

Fall and Spring
This course is part of a set of 100-level courses offered by Dietrich departments as independent studies for second-semester freshmen, and first- or second-semester sophomores, in the College. In general, these courses are designed to give students some real research experience through work on a faculty project or lab in ways that might stimulate and nurture subsequent interest in research participation. Faculty and students devise a regular meeting and task schedule. Each Research Training course is worth 9 units, which generally means a minimum of about 9 work-hours per week. These courses are offered only as electives; i.e., they cannot be applied toward a college or major requirement, although the units do count toward graduation as elective units. Additional details (including a roster and descriptions of Research Training Courses available in any given semester) are available in the Dietrich Academic Advisory Center.

88-200 SDS Colloquium

Spring: 3 units
The SDS Colloquium is an opportunity for students to gather and discuss topics related to the various opportunities available both during the undergraduate career and after graduation. Students will explore areas such as academic planning, personal and professional values, and professional communication/communication skills. Co-curricular experiences such as: study abroad, research, internship/career planning and goal setting, and graduate school are among the topics to be presented. Students will have the opportunity to talk with SDS advisors, faculty, and alumni as well as with other professionals from around the University. Sophomore or junior standing is required.

88-221 Markets, Democracy, and Public Policy

Spring: 9 units
In this course, you will learn a powerful set of concepts for analyzing: (i) What markets are and the positive and negative effects they may have on individuals and society (ii) What democracy is, how markets and democracy may interact, and some ways in which democracy is vulnerable (iii) How public policy might soften some of the negative effects of markets and support democracy. You will learn theory via application to historical and current real-world examples. You will appreciate how theory illuminates the real-world examples.
Prerequisite: 73-102

88-223 Decision Analysis

Spring: 12 units
This course offers practical guidance about how to make better decisions and teaches students how to use modeling to do decision analysis. We analyze decisions involving uncertainty, risk, and time delay. In addition to methods of decision analysis, the course will also emphasize sensitivity analysis and communication of recommendations.
Prerequisites: 36-201 or 36-247 or 36-211 or 36-207 or 36-200 or 70-207 or 36-200 or 36-225 or 36-217

88-230 Human Intelligence and Human Stupidity

Fall: 9 units
By some standards, humans are an incredibly intelligent species. We have set foot on the moon, split the atom, and produced extraordinary works of art and literature (including the complete works of Shakespeare, which, despite theoretical accounts to the contrary, no amount of monkeys on typewriters has ever been able to duplicate). And yet. we are also the species that has brought about the Darwin Awards, spent $125 million sending a probe to Mars which was unable to function because engineers failed to convert inches to centimeters, and produced cringe-worthy works of art and literature (including the 1964 movie "Santa Claus Conquers the Martians" which no amount of monkeys on typewriters would ever want to duplicate.). What is intelligence and how does it vary across individuals and over our lifespans? What are we good at, and what are we bad at, and why? Are there things that that make us dumber? Are there things we can do to make ourselves smarter? How should what we know about the range of human intellectual abilities guide policy, education, law, medicine, and business; what implications does this have regarding the tasks/jobs that humans should be doing and the tasks/jobs that machines ought to do? Using cutting edge research from psychology and decision science, this course will explore the strange contradiction that defines the human experience: How are we simultaneously so smart and so dumb?

88-231 Thinking in Person vs. Thinking Online

Intermittent: 9 units
Being online changes how we think. Different media lead us to ask different questions, remember (or forget) different information, attend to different details, and interact with other people in different ways. These types of thinking aren't inherently better or worse, but they may be better or worse for facilitating specific goals. Too often, we use a particular medium/technology without considering how it will influence our thinking. This can lead us to be less efficient or less effective at a task than we otherwise might be, or can qualitatively change the nature of our outcomes. In this class, we will explore how the media we use affects the character of our thinking, so as to enable students to make mindful and deliberate choices about how to interact with media in ways that support the type of thinking desired and appropriate for their goals. Moreover, we will examine how to optimize media for specific goals in important applied domains, such as education, medicine, policy, child-rearing, and dating.

88-234 Negotiation: International Focus

Spring: 9 units
Most people think negotiation is all about strategies and tactics, that is what you do and say during a negotiation. However, negotiation is best understood by analyzing the contextual environment in which the negotiation takes place. This class focuses on negotiations that take place across international borders and examining how the features of the negotiation environment drive the negotiation process and ultimately the results. We will show how features such as the historical relationships between the parties, the constituents and political environment, the cultural norms, alternatives to a negotiated agreement, linkages to future negotiations with other countries, whether the negotiation takes place openly or behind closed doors, and the psychological process will influence the negotiating agents, process, and outcomes. Note that this framework can be applied to any negotiation situation to shed light on what transpired during a negotiation and how an agreement ultimately was or was not reached.

88-235 Negotiation: Strategies and Behavioral Insights

Fall: 9 units
Negotiation is a critical skill that is essential for success in today's world. Decision-makers use negotiation to reach agreements with co-workers, bosses, clients, service providers, subordinates, firms, family, roommates, and friends. Regardless of one's career path, learning how to negotiate effectively is important. This course provides a systematic and insightful approach to negotiation - the art and science of securing agreements between interdependent parties. Through experiential exercises, students will learn to analyze the features of the negotiation environment, develop an understanding of effective negotiation strategies and tactics, and identify the behavioral barriers and psychological factors that may prevent decision-makers from reaching wise agreements. The exercises, which feature negotiations in a variety of contexts including business negotiations, salary negotiations, interpersonal negotiations, and team negotiations, are designed to provide students with an opportunity to practice new strategies in a low-risk environment, receive feedback, and apply new knowledge to subsequent exercises. In-class discussions and lectures will complement the exercises, allowing students to explore and apply theoretical concepts to practical scenarios. This course is appropriate for students of any major who are interested in refining their negotiation skills.

88-251 Empirical Research Methods

Fall: 9 units
This course teaches students how to evaluate and conduct original research regarding human behavior, whether it be in economic, social, or political settings. The course gives students practical experience in many of the most commonly used research techniques, including surveys, experiments, and quasi-experimental analysis. Although the course focuses primarily on the relationship between formulating research questions and implementing the appropriate methods to answer them, students can expect regularly to apply the statistical techniques learned in the course prerequisites, including regression.
Prerequisites: 36-201 or 36-200 or 36-207 or 36-247

88-252 Causal Inference: from Data to Decisions

Spring: 9 units
Causal questions are pervasive in the social and behavioral sciences, and empirical researchers often use regression analysis as a tool for tackling such questions. This course focuses on the scientific problem of analyzing causal hypotheses in real-world settings, not on the mathematical details of regression. After clearly distinguishing prediction from causation, we discuss how to represent causal hypotheses and how to use regressions to analyze both predictive and causal hypotheses. Using in-class data exercises throughout, we will examine how to move from an interesting but somewhat vague question about the world (e.g., do police discriminate based on race and gender, do NFL athletes choke under high pressure, does parenthood improve happiness) to a clear statistical model that, when estimated, meaningfully addresses the question asked. The course emphasizes causal analysis as the main research goal and multivariate linear regression as the main statistical tool. After mastering basic techniques, we will introduce students to more advanced econometric approaches such as panel regressions and instrumental variables to deal with trickier settings in which causal inference is more challenging (e.g., do more guns lead to more violence?). In keeping with the hands-on philosophy of the course, a central focus of the semester will be a group research paper/presentation where students will have the opportunity to formulate and empirically test a research question of their choosing. Students will learn how to find, clean, and analyze a new dataset, and then concisely communicate their findings in the form of a scientific paper (and accompanying presentation). The research project makes this course excellent preparation for any student who hopes to ultimately write an undergraduate thesis.
Prerequisites: 85-309 or 70-208 or 36-309 or 36-202

88-255 Strategic Decision Making

Fall: 9 units
How do people navigate social interactions when their goals are in conflict? When should a person cooperate and when should a person pursue self-interest in an ongoing social interaction? How can a business establish strategic partnerships that create value and at the same time battle with competitors to take advantage of the value they create? Strategic decision making requires a framework to think through the implications of cooperation and of competition. This course gives you a systematic approach to understanding how people, firms, or countries interact with one another to achieve their own goals. We focus on the practical application of theory-based strategic principles and on their behavioral validity (whereas traditional game theory courses usually focus on formal modeling techniques). Readings will focus on real-life stories accompanied by a full analysis of the principles involved. The class will be organized as a seminar, centered around discussion, not lecture. Students will also be placed in the role of strategist in occasional simulations in class.

88-261 Health Policy and Decision Making

Fall: 9 units
Why does picking the right healthcare plan feel like a gamble-and how do you win? Why are two identical pills priced worlds apart? What guides a doctor's recommendation and #8212; science, or the invisible forces of economics and psychology? Why can't a tech-rich health system guarantee good health for all? Can a policy change really nudge a nation towards better health, or is that a fantasy? Join this course to tackle these puzzles, cutting through the complex maze of health decisions, cost disparities, and policy impacts (with a focus on the US). Debate, challenge, and uncover the forces molding healthcare. Ready for a deep dive into the mechanics of healthcare? This is your starting line.

88-262 Medical Decision Making

Spring: 9 units
tba

88-275 Bubbles: Data Science for Human Minds

Fall: 9 units
No one is an island: from the casual interactions of day-to-day life to the global markets that supply us with the fruits of our technologies, the fabric of experience is woven out of interaction with other people. This course will introduce you to basic ideas in psychology, economics, and the social sciences that help us understand how this happens. We'll learn about both the mysterious inner world of human experience, and the equally strange and striking social phenomena that they lead to. We'll experiment on ourselves in class to discover unexpected aspects of our own unconscious, and how irrational even the best groups can be. Most importantly, we'll send you out into the world - the physical worlds of CMU and Pittsburgh, and the virtual ones onlineto conduct your own investigations. We know extraordinarily little about the "human animal", and the best way to learn is to go look for ourselves.
Prerequisites: 70-207 or 36-200

88-281 Topics in Law: 1st Amendment

Fall: 9 units
In their firm desire to perfect the new Constitution, which defined and limited the powers and roles of their new government, the founding fathers insisted on explicit statements that would protect the rights of the new nation's citizens. Indeed, the protection of these essential rights in many ways drove and defined their successful rebellion from Britain. This impulse resulted in ten amendments to the Constitution, which we have come to know as the Bill of Rights. The very first (and arguably considered at the time as the most essential) of these was the First Amendment, which we sometimes call the "free speech" amendment to the Constitution. This amendment guarantees every U.S. citizen five freedoms: freedom of religion, speech, press, peaceable assembly, and the freedom to petition the government for redress of grievances. This course examines the historical and philosophical roots of this key constitutional amendment, how it has been fleshed out and defined over time through case law, and the bases of some more recent critics of this amendments and current interpretations.

88-284 Topics of Law: The Bill of Rights

Spring: 9 units
This course examines the history and place of the Bill of Rights in our nation's constitutional framework. It focuses on the historical origins of the U.S. Constitution, of each of the first ten amendments to the Constitution (that we refer to as the "Bill of Rights"), how the meanings and interpretations of these have evolved over time, and what they mean to us today. Each article of the Bill of Rights will be examined in terms of its original intentions, and then through cases that have challenged and been interpreted through the Bill's articles.

88-285 Deconstructing and Dismantling Discrimination

Fall: 9 units
Prejudice and discrimination produce and perpetuate inequitable social outcomes for individuals and groups. However, shifting attitudes does not always change behavior, nor do behavioral shifts always lead to broader social and policy change to bring about societal equity. So, how should we engage in the action needed to address systemic inequality? In this course, students will learn key theories from social psychology, behavioral economics and decision-making, and review research from those disciplines on prejudice and discrimination, including racism, sexism, and classism. With that foundation, students will critically assess policy effectiveness in domains where social inequality persists, including environmental and criminal justice, education, healthcare, housing, and wealth and income. Policies will be examined through readings, podcasts, discussions, and writing activities. In a peer-evaluated final group project, students will propose a policy solution to a specific issue, analyze its efficacy, and present a plan to gain public support for the policy.
Prerequisites: (85-241 or 85-102 or 88-120) and (76-102 or 76-108 or 76-101 or 76-107)

88-290 Confessions, Lies, and Gossip

Intermittent: 9 units
Human beings are social creatures, and sharing thoughts, feelings, and information with others is fundamental to the human experience. We engage in this type of disclosure frequently, often without conscious thought or deliberation. Yet the act of disclosing information is fraught with risk, particularly in the digital age where what we share can be widely accessed and permanently stored. This course aims to cast this ubiquitous act in a new light, investigating many of the behaviors we take for granted, and explaining common counter-normative and suboptimal phenomena, through different theoretical lenses. Why do people share information that they know might prove to be materially damaging or harmful to their reputation? Can gossiping be understood as a prosocial act, benefitting a common good? What types of information are most likely to "go viral"? This course attempts to answer these and many other questions, and to provide students with the perspective and tools necessary to improve their own disclosure decision making.
Prerequisites: 85-102 or 88-120

88-300 Programming and Data Analysis for Social Scientists

Spring: 9 units
This course presents an introduction to computational thinking through practice with data analysis. Students will develop extensive expertise using the statistical programming language R. Designed primarily with social science majors in mind, students will use a variety of data structures to represent information and solve problems. The course is conducted in a "flipped classroom" style, and places a heavy emphasis on hands-on programming and #8212; in every class, students will practice writing computer programs to conduct analysis and explore social science phenomena. Students will develop skills in all facets of the data analysis pipeline, from installing and loading packages to reading-in files to data cleaning, munging, visualization and modeling. The course is primarily intended for students who have limited familiarity with coding, and assumes no previous exposure to R.
Prerequisites: 36-201 or 36-200

88-302 Behavioral Decision Making

Fall and Spring: 9 units
Behavioral decision making is the study of how people make decisions, in terms that can eventually help them to make better decisions. It draws together research from psychology, economics, political science, and management, among other fields. It has applications that range from managing potentially hazardous technologies, to involving patients more fully in the choice of medical procedures, to the design of computer-interactive systems. The course covers behavioral theories of probabilistic inference, intuitive prediction, preference, and decision making. Topics include heuristics and biases in inference and prediction, risk perceptions and attitudes, strategies for combining information from different sources and dealing with conflicting objectives, and the roles of group and emotional processes in decision making. The course emphasizes the mutually reinforcing relationship between theory and application.
Prerequisites: (36-220 or 36-225 or 36-247 or 36-217 or 36-200 or 36-201 or 36-207 or 36-211 or 70-207) and 88-120

88-312 Decision Models and Games

Spring: 9 units
Humans often make decisions in changing and uncertain situations. A car driver entering a new city must adjust decisions rapidly while moving along heavy traffic; firefighter crews entering a burning building must maintain awareness of the development of fire; citizens in a country must change their activities based on the evolution of a pandemic and the restrictions imposed. While challenging, humans are an adaptable species. We plan and re-adjust our plans to changing conditions; we keep aware of potentially new courses of action; and we manage our limited time, information, and attention to changing environments. How do humans make decisions in dynamic situations? This course will explore human decision making as a dynamic process resulting from human interactions with the environment. The course uses decision games to illustrate how humans learn and adapt to changing conditions of choice, and computational models to simulate decision processes and environmental dynamics. Decision Models and Games will provide: (1) foundational perspectives for using models to represent the dynamics of environments and human decision processes; (2) tools to build computational models of human decision making and of dynamic environments; and (3) practical illustrations of how models and games can be used to understand and generate solutions to a wide range of decision problems, from simple choices to large scale consequential decisions.
Prerequisites: 36-201 or 70-207 or 36-200

88-323 Policy in a Global Economy

Fall: 9 units
From the dawn of the New Deal through the presidency of Barack Obama, the U.S. led the development of an open, global system of relatively free trade and global capital flows. In the current political environment, leaders on both the American political left (like Senator Bernie Sanders) and the political right (like Donald Trump), have called into question this bipartisan consensus in favor of freer trade and investment. That turn away from globalization has been accelerated by the COVID-19 pandemic. Was the earlier pro-globalization consensus wrong? Is globalization good or bad for the U.S. economy? What are the impacts of globalization on the rest of the world? How has economic globalization impacted the environment and income inequality in the U.S. and around the world? How should the Biden Administration seek to manage international economic policy? This course provides future policy makers and managers with the knowledge and analytical tools necessary to understand economic globalization and its effects. These issues will be studied using the analytical tools and concepts of international economics. Guest lectures and case studies will provide a range of perspectives on current policy debates. The course will also examine science-based policies that could maximize the benefits and minimize the disruption generated by globalization. The fall 2021 version of the course will examine the global macroeconomic impact of the COVID-19 pandemic and the ways in which international policy coordination and #8212; or lack thereof and #8212; worsened that impact.
Prerequisite: 73-102

Course Website: https://api.heinz.cmu.edu/courses_api/course_detail/90-860/

88-341 Team Dynamics and Leadership

Fall: 9 units
Much of the work in groups and organizations consists of communication. You communicate to get information that will be the basis of decisions, to provide a vision for the people who work for and with you, to coordinate activity, and to sell yourself and your work. The goal of this course is to identify sources of communication problems within an organization and ways to overcome them. To do this requires that we know how communication normally works, what parts are difficult, and how to fix it when it goes wrong. The focus of this course is on providing you with a broad understanding of the way communication operates within dyads, work groups, and organizations. This course is not a practicum in public speaking or writing, although you will get some experience writing, speaking and managing impressions. Rather the intent is to give you theoretical and empirical underpinnings for the communication you will undoubtedly do when you return to work. Readings come from both the research and the managerial literatures. Among the topics considered are managerial communication, persuasion and conformity, self presentation and person perception, social networks. Cases and group projects give you an opportunity to apply what you've learned.
Prerequisites: 36-247 or 36-220 or 36-225 or 70-207 or 36-217 or 36-207 or 36-200 or 36-201

88-342 The Neuroscience of Decision Making

Intermittent: 9 units
Because we are human, feelings provide the basis for reason and rational decision-making. Consider for example, that brain-damaged patients left devoid of emotion struggle to make the most elementary decisions: while they are able layout the pros and cons of a decision, but they are unable to make the final choice. This course will discuss seminal discoveries in affective neuroscience underlying decision-making.
Prerequisites: 85-211 or 88-120

88-344 Systems Analysis: Environmental Policy

Intermittent: 9 units
Systems Analysis: Environmental Policy provides an introduction to how environmental policies have been and can be designed/created, implemented, and evaluated amidst complex information-based, social, political, and cultural processes. The course emphasizes a systems-based methodological approach for addressing the complexities involved in framing, analyzing, and designing an implementation plan for policy construction. The course also explores through landmark and contemporary case studies several dimensions of environmental policy-making: - Contextual, historical, and structural aspects of environmental policy-making at the local, state, federal, and international levels - Use of quantitative and qualitative analytical tools (from core program + new tools) - The process of how policies derive their meanings.

88-360 Behavioral Economics

Fall: 9 units
This course introduces students to behavioral economics, an emerging subfield of economics that incorporates insights from psychology and other social sciences into economics. We will examine evidence on how human behavior systematically departs from the standard assumptions of economics, and then investigate attempts by behavioral economists to improve economic analyses.
Prerequisites: (21-120 or 21-112) and (73-102 or 73-100 or 88-220)

88-365 Behavioral Economics and Public Policy

Fall: 9 units
Economics has up to now been the social science that has been most broadly and deeply involved in public policy. With its rational choice perspective, the economic perspective has tended to favor certain types of policies namely those that enhance the efficiency of market mechanisms and lower the cost of information. In this course we will spend the first several classes reviewing the assumptions, implications for public policy and limitations of the rational choice perspective. The remainder of the course will then be devoted to examining different public policy issues, including saving, health care, crime and drug abuse, through the competing lenses of traditional and behavioral economics.
Prerequisites: 88-220 or 73-100 or 73-102

88-366 Behavioral Economics of Poverty and Development

Intermittent: 9 units
This course will introduce students to the study of economic development and poverty alleviation, with a special focus on recent insights from the intersection of psychology and economics. We will primarily focus on the health, microfinance, agriculture, and education sectors in developing countries. The course will have a methodological component largely centered on using experiments to evaluate interventions and policies that apply to households, small firms, and farms. While we will cover standard economic approaches, we will give extra attention to how a behavioral lens can help in both understanding development issues (e.g. barriers to household risk management) and in designing effective interventions (e.g. the timing of fertilizer sales).
Prerequisites: (73-100 or 73-102 or 88-220) and 36-202

88-367 Behavioral Economics & Field Experiments in Organizations

Spring: 9 units
Behavioral Economics is a sub-field of economics that, relying on insights from psychology and decision-making, aspires to describe actual behavior with greater empirical accuracy and psychological realism than that implied by the standard neoclassical model. In this course, we will investigate the success of this approach in explaining ostensible anomalies in the "wild" such as under-savings for retirement, over-consumption of unhealthy food, extreme aversion to losses among investors, workers, and home-owners, the over-confidence of corporate CEOs and NFL general managers, and the influence of emotions on domestic violence, stock market activity, and risk-taking. We will first document and review the underlying theory for three conceptual departures from the standard model -non-standard preferences (e.g., present-bias, reference dependence), non-standard beliefs (e.g., overconfidence, gambler''s fallacy), and non-standard decision-making (e.g., heuristics, emotions, framing effects)-and then quickly move to assess the evidence for these claims in field settings. We will additionally explore how markets respond to behavioral biases, and discuss recent research in behavioral policy with an emphasis on policies aimed at increasing savings, improving food choice, and heightening program take-up and compliance. The course will be paper-centric and we will review a variety of popular empirical methods from field experiments to quasi-experimental approaches (e.g., estimation through regression-based panel analyses, difference-in-differences, and instrumental variables). Student evaluation will be based on a mix of exams, problem sets, written assignments, and class participation.
Prerequisites: 73-102 and 36-202

88-372 Social and Emotional Brain

Intermittent: 9 units
This course provides an introductory survey of the methods and findings in social and affective neuroscience. Half the course is lecture style and covers the basics of neuroanatomy, neurochemistry, and neuroendocrine systems, as well as a survey of relevant neuroscience methods (neuroimaging, neuropsychological, psychophysiological, transcranial magnetic stimulation, etc.). The other half of the course is more like a seminar, where each week we will discuss a couple seminal empirical papers from the scientific literature. Topics include interpersonal relationships, prosocial behavior, aggression, prejudice, emotion regulation, stress, etc.
Prerequisite: 85-102

88-379 Data-Driven Decision Analysis

Intermittent: 9 units
Business managers and public policymakers who make good decisions are in high demand and are richly rewarded. Increasingly, those decisions must be made in dynamic, data-rich environments. In those environments, having an extensive analytical toolkit and being able to build and use decision models are essential for success. Building on the foundations laid by prior coursework, we will cover advanced analytical topics from the decision sciences with an emphasis on model building. Topics may include utility function elicitation, optimal decision making under uncertainty and imperfect information, valuing flexibility with real options, portfolio theory, artificial intelligence (AI) and evolutionary computation methods, robust decision making, and Monte Carlo simulation and variance reduction methods. The focus of this course is normative, rather than descriptive decision making. The course will make extensive use of Microsoft Excel and students are expected to possess a high level of numeracy upon enrollment. Although we will touch on the theoretical foundations of the material, our primary focus will be on getting our hands dirty by using the techniques covered to build models. The material covered in this class will be taught using real-world problems and place a high value on using messy, often-incomplete real-world data where the strengths and weaknesses of various tools can be evaluated.
Prerequisites: (36-225 or 70-207 or 36-200 or 36-207) and (19-351 or 19-301 or 70-257 or 88-223)

88-397 SDS Undergraduate Research - mini

All Semesters
Students conduct research under the supervision of a Social and amp; Decision Sciences faculty member. Students who wish to engage in research should seek out a faculty member whose interests are appropriate to the research. Prerequisite: Students must also complete an "Independent Study/Research for Credit" form, available from the SDS advisor in Porter 208A. Permission of a faculty sponsor.

88-398 Independent Study

Fall and Spring
Students conduct independent academic study under the supervision of a Social and amp; Decision Sciences faculty member. Students who wish to engage in an independent study should seek out a faculty member whose interests are appropriate to the topic. Students must also complete an "Independent Study/Research for Credit" form, available from the SDS Advisors in Porter 208A and 208G.

88-399 Undergraduate Research

Fall and Spring
Students conduct research under the supervision of a Social and amp; Decision Sciences faculty member. Students who wish to engage in research should seek out a faculty member whose interests are appropriate to the research. Students must also complete an "Independent Study/Research for Credit" form, available from the SDS Advisors in Porter 208A and 208G.

88-411 Rise of the Asian Economies

Intermittent: 9 units
For most of the past quarter century, no region of the world has been more economically dynamic than Asia. This course is designed to provide students with the essential knowledge necessary to evaluate opportunities and risks in Asia. The course will use analytical tools drawn from economics and finance, business cases, and guest lectures to focus on the key strengths that sustained economic growth in East Asia for decades, the weaknesses that undermined that growth in the late 1990s, and what lies ahead. The course will also examine Indian economic growth since the early 1980s, and compare India's experience with that of the East Asian economies. A special focus will be placed on recent developments in India and China and the prospects for continued growth in those countries over the next decade.
Prerequisites: 84-110 or 73-102 or 73-150 or 88-220 or 73-100

88-451 Policy Analysis Senior Project

Spring: 12 units
Students in this course apply the research and analytical methods learned in their other courses to a real-world problem. Students decide how to structure the problem, divide into teams responsible for its different parts, identify and analyze relevant literature, collect data, synthesize their results, and present their conclusions in oral and written form to a review panel of individuals concerned with the problem. Faculty members help them along the way. Performance is based on students' contribution to the process and substance of the class, as observed by the faculty and by their fellow students. One or two such projects is offered every term. A complete list of previous topics is available from the department. Course is open only to seniors in SDS.

88-452 Policy Analysis Senior Project

Fall: 12 units
Students in this course apply the research and analytical methods learned in their other courses to a real-world problem. Students decide how to structure the problem, divide into teams responsible for its different parts, identify and analyze relevant literature, collect data, synthesize their results, and present their conclusions in oral and written form to a review panel of individuals concerned with the problem. Faculty members help them along the way. Performance is based on students' contribution to the process and substance of the class, as observed by the faculty and by their fellow students. One or two such projects is offered every term. A complete list of previous topics is available from the department. Course is open only to seniors in SDS.

88-453 Behavioral Economics Capstone

Spring: 9 units
The Capstone in Behavioral Economics, Policy, and Organizations will work to apply the theories, concepts, and statistical techniques mastered in prior courses to an applied project. Students will work closely both in teams and individually with the instructor on a project that will address a problem posed by an organization or government that behavioral economics can help to solve. Students will work to structure the problem, design an intervention or study, collect and analyze the data, and make recommendations for implementation. Students will manage the project and drive interactions with the client organization.

88-454 Decision Science Capstone

Fall and Spring: 9 units
The Capstone in Decision Science is a seminar that applies the theories, concepts, and statistical techniques mastered in prior courses to an applied project. Students will work closely both in teams and individually with the instructor on a project that will address an applied problem that decision science can help to solve. Students will work to structure the problem, define a focused research question, design a study that addresses the question, collect and analyze the data, and make policy or practice recommendations based on the findings. Students will manage the project, drive the scientific question and approach, and make a formal presentation to a panel of experts.
Prerequisite: 88-302

88-499 Advanced Undergraduate Research

Fall and Spring
Students conduct research at an advanced level under the supervision of a Social and amp; Decision Sciences faculty member. Students who wish to engage in advanced research should seek out a faculty member whose interests are appropriate to the research. Students must also complete an "Independent Study/Research for Credit" form, available from the SDS Advisors in Porter 208A and 208G.

88-505 Undergraduate Internship

All Semesters
An internship is an approved and monitored work experience than can be related to an academic field of study through active reflection and specific learning goals. Students must work at least 10 hours per week for the semester at the internship. Additionally, students will also keep in regular contact with a faculty member in Social and Decision Sciences, who will assign and evaluate academic work. Internships are available for 1-9 units, depending on the type and amount of academic work produced. Students are responsible for finding their own internships and faculty sponsors, although assistance is available in the department. Students must also complete an "Internship Learning Agreement" form, available from the SDS Advisors in Porter 208H and 208G.

88-631 Thinking in Person vs. Thinking Online

Intermittent: 9 units
Being online changes how we think. Different media lead us to ask different questions, remember (or forget) different information, attend to different details, and interact with other people in different ways. These types of thinking aren't inherently better or worse, but they may be better or worse for facilitating specific goals. Too often, we use a particular medium/technology without considering how it will influence our thinking. This can lead us to be less efficient or less effective at a task than we otherwise might be, or can qualitatively change the nature of our outcomes. In this class, we will explore how the media we use affects the character of our thinking, so as to enable students to make mindful and deliberate choices about how to interact with media in ways that support the type of thinking desired and appropriate for their goals. Moreover, we will examine how to optimize media for specific goals in important applied domains, such as education, medicine, policy, child-rearing, and dating.

Department of Statistics and Data Science

Rebecca Nugent, Department Head

Peter Freeman, Director of Undergraduate Studies

Samantha Nielsen, Associate Director of Academic Programs

Amanda Mitchell, Lead Senior Academic Advisor

Glenn Clune, Academic Program Manager

Sylvie Aubin, Academic Program Manager

Peter Long, Academic Advisor

Email: statadvising@andrew.cmu.edu
Location: Baker Hall 129
www.stat.cmu.edu/ (http://www.stat.cmu.edu/)

Overview

Uncertainty is inescapable: randomness, measurement error, deception, and incomplete or missing information all complicate our lives. Statistics is the science and art of making predictions and decisions in the face of uncertainty. Statistical issues are central to big questions in public policy, law, medicine, industry, computing, technology, finance, and science. Indeed, the tools of statistics apply to problems in almost every area of human activity where data are collected.

Statisticians have diverse skills in computing, mathematics, decision making, designing experiments, forecasting, and interpreting and communicating analysis results. Moreover, effective statisticians actively collaborate with people in other fields and, in the process, learn about other fields. Statistics & Data Science students who master core concepts and collaboration are highly sought after in the marketplace.

Recent statistics majors at Carnegie Mellon have taken jobs at leading companies in many fields, including the National Economic Research Association, Boeing, Morgan Stanley, Deloitte, Rosetta Marketing Group, Nielsen, Proctor & Gamble, Accenture, and Goldman Sachs. Others have taken research positions at the National Security Agency, the U.S. Census Bureau, and the Science and Technology Policy Institute, or worked for Teach for America. Many of our students also go on to graduate study at some of the top programs in the country including Carnegie Mellon, Harvard, MIT, Yale, NYU, Penn, Johns Hopkins, Duke, Michigan, Chicago, Northwestern, Washington, Stanford, and California.

The Department and Faculty

The Department of Statistics & Data Science at Carnegie Mellon University is world-renowned for its contributions to statistical theory and practice. Research in the department spans the gamut from pure mathematics to the hottest frontiers of science. Current research projects are helping make fundamental advances in neuroscience, cosmology, public policy, finance, and genetics.

The faculty members are recognized around the world for their expertise and have garnered many prestigious awards and honors. (For example, three members of the faculty have been awarded the COPSS medal, the highest honor given by professional statistical societies.) At the same time, the faculty is firmly dedicated to undergraduate education. The entire faculty, junior and senior, teach courses at all levels. The faculty are accessible and are committed to involving undergraduates in research.

The Department augments all these strengths with a friendly, energetic working environment and exceptional computing resources. Talented graduate students join the department from around the world, and add a unique dimension to the department's intellectual life. Faculty, graduate students, and undergraduates interact regularly.

How to Take Part

There are many ways to get involved in statistics at Carnegie Mellon:

- The Bachelor of Science in Statistics in the Dietrich College of Humanities and Social Sciences (DC) is a broad-based, flexible program that helps you master both the theory and practice of statistics. The program can be tailored to prepare you for later graduate study in statistics or to complement your interests in almost any field, including psychology, physics, biology, history, business, information systems, and computer science.
- The Minor (or Additional Major) in Statistics is a useful complement to a (primary) major in another department or college. Almost every field of inquiry must grapple with statistical problems, and the tools of statistical theory and data analysis you will develop in the Statistics minor (or Additional Major) will give you a critical edge.
- The Bachelor of Science in Economics and Statistics provides an interdisciplinary course of study aimed at students with a strong interest in the empirical analysis of economic data. Jointly administered by the Department of Statistics & Data Science and the Undergraduate Economics Program, the major's curriculum provides students with a solid foundation in the theories and methods of both fields. (See Dietrich College Interdepartmental Majors as well later in this section)
- The Bachelor of Science in Statistics and Machine Learning is a program housed in the Department of Statistics & Data Science and is jointly administered with the Department of Machine Learning. In this major students take courses focused on skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. The program is geared toward students interested in statistical computation, data science, and "big data" problems.
- The Statistics Concentration and the Operations Research and Statistics Concentration in the Mathematical Sciences Major (see Department of Mathematical Sciences) are administered by the Department of Mathematical Sciences with input from the Department of Statistics & Data Science.
- Non-majors are eligible to take most of our courses, and indeed, they are required to do so by many programs on campus. Such courses offer one way to learn more about the Department of Statistics & Data Science and the field in general.

Curriculum

Statistics consists of two intertwined threads of inquiry: statistical theory and data analysis. The former uses probability theory to build and analyze mathematical models of data in order to devise methods for making effective predictions and decisions in the face of uncertainty. The latter involves techniques for extracting insights from complicated data, designs for accurate measurement and comparison, and methods for checking the validity of theoretical assumptions. Statistical theory informs data analysis and vice versa. The Department of Statistics & Data Science curriculum follows both of these threads and helps students develop required skills.

Throughout the sections of this catalog, we describe the requirements for the Major in Statistics (the core major as well as the Mathematics and Neuroscience tracks), followed by the requirements for the Major in Economics and Statistics, the Major in Statistics and Machine Learning, and the Minor in Statistics.

Note: We recommend that you use the information provided below as a general guideline, and then schedule a meeting with a Statistics Undergraduate Advisor (statadvising@stat.cmu.edu) to discuss the requirements in more detail, and build a program that is tailored to your strengths and interests.

B.S. in Statistics

Peter Freeman, *Undergraduate Program Director*

Location: Baker Hall 229
pfreeman@andrew.cmu.edu

Amanda Mitchell, *Lead Senior Academic Advisor*

Glenn Clune, *Academic Program Manager*

Sylvie Aubin, *Academic Program Manager*

Peter Long, *Academic Advisor*

Location: Baker Hall 129
statadvising@andrew.cmu.edu (statadvising@stat.cmu.edu)

Students in the Bachelor of Science in Statistics program develop and master a wide array of skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. In addition, Statistics majors gain experience in applying statistical tools to real problems in other fields and learn the nuances of interdisciplinary collaboration. The requirements for the B.S. in Statistics are detailed below and are organized by categories #1-7.

Curriculum

1. Mathematical Foundations (Prerequisites) 29–42 units

Mathematics is the language in which statistical models are described and analyzed, so some experience with basic calculus and linear algebra is an important component for anyone pursuing a program of study in Statistics & Data Science.

Calculus*

Complete one of the two following sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

Sequence 1

21-111	Calculus I	10
21-112	Calculus II	10
And one of the following three courses:		
21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

Sequence 2

21-120	Differential and Integral Calculus	10
And one of the following three courses:		
21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

Notes:

- Passing the Mathematical Sciences 21-120 assessment test is an acceptable alternative to completing 21-120.

Linear Algebra**

Complete *one* of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	11
21-242	Matrix Theory	11

* It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be completed before taking 36-401 Modern Regression.

21-241 and 21-242 are intended only for students with a very strong mathematical background.

2. Data Analysis 36-45 units

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfies the Dietrich College Core Requirement in Statistical Reasoning. This course is therefore recommended for students in the college. (Note: a score of 5 on the Advanced Placement [AP] Exam in Statistics may be used to waive this requirement). 36-220 emphasizes examples in engineering.

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students' previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

Sequence 1 (For students beginning their freshman or sophomore year)

Beginning*

Choose *one* of the following courses:

36-200	Reasoning with Data *	9
36-220	Engineering Statistics and Quality Control	9

*A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement. 36-220 emphasizes examples in engineering and Architecture.

Note: Students who enter the program with credit for 36-235 or 36-236 should discuss options with an advisor.

Intermediate*

Choose *one* of the following courses:

36-202	Methods for Statistics & Data Science **	9
36-309	Experimental Design for Behavioral & Social Sciences	9
36-290	Introduction to Statistical Research Methodology	9
* Or an extra Advanced Data Analysis Elective		
** Must take prior to 36-401, if not, an additional Advanced Data Analysis Elective is required		

Advanced Data Analysis Elective

Choose <u>one</u> of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-470	Special Topics: Statistical Methods in Health Sciences	9
36-471	Special Topics: Time Series	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Students can also take a second 36-46x or 36-47x (see section #5).

<u>and</u> take the following *two* courses:

36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

Sequence 2 (For students beginning later in their college career)

Advanced Data Analysis Electives

Choose <u>two</u> of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9

36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-470	Special Topics: Statistical Methods in Health Sciences	9
36-471	Special Topics: Time Series	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

**All Special Topics are not offered every semester, and new Special Topics are regularly added. See section 5 for details.

and take the following *two* courses:

36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

3. Probability Theory and Statistical Theory 18 units

The theory of probability gives a mathematical description of the randomness inherent in our observations. It is the language in which statistical models are stated, so an understanding of probability is essential for the study of statistical theory. Statistical theory provides a mathematical framework for making inferences about unknown quantities from data. The theory reduces statistical problems to their essential ingredients to help devise and evaluate inferential procedures. It provides a powerful and wide-ranging set of tools for dealing with uncertainty.

To satisfy the theory requirement take the following two courses:

Take one of the following courses:		
36-235	Probability and Statistical Inference I *	9
36-225	Introduction to Probability Theory	9
And one of the following three courses:		
36-236	Probability and Statistical Inference II **	9
36-226	Introduction to Statistical Inference	9
36-326	Mathematical Statistics (Honors)	9

*It is possible to substitute 36-218, 36-219, 36-225, 15-259 or 21-325 for 36-235. 36-235 is the standard (and recommended) introduction to probability, 36-219 is tailored for engineers and computer scientists, 36-218 and 15-259 are more mathematically rigorous classes for Computer Science students and more mathematically advanced (students need advisor approval to enroll), and 21-325 is a rigorous probability theory course offered by the Department of Mathematics.)

**It is possible to substitute 36-226 or 36-326 (honors course) for 36-236 . 36-236 is the standard (and recommended) introduction to statistical inference.

Please note that students who complete 36-235 are expected to take 36-236 to complete their theory requirements. Students who choose to take 36-225 instead will be required to take 36-226 afterward. They will not be eligible to take 36-236.

Comment:

(i) In order to meet the prerequisite requirements, a grade of at least a C is required in 36-235 (or equivalent), 36-236 (or equivalent), and 36-401.

4. Statistical Computing 19 to 21 units

Fundamental to the practice of statistics and data science is the ability to effectively code data processing and analysis tasks. Within the domain of statistics, the use of the programming language R is ubiquitous, and thus we expose students to it throughout the curriculum (and in depth in Statistical Computing). Within the larger domain of data science, the use of the programming language Python is also ubiquitous, and thus we require all majors to gain, at a minimum, basic competency in the language by taking either Principles of Computing, or Fundamentals of Programming and Computer Science. We would advise those students who are considering receiving course credit for one of these two courses given their score on the AP Computer Science A exam to actually take one (or both) of them at Carnegie Mellon instead, as within data science as a whole Python is far more widely used than Java.

Take one of the following two courses:		
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
Complete the following course:		
36-350	Statistical Computing	9

5. Special Topics 9 units

The Department of Statistics & Data Science offers advanced courses that focus on specific statistical applications or advanced statistical methods. These courses are numbered 36-46x (36-461, 36-462, etc.) or 36-47x (36-470, 36-471, etc.) The objective of the course is to expose students to important topics in statistics and/or interesting applications which are not part of the standard undergraduate curriculum. Note that all Special Topics are not offered every semester, and new Special Topics are regularly added.

To satisfy the Special Topics requirement choose *one* of the **36-46x or 36-47x** courses (which are 9 units).

Note: All 36-46x and 36-47x courses require 36-401 as a prerequisite or corequisite.

6. Statistical Elective 9–12 units

Students are required to take one elective which can be within or outside the Department of Statistics & Data Science. **Courses within Statistics & Data Science** can be any 300 or 400 level course (that is not used to satisfy any other requirement for the statistics major).

The following is a partial list of **courses outside Statistics & Data Science** that qualify as electives as they provide the intellectual infrastructure that will advance the student's understanding of statistics and its applications. Other courses may qualify as well; consult with an advisor.

15-121	Introduction to Data Structures	10
15-122	Principles of Imperative Computation	12
10-301	Introduction to Machine Learning	12
10-315	Introduction to Machine Learning (SCS Majors)	12
15-388	Practical Data Science	9
21-127	Concepts of Mathematics	12
21-260	Differential Equations	9
21-292	Operations Research I	9
21-301	Combinatorics	9
21-355	Principles of Real Analysis I	9
80-220	Philosophy of Science	9
80-221	Philosophy of Social Science	9
80-310	Formal Logic	9
85-310	Research Methods in Cognitive Psychology	9
85-320	Research Methods in Developmental Psychology	9
85-340	Research Methods in Social Psychology	9
88-223	Decision Analysis	12
88-302	Behavioral Decision Making	9

Note: Additional prerequisites are required for some of these courses. Students should carefully check the course descriptions to determine if additional prerequisites are necessary.

7. Concentration Area

Self-Defined Concentration Area (with advisor's approval) 36 UNITS

The power of statistics, and much of the fun, is that it can be applied to answer such a wide variety of questions in so many different fields. A critical part of statistical practice is understanding the questions being asked so that appropriate methods of analysis can be used. Hence, a critical part of statistical training is to gain experience applying abstract tools to real problems.

The Concentration Area is a set of four related courses outside of Statistics & Data Science that prepares the student to deal with statistical aspects of problems that arise in another field. These courses are usually drawn from a *single* discipline of interest to the student and must be approved by your Statistics Undergraduate Director. While these courses are not in Statistics & Data Science, the concentration area must complement the overall degree.

For example, students intending to pursue careers in the health or biomedical sciences could take further courses in biology or chemistry, or students intending to pursue graduate work in statistics could take further courses in advanced mathematics.

The concentration area can be fulfilled with a minor or additional major, but not *all* minors and additional majors fulfill this requirement. Please make sure to consult your Statistics Undergraduate advisor *prior* to pursuing courses for the concentration area. Once the concentration area is approved, any changes made to the previously agreed upon coursework require re-approval by an advisor.

Concentration Approval Process

- Submit the below materials to your Undergraduate Statistics Advisor:
    - List of possible coursework to fulfill the concentration*
    - 150-200 word essay describing how the proposed courses complement the B.S. in Statistics degree.

* These courses can be amended later but must be re-approved by your Statistics Undergraduate Advisor if amended.

* Note: The concentration/track requirement is only for students whose *primary* major is statistics and has no other additional major or minor. The requirement does not apply for students who pursue an *additional* major in statistics.

Total number of units for the major	**156-183* Units**
Total number of units for the degree	**360 Units**

*Note: This number can vary depending on the courses chosen for the concentration area that a student takes. Speak with an academic advisor for more details.

Recommendations

Students in the Dietrich College of Humanities and Social Sciences who wish to major or minor in Statistics are advised to complete both the calculus requirement (one Mathematical Foundations calculus sequence) and the Beginning Data Analysis course 36-200 by the end of their freshman year.

The linear algebra requirement is a prerequisite for the course 36-401. It is therefore essential that students complete this requirement by their junior years at the latest.

Recommendations for Prospective Ph.D. Students

Students interested in pursuing a Ph.D. in Statistics or Biostatistics (or related programs) after completing their undergraduate degree are strongly recommended to pursue the **Mathematical Statistics Track** or to take additional Mathematics courses. Although 21-240 Matrix Algebra with Applications is recommended for Statistics majors, students interested in PhD programs should consider taking 21-241 Matrices and Linear Transformations or 21-242 Matrix Theory instead. Additional courses to consider are 21-228 Discrete Mathematics, 21-341 Linear Algebra, 21-355 Principles of Real Analysis I, and 21-356 Principles of Real Analysis II.

Additional Major in Statistics

Students who elect the B.S. in Statistics as a second or third major must fulfill all Statistics degree requirements except for the Concentration Area requirement. Majors in many other programs would naturally complement a statistics major, including Tepper's undergraduate business program, Social and Decision Sciences, Policy and Management, and Psychology.

With respect to double-counting courses, it is departmental policy that students must have at least five statistics courses that do not count for their primary major. If students do not have at least five, they will need to take additional advanced data analysis electives.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major's requirements overlap with the requirements for the B.S. in Statistics.

Substitutions and Waivers

Many departments require Statistics & Data Science courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics & Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics & Data Science. In many of these cases, the student will need to take additional courses to satisfy major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics.

Research

The Statistics & Data Science program encourages students to gain research experience. Opportunities within the department include Summer Undergraduate Research Apprenticeships (SURA), run in association with the university's Office of Undergraduate Research and Scholar Development, and the departmental capstone courses 36-490 Undergraduate Research or 36-497 Corporate Capstone Project. (Note that these courses require an application.) Additionally, students can pursue independent study. For those students who maintain a quality point average of 3.25 overall or above, there is also the Dietrich College Senior Honors Program (p.).

The faculty in the Statistics & Data Science department largely work within the domains of statistical theory and methodological development, areas that require advanced mathematical training. Thus we encourage students to search broadly for research opportunities: faculty, post-doctoral researchers, and graduate students in many departments throughout the university have data to analyze and would welcome the help of undergraduate statistics students.

Sample Programs

The following sample programs illustrate three (of many) ways to satisfy the requirements for the B.S. in Statistics. However, keep in mind that the program is flexible enough to support *many* other possible schedules and to emphasize a wide variety of interests.

The first schedule uses calculus sequence 1.

The second schedule is an example of the case when a student enters the program through 36-235 and 36-236 (and therefore skips the beginning data analysis sequence). This schedule has more emphasis on statistical theory and probability.

Schedule 1

First-Year		**Second-Year**	
Fall	**Spring**	**Fall**	**Spring**
36-200 Reasoning with Data	36-202 Methods for Statistics & Data Science	36-235 Probability and Statistical Inference I	36-236 Probability and Statistical Inference II
21-111 Calculus I	21-112 Calculus II	21-256 Multivariate Analysis	36-350 Statistical Computing
-----	One of the following two courses:	Course toward concentration	21-240 Matrix Algebra with Applications
-----	15-110 Principles of Computing	-----	-----
	15-112 Fundamentals of Programming and Computer Science		

Third-Year		**Fourth-Year**	
Fall	**Spring**	**Fall**	**Spring**
36-401 Modern Regression	36-402 Advanced Methods for Data Analysis	Course toward concentration	Course toward concentration
36-3xx or 36-4xx Advanced Data Analysis Elective	36-46x Special Topics course	-----	-----
Course toward concentration	Course toward concentration	-----	-----
-----	-----	-----	-----

Schedule 2

First-Year		**Second-Year**	
Fall	**Spring**	**Fall**	**Spring**
21-120 Differential and Integral Calculus	21-256 Multivariate Analysis	36-235 Probability and Statistical Inference I	36-236 Probability and Statistical Inference II
36-200 Reasoning with Data	One of the following two courses:	-----	21-240 Matrix Algebra with Applications
-----	15-110 Principles of Computing	-----	-----
-----	15-112 Fundamentals of Programming and Computer Science	-----	-----

Third-Year		Fourth-Year	
Fall	**Spring**	**Fall**	**Spring**
36-350 Statistical Computing	36-402 Advanced Methods for Data Analysis	36-46x Special Topics	Course toward concentration
36-401 Modern Regression	Course toward concentration	Course toward concentration	36-3xx or 36-4xx Advanced Data Analysis Elective
36-3xx or 36-4xx Advanced Data Analysis Elective	-----	-----	-----
Course toward concentration	-----	-----	-----

B.S. in Statistics (Mathematical Sciences Track)

Peter Freeman, *Undergraduate Program Director*

Location: Baker Hall 229
pfreeman@andrew.cmu.edu

Amanda Mitchell, *Lead Senior Academic Advisor*

Glenn Clune, *Academic Program Manager*

Sylvie Aubin, *Academic Program Manager*

Peter Long, *Academic Advisor*

Location: Baker Hall 129
statadvising@andrew.cmu.edu (statadvising@stat.cmu.edu)

Students in the Bachelor of Science in Statistics (Mathematical Sciences Track) program develop and master a wide array of skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. In addition, Statistics majors gain experience in applying statistical tools to real problems in other fields and learn the nuances of interdisciplinary collaboration. The requirements for the B.S. in Statistics (Mathematical Sciences Track) are detailed below and are organized by categories #1-#7.

Curriculum

1. Mathematical Foundations (Prerequisites) 39-52 units

Mathematics is the language in which statistical models are described and analyzed, so some experience with basic calculus and linear algebra is an important component for anyone pursuing a program of study in Statistics & Data Science.

Calculus*

Complete one of the two following sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

Sequence 1

21-111	Calculus I	10
21-112	Calculus II	10
21-122	Integration and Approximation	10
And one of the following three courses:		
21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

Sequence 2

21-120	Differential and Integral Calculus	10
21-122	Integration and Approximation	10
And one of the following three courses:		
21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

Notes:

- Passing the Mathematical Sciences 21-120 assessment test is an acceptable alternative to completing 21-120.
- 21-122 is a required prerequisite for 21-355 Principles of Real Analysis I, a requirement for the Mathematical Sciences Track major concentration.

Linear Algebra**

Complete *one* of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	11
21-242	Matrix Theory	11

* It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be completed before taking 36-401 Modern Regression.

21-241 and 21-242 are intended only for students with a very strong mathematical background.

2. Data Analysis 36-45 units

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfies the Dietrich College Core Requirement in Statistical Reasoning. This course is therefore recommended for students in the college. (Note: a score of 5 on the Advanced Placement [AP] Exam in Statistics may be used to waive this requirement). 36-220 emphasizes examples in engineering.

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students' previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

Sequence 1 (For students beginning their freshman or sophomore year)

Beginning*

Choose *one* of the following courses:

36-200	Reasoning with Data *	9
36-220	Engineering Statistics and Quality Control	9

*A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement. 36-220 emphasizes examples in engineering and Architecture.

Note: Students who enter the program with 36-235 or 36-236 should discuss options with an advisor.

Intermediate*

Choose *one* of the following courses:

36-202	Methods for Statistics & Data Science **	9
36-309	Experimental Design for Behavioral & Social Sciences	9
36-290	Introduction to Statistical Research Methodology	9
*Or an extra Advanced Data Analysis Elective		
** Must take prior to 36-401, if not, an additional Advanced Data Analysis Elective is required		

Advanced Data Analysis Elective

Choose *one* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9

36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-470	Special Topics: Statistical Methods in Health Sciences	9
36-471	Special Topics: Time Series	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Students can also take a second 36-46x (see section #5).

and take the following *two* courses:

36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

Sequence 2 (For students beginning later in their college career)

Advanced

Choose *two* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-470	Special Topics: Statistical Methods in Health Sciences	9
36-471	Special Topics: Time Series	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

**All Special Topics are not offered every semester, and new Special Topics are regularly added. See section 5 for details.

and take the following *two* courses:

36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

3. Probability Theory and Statistical Theory 18 units

The theory of probability gives a mathematical description of the randomness inherent in our observations. It is the language in which statistical models are stated, so an understanding of probability is essential for the study of statistical theory. Statistical theory provides a mathematical framework for making inferences about unknown quantities from data. The theory reduces statistical problems to their essential ingredients to help devise and evaluate inferential procedures. It provides a powerful and wide-ranging set of tools for dealing with uncertainty.

To satisfy the theory requirement take the following two courses:

Take one of the following courses:		
36-235	Probability and Statistical Inference I *	9
36-225	Introduction to Probability Theory	9
And one of the following three courses:		
36-226	Introduction to Statistical Inference	9
36-236	Probability and Statistical Inference II **	9
36-326	Mathematical Statistics (Honors)	9

*It is possible to substitute 36-218, 36-219, 36-225, 15-259, or 21-325 for 36-235. 36-235 is the standard (and recommended) introduction to probability, 36-219 is tailored for engineers and computer scientists, 36-218 and 15-259 are more mathematically rigorous classes for Computer Science students and more mathematically advanced (students need prior approval to enroll), and 21-325 is a rigorous probability theory course offered by the Department of Mathematics).

**It is possible to substitute 36-226 or 36-326 (honors course) for 36-236. 36-236 is the standard (and recommended) introduction to statistical inference.

Please note that students who complete 36-235 are expected to take 36-236 to complete their theory requirements. Students who choose to take 36-225 will be required to take 36-226 afterward. They will not be eligible to take 36-236.

Comment:

(i) In order to meet the prerequisite requirements, a grade of at least a C is required in 36-235 (or equivalent), 36-236 (or equivalent), and 36-401.

4. Statistical Computing 19 to 21 units

Fundamental to the practice of statistics and data science is the ability to effectively code data processing and analysis tasks. Within the domain of statistics, the use of the programming language R is ubiquitous, and thus we expose students to it throughout the curriculum (and in depth in Statistical Computing). Within the larger domain of data science, the use of the programming language Python is also ubiquitous, and thus we require all majors to gain, at a minimum, basic competency in the language by taking either Principles of Computing, or Fundamentals of Programming and Computer Science. We would advise those students who are considering receiving course credit for one of these two courses given their score on the AP Computer Science A exam to actually take one (or both) of them at Carnegie Mellon instead, as within data science as a whole Python is far more widely used than Java.

Take one of the following two courses:		
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
Complete the following course:		
36-350	Statistical Computing	9

5. Special Topics 9 units

The Department of Statistics & Data Science offers advanced courses that focus on specific statistical applications or advanced statistical methods. These courses are numbered 36-46x (36-461, 36-462, etc.) or 36-47x (36-470, 36-471, etc.). The objective of the course is to expose students to important topics in statistics and/or interesting applications which are not part of the standard undergraduate curriculum. Note that all Special Topics are not offered every semester, and new Special Topics are regularly added.

To satisfy the Special Topics requirement choose *one* of the **36-46x or 36-47x** courses (which are 9 units).

Note: All 36-46x and 36-47x courses require 36-401 as a prerequisite or corequisite.

6. Statistical Elective 9–12 units

Students are required to take one elective which can be within or outside the Department of Statistics & Data Science. **Courses within Statistics & Data Science** can be any 300 or 400 level course (that is not used to satisfy any other requirement for the statistics major).

The following is a partial list of **courses outside Statistics & Data Science** that qualify as electives as they provide the intellectual infrastructure that will advance the student's understanding of statistics and its applications. Other courses may qualify as well; consult with your Statistics Undergraduate Advisor.

15-121	Introduction to Data Structures	10
15-122	Principles of Imperative Computation	12
10-301	Introduction to Machine Learning	12
10-315	Introduction to Machine Learning (SCS Majors)	12
15-388	Practical Data Science	9
21-260	Differential Equations	9
21-292	Operations Research I	9

21-301	Combinatorics	9
21-355	Principles of Real Analysis I	9
80-220	Philosophy of Science	9
80-221	Philosophy of Social Science	9
80-310	Formal Logic	9
85-310	Research Methods in Cognitive Psychology	9
85-320	Research Methods in Developmental Psychology	9
85-340	Research Methods in Social Psychology	9
88-223	Decision Analysis	12
88-302	Behavioral Decision Making	9

Note: Additional prerequisites are required for some of these courses. Students should carefully check the course descriptions to determine if additional prerequisites are necessary.

Mathematical Statistics Track 46–52 units

21-127	Concepts of Mathematics	12
21-355	Principles of Real Analysis I	9
36-410	Introduction to Probability Modeling	9

Note: 21-122 is a prerequisite for 21-355 and must be completed before students can register for the course.

And *two* of the following:

21-228	Discrete Mathematics	9
21-257	Models and Methods for Optimization	9
or 21-292	Operations Research I	
21-301	Combinatorics	9
21-344	Numerical Linear Algebra	9
21-356	Principles of Real Analysis II	9
21-373	Algebraic Structures	9
36-700	Probability and Mathematical Statistics	12

Total number of units for the major	**177-209 Units***
Total number of units for the degree	**360 Units**

*Note: This number can vary depending on the courses chosen for the concentration area that a student takes. Speak with an academic advisor for more details.

Recommendations

Students in the Dietrich College of Humanities and Social Sciences who wish to major or minor in Statistics are advised to complete both the calculus requirement (one Mathematical Foundations calculus sequence) and the Beginning Data Analysis course 36-200 by the end of their freshman year.

The linear algebra requirement is a prerequisite for the course 36-401. It is therefore essential that students complete this requirement by their junior years at the latest.

Recommendations for Prospective Ph.D. Students

Students interested in pursuing a Ph.D. in Statistics or Biostatistics (or related programs) after completing their undergraduate degree are strongly recommended to pursue the **Mathematical Statistics Track**.

Additional Major in Statistics (Mathematical Science Track)

Students who elect the B.S. in Statistics (Mathematical Science Track) as an additional major must fulfill all Statistics (Mathematical Science Track) degree requirements. With respect to double-counting courses, it is departmental policy that students must have at least six courses [three Statistics courses (36-xxx) and three Mathematical Sciences Track electives] that do not count for their primary major. If students do not have at least six, they typically take additional advanced data analysis and/or math electives.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major's requirements overlap with the requirements for a B.S. in Statistics (Mathematical Science Track).

Substitutions and Waivers

Many departments require Statistics & Data Science courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics & Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics & Data Science. In many of these cases, the student will need to take additional courses to satisfy major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics.

Research

The Statistics & Data Science program encourages students to gain research experience. Opportunities within the department include Summer Undergraduate Research Apprenticeships (SURA), run in association with the university's Office of Undergraduate Research and Scholar Development, and the departmental capstone courses 36-490 Undergraduate Research or 36-497 Corporate Capstone Project. (Note that these courses require an application.) Additionally, students can pursue independent study. For those students who maintain a quality point average of 3.25 overall or above, there is also the Dietrich College Senior Honors Program (p.).

The faculty in the Statistics & Data Science department largely work within the domains of statistical theory and methodological development, areas that require advanced mathematical training. Thus we encourage students to search broadly for research opportunities: faculty, post-doctoral researchers, and graduate students in many departments throughout the university have data to analyze and would welcome the help of undergraduate statistics students.

Sample Programs

The following sample programs illustrate three (of many) ways to satisfy the requirements for the B.S. in Statistics (Mathematical Sciences Track). However, keep in mind that the program is flexible enough to support *many* other possible schedules and to emphasize a wide variety of interests.

The first schedule uses calculus sequence 1.

The second schedule is an example of the case when a student enters the program through 36-235 and 36-236 (and therefore skips the intermediate data analysis course). This schedule has more emphasis on statistical theory and probability.

SCHEDULE 1

First-Year		Second-Year	
Fall	**Spring**	**Fall**	**Spring**
36-200 Reasoning with Data	36-202 Methods for Statistics & Data Science	21-122 Integration and Approximation	36-236 Probability and Statistical Inference II
21-111 Calculus I	21-256 Multivariate Analysis	21-127 Concepts of Mathematics	36-350 Statistical Computing
-----	21-112 Calculus II	36-235 Probability and Statistical Inference I	21-240 Matrix Algebra with Applications
-----	-----	One of the two following courses:	-----
		15-110 Principles of Computing	
		15-112 Fundamentals of Programming and Computer Science	

Third-Year		Fourth-Year	
Fall	**Spring**	**Fall**	**Spring**
36-401 Modern Regression	36-402 Advanced Methods for Data Analysis	36-46x Special Topics	36-410 Introduction to Probability Modeling

B.S. in Statistics (Statistics and Neuroscience Track)

Peter Freeman, *Undergraduate Program Director*

Location: Baker Hall 229
pfreeman@andrew.cmu.edu

Amanda Mitchell, *Lead Senior Academic Advisor*

Glenn Clune, *Academic Program Manager*

Sylvie Aubin, *Academic Program Manager*

Peter Long, *Academic Advisor*

Location: Baker Hall 129
statadvising@andrew.cmu.edu (statadvising@stat.cmu.edu)

Students in the Bachelor of Science in Statistics (Statistics and Neuroscience Track) program develop and master a wide array of skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. In addition, Statistics majors gain experience in applying statistical tools to real problems in other fields and learn the nuances of interdisciplinary collaboration. The requirements for the B.S. in Statistics (Neuroscience Track) are detailed below and are organized by categories #1-#7.

Curriculum

1. Mathematical Foundations (Prerequisites) 29–42 units

Mathematics is the language in which statistical models are described and analyzed, so some experience with basic calculus and linear algebra is an important component for anyone pursuing a program of study in Statistics & Data Science.

Calculus*

Complete one of the two following sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

Sequence 1

21-111	Calculus I	10
21-112	Calculus II	10
And one of the following three courses:		
21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

Sequence 2

21-120	Differential and Integral Calculus	10
And one of the following three courses:		
21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

Notes:

- Passing the Mathematical Sciences 21-120 assessment test is an acceptable alternative to completing 21-120.

Linear Algebra**

Complete *one* of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	11
21-242	Matrix Theory	11

* It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be completed before taking 36-401 Modern Regression.

21-241 and 21-242 are intended only for students with a very strong mathematical background.

2. Data Analysis 36-45 units

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfies the Dietrich College Core Requirement in Statistical Reasoning. This course is therefore recommended for students in the college. (Note: a score of 5 on the Advanced Placement [AP] Exam in Statistics may be used to waive this requirement). 36-220 emphasizes examples in engineering and architecture.

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students' previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

Sequence 1 (For students beginning their freshman or sophomore year)

Beginning*

Choose *one* of the following courses:

36-200	Reasoning with Data *	9
36-220	Engineering Statistics and Quality Control	9

*A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement. 36-220 emphasizes examples in engineering and Architecture.

Note: Students who enter the program with 36-235 or 36-236 should discuss options with an advisor.

Intermediate*

Choose *one* of the following courses:

36-202	Methods for Statistics & Data Science **	9
36-309	Experimental Design for Behavioral & Social Sciences	9
36-290	Introduction to Statistical Research Methodology	9
*Or an extra Advanced Data Analysis Elective		
** Must take prior to 36-401, if not, an additional Advanced Data Analysis Elective is required		

Advanced Data Analysis Electives

Choose *one* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-470	Special Topics: Statistical Methods in Health Sciences	9
36-471	Special Topics: Time Series	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Students can also take a second 36-46x (see section #5).

and take the following *two* courses:

36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

Sequence 2 (For students beginning later in their college career)

Advanced Data Analysis Electives

Choose *two* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-470	Special Topics: Statistical Methods in Health Sciences	9
36-471	Special Topics: Time Series	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

**All Special Topics are not offered every semester, and new Special Topics are regularly added. See section 5 for details.

and take the following *two* courses:

36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

3. Probability Theory and Statistical Theory 18 units

The theory of probability gives a mathematical description of the randomness inherent in our observations. It is the language in which statistical models are stated, so an understanding of probability is essential for the study of statistical theory. Statistical theory provides a mathematical framework for making inferences about unknown quantities from data. The theory reduces statistical problems to their essential ingredients to help devise and evaluate inferential procedures. It provides a powerful and wide-ranging set of tools for dealing with uncertainty.

To satisfy the theory requirement take the following two courses:

Take one of the following courses:		
36-235	Probability and Statistical Inference I	9
36-225	Introduction to Probability Theory	9
and one of the following three courses:		
36-226	Introduction to Statistical Inference	9
36-236	Probability and Statistical Inference II **	9
36-326	Mathematical Statistics (Honors)	9

*It is possible to substitute 36-218, 36-219, 36-225, 15-259, or 21-325 for 36-235. 36-235 is the standard (and recommended) introduction to probability, 36-219 is tailored for engineers and computer scientists, 36-218 and 15-259 are more mathematically rigorous classes for Computer Science students and more mathematically advanced (students need advisor approval to enroll), and 21-325 is a rigorous probability theory course offered by the Department of Mathematics.

**It is possible to substitute 36-226 or 36-326 (honors course) in place of 36-236. 36-236 is the standard (and recommended) introduction to statistical inference.

Please note that students who complete 36-235 are expected to take 36-236 to complete their theory requirements. Students who choose to take 36-225 instead will be required to take 36-226 afterward. They will not be eligible to take 36-236.

Comment:

(i) In order to meet the prerequisite requirements, a grade of at least a C is required in 36-235 (or equivalent), 36-236 (or equivalent) and 36-401.

4. Statistical Computing 19 to 21 units

Fundamental to the practice of statistics and data science is the ability to effectively code data processing and analysis tasks. Within the domain of statistics, the use of the programming language R is ubiquitous, and thus we expose students to it throughout the curriculum (and in depth in Statistical Computing). Within the larger domain of data science, the use of the programming language Python is also ubiquitous, and thus we require all majors to gain, at a minimum, basic competency in the language by taking either Principles of Computing, or Fundamentals of Programming and Computer Science. We would advise those students who are considering receiving course credit for one of these two courses given their score on the AP Computer Science A exam to actually take one (or both) of them at Carnegie Mellon instead, as within data science as a whole Python is far more widely used than Java.

Take one of the two following courses:		
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
Complete the following course:		
36-350	Statistical Computing	9

5. Special Topics 9 units

The Department of Statistics & Data Science offers advanced courses that focus on specific statistical applications or advanced statistical methods. These courses are numbered 36-46x (36-461, 36-462, etc.) or 36-47x (36-470, 36-471, etc.). The objective of the course is to expose students to important topics in statistics and/or interesting applications which are not part of the standard undergraduate curriculum. Note that all Special Topics are not offered every semester, and new Special Topics are regularly added.

To satisfy the Special Topics requirement choose *one* of the **36-46x or 36-47x** courses (which are 9 units).

Note: All 36-46x and 36-47x courses require 36-401 as a prerequisite or corequisite.

6. Statistical Elective 9–12 units

Students are required to take one elective which can be within or outside the Department of Statistics & Data Science. **Courses within Statistics & Data Science** can be any 300 or 400 level course (that is not used to satisfy any other requirement for the statistics major).

The following is a partial list of **courses outside Statistics & Data Science** that qualify as electives as they provide the intellectual infrastructure that will advance the student's understanding of statistics and its applications. Other courses may qualify as well; consult with the Statistics Undergraduate Advisor.

15-121	Introduction to Data Structures	10
15-122	Principles of Imperative Computation	12
10-301	Introduction to Machine Learning	12
10-315	Introduction to Machine Learning (SCS Majors)	12
15-388	Practical Data Science	9
21-127	Concepts of Mathematics	12
21-260	Differential Equations	9
21-292	Operations Research I	9
21-301	Combinatorics	9
21-355	Principles of Real Analysis I	9
80-220	Philosophy of Science	9
80-221	Philosophy of Social Science	9
80-310	Formal Logic	9
85-310	Research Methods in Cognitive Psychology	9
85-320	Research Methods in Developmental Psychology	9
85-340	Research Methods in Social Psychology	9
88-223	Decision Analysis	12
88-302	Behavioral Decision Making	9

Statistics and Neuroscience Track 45–54 UNITS

85-211	Cognitive Psychology	9
85-219	Foundations of Brain and Behavior	9

And three electives (at least one from Methodology and Analysis and at least one within the Neuroscience Background listed below):

Methodology and Analysis

10-301	Introduction to Machine Learning	12
18-290	Signals and Systems	12
42-630	Introduction to Neural Engineering	12
42-632	Neural Signal Processing	12
36-700	Probability and Mathematical Statistics	12
42/86-631	Neural Data Analysis	12
85-310	Research Methods in Cognitive Psychology	9
85-314	Cognitive Neuroscience Research Methods	9

Neuroscience Background

03-362	Cellular Neuroscience	9
03-363	Systems Neuroscience	9
15-386	Neural Computation	9
85-370	Perception	9
85-408	Visual Cognition	9
85-414	Cognitive Neuropsychology	9
85-419	Introduction to Parallel Distributed Processing	9

Total Number of Units for the Major:	**165-201* Units**
Total Number of Units for the Degree:	**360 Units**

*Note: This number can vary depending on the courses chosen for the concentration area that a student takes. Speak with an academic advisor for more details.

Recommendations

Students in the Dietrich College of Humanities and Social Sciences who wish to major or minor in Statistics are advised to complete both the calculus requirement (one Mathematical Foundations calculus sequence) and the Beginning Data Analysis course 36-200 by the end of their freshman year.

The linear algebra requirement is a prerequisite for the course 36-401. It is therefore essential that students complete this requirement by their junior years at the latest.

Recommendations for Prospective Ph.D. Students

Students interested in pursuing a Ph.D. in Statistics or Biostatistics (or related programs) after completing their undergraduate degree are strongly recommended to pursue the **Mathematical Statistics Track** or to take additional Mathematics courses. Although 21-240 Matrix Algebra with Applications is recommended for Statistics majors, students interested in PhD programs should consider taking 21-241 Matrices and Linear Transformations or 21-242 Matrix Theory instead. Additional courses to consider are 21-228 Discrete Mathematics, 21-341 Linear Algebra, 21-355 Principles of Real Analysis I, and 21-356 Principles of Real Analysis II.

Additional Major in Statistics (Neuroscience Track)

Students who elect the B.S. in Statistics (Neuroscience Track) as an additional major must fulfill all Statistics (Neuroscience Track) degree requirements. With respect to double-counting courses, it is departmental policy that students must have at least six courses [three Statistics courses (36-xxx) and three Neuroscience Track electives] that do not count for their primary major. If students do not have at least six, they typically take additional advanced data analysis and/or neuroscience electives.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major's requirements overlap with the requirements for the B.S. in Statistics (Neuroscience Track).

Substitutions and Waivers

Many departments require Statistics & Data Science courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics & Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics & Data Science. In many of these cases, the student will need to take additional courses to satisfy major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics.

Research

The Statistics & Data Science program encourages students to gain research experience. Opportunities within the department include Summer Undergraduate Research Apprenticeships (SURA), run in association with the university's Office of Undergraduate Research and Scholar Development, and the departmental capstone courses 36-490 Undergraduate Research, , or 36-497 Corporate Capstone Project. (Note that these courses require an application.) Additionally, students can pursue independent study. For those students who maintain a quality point average of 3.25 overall or above, there is also the Dietrich College Senior Honors Program (p.).

The faculty in the Statistics & Data Science department largely work within the domains of statistical theory and methodological development, areas that require advanced mathematical training. Thus we encourage students to search broadly for research opportunities: faculty, post-doctoral researchers, and graduate students in many departments throughout the university have data to analyze and would welcome the help of undergraduate statistics students.

Sample Programs

The following sample programs illustrate three (of many) ways to satisfy the requirements for the B.S. in Statistics (Neuroscience Track). However, keep in mind that the program is flexible enough to support *many* other possible schedules and to emphasize a wide variety of interests.

The first schedule uses calculus sequence 2.

The second schedule is an example of the case when a student enters the program through 36-235 and 36-236 (and therefore skips the intermediate data analysis course). This schedule has more emphasis on statistical theory and probability.

schedule 1

First-Year		Second-Year	
Fall	**Spring**	**Fall**	**Spring**
36-200 Reasoning with Data	36-202 Methods for Statistics & Data Science	36-235 Probability and Statistical Inference I	36-236 Probability and Statistical Inference II

B.S. in Economics and Statistics

Peter Freeman, *Undergraduate Program Director*

Location: Baker Hall 229
pfreeman@andrew.cmu.edu

Amanda Mitchell, *Lead Senior Academic Advisor*

Sylvie Aubin, *Academic Program Manager*

Location: Baker Hall 129
statadvising@andrew.cmu.edu (statadvising@stat.cmu.edu)

The Major in Economics and Statistics provides an interdisciplinary course of study aimed at students with a strong interest in the empirical analysis of economic data. With a joint curriculum from the Department of Statistics and Data Science and the Undergraduate Economics Program, the major provides students with a solid foundation in the theories and methods of both fields. Students in this major are trained to advance the understanding of economic issues through the analysis, synthesis and reporting of data using the advanced empirical research methods of statistics and econometrics. Graduates are well positioned for admission to competitive graduate programs, including those in statistics, economics and management, as well as for employment in positions requiring strong analytical and conceptual skills - especially those in economics, finance, education, and public policy.

All economics courses counting towards an economics degree must be completed with a grade of "C" or higher.

Curriculum

The requirements for the B.S. in Economics and Statistics are the following:

1. MATHEMATICAL FOUNDATIONS (PREREQUISITES) 29-42 UNITS

Mathematics is the language in which statistical models are described and analyzed, so some experience with basic calculus and linear algebra is an important component for anyone pursuing a program of study in Economics and Statistics.

CALCULUS

Complete one of the two following sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

SEQUENCE 1

21-111	Calculus I	10
21-112	Calculus II	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

SEQUENCE 2

21-120	Differential and Integral Calculus	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

NOTES:

- Passing the Mathematical Sciences 21-120 assessment test is an acceptable alternative to completing 21-120.

Note: Taking/having credit for both 21-111 and 21-112 is equivalent to 21-120. The Mathematical Foundations total is then 48-49 units. The Economics and Statistics major would then total 201-211 units.

Linear Algebra

One of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	11
21-242	Matrix Theory	11

Note: 21-241 and 21-242 are intended only for students with a very strong mathematical background.

II. Foundations 54 units

2. Economics Foundations 18 UNITS

Take one of the following courses:		
73-102	Principles of Microeconomics *	9
73-104	Principles of Microeconomics Accelerated **	9
Take the following course:		
73-103	Principles of Macroeconomics	9

*Students who place out of 73-102 based on the economics placement exam will receive a pre-req waiver for 73-102 and are waived from taking 73-102

**This course requires students to complete a 4 or 5 on the AP Microeconomics exam or qualifying score on the IB/Cambridge Exams. 73-104 will substitute for any 73-102 prerequisite requirement in other courses. 73-104 is a more rigorous introduction to microeconomics, is taught at a faster pace than 73-102, and dives a bit deeper into key topics. It is designed for students who have prior knowledge to fundamental economic concepts through AP/IB/ Cambridge coursework. Enrollment in 73-104 requires special permission. Students who wish to take this course should add themselves to the 73-104 waitlist once registration opens. The Tepper School will verify the advancement placement scores and will enroll students in 73-104

3. Statistical Foundations 36 UNITS

DATA ANALYSIS

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfy the Dietrich College Core Requirement in Statistical Reasoning. This course is therefore recommended for students in the college. (Note: a score of 5 on the Advanced Placement [AP] Exam in Statistics may be used to waive this requirement). 36-220 emphasizes examples in engineering.

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students' previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

Sequence 1 (For students beginning their freshman or sophomore year)

Beginning*

Choose *one* of the following courses:

36-200	Reasoning with Data *	9
36-220	Engineering Statistics and Quality Control	9

*A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement. 36-220 emphasizes examples in engineering and Architecture.

Note: Students who enter the program with 36-235 or 36-236 should discuss options with an advisor. Any 36-300 or 36-400 level course in Data Analysis that does not satisfy any other requirement for the Economics and Statistics Major may be counted as a Statistical Elective.

Intermediate*

Choose *one* of the following courses:

36-202	Methods for Statistics & Data Science **	9
36-290	Introduction to Statistical Research Methodology	9
36-309	Experimental Design for Behavioral & Social Sciences	9

* Or extra data analysis course in Statistics
** Must take prior to 36-401 Modern Regression, if not, an additional Advanced Statistics Elective is required.

Advanced Statistics Elective
Choose *two* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-470	Special Topics: Statistical Methods in Health Sciences	9
36-471	Special Topics: Time Series	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Sequence 2 (For students beginning later in their college career)

Advanced Statistics Electives
Choose *three* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-470	Special Topics: Statistical Methods in Health Sciences	9
36-471	Special Topics: Time Series	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

**All Special Topics are not offered every semester, and new Special Topics are regularly added. See section 5 for details.

III. Disciplinary Core 136-139 units

1. Economics Core 27 UNITS

73-230	Intermediate Microeconomics	9
73-240	Intermediate Macroeconomics	9
70-340	Business Communications	9

Economics Quantitative Analysis Requirements 27 UNITS

Course List		
73-265	Economics and Data Science	9
73-274	Econometrics I	9
Take one of the following courses:		
73-374	Econometrics II	9
73-423	Forecasting for Economics and Business	9
70-467	Machine Learning for Business Analytics	9

2. Statistics Core 36 UNITS

Take one of the following courses:		
36-235	Probability and Statistical Inference I *#	9
36-225	Introduction to Probability Theory	9
Take one of the following courses:		
36-236	Probability and Statistical Inference II **	9
36-226	Introduction to Statistical Inference	9
36-326	Mathematical Statistics (Honors)	9
Take both of the following courses:		
36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

*In order meet the prerequisite requirements for the major, a grade of C or better is required in 36-235 (or equivalents), 36-236 or 36-326 and 36-401.

#It is possible to substitute 36-218, 36-219, 36-225, 15-259, or 21-325 for 36-235. 36-235 is the standard introduction to probability, 36-219 is tailored for engineers and computer scientists, 36-218 and 15-259 are more mathematically rigorous classes for Computer Science students and more mathematically advanced Statistics students (Statistics students need advisor approval to enroll), and 21-325 is a rigorous Probability Theory course offered by the Department of Mathematics.

**It is possible to substitute 36-226 or 36-326 for 36-236. 36-236 is the standard introduction to statistical inference.

Please note that students who complete 36-235 are expected to take 36-236 to fulfill their theory requirements. Students who choose to take 36-225 instead will be required to take 36-226 afterward, they will not be eligible to take 36-236.

3. Statistical Computing 19-21 UNITS

Take one of the following two courses:		
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
Complete the following course:		
36-350	Statistical Computing	9

4. Advanced Electives 36 units

Students must take two advanced Economics elective courses (numbered 73-300 through 73-495, excluding 73-374) and two (or three - depending on previous coursework, see Section 3) advanced Statistics elective courses (numbered 36-303, 36-311, 36-313, 36-315, 36-318, 36-46x, 36-490, or 36-497).

Total number of units for the major	**219-235 Units**
Total number of units for the degree	**360 Units**

Professional Development

While not required, students are strongly encouraged to take advantage of professional development opportunities and/or coursework. The Department of Statistics and Data Science also offers a series of workshops pertaining to resume preparation, graduate school applications, careers in the field, among other topics. Students should also take advantage of the Career and Professional Development Center.

Additional Major in Economics and Statistics

Students who elect Economics and Statistics as an additional major must fulfill all Economics and Statistics degree requirements. Majors in many other programs would naturally complement an Economics and Statistics Major, including Tepper's undergraduate business program, Social and Decision Sciences, Policy and Management, and Psychology.

With respect to double-counting courses, it is departmental policy that students must have at least six courses [three Economics (73-xxx) and three Statistics (36-xxx)] that do *not* count for their primary major. If students do not have at least three ECON and three STA classes, they will need to take additional advanced data analysis or economics electives, depending on where the double-counting issue is.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major's requirements overlap with the requirements for a Major in Economics and Statistics.

Substitutions and Waivers

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor. The final authority in such decisions rests there. The Department of Statistics and Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Economics and Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Economics and Statistics.

Sample Program

The following sample program illustrates one way to satisfy the requirements of the Economics and Statistics Major. Keep in mind that the program is flexible and can support other possible schedules (see footnotes below the schedule).

First-Year		**Second-Year**	
Fall	**Spring**	**Fall**	**Spring**
21-120 Differential and Integral Calculus	36-202 Methods for Statistics & Data Science	36-235 Probability and Statistical Inference I	36-236 Probability and Statistical Inference II
36-200 Reasoning with Data	21-256 Multivariate Analysis	73-230 Intermediate Microeconomics	21-240 Matrix Algebra with Applications
73-102 Principles of Microeconomics	73-103 Principles of Macroeconomics	73-265 Economics and Data Science	73-240 Intermediate Macroeconomics
15-110 Principles of Computing	-----	70-340 Business Communications	73-274 Econometrics I
	-----	-----	-----

Third-Year		**Fourth-Year**	
Fall	**Spring**	**Fall**	**Spring**
36-350 Statistical Computing	36-402 Advanced Methods for Data Analysis	36-3xx or 36-4xx Advanced Data Analysis Elective	36-3xx or 36-4xx Advanced Data Analysis Elective
36-401 Modern Regression	-----	Economics Elective	Economics Elective
Advanced Quantitative Analysis Course	-----	-----	-----
-----		-----	-----
-----		-----	-----

*In each semester, ----- represents other courses (not related to the major) which are needed in order to complete the 360 units that the degree requires.

Prospective PhD students are advised to add 21-127 fall of sophomore year, replace 21-240 with 21-241, add 21-260 in spring of junior year and 21-355 in fall of senior year.

B.S. in Statistics and Machine Learning

Peter Freeman, *Undergraduate Program Director*

Location: Baker Hall 229
pfreeman@andrew.cmu.edu

Amanda Mitchell, *Lead Senior Academic Advisor*

Glenn Clune, *Academic Program Manager*

Sylvie Aubin, *Academic Program Manager*

Peter Long, *Academic Advisor*

Location: Baker Hall 129
statadvising@andrew.cmu.edu (statadvising@stat.cmu.edu)

Students in the Bachelor of Science in Statistics and Machine Learning program develop and master a wide array of skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. In addition, Statistics and Machine Learning majors gain experience in applying statistical tools to real problems in other fields and learn the nuances of interdisciplinary collaboration. This program is geared towards students interested in statistical computation, data science, or “Big Data” problems. The requirements for the B.S. in Statistics and Machine Learning are detailed below and are organized by categories.

Curriculum

1. Mathematical Foundations (Prerequisites) 41–54 units

Mathematics is the language in which statistical models are described and analyzed, so some experience with basic calculus and linear algebra is an important component for anyone pursuing a program of study in Statistics and Machine Learning.

Calculus*

Complete one of the following sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

Sequence 1

21-111	Calculus I	10
21-112	Calculus II	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

Sequence 2

21-120	Differential and Integral Calculus	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

Notes:

- Passing the Mathematical Sciences 21-120 assessment test is an acceptable alternative to completing 21-120

Linear Algebra**

Complete *one* of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	11
21-242	Matrix Theory	11

* It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be completed before taking 36-401 Modern Regression.

21-241 and 21-242 are intended only for students with a very strong mathematical background.

Mathematical Theory

21-127	Concepts of Mathematics	12

2. Data Analysis 45–54 units

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfies the Dietrich College Core Requirement in Statistical Reasoning. This course is therefore recommended for students in the college. (Note: a score of 5 on the Advanced Placement [AP] Exam in Statistics may be used to waive this requirement). 36-220 emphasizes examples in engineering and architecture.

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students' previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

Sequence 1 (For students beginning their freshman or sophomore year)

Beginning*

Choose one of the following courses:

36-200	Reasoning with Data *	9
36-220	Engineering Statistics and Quality Control	9

*A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement. 36-220 emphasizes examples in engineering and Architecture.

Note: Students who enter the program with 36-235 or 36-236 should discuss options with an advisor.

Intermediate*

Choose *one* of the following courses:

36-202	Methods for Statistics & Data Science **	9
36-309	Experimental Design for Behavioral & Social Sciences	9
36-290	Introduction to Statistical Research Methodology	9
*Or an extra Advanced Data Analysis Elective		
**Must take prior to 36-401 or will need to take an additional Advanced Data Analysis Elective		

Advanced Data Analysis Electives

Choose _two_ of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-470	Special Topics: Statistical Methods in Health Sciences	9
36-471	Special Topics: Time Series	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

All Special Topics are not offered every semester. They are on a rotation and new Special Topics are regularly added.

and take the following *two* courses:

36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

Sequence 2 (For students beginning later in their college career)

Advanced Data Analysis Electives

Choose _three_ of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9

36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-470	Special Topics: Statistical Methods in Health Sciences	9
36-471	Special Topics: Time Series	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

All Special Topics are not offered every semester. They are on a rotation and new Special Topics are regularly added.

and take the following *two* courses:

36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

3. Probability Theory and Statistical Theory 18 units

The theory of probability gives a mathematical description of the randomness inherent in our observations. It is the language in which statistical models are stated, so an understanding of probability is essential for the study of statistical theory. Statistical theory provides a mathematical framework for making inferences about unknown quantities from data. The theory reduces statistical problems to their essential ingredients to help devise and evaluate inferential procedures. It provides a powerful and wide-ranging set of tools for dealing with uncertainty.

To satisfy the theory requirement take the following *two* courses**:

Take one of the following courses:		
36-235	Probability and Statistical Inference I *	9
36-225	Introduction to Probability Theory	9
And one of the three following courses:		
36-226	Introduction to Statistical Inference	9
36-236	Probability and Statistical Inference II **	9
36-326	Mathematical Statistics (Honors)	9

*It is possible to substitute 36-218, 36-219, 36-225, 15-259, or 21-325 for 36-235 . 36-235 is the standard (and recommended) introduction to probability, 36-219 is tailored for engineers and computer scientists, 36-218 and 15-259 are more mathematically rigorous classes for Computer Science students and more mathematically advanced (students need advisor approval to enroll), and 21-325 is a rigorous probability theory course offered by the Department of Mathematics.)

**It is possible to substitute 36-226 or 36-326(honors course) for 36-236. 36-236 is the standard (and recommended) introduction to statistical inference.

Please note that students who complete 36-235 are expected to take 36-236 to complete their theory requirements. Students who choose to take 36-225 instead will be required to take 36-226 afterward. They will not be eligible to take 36-236.

Comments:

(i) In order to meet the prerequisite requirements, a grade of at least a C is required in 36-235 (or equivalent), 36-236 (or equivalent) and 36-401.

4. Statistical Computing 9 units

Fundamental to the practice of statistics and data science is the ability to effectively code data processing and analysis tasks. Within the domain of statistics, the use of the programming language R is ubiquitous, and thus we expose students to it throughout the curriculum (and in depth in Statistical Computing).

36-350	Statistical Computing	9

5. Machine Learning/Computer Science 57-60 units

Statistical modeling in practice nearly always requires computation in one way or another. Computational algorithms are sometimes treated as “black boxes," whose innards the statistician need not pay attention to. But this attitude is becoming less and less prevalent, and today there is much to be gained from a strong working knowledge of computational tools. Understanding the strengths and weaknesses of various methods allows the data analyst to select the right tool for the job; understanding how they can be adapted to work in new settings greatly extends the realm of problems that he/she can solve. While all majors in Statistics & Data Science are given solid grounding in computation, extensive computational training is really what sets the B.S. in Statistics and Machine Learning program apart. Note that we would advise those students who are considering receiving course credit for Fundamentals of Programming and Computer Science given their score on the AP Computer Science A exam to actually take the course at Carnegie Mellon instead, as within data science as a whole Python is far more widely used than Java.

15-112	Fundamentals of Programming and Computer Science	12
15-122	Principles of Imperative Computation	12
15-351	Algorithms and Advanced Data Structures	12
or 15-451	Algorithm Design and Analysis	
10-301	Introduction to Machine Learning	12
or 10-315	Introduction to Machine Learning (SCS Majors)	

and take *one* of the following Machine Learning Advanced Electives:

05-434	Machine Learning in Practice	12
10-403	Deep Reinforcement Learning & Control	12
10-703	Deep Reinforcement Learning & Control	12
10-405	Machine Learning with Large Datasets (Undergraduate)	12
10-605	Machine Learning with Large Datasets	12
10-417	Intermediate Deep Learning	12
10-418	Machine Learning for Structured Data	12
10-707	Advanced Deep Learning	12
11-344	Machine Learning in Practice	12
11-411	Natural Language Processing	12
11-441	Machine Learning with Graphs	9
11-485	Introduction to Deep Learning	9
11-661	Language and Statistics	12
11-761	Language and Statistics	12
15-281	Artificial Intelligence: Representation and Problem Solving	12
15-386	Neural Computation	9
15-387	Computational Perception	9
16-311	Introduction to Robotics	12
16-385	Computer Vision	12
16-720	Computer Vision	12
*PhD level ML course as approved by Statistics advisor		
** Independent research with an ML faculty member as approved by Statistics Advisor		
***This is not an exhaustive list. Please contact your Academic Advisor if there is a course you are considering taking that is not on this list.		

Total number of units for the major	**170-195 Units**
Total number of units for the degree	**360 Units**

Recommendations

Students in the Dietrich College of Humanities and Social Sciences who wish to declare a Statistics and Machine Learning major are advised to complete both the calculus requirement (one Mathematical Foundations calculus sequence) and the Beginning Data Analysis course 36-200 Reasoning with Data by the end of their Freshman year.

The linear algebra requirement is a prerequisite for the course 36-401 . It is therefore essential that students complete this requirement by their junior years at the latest.

Recommendations for Prospective Ph.D. Students

Students interested in pursuing a Ph.D. in Statistics or Machine Learning (or related programs) after completing their undergraduate degree are strongly recommended to take additional Mathematics courses. Although 21-240 Matrix Algebra with Applications is recommended for Statistics majors, students interested in PhD programs should consider taking 21-241 Matrices and Linear Transformations or 21-242 Matrix Theory instead. Additional courses to consider are 21-228 Discrete Mathematics, 21-341

Linear Algebra, 21-355 Principles of Real Analysis I, and 21-356 Principles of Real Analysis II.

Additional experience in programming and computational modeling is also recommended. Students should consider taking more than one course from the list of Machine Learning electives provided under the Computing section.

Additional Major in Statistics and Machine Learning

Students who elect Statistics and Machine Learning as a second or third major must fulfill *all* degree requirements.

With respect to double-counting courses, it is departmental policy that students must have at least six courses (three Computer Science/Machine Learning and three Statistics) that do *not* count for their primary major. If students do not have at least six, they will need to take additional advanced data analysis or ML electives, depending on where the double counting issue is.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major's requirements overlap with the requirements for the B.S. in Statistics and Machine Learning.

Substitutions and Waivers

Many departments require Statistics & Data Science courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics & Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics & Data Science. In many of these cases, the student will need to take additional courses to satisfy major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics and Machine Learning.

Research

The Statistics & Data Science program encourages students to gain research experience. Opportunities within the department include Summer Undergraduate Research Apprenticeships (SURA), run in association with the university's Office of Undergraduate Research and Scholar Development, and the departmental capstone courses 36-490 Undergraduate Research or 36-497 Corporate Capstone Project. (Note that these courses require an application.) Additionally, students can pursue independent study. For those students who maintain a quality point average of 3.25 overall or above, there is also the Dietrich College Senior Honors Program (p.).

The faculty in the Statistics & Data Science department largely work within the domains of statistical theory and methodological development, areas that require advanced mathematical training. Thus we encourage students to search broadly for research opportunities: faculty, post-doctoral researchers, and graduate students in many departments throughout the university have data to analyze and would welcome the help of undergraduate statistics students.

Sample Programs

The following sample program illustrates one way to satisfy the requirements for the B.S. in Statistics and Machine Learning. Keep in mind that the program is flexible and can support other possible schedules (see footnotes below the schedule). Sample program 1 is for students who have not satisfied the basic calculus requirements. Sample program 2 is for students who have satisfied the basic calculus requirements and choose option 2 for their data analysis courses (see section #2)

Schedule 1

First-Year		Second-Year	
Fall	**Spring**	**Fall**	**Spring**
36-200 Reasoning with Data	36-202 Methods for Statistics & Data Science	36-235 Probability and Statistical Inference I	36-236 Probability and Statistical Inference II
21-120 Differential and Integral Calculus	21-256 Multivariate Analysis	21-127 Concepts of Mathematics	21-241 Matrices and Linear Transformations
-----	15-112 Fundamentals of Programming and Computer Science	-----	15-122 Principles of Imperative Computation
-----	-----	-----	36-350 Statistical Computing
-----	-----		-----

Third-Year		Fourth-Year	
Fall	**Spring**	**Fall**	**Spring**
36-401 Modern Regression	36-402 Advanced Methods for Data Analysis	10-301 Introduction to Machine Learning	Machine Learning Advanced Elective
-----	15-351 Algorithms and Advanced Data Structures	36-3xx or 36-4xx Advanced Data Analysis Elective	36-3xx or 36-4xx Advanced Data Analysis Elective
-----	-----	-----	-----
-----	-----	-----	-----
-----	-----	-----	-----

*In each semester, ----- represents other courses (not related to the major) which are needed in order to complete the 360 units that the degree requires.

Schedule 2

First-Year		Second-Year	
Fall	**Spring**	**Fall**	**Spring**
36-200 Reasoning with Data	21-127 Concepts of Mathematics	36-235 Probability and Statistical Inference I	36-236 Probability and Statistical Inference II
21-256 Multivariate Analysis	-----	15-122 Principles of Imperative Computation	21-241 Matrices and Linear Transformations

-----	-----	-----	-----
-----	-----	-----	-----
-----	-----	-----	-----

*In each semester, "-----" represents other courses (not related to the major) which are needed in order to complete the 360 units that the degree requires.

The Minor in Statistics

Peter Freeman, *Undergraduate Program Director*

Location: Baker Hall 229
pfreeman@andrew.cmu.edu

Amanda Mitchell, *Lead Senior Academic Advisor*

Location: Baker Hall 129
statadvising@stat.cmu.edu

The Minor in Statistics develops skills that complement major study in other disciplines. The program helps the student master the basics of statistical theory and advanced techniques in data analysis. This is a good choice for deepening understanding of statistical ideas and for strengthening research skills.

In order to complete a minor in Statistics a student must satisfy all of the following requirements:

1. Mathematical Foundations (Prerequisites) 29-41 units

Calculus:*:

Complete *one* of the following two sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

Sequence 1

21-111	Calculus I	10
21-112	Calculus II	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

Sequence 2

21-120	Differential and Integral Calculus	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

Note: Passing the Mathematical Sciences 21-120 assessment test if an acceptable alternative to completing 21-120.

Linear Algebra:

Complete *one* of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	11
21-242	Matrix Theory	11

*It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be complete before taking 36-401 Modern Regression or 36-46X or 36-47X Special Topics.

21-241 and 21-242 are intended only for students with a very strong mathematical background.

2. Data Analysis 36 units

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfies the Dietrich College Core Requirement in Statistical Reasoning. This course is therefore recommended for students in the College. (Note: A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement). 36-220 is another course that can complete the Beginning Data Analysis requirement that emphasizes examples in engineering and architecture.

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis and Methodology courses draw on students' previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

<u>Sequence 1 (For students beginning their freshman or sophomore year)</u>

Beginning Data Analysis*

Choose *one* of the following courses:

36-200	Reasoning with Data *	9
36-220	Engineering Statistics and Quality Control	9

*A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement. 36-220 emphasizes examples in engineering and Architecture.

Intermediate Data Analysis*

Choose *one* of the following courses:

36-202	Methods for Statistics & Data Science **	9
36-290	Introduction to Statistical Research Methodology	9
36-309	Experimental Design for Behavioral & Social Sciences	9

*The Beginning and Intermediate Data Analysis sequence (i.e. 36-200 and 36-202, or equivalents as listed above) can be replaced with an *additional* Advanced Analysis and Methodology course, shown below in Sequence 2.

**Must take the Intermediate Data Analysis requirement prior to 36-401, if not, an additional Advanced Analysis and Methodology course is required.

Advanced Data Analysis and Methodology

Take the following course:

36-401	Modern Regression	9

and <u>*one*</u> of the following courses:

36-402	Advanced Methods for Data Analysis	9
36-410	Introduction to Probability Modeling	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-470	Special Topics: Statistical Methods in Health Sciences	9
36-471	Special Topics: Time Series	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Special Topics rotate and new ones are regularly added.

<u>Sequence 2 (For students beginning later in their college career)</u>

Advanced Data Analysis and Methodology

Take the following course:

36-401	Modern Regression	9

and take <u>*two*</u> of the following courses (one of which must be 400-level):

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-402	Advanced Methods for Data Analysis	9
36-410	Introduction to Probability Modeling	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9

36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-470	Special Topics: Statistical Methods in Health Sciences	9
36-471	Special Topics: Time Series	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Special Topics rotate and new ones are regularly added.

3. Probability Theory and Statistical Theory 18 units

The theory of probability gives a mathematical description of the randomness inherent in our observations. It is the language in which statistical models are stated, so an understanding of probability is essential for the study of statistical theory. Statistical theory provides a mathematical framework for making inferences about unknown quantities from data. The theory reduces statistical problems to their essential ingredients to help devise and evaluate inferential procedures. It provides a powerful and wide-ranging set of tools for dealing with uncertainty.

To satisfy the theory requirement take the following *two* courses:

Take one of the following courses:		
36-235	Probability and Statistical Inference I *	9
36-225	Introduction to Probability Theory	9
And one of the following three courses:		
36-236	Probability and Statistical Inference II **	9
36-226	Introduction to Statistical Inference	9
36-326	Mathematical Statistics (Honors)	9

*It is possible to substitute 36-218, 36-219 , 36-225, 15-259, or 21-325 for 36-235 . (36-235 is the standard (and recommended) introduction to probability, 36-219 is tailored for engineers and computer scientists, 36-218 and 15-259 are more mathematically rigorous classes for Computer Science students and more mathematically advanced (students need advisor approval to enroll), and 21-325 is a rigorous Probability Theory course offered by the Department of Mathematics.) 36-326 is not offered every semester/year but can be substituted for 36-226 and is considered an honors course.

**It is possible to substitute 36-226 or 36-326 (honors course) for 36-236. 36-236 is the standard (and recommended) introduction to statistical inference.

Please note that students who complete 36-235 are expected to take 36-236 to fulfill their theory requirements. Students who choose to take 36-225 instead will be required to take 36-226 afterward, they will not be eligible to take 36-236.

Comments:

(i) In order to be in good standing and to continue with the minor, a grade of at least a C is required in 36-235 (or equivalent), and 36-236 (or equivalent).

Total number of units required for the minor	**83 Units**

Double Counting

With respect to double-counting courses, it is departmental policy that students must have at least three statistics courses (36-xxx) that do *not* count for their primary major. If students do not have at least three, they need to take additional advanced electives. Make sure to consult your Statistics Minor advisor regarding double counting.

Sample Programs for the Minor

The following two sample programs illustrates two (of many) ways to satisfy the requirements of the Statistics Minor. Keep in mind that the program is flexible and can support many other possible schedules.

The first schedule uses calculus sequence 1, 36-200, and 36-202 to satisfy the intermediate data analysis requirement. The second schedule is an example of the case when a student enters the Minor through 36-235 and 36-236 (and therefore skips the beginning data analysis course). The schedule uses calculus sequence 2, and an advanced data analysis elective (to replace the beginning data analysis course).

Schedule 1

First-Year		Second-Year	
Fall	**Spring**	**Fall**	**Spring**
21-111 Calculus I	21-112 Calculus II	36-202 Methods for Statistics & Data Science	21-240 Matrix Algebra with Applications
36-200 Reasoning with Data		21-256 Multivariate Analysis	

Third-Year		Fourth-Year	
Fall	**Spring**	**Fall**	**Spring**
36-235 Probability and Statistical Inference I	36-236 Probability and Statistical Inference II	36-401 Modern Regression	Any 36-4xx level course

Schedule 2

First-Year		Second-Year	
Fall	**Spring**	**Fall**	**Spring**
21-120 Differential and Integral Calculus	21-256 Multivariate Analysis	36-235 Probability and Statistical Inference I	36-236 Probability and Statistical Inference II
			21-240 Matrix Algebra with Applications

Third-Year		Fourth-Year
Fall	**Spring**	**Fall**
36-401 Modern Regression	36-3xx or 36-4xx Advanced Data Analysis Elective	One 36-4xx Advanced Methodology Course

Statistics & Data Science Dietrich Senior Honors Thesis

Eligibility

Eligibility is determined by Dietrich College. Students who are eligible will be notified prior to their senior year.

Dietrich College Requirements (https://www.cmu.edu/dietrich/students/undergraduate/programs/senior-honors/):

- Students *must have a major in Dietrich College*, either as a primary or an additional major; or be in the BHA (https://www.cmu.edu/interdisciplinary/programs/bha.html) program.
- Cumulative QPA through the end of the junior year of at least 3.25 overall, and 3.50 in the Dietrich College major associated with the proposed project.
- Departmental sponsorship in the form of an agreement by a faculty member to serve as advisor for the 2-semester/18 unit Honors project (graduate students may not serve as advisors; adjunct faculty may do so, but only in collaboration with a regular faculty member), and approval by the department head.

Statistics & Data Science Requirements Overview

The below guidelines apply to any Statistics & Data Science students who are doing an honors thesis that has been *approved through the Statistics & Data Science department* (i.e. our department signs off on the thesis paperwork). If you are a Stat & DS student pursuing a Dietrich senior honors thesis through another department (i.e. a different department than Stat & DS is signing off on it) then these guidelines do not apply to you.

In order to be approved for a thesis with the Stat & DS department the project needs to have a significant statistical component. This will be discussed and confirmed during the proposal approval phase of applying.

Honors Thesis Timeline

Senior Year - Fall Semester

The Dietrich College senior honors thesis is a year-long project. As such, after the fall semester of a student's senior year a progress report will be due to Undergraduate Program Director, Peter Freeman (pfreeman@andrew.cmu.edu), for review.

Progress Paper Requirements:

- Minimum length - 5 pages of text (not including graphs/figures/ results)
- This paper should build substantially on the proposal, and lay out what work has been done up to this point, as well as an action plan for the spring semester.
- Must be sent to Undergraduate Program Director, Peter Freeman (pfreeman@andrew.cmu.edu), by the last day of classes for the fall semester (typically the first week of December).

Senior Year - Spring Semester

Final Thesis Requirements:

In alignment with a typical advanced data analysis (ADA) project in the field of Statistics the minimum required length of the final thesis must be a minimum of 15 written pages, no more than 18 single-spaced pages, 12-point font. *This does *not* include figures.*

- Figures can be embedded within the text (so long as the overall text length requirement is met) but can also be provided as appendices after the main body of the text.
- Reports should be written in IMRaD format (Introduction, Methods, Results, and Discussion), where the "Introduction" can be a Background and Significance section followed by a Data section.
- All theses are due to the Undergraduate Program Director, Peter Freeman (pfreeman@andrew.cmu.edu), and Department Head, Rebecca Nugent (rnugent@andrew.cmu.edu), at the end of the 12th week of class in spring semester (roughly the first week of April).

Substitutions and Waivers

Many departments require Statistics & Data Science courses as part of their major or minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics & Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

However, the Statistics & Data Science department's Director of Undergraduate Studies can provide advice and information to the student's advisor about the viability of a proposed substitution. Students should make available as much information as possible concerning proposed substitutions. Students seeking waivers may be asked to demonstrate mastery of the material.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics & Data Science. In many of these cases, the student will need to take additional courses to satisfy the Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics.

Statistics majors and minors seeking substitutions or waivers should speak to a departmental academic advisor.

Faculty

SIVARAMAN BALAKRISHNAN, Associate Professor – Ph.D., Carnegie Mellon; Carnegie Mellon, 2015–

ELI BEN-MICHAEL, Assistant Professor, Joint With Heinz College – Ph.D., University of California; Carnegie Mellon, 2022–

ZACHARY BRANSON, Assistant Teaching Professor – Ph.D., Harvard University; Carnegie Mellon, 2019–

TAEYONG PARK, Assistant Teaching Professor – Ph.D., Washington University in St. Louis; Carnegie Mellon, 2018–

ALESSANDRO RINALDO, Professor – Ph.D., Carnegie Mellon; Carnegie Mellon, 2005–

SAM VENTURA – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2015–

Department of Statistics and Data Science Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes *(*https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/*) each semester for course offerings and for any necessary pre-requisites or co-requisites.*

36-198 Research Training: Writing in Statistics

Intermittent
TBD
Prerequisite: 36-200

36-200 Reasoning with Data

All Semesters: 9 units
This course is an introduction to learning how to make statistical decisions and now to reason with data. The approach will emphasize the thinking-through of empirical problems from beginning to end and using statistical tools to look for evidence for/against explicit arguments/hypotheses. Types of data will include continuous and categorical variables, images, text, networks, and repeated measures over time. Applications will largely drawn from interdisciplinary case studies spanning the humanities, social sciences, and related fields. Methodological topics will include basic exploratory data analysis, elementary probability, significance tests, and empirical research methods. There will be once-weekly computer lab for additional hands-on practice using an interactive software platform that allows student-driven inquiry.

36-202 Methods for Statistics & Data Science

All Semesters: 9 units
This course builds on the principles and methods of statistical reasoning developed in 36-200 (or its equivalents). The course covers simple and multiple regression, basic analysis of variance methods, logistic regression, and introduction to data mining including classification and clustering. Students will also learn the principles of overfitting, training vs testing, ensemble methods, variable selection, and bootstrapping. Course objectives include applying the basic principles and methods that underlie statistical practice and empirical research to real data sets and interdisciplinary problems. Learning the Data Analysis Pipeline is strongly emphasized through structured coding and data analysis projects. In addition to three lectures a week, students attend a computer lab once a week for "hands-on" practice of the material covered in lecture. There is no programming language pre-requisite. Students will learn the basics of R Markdown and related analytics tools.
Prerequisites: 36-200 or 36-220 or 36-247 or 36-207 or 70-207

36-204 Discovering the Data Universe

Intermittent: 3 units
Every day we wake up in the data universe, we use the information around us to make decisions. We are constantly evaluating and interpreting data from our environment, in everything from spreadsheets to Instagram posts. At the same time, our own personal data are being observed and recorded and #8212;through websites we visit online, our smart devices, and even our interactions with other students and faculty at CMU. Navigating this data universe requires knowledge of what data is and how to use it responsibly. For example, can a plant be a data set? Discovering the truth behind a piece of data, including who made it, what it looks like, and what we can learn from it, is a critical skill. Understanding data can be the difference between being able to distinguish truth from lies; and the key to identifying your data footprint and succeeding in research and in your career. In this course, we will explore the data universe from multiple angles and across several types of data. We will define, find, and analyze data, and most importantly, identify narratives within data to tell stories about the world around us. We will examine data using the following questions: How can we tell multiple stories from the same dataset? What biases can exist in data? And, who creates or decides what data matters enough to collect, preserve, and share? NOTE: There will be one in person and one virtual pre-recorded lecture each week.

36-218 Probability Theory for Computer Scientists

Fall and Spring: 9 units
Probability theory is the mathematical foundation for the study of both statistics and of random systems. This course is an intensive introduction to probability,from the foundations and mechanics to its application in statistical methods and modeling of random processes. Special topics and many examples are drawn from areas and problems that are of interest to computer scientists and that should prepare computer science students for the probabilistic and statistical ideas they encounter in downstream courses and research. A grade of C or better is required in order to use this course as a pre-requisite for 36-226, 36-326, and 36-410. If you hold a Statistics primary/additional major or minor you will be required to complete 36-226. For those who do not have a major or minor in Statistics, and receive at least a B in 36-218, you will be eligible to move directly onto 36-401.
Prerequisites: (21-111 and 21-112) or 21-120 or 21-256 or 21-259

Course Website: http://www.stat.cmu.edu/academics/courselist (http://www.stat.cmu.edu/academics/courselist/)

36-219 Probability Theory and Random Processes

All Semesters: 9 units
This course provides an introduction to probability theory. It is designed for students in electrical and computer engineering. Topics include elementary probability theory, conditional probability and independence, random variables, distribution functions, joint and conditional distributions, limit theorems, and an introduction to random processes. Some elementary ideas in spectral analysis and information theory will be given. A grade of C or better is required in order to use this course as a pre-requisite for 36-226 and 36-410.
Prerequisites: (21-111 and 21-112) or 21-120 or 21-256 or 21-259

36-220 Engineering Statistics and Quality Control

Fall and Spring: 9 units
This is a course in introductory statistics for engineers with emphasis on modern product improvement techniques. Besides exploratory data analysis, basic probability, distribution theory and statistical inference, special topics include experimental design, regression, control charts and acceptance sampling.
Prerequisites: 21-120 or 21-112

36-225 Introduction to Probability Theory

Fall and Summer: 9 units
This course is the first half of a year-long course which provides an introduction to probability and mathematical statistics for students in the data sciences. Topics include elementary probability theory, conditional probability and independence, random variables, distribution functions, joint and conditional distributions, law of large numbers, and the central limit theorem.
Prerequisites: (21-112 and 21-111) or 21-120 or 21-256 or 21-259

Course Website: http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/depar (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/depar/)

36-226 Introduction to Statistical Inference

Spring and Summer: 9 units
This course is the second half of a year-long course in probability and mathematical statistics. Topics include maximum likelihood estimation, confidence intervals, hypothesis testing, and properties of estimators, such as unbiasedness and consistency. If time permits there will also be a discussion of linear regression and the analysis of variance. A grade of C or better is required in order to advance to 36-401, 36-402 or any 36-46x course. Not open to students who have received credit for 36-626.
Prerequisites: 21-325 Min. grade C or 36-219 Min. grade C or 36-225 Min. grade C or 15-259 Min. grade C or 36-218 Min. grade C or 36-217 Min. grade C

36-235 Probability and Statistical Inference I

Fall: 9 units
This class is the first half of a two-semester, calculus-based course sequence that introduces theoretical aspects of probability and statistical inference to students. The material in this course and in 36-236 (Probability and Statistical Inference II) is organized so as to provide repeated exposure to essential concepts: the courses cover specific probability distributions and their inferential applications one after another, starting with the normal distribution and continuing with the binomial and Poisson distributions, etc. Topics specifically covered in 36-235 include basic probability, random variables, univariate and multivariate distribution functions, point and interval estimation, hypothesis testing, and regression, with the discussion being supplemented with computer-based examples and exercises (e.g., visualization and simulation). Given its organization, the course is only appropriate for those taking the full two-semester sequence, and thus it is currently open only to statistics majors (primary, additional, dual) and minors. (Check with the statistics advisors for the exact declaration deadline.) Non-majors/minors requiring a probability course are directed to take 36-225 or one of its analogues. A grade of C or better in 36-235 is required in order to advance to 36-236 (or 36-226) and/or 36-410. This course is not open to students who have received credit for 36-217, 36-218, 36-219, or 36-700, or for 21-325 or 15-259.
Prerequisites: (21-112 and 21-111) or 21-256 or 21-259 or 21-120

36-236 Probability and Statistical Inference II

Spring: 9 units
This class is the second half of a two-semester, calculus-based course sequence that introduces theoretical aspects of probability and statistical inference to students. The material in this course and in 36-235 (Probability and Statistical Inference I) is organized so as to provide repeated exposure to essential concepts: the courses cover specific probability distributions and their inferential applications one after another, starting with the normal distribution and continuing with the binomial and Poisson distributions, etc. Topics specifically covered in 36-236 include the binomial and related distributions, the Poisson and related distributions, and the uniform distribution, and how they are used in point and interval estimation, hypothesis testing, and regression. Also covered in 36-236 are topics related to multivariate distributions: marginal and conditional distributions, covariance, and conditional distribution moments. All discussion is supplemented with computer-based examples and exercises (e.g., visualization and simulation). Given its organization, the course is only appropriate for those who first take 36-235, and thus it is currently open only to statistics majors (primary, additional, dual) and minors, as well as to CS majors using both 36-235 and 36-236 to complete their probability requirement. All others are directed to take 36-226. A grade of C or better in 36-236 is required in order to advance to 36-401.
Prerequisite: 36-235 Min. grade C

36-290 Introduction to Statistical Research Methodology

Fall: 9 units
This is a first course in statistical practice, targeted to first-semester sophomores. It is designed as a high-level introduction to the ways by which statisticians go about approaching and analyzing quantitative observational data, thus preparing students for future work in capstone classes. Students in the course are taught the basic concepts of statistical learning and #8212;inference vs.prediction, supervised vs. unsupervised learning, regression vs. classification, etc. and #8212;and will reinforce this knowledge by applying, e.g., linear regression, random forest, principal components analysis, and/or hierarchical clustering and more to datasets provided by the instructor. Students will also practice disseminating the results of their analyses via oral presentations and posters. Analyses will be carried out using the R programming language.
Prerequisites: 36-220 or 70-207 or 36-207 or 36-200 or 36-247

Course Website: http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/depar (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/depar/)

36-297 Early Undergraduate Research

Fall and Spring: 6 units
This course is designed to give early undergraduate students (those who have not yet taken 36-401) experience navigating real data science research problems. Small groups of students are matched with clients and do supervised research for a semester. From an academic perspective, the course presents an opportunity for students to gain skills in, e.g., data acquisition and cleaning, exploratory data analysis, and basic statistical modeling; which skills are practiced is project-dependent. Additionally, the course will help students develop the professional skills necessary for successfully navigating team-based project delivery roles. Programming will be performed in R and/or Python; previous programming experience is not required.

36-300 Statistics & Data Science Internship

Summer: 3 units
The Department of Statistics and amp; Data Science considers experiential learning as an integral part of our program. One such option is through an internship. If a student has an internship, they dont have to register for this class unless they want it listed on their official transcripts. This process should be used by international students interested in Curricular Practical Training (CPT) and should also be authorized by the Office of International Education (OIE). More information regarding CPT is available on OIE's website. This course will be taken as Pass/Fail, and students will be charged tuition for 3 units. There is an approval process in order to register for this course. Please contact your advisor the Department of Statistics and amp; Data Science for more details.

36-301 Documenting Human Rights

Intermittent: 9 units
This course will teach students about the origins of modern human rights and the evolution of methods to document the extent to which these rights are being upheld or violated. The need to understand and document human rights issues is at the center of the most pressing current events. From threats to democracy and civil rights to work holding perpetrators of mass harm accountable in legal proceedings to efforts to quantify and advance economic, social, cultural, and environmental rights, making human rights violations visible is fundamental to achieving a more just world. We will begin with an overview of the history of human rights, the main philosophical and political debates in the field, and the most relevant organizations, institutions, and agreements. We will then delve into specific cases that highlight methodological opportunities and challenges, including: the identification of mass atrocity victims, the disappeared, and missing migrants; efforts to estimate civilian casualties in war; the documentation of police brutality and other human rights violations with smartphones; as well as the use of satellite imagery and drone footage for the documentation of genocide, environmental rights, and war crimes. We will critically assess the technical challenges that arise in each context and how the human rights and scientific communities have responded. After reviewing these cases, we will conclude by reflection on why the documentation of human rights actually matters and what happens to evidence once it is gathered. Students will then take what they've learned and do two multidisciplinary group projects, one involving the document of a rights violation in Western Pennsylvania and the other involving an international situation. Assignments include an essay, a data analysis assignment, and a group project that include a written component, quantitative and/or qualitative data analysis, and a presentation.

36-303 Sampling, Survey and Society

Spring: 9 units
This course will revolve around the role of sampling and sample surveys in the context of U.S. society and its institutions. We will examine the evolution of survey taking in the United States in the context of its economic, social and political uses. This will eventually lead to discussions about the accuracy and relevance of survey responses, especially in light of various kinds of nonsampling error. Students will be required to design, implement and analyze a survey sample.
Prerequisites: 70-208 or 36-236 or 36-218 Min. grade B or 36-208 or 36-202 or 36-309 or 36-220 or 36-226 or 36-326

36-309 Experimental Design for Behavioral & Social Sciences

Fall and Summer: 9 units
This course focuses on the statistical aspects of the design and analysis stages of planned experiments. The design stage focuses on determining how experimental factors are allocated, the sample size necessary to achieve adequate statistical power, and how subjects/variables are measured. The analysis stage focuses on how data are collected and which statistical models are most appropriate to answer the research questions of interest. Although students will have to do some computer programming to implement these statistical techniques, the most important aspect of the course will be on interpreting analyses' results (e.g., whether a given analysis is appropriate, to what extent that analysis can answer research questions of interest, and the broader implications of an analysis within the context of the experiment). In addition to a weekly lecture, students will attend a computer lab once a week to get guidance and hands-on practice implementing statistical techniques we learn in class.
Prerequisites: 36-218 or 70-207 or 36-326 or 36-226 or 36-220 or 15-260 or 36-247 or 36-200 or 36-236

Course Website: http://www.stat.cmu.edu/academics/courselist (http://www.stat.cmu.edu/academics/courselist/)

36-311 Statistical Analysis of Networks

Intermittent: 9 units
Networks are omnipresent. In this course, students will get an introduction to network science, mainly focusing on social network analysis. The course will start with some empirical background, and an overview of concepts used when measuring and describing networks. We will also discuss network visualization. Most traditional models cannot be applied straightforwardly to social network data, because of their complex dependence structure. We will discuss random graph models and statistical network models, that have been developed for the study of network structure and growth. We will also cover models of how networks impact individual behavior.
Prerequisite: 36-226

36-313 Statistics of Inequality and Discrimination

Intermittent: 9 units
Many social questions about inequality, injustice and unfairness are, in part, questions about evidence, data, and statistics. This class lays out the statistical methods which let us answer questions like "Does this employer discriminate against members of that group?", "Is this standardized test biased against that group?", "Is this decision-making algorithm biased, and what does that even mean?" and "Did this policy which was supposed to reduce this inequality actually help?" We will also look at inequality within groups, and at different ideas about how to explain inequalities between groups. The class will interweave discussion of concrete social issues with the relevant statistical concepts.
Prerequisite: 36-202

36-315 Statistical Graphics and Visualization

All Semesters: 9 units
Graphical displays of quantitative information take on many forms, and they help us understand data and statistical methods by (hopefully) clearly communicating arguments, results, and ideas. This course introduces students to the most common forms of graphical displays and their uses and misuses. Ideally, graphs are designed according to three key elements: The data structure, the graph's audience, and the designer's intended message. Students will learn how to create well-designed graphs and understand them from a statistical perspective. Furthermore, the course will consider complex data structures that are becoming increasingly common in data visualizations (temporal, spatial, and text data); we will discuss common ways to process these data that make them easy to visualize. As time permits, we may also consider more advanced graphical methods (e.g., interactive graphics and computer-generated animations). In addition to two weekly lectures, there will be weekly computer labs and homework assignments where students use R to visualize and analyze real datasets. Along the way, students also make monthly Piazza posts discussing the strengths and weaknesses of a graph they found online, thereby critiquing real graphical designs found in the wild. The course culminates in a group final project, where students make public-facing data visualizations and analyses for a real dataset. All assignments will be in R; although this is not a programming class, using programming-based statistical software like R is essential to create modern-day graphics, and this class will give you practice using this kind of software. Throughout, communication skills (usually written or visual, but sometimes spoken) will play an important role. Indeed, if it's true that "a picture speaks a thousand words," then ideally the one thousand words you are communicating with your graphics are statistically correct, clear, and compelling.
Prerequisites: 36-309 or 36-225 or 36-218 or 70-208 or 36-202 or 36-219 or 36-235 or 36-208 or 15-259 or 21-325

36-318 Introduction to Causal Inference

Intermittent: 9 units
Many social science and scientific inquiries can be framed as causal questions. Does a new cancer treatment cause a reduction in mortality? Do financial grants cause students to do better in college? Does a new public policy cause an increase in voter turnout? When tackling these questions, we frequently come across the phrase "correlation does not imply causation." If that's the case, then what does imply causation? In this course, we will discuss causal inference methods for measuring causal effects of different interventions (e.g., drug treatments, financial grants, and public policies). First, we will discuss how experiments and #8212;-where interventions are randomized among subjects and #8212;-can imply causation when an appropriate experimental design and statistical analysis is used. Then, we will discuss how observational studies and #8212;-where interventions are not randomized and #8212;-can also imply causation when approaches like propensity score methods, matching, and doubly robust estimation are employed. Finally, we will discuss instrumental variables and regression discontinuity designs and #8212;-which are frequently used in medicine and public policy for establishing causal inferences. Throughout we will use R to conduct causal analyses. A working knowledge of regression is encouraged, but regression will also be discussed and taught during much of the course.
Prerequisites: 15-259 Min. grade C or 36-225 Min. grade C or 36-219 Min. grade C or 36-218 Min. grade C or 36-235 Min. grade C or 21-325 Min. grade C

36-326 Mathematical Statistics (Honors)

Spring: 9 units
This course is a rigorous introduction to the mathematical theory of statistics. A good working knowledge of calculus and probability theory is required. Topics include maximum likelihood estimation, confidence intervals, hypothesis testing, Bayesian methods, and regression. A grade of C or better is required in order to advance to 36-401, 36-402 or any 36-46x course. Not open to students who have received credit for 36-625.
Prerequisites: 15-359 or 21-325 or 36-217 or 36-225 with a grade of A AND advisor approval. Students interested in the course should add themselves to the waitlist pending review.
Prerequisites: 36-218 Min. grade A or 21-325 Min. grade A or 36-217 Min. grade A or 36-225 Min. grade A or 15-359 Min. grade A

36-350 Statistical Computing

All Semesters: 9 units
Statistical Computing is a one-semester course that will introduce you to the fundamentals of computational data analysis, as carried out in the R programming language, and to the fundamentals of working with relational databases, such as SQLite. No previous knowledge of either is required.
Prerequisites: 21-325 Min. grade C or 36-218 Min. grade C or 36-219 Min. grade C or 36-225 Min. grade C or 36-217 Min. grade C or 15-259 Min. grade C or 36-235 Min. grade C

36-390 Study Abroad Experience in Statistics and Data Science

Summer: 9 units
Statistics and Data Science at the Monteverde Institute in Costa Rica. This is a five-week study abroad experience in which students will directly engage with, and will process, visualize, and/or analyze data collected by, researchers at the institute. Students will also have the opportunity to participate in data collection, as appropriate. The mission of the institute is to promote sustainable practices that benefit both the local community and local wildlife, and the data that students can examine include, but are not limited to, ecological data on bats, birds, reforestation, and stream beds, as well as data arising from community surveys. This course does not require prior knowledge of, or exposure to, data processing, visualization, or analysis techniques beyond what is covered in the prerequisite classes, and necessary techniques and methods will be introduced and discussed in daily classes. Project goals will be modified for students with more advanced backgrounds (e.g., students who have completed 36-401 and 36-402). The 2024 class is limited to six students overall.

36-400 Introduction to Statistical Modeling and Learning

Spring: 9 units
This course is a high-level introduction both to fundamental concepts of probability and statistics and to the ways by which statisticians go about approaching and analyzing data. The course will cover data processing, exploratory data analysis, parameter estimation and hypothesis testing, clustering, and common regression and classification models. Students will carry out work using the R and Python programming languages. This course is open only to students not majoring in Stat and amp; DS who have taken the prerequisite courses.
Prerequisites: 36-200 and (36-309 or 36-202 or 36-290)

36-401 Modern Regression

Fall: 9 units
This course is an introduction to the real world of statistics and data analysis using linear regression modeling. We will explore real data sets, examine various models for the data, assess the validity of their assumptions, and determine which conclusions we can make (if any). We will use the R programming language to implement our analyses and produce graphs and tables of results. Data analysis is a bit of an art; there may be several valid approaches. We will strongly emphasize the importance of critical thinking about the data and the question of interest. Our overall goal is to use data and a basic set of modeling tools to answer substantive questions, and to present the results in a scientific report.
Prerequisites: (36-236 Min. grade C or 36-326 Min. grade C or 36-226 Min. grade C or 36-218 Min. grade B) and (21-242 or 21-240 or 21-241)

36-402 Advanced Methods for Data Analysis

Spring: 9 units
This course introduces modern methods of data analysis, building on the theory and application of linear models from 36-401. Topics include nonlinear regression, nonparametric smoothing, density estimation, generalized linear and generalized additive models, simulation and predictive model-checking, cross-validation, bootstrap uncertainty estimation, multivariate methods including factor analysis and mixture models, and graphical models and causal inference. Students will analyze real-world data from a range of fields, coding small programs and writing reports.
Prerequisite: 36-401 Min. grade C

36-410 Introduction to Probability Modeling

Spring: 9 units
An introductory-level course in stochastic processes. Topics typically include Poisson processes, Markov chains, birth and death processes, random walks, recurrent events, and renewal theory. Examples are drawn from reliability theory, queuing theory, inventory theory, and various applications in the social and physical sciences.
Prerequisites: 21-325 or 15-259 or 36-225 or 36-235 or 36-217

36-460 Special Topics: Sports Analytics

Spring: 9 units
This course introduces students to fundamental topics in sports analytics and the relevant statistical methods for tackling problems in this growing area. The first half of the course will cover foundational topics in sports analytics including models for the expected value of game states, win probability, team ratings, and hierarchical models for player evaluation. The second half of the course will focus on spatio-temporal methods appropriate for modeling complex player-tracking data. The focus is on understanding the foundations of the considered methods and introducing software for implementation. Students will develop their own sports analytics project using techniques covered in the course for their final assessment.
Prerequisite: 36-401 Min. grade C

36-461 Special Topics: Statistical Methods in Epidemiology

Intermittent: 9 units
Epidemiology is concerned with understanding factors that cause, prevent, and reduce diseases by studying associations between disease outcomes and their suspected determinants in human populations. Epidemiologic research requires an understanding of statistical methods and design. Epidemiologic data is typically discrete, i.e., data that arise whenever counts are made instead of measurements. In this course, methods for the analysis of categorical data are discussed with the purpose of learning how to apply them to data. The central statistical themes are building models, assessing fit and interpreting results. There is a special emphasis on generating and evaluating evidence from observational studies. Case studies and examples will be primarily from the public health sciences.
Prerequisite: 36-401 Min. grade C

Course Website: http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/depar (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/depar/)

36-462 Special Topics: Statistical Machine Learning

Intermittent: 9 units
Data mining is the science of discovering patterns and learning structure in large data sets. Covered topics include information retrieval, clustering, dimension reduction, regression, classification, and decision trees.
Prerequisite: 36-401 Min. grade C

Course Website: http://www.stat.cmu.edu/academics/courselist (http://www.stat.cmu.edu/academics/courselist/)

36-463 Special Topics: Multilevel and Hierarchical Models

Intermittent: 9 units
Multilevel and hierarchical models are among the most broadly applied "sophisticated" statistical models, especially in the social and biological sciences. They apply to situations in which the data "cluster" naturally into groups of units that are more related to each other than they are the rest of the data. In the first part of the course we will review linear and generalized linear models. In the second part we will see how to generalize these to multilevel and hierarchical models and relate them to other areas of statistics, and in the third part of the course we will learn how Bayesian statistical methods can help us to build, estimate and diagnose problems with these models using a variety of data sets and examples.
Prerequisite: 36-401 Min. grade C

Course Website: http://www.stat.cmu.edu/academics/courselist (http://www.stat.cmu.edu/academics/courselist/)

36-464 Special Topics: Psychometrics: A Statistical Modeling Approach

Intermittent: 9 units
Much of the social, educational, policy, and professional worlds involve measuring the skills, abilities, attitudes, decision-making, etc. of people and #8212; from SAT's and GRE's for school, to 360-evaluations in business. This is the field of modern psychometrics, and it involves (at least) two kinds of craft: designing good sets of questions, and designing and fitting statistical models that extract the information we want from the responses to those questions. In this course we will touch on both kinds of craft, but we will concentrate on the second: what do statistical models for psychometric data look like, and how can we design, fit, and use them in practice? We will look at these models from a variety of statistical perspectives, but we will concentrate on the applied Bayesian point of view.
Prerequisite: 36-401 Min. grade C

Course Website: http://www.stat.cmu.edu/academics/courselist (http://www.stat.cmu.edu/academics/courselist/)

36-465 Special Topics: Conceptual Foundations of Statistical Learning

Intermittent: 9 units
This class is an introduction to the foundations of statistical learning theory, and its uses in designing and analyzing machine-learning systems. Statistical learning theory studies how to fit predictive models to training data, usually by solving an optimization problem, in such a way that the model will predict well, on average, on new data. The course will focus on the key concepts and theoretical tools, at a level accessible to students who have taken 36-401 and its pre-requisites. The course will also illustrate those concepts and tools by applying them to carefully selected kinds of machine learning systems (such as kernel machines). Students wanting exposure to a broad range of algorithms and applications would be better served by 36-462/662 ("Data Mining"). This class is for those who want a deeper understanding of the principles underlying all machine learning methods.
Prerequisite: 36-401 Min. grade C

36-466 Special Topics: Statistical Methods in Finance

Intermittent: 9 units
Financial econometrics is the interdisciplinary area where we use statistical methods and economic theory to address a wide variety of quantitative problems in finance. These include building financial models, testing financial economics theory, simulating financial systems, volatility estimation, risk management, capital asset pricing, derivative pricing, portfolio allocation, proprietary trading, portfolio and derivative hedging, and so on and so forth. Financial econometrics is an active field of integration of finance, economics, probability, statistics, and applied mathematics. Financial activities generate many new problems and products, economics provides useful theoretical foundation and guidance, and quantitative methods such as statistics, probability and applied mathematics are essential tools to solve quantitative problems in finance. Professionals in finance now routinely use sophisticated statistical techniques and modern computation power in portfolio management, proprietary trading, derivative pricing, financial consulting, securities regulation, and risk management.
Prerequisite: 36-401

36-467 Special Topics: Data over Space & Time

Intermittent: 9 units
This course is an introduction to the opportunities and challenges of analyzing data from processes unfolding over space and time. It will cover basic descriptive statistics for spatial and temporal patterns; linear methods for interpolating, extrapolating, and smoothing spatio-temporal data; basic nonlinear modeling; and statistical inference with dependent observations. Class work will combine practical exercises in R, a little mathematics on the underlying theory, and case studies analyzing real problems from various fields (economics, history, meteorology, ecology, etc.). Depending on available time and class interest, additional topics may include: statistics of Markov and hidden-Markov (state-space) models; statistics of point processes; simulation and simulation-based inference; agent-based modeling; dynamical systems theory.
Prerequisite: 36-401 Min. grade C

Course Website: http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/depar (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/depar/)

36-468 Special Topics: Text Analysis

Intermittent: 9 units
The analysis of language is concerned with how variables relate to people (their gender, age, and location, for example), how variables relate to use (such as writing in different academic disciplines), and how variables change over time. While we are surrounded by data that might potentially shed light on many of these questions, working with real-world linguistic data can present some unique challenges in sampling, in the distribution of features, and in their high dimensionality. In this course, we work through some of these issues, paying particular attention to the aligning of the statistical questions we want to investigate with the choice of statistical models, as well as focusing on the interpretation of results. Analysis will be carried out in R and students will develop a suite of tools as they work through their course projects.
Prerequisites: 36-218 Min. grade B or 36-226 Min. grade C or 36-236 Min. grade C

36-469 Special Topics: Statistical Genomics and High Dimensional Inference

Intermittent: 9 units
The field of computational and statistical genomics focuses on developing and applying computationally efficient and statistically robust methods to sort through increasingly rich and massive genome wide data sets to identify complex genetic patterns, gene interactions, and disease associations. Because the genome is vast, analytical approaches require high dimensional statistical approaches such as multiple testing, dimension reduction techniques, regularization and high dimensional regression analysis, best linear unbiased prediction models, networks and graphical models. In this course, we will motivate these topics using data obtained from the human genetic and genomic literature. No prior knowledge in biology is required.
Prerequisite: 36-401 Min. grade C

36-470 Special Topics: Statistical Methods in Health Sciences

Intermittent: 9 units
As the volume of health and clinical data continues to expand, the integration of statistical and machine learning methods becomes increasingly important for enhancing healthcare efficiency. However, there are challenges in modeling health data, for example, annotated data is often limited or subject to incompleteness. In this course, we will introduce statistical methods that address these challenges, including survival analysis, latent variable models, clustering, semi-supervised learning, and so on. An emphasis will put on understanding methodological foundations and how to appropriately apply methods to health data. Through homework assignments, labs, paper presentations, and a final project, students will gain hands-on-experience in applying statistical methods to solve problems arising from health sciences.
Prerequisite: 36-401 Min. grade C

36-471 Special Topics: Time Series

Fall: 9 units
This course covers time series analysis from fundamentals to advanced models in both time and frequency domains. The focus is on practical execution and interpretation of time series analyses with realistic real-world data.
Prerequisite: 36-401

36-490 Undergraduate Research

Fall and Spring: 9 units
This course is designed to give undergraduate students experience using statistics in real research problems. Small groups of students are matched with clients and do supervised research for a semester. From an academic perspective, the course presents an opportunity for students to gain skills in approaching a research problem, critical thinking, and statistical analyses. Additionally, the course will help students develop the professional skills necessary for successfully navigating team-based project delivery roles. Client-facing and collaborative skills will be emphasized within a team setting, and students will learn leading practices for engaging stakeholders as well as gain a conceptual understanding of leading practices for project delivery.

36-497 Corporate Capstone Project

Fall and Spring: 9 units
This course is designed to give undergraduate students experience applying statistics data science methodology to real industry projects. Small groups of students will be matched with industry clients and do supervised projects for a semester. From an academic perspective, the course presents an opportunity for students to gain skills in approaching a research problem, critical thinking, and statistical analyses. Additionally, the course will help students develop the professional skills necessary for successfully navigating team-based project delivery roles. Client-facing and collaborative skills will be emphasized within a team setting, and students will learn leading practices for engaging stakeholders as well as gain a conceptual understanding of leading practices for project delivery. The industry clients will change and rotate each semester; available projects will be advertised prior to the first week of class. The course size is limited; students apply the previous semester and placed on the course waitlist until project matching is performed. Students with skill sets matching project needs will be given priority. We will also take into consideration whether or not a student has had a recent prior corporate capstone experience with the goal of providing experiences to a broad group of qualified students. Note that there is no guarantee a waitlisted student will be matched to a project in any given semester.

36-498 Corporate Capstone II

Fall and Spring
This course allows students to continue work on projects begun as part of 36-497, Corporate Capstone Project. Enrollment is at the discretion of the external advisor for the 36-497 project and the Department of Statistics and amp; Data Science.

36-680 Quantitative Financial Analytics and Algorithmic Trading

Fall and Spring: 12 units
Algorithmic trading serves as a practical application of software engineering and data science methodologies and quantitative analysis techniques within the context of financial markets. This project-based course offers an introduction to algorithmic trading and the principles behind it, while emphasizing universally applicable engineering concepts and data-driven methodologies. Students will gain an understanding of the fundamentals of financial markets and trading systems, learn how to manage data, generate signals, backtest strategies, and use APIs to execute trades. Additionally, they will apply risk management principles, position sizing, and software development best practices such as unit testing in Python. Most importantly, the course will teach students specific thinking patterns and data science methodologies that can be applied across various engineering and data analysis fields. Students will be equipped with a toolbox needed to continue researching trading strategies, predictive analytics, or other data science-related topics independently. Following condensed lecture videos, the course will emulate a professional environment through a series of individual assignments culminating in a functional project. Delivery of the project will be guided by direct instruction, Q and amp;A calls, and an online chat group with the lecturers, similar to a real workplace. Students will deliver a functional project in Python, according to a specification, while also taking exams on the theoretical materials covered in the lectures. Student progress is assessed through the delivery of practical projects according to a specification and evaluation criteria. While there are no prerequisites for this course, an understanding of statistics, probabilities, hypothesis testing, measures of spread, confidence intervals, and related topics is assumed.

36-700 Probability and Mathematical Statistics

Fall: 12 units
This is a one-semester course covering the basics of statistics. We will first provide a quick introduction to probability theory, and then cover fundamental topics in mathematical statistics such as point estimation, hypothesis testing, asymptotic theory, and Bayesian inference. If time permits, we will also cover more advanced and useful topics including nonparametric inference, regression and classification. Prerequisites: one- and two-variable calculus and matrix algebra. Graduate students in degree-seeking programs are given priority.

Dietrich College Interdisciplinary Majors

When addressing complex issues, we often rely on approaches that take advantage of a variety of relevant disciplines. The college houses the special category of “interdepartmental majors” for programs where this interdisciplinary approach is most pronounced and in which the varied disciplinary perspectives are most fully integrated. These majors are presented here separately, rather than as departmentally-based options, to reflect and underscore their sponsorship by more than one academic department and the unique features that follow from this structure.

Interdepartmental majors are administered by the academic department of the major's faculty advisor.

The Major in Economics and Politics

Audrey Kurth Cronin, *Director, Trustees Professor of Security and Technology*
acronin@andrew.cmu.edu, Posner Hall 385A

Emily Half, *Deputy Director for Academic Affairs*
ehalf@andrew.cmu.edu, Posner Hall 391, 412-268-7082

Politics and economics are deeply interconnected. Political institutions and decision-making impact economic growth, income distribution, and many other aspects of economic life. Both fiscal and monetary policies affect the economy: but these policies also reflect political considerations and influence political outcomes. For example, while the United Nations is often thought of in purely political terms, the Security Council can and does impose sanctions on countries-- an example of an economic policy used for political change.

The Economics and Politics major is offered jointly between the Carnegie Mellon Institute for Strategy and Technology (https://www.cmu.edu/cmist/) (CMIST) and the Undergraduate Economics Program (https://www.cmu.edu/tepper/programs/undergraduate-economics/) (UEP). The major will appeal to any student interested in the design, evaluation, and political implementation of economic policy. It will be especially attractive to students considering careers in politics, government agencies, political and business consulting, lobbying, or the law.

The BS in Economics and Politics is an interdisciplinary major. The major will develop the political context and underpinnings of economic policy making. It will explore how political institutions resolve the tradeoffs and disagreements associated with policymaking and how they can facilitate or impede desirable economic outcomes.

CMIST's strengths lie in topics such as emerging technology, national security, and grand strategy. Economic policy is one facet of grand strategy through which governments pursue domestic and international goals. This major will enable students to understand economic statecraft from a broad perspective. It will address key issues such as how multilateral economic institutions such as the IMF and World Bank use economic coercion. Whether coercion is successful or not depends not only on the levers of power but on also on variations in regime structures, alongside complex linkages in the international economy. For example, the viability of the “Euro Zone” depends on whether the political-economic agreements necessary to mitigate institutional weaknesses are politically feasible or destined to failure. In short, international economics affects everything from human rights practices to trade patterns to energy markets to tech company investments to global compliance with climate change treaties.

Economics and Politics is available as both a primary and an additional major. The requirements are the same for both.

Curriculum

A maximum of four courses may double count between the Economics and Politics major and any other majors or minor. Unlimited double counting is permitted with general education requirements.

Students must earn a grade of "C" or better in all courses taken in the Department of Economics (73-xxx).

Mathematics (19 units)

Students must complete all of the following courses.

21-120	Differential and Integral Calculus	10
or 21-112	Calculus II	
21-256	Multivariate Analysis	9
or 21-259	Calculus in Three Dimensions	

Economics Core (54 units)

Students must complete all of the following courses.

73-102	Principles of Microeconomics *	9
or 73-104	Principles of Microeconomics Accelerated	
73-103	Principles of Macroeconomics	9
73-230	Intermediate Microeconomics	9
73-240	Intermediate Macroeconomics	9
73-265	Economics and Data Science	9
73-274	Econometrics I	9

***Students who place out of 73-102 based on the economics placement exam will receive a pre-req waiver for 73-102 and are waived from taking 73-102**

CMIST Core (48 units)

Students must complete all of the following courses.

84-104	Decision Processes in American Political Institutions	9
84-226	International Relations	9
84-266	Research Design for Political Science	9
84-275	Comparative Politics	9
84-310	Policy in a Global Economy 1: International Trade and Trade Policy	6
84-311	Policy in a Global Economy 2: International Macroeconomics and Finance	6

Communication (9 units)

Students must complete the following course:

84-250	Writing for Political Science and Policy	9

Electives (27 units)

Majors are required to take 27 units (usually three courses) from the elective lists below. At least 9 units (typically one course) must be taken from Economics (73-xxx) and at least 9 units (typically one course)) must be taken from the Carnegie Mellon Institute for Strategy and Technology (84-xxx). Students may complete electives through coursework in the Carnegie Mellon University Washington Semester Program (CMU/WSP) (https://www.cmu.edu/cmist/washington-center/washington-semester-program/).

Economics Electives

73-328	Health Economics	12
73-332	Political Economy	9
73-338	Financial Crises and Risk	9
73-348	Behavioral Economics	9
73-352	Public Economics	9
73-353	Financial Regulation in the Digital Age	9
73-365	Firms, Market Structures, and Strategy	9
73-421	Emerging Markets	9
73-427	Sustainability, Energy, and Environmental Economics	9

CMIST: Political Science and International Relations Electives

84-120	Introduction to US Constitutional Law	9
84-200	Security War Game Simulation	6
84-252	Briefing in the Policy World	6
84-274	An Introduction to Technology and War	9
84-280	Popcorn and Politics: American Foreign Policy at the Movies	10
84-303	International Human Rights	6
84-304	In the News: Analysis of Current US National Security Priorities	6
84-306	Latin American Politics	9
84-309	American Political Divides and Great Debates	9

84-312	Terrorism in Sub-Saharan Africa	6
84-313	International Organizations and Law	6
84-317	Defense PPBE in the Age of Emerging Technologies	6
84-318	Politics of Developing Nations	9
84-319	Civil-Military Relations	9
84-322	Nonviolent Conflict and Revolution	9
84-323	War and Peace in the Contemporary Middle East	9
84-324	The Future of Democracy	9
84-325	Contemporary American Foreign Policy	9
84-328	Military Strategy and Doctrine	9
84-329	Asian Strategies	6
84-332	Contemporary US Constitutional Law Issues Taught in Washington, DC, through CMU/WSP	6
84-338	Analysis of US Presidential Powers Taught in Washington, DC, through CMU/WSP	6
84-349	Digital Diplomacy: Cybersecurity Challenges and Global Governance	9
84-350	A Strategist's Introduction to Artificial Intelligence	9
84-351	Bias, Objectivity, and the Media's Role in Politics	6
84-352	Representation and Voting Rights	9
84-354	The American Experiment: Unravelling the US Electoral System	6
84-355	Democracy's Data: Analytics and Insights into American Elections	9
84-360	CMU/WSP: Internship Seminar Taught in Washington, DC, through CMU/WSP	24
84-362	Diplomacy and Statecraft	9
84-363	Click. Hack. Rule: Understanding the Power & Peril of Cyber Conflict	9
84-365	The Politics of Fake News and Misinformation	9
84-367	The Politics of Antisemitism	9
84-369	Decision Science for International Relations	9
84-370	Nuclear Security & Arms Control	9
84-372	Space and National Security	9
84-373	Emerging Technologies and International Law	9
84-380	US Grand Strategy	9
84-383	Cyber Policy as National Policy	6
84-386	The Privatization of Force	9
84-387	Remote Systems and the Cyber Domain in Conflict	9
84-388	Concepts of War and Cyber War	6
84-389	Terrorism and Insurgency	9
84-390	Social Media, Technology, and Conflict	9
84-393	Legislative Decision Making: US Congress	9
84-402	Judicial Politics and Behavior	9
84-405	The Future of Warfare	9
84-440	Collaborative Research in Political Science	Var.
Additional Electives		
19-411	Science and Innovation Leadership for the 21st Century: Firms, Nations, and Tech	9
19-425	Sustainable Energy for the Developing World	9
70-365	International Trade and International Law	9
70-430	International Management	9
79-280	Coffee and Capitalism	9
79-318	Sustainable Social Change: History and Practice	9
80-135	Introduction to Political Philosophy	9
80-136	Social Structure, Public Policy & Ethics	9
80-335	Social and Political Philosophy	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9
88-366	Behavioral Economics of Poverty and Development	9
88-411	Rise of the Asian Economies	9

CAPSTONE (18-30 units)

Students must complete all of the following courses.

84-450	Policy Seminar	6-12
or 84-336	Implementing Public Policy: From Good Idea To Reality	
or 84-339	Seminar in Public Policy Research	
73-497	Senior Project or Senior Honors Thesis in Dietrich or Tepper (18 units total)	12

Note: Students in the BS in Economics and Politics who complete a Dietrich or Tepper Honors Thesis in economics may use 73-497 (Senior Project) as an economics elective.

DOUBLE-COUNTING RESTRICTION

A maximum of four courses may double count with another major or minor.

Sample four-year plan

These sample curricula represent a plan for completing the requirements for the B.S. in Economics and Politics. Economics and Politics students are encouraged to spend a semester studying and interning in Washington, DC, through the CMU/WSP (https://www.cmu.edu/cmist/washington-center/washington-semester-program/), and/or study abroad. The plan below demonstrates that a semester off-campus fits well into the curriculum. Students may declare the BS in Economics and Politics as early as the second semester of the freshman year and should consult frequently with the Economics and Politics advisors about their course of study. Please note that this is only a sample plan of study and not the only possible plan of study. The Economics and Politics major and Dietrich College General Education curricula provide a high degree of flexibility in sequencing and coursework. Double counting between the major and General Education requirements is unlimited. The plan below shows a very conservative view of double counting.

First-Year		**Second-Year**	
Fall	**Spring**	**Fall**	**Spring**
21-120 Differential and Integral Calculus	21-256 Multivariate Analysis	73-230 Intermediate Microeconomics	73-240 Intermediate Macroeconomics
36-200 Reasoning with Data	73-103 Principles of Macroeconomics	73-265 Economics and Data Science	73-274 Econometrics I
73-102 Principles of Microeconomics	84-275 Comparative Politics	84-226 International Relations	84-250 Writing for Political Science and Policy
84-104 Decision Processes in American Political Institutions	First-Year Writing	84-266 Research Design for Political Science	84-310 Policy in a Global Economy 1: International Trade and Trade Policy
Grand Challenge Seminar	Disciplinary Perspectives: Humanities	General Education	84-311 Policy in a Global Economy 2: International Macroeconomics and Finance
99-101 Core@CMU			General Education

The Major in Economics and Statistics

Amanda Mitchell, *Statistics & Data Science Academic Program Manager*
Stephen Pajewski, *Economics Senior Academic Advisor and Program Manager*

Statistics & Data Science Location: Baker Hall 129
statadvising@andrew.cmu.edu (statadvising@stat.cmu.edu)

Economics Location: Tepper 2400
econprog@andrew.cmu.edu

The B.S. in Economics and Statistics is jointly advised by the Department of Statistics and Data Science and the Undergraduate Economics Program.

The Major in Economics and Statistics provides an interdisciplinary course of study aimed at students with a strong interest in the empirical analysis of economic data. With joint curriculum from the Department of Statistics and Data Science and the Undergraduate Economics Program, the major provides students with a solid foundation in the theories and methods of both fields. Students in this major are trained to advance the understanding of economic issues through the analysis, synthesis and reporting of data using the advanced empirical research methods of statistics and econometrics. Graduates are well positioned for admission to competitive graduate programs, including those in statistics, economics and management, as well as for employment in positions requiring strong analytic and conceptual skills - especially those in economics, finance, education, and public policy.

All economics courses counting towards an economics degree must be completed with a grade of "C" or higher.

Curriculum

The requirements for the B.S. in Economics and Statistics are the following:

1. MATHEMATICAL FOUNDATIONS (PREREQUISITES) 29-42 UNITS

Mathematics is the language in which statistical models are described and analyzed, so some experience with basic calculus and linear algebra is an important component for anyone pursuing a program of study in Economics and Statistics.

Calculus

Complete one of the two following sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

Sequence 1

21-111	Calculus I	10
21-112	Calculus II	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

Sequence 2

21-120	Differential and Integral Calculus	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	10
21-268	Multidimensional Calculus	11

NOTES:

- Passing the MSC 21-120 assessment test is an acceptable alternative to completing 21-120.

Note: Taking/having credit for both 21-111 and 21-112 is equivalent to 21-120. The Mathematical Foundations total is then 48-49 units. The Economics and Statistics major would then total 201-211 units.

Linear Algebra

One of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	11
21-242	Matrix Theory	11

Note: 21-241 and 21-242 are intended only for students with a very strong mathematical background.

II. Foundations 54 units

2. Economics Foundations 18 UNITS

Take one of the following courses:		
73-102	Principles of Microeconomics *	9
73-104	Principles of Microeconomics Accelerated **	9
Take the following course:		
73-103	Principles of Macroeconomics	9

*Students who place out of 73-102 based on the economics placement exam will receive a pre-req waiver for 73-102 and are waived from taking 73-102

**This course requires students to complete a 4 or 5 on the AP Microeconomics exam or qualifying score on the IB/Cambridge Exams. 73-104 will substitute for any 73-102 prerequisite requirement in other courses. 73-104 is a more rigorous introduction to microeconomics, is taught at a faster pace than 73-102, and dives a bit deeper into key topics. It is designed for students who have prior knowledge to fundamental economic concepts through AP/IB/Cambridge coursework. Enrollment in 73-104 requires special permission. Students who wish to take this course should add themselves to the 73-104 waitlist once registration opens. The Tepper School will verify the advancement placement scores and will enroll students in 73-104

3. Statistical Foundations 36 UNITS

DATA ANALYSIS

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfy the DC College Core Requirement in Statistical Reasoning. This course is therefore recommended for students in the college. (Note: a score of 5 on the Advanced Placement [AP] Exam in Statistics may be used to waive this requirement). 36-220 emphasizes examples in engineering.

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students' previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

Sequence 1 (For students beginning their freshman or sophomore year)

Beginning*

Choose *one* of the following courses:

36-200	Reasoning with Data *	9
36-220	Engineering Statistics and Quality Control	9

*A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement. 36-220 emphasizes examples in engineering and Architecture.

Note: Students who enter the program with 36-235 or 36-236 should discuss options with an advisor. Any 36-300 or 36-400 level course in Data Analysis that does not satisfy any other requirement for the Economics and Statistics Major may be counted as a Statistical Elective.

Intermediate*

Choose *one* of the following courses:

36-202	Methods for Statistics & Data Science **	9
36-290	Introduction to Statistical Research Methodology	9
36-309	Experimental Design for Behavioral & Social Sciences	9

* Or extra data analysis course in Statistics
** Must take prior to 36-401 Modern Regression, if not, an additional Advanced Statistics Elective is required.

Advanced Statistics Elective
Choose *two* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9

36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Sequence 2 (For students beginning later in their college career)

Advanced Statistics Electives
Choose *three* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-313	Statistics of Inequality and Discrimination	9
36-315	Statistical Graphics and Visualization	9
36-318	Introduction to Causal Inference	9
36-460	Special Topics: Sports Analytics	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Statistical Machine Learning	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Psychometrics: A Statistical Modeling Approach	9
36-465	Special Topics: Conceptual Foundations of Statistical Learning	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-469	Special Topics: Statistical Genomics and High Dimensional Inference	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

**All Special Topics are not offered every semester, and new Special Topics are regularly added. See section 5 for details.

III. Disciplinary Core — 136-139 units

1. Economics Core — 45 UNITS

73-230	Intermediate Microeconomics	9
73-240	Intermediate Macroeconomics	9
73-265	Economics and Data Science	9
73-274	Econometrics I	9
73-374	Econometrics II	9

2. Statistics Core — 36 UNITS

Take one of the following courses:		
36-235	Probability and Statistical Inference I *#	9
36-225	Introduction to Probability Theory	9
Take one of the following courses:		
36-236	Probability and Statistical Inference II **	9
36-226	Introduction to Statistical Inference	9
36-326	Mathematical Statistics (Honors)	9
Take both of the following courses:		
36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

*In order meet the prerequisite requirements for the major, a grade of C or better is required in 36-235 (or equivalents), 36-236 or 36-326 and 36-401.

#It is possible to substitute 36-218, 36-219, 36-225or 21-325 for 36-235. 36-235 is the standard introduction to probability, 36-219 is tailored for engineers and computer scientists, 36-218 is a more mathematically rigorous class for Computer Science students and more mathematically advanced Statistics students (Statistics students need advisor approval to enroll), and 21-325 is a rigorous Probability Theory course offered by the Department of Mathematics.

**It is possible to substitute 36-226 or 36-326 for 36-236. 36-236 is the standard introduction to statistical inference.

Please note that students who complete 36-235 are expected to take 36-236 to fulfill their theory requirements. Students who choose to take 36-225 instead will be required to take 36-226 afterward, they will not be eligible to take 36-236.

3. Statistical Computing — 19-21 UNITS

Take one of the following two courses:		
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
Complete the following course:		
36-350	Statistical Computing	9

4. Advanced Electives — 36 units

Students must take two advanced Economics elective courses (numbered 73-300 through 73-495, excluding 73-374) and two (or three - depending on previous coursework, see Section 3) advanced Statistics elective courses (numbered 36-303, 36-311, 36-313, 36-315, 36-318, 36-46x, 36-490, or 36-497).

Total number of units for the major	**219-235 Units**
Total number of units for the degree	**360 Units**

Professional Development

While not required, students are strongly encouraged to take advantage of professional development opportunities and/or coursework. One option is , a fall-only course that provides information about careers in Economics, job search strategies, and research opportunities. The Department of Statistics and Data Science also offers a series of workshops pertaining to resume preparation, graduate school applications, careers in the field, among other topics. Students should also take advantage of the Career and Professional Development Center.

Additional Major in Economics and Statistics

Students who elect Economics and Statistics as an additional major must fulfill all Economics and Statistics degree requirements. Majors in many other programs would naturally complement an Economics and Statistics Major, including Tepper's undergraduate business program, Social and Decision Sciences, Policy and Management, and Psychology.

With respect to double-counting courses, it is departmental policy that students must have at least six courses [three Economics (73-xxx) and three Statistics (36-xxx)] that do *not* count for their primary major. If students do not have at least three ECON and three STA classes, they will need to take additional advanced data analysis or economics electives, depending on where the double-counting issue is.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major's requirements overlap with the requirements for a Major in Economics and Statistics.

Substitutions and Waivers

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics and Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Economics and Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Economics and Statistics.

Sample Program

The following sample program illustrates one way to satisfy the requirements of the Economics and Statistics Major. Keep in mind that the program is flexible and can support other possible schedules (see footnotes below the schedule).

First-Year		Second-Year	
Fall	**Spring**	**Fall**	**Spring**
21-120 Differential and Integral Calculus	36-202 Methods for Statistics & Data Science	36-235 Probability and Statistical Inference I	36-236 Probability and Statistical Inference II
36-200 Reasoning with Data	21-256 Multivariate Analysis	73-230 Intermediate Microeconomics	21-240 Matrix Algebra with Applications
73-102 Principles of Microeconomics	73-103 Principles of Macroeconomics		73-240 Intermediate Macroeconomics
15-110 Principles of Computing	-----	73-265 Economics and Data Science	73-274 Econometrics I
	-----	-----	-----

Third-Year		Fourth-Year	
Fall	**Spring**	**Fall**	**Spring**
36-350 Statistical Computing	36-402 Advanced Methods for Data Analysis	36-3xx or 36-4xx Advanced Data Analysis Elective	36-3xx or 36-4xx Advanced Data Analysis Elective
36-401 Modern Regression		Economics Elective	Economics Elective
73-374 Econometrics II	-----	-----	-----
-----	-----	-----	-----
-----		-----	-----

*In each semester, ----- represents other courses (not related to the major) which are needed in order to complete the 360 units that the degree requires.

Prospective PhD students are advised to add 21-127 fall of sophomore year, replace 21-240 with 21-241, add 21-260 in spring of junior year and 21-355 in fall of senior year.

The Major in Ethics, History, and Public Policy

The B.A./B.S. in Ethics, History, and Public Policy (EHPP) is an interdepartmental major offered jointly by the Departments of History and Philosophy.

Preparing students to be leaders is a vital goal of colleges and universities in every democratic society. The intellectual challenges facing public and private sector leaders have expanded dramatically since the pioneering EHPP program began in 1996, but the need remains as great as ever for broadly educated, ethically sensitive, and technically skilled leaders.

EHPP prepares students to demonstrate sophistication and flexibility in their command of interdisciplinary knowledge; deep historical understanding of how modern-day policy problems have emerged and evolved; and clear, rational criteria for ethical and socially just decision making. The curriculum provides students with a strong humanistic foundation for developing such high-level, historically grounded, and ethically attuned leadership capacities. It also offers ample room for specialization in a wide range of policy areas in which the History and Philosophy departments have special expertise, e.g., medicine and public health, criminal justice, environment, technology, artificial intelligence (AI), gender, civil rights, immigration, and education.

Curriculum

Students seeking a primary major in Ethics, History, and Public Policy may elect to receive either a Bachelor of Arts or a Bachelor of Science degree (additional requirements apply; see below). Basic requirements include 120 units encompassing 45 units in History, 45 units in Philosophy, 18 units in Law and Social Science, and a 12-unit EHPP Capstone Course. This program may also be taken as an additional (i.e., second) major. All courses toward the major must be taken for a letter grade and must be passed with a grade of "C" or better. Students can double count any course for the major with another major or minor, with the exception of Social and Political History, for which a student can double count a maximum of two courses.

I. Foundation Courses in History and Philosophy — 18 units

Choose one of the following two courses:

79-189	Democracy and History: Thinking Beyond the Self	9
79-248	U.S. Constitution & the Presidency	9

Choose one of the following two courses:

80-130	Introduction to Ethics	9
80-330	Ethical Theory	9

II. Ethics and Policy Core — 36 units

Choose four of the courses below:

No more than one course may be taken at the 100 level and at least one course must be taken at the 300 level or above.

80-135	Introduction to Political Philosophy	9
80-136	Social Structure, Public Policy & Ethics	9
80-208	Critical Thinking	9
80-221	Philosophy of Social Science	9
80-234	Race, Gender, and Justice	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-249	AI, Society, and Humanity	9

80-305	Game Theory	9
80-306	Decision Theory	9
80-324	Philosophy of Economics	9
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9
80-336	Philosophy of Law	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9

III. History and Policy Core 36 units

Choose four of the courses below:

79-175	Moneyball Nation: Data in American Life	9
79-204	American Environmental History	9
79-212	Jim Crow America	9
79-215	Environmental Justice from Conservation to Climate Change	9
79-234	Technology and Society	9
79-242	African American History: Reconstruction to the Present	9
79-248	U.S. Constitution & the Presidency	9
79-250	Voting Rights: An Introduction	9
79-278	How (Not) to Change the World	9
79-300	Controversial Topics in the History of American Public Policy	9
79-320	Women, Politics, and Protest	9
79-321	Documenting Human Rights	9
79-330	Medicine and Society: Health, Healers, and Hospitals	9
79-343	Education, Democracy, and Civil Rights	9
79-360	Crime, Policing, and the Law: Historical and Contemporary Perspectives	9
79-370	Technology in the United States	9
79-380	Hostile Environments: The Politics of Pollution in Global Perspective	9

IV. Foundation Courses in Law and Social Science 18 units

Choose two of the courses below:

17-200	Ethics and Policy Issues in Computing	9
19-101	Introduction to Engineering and Public Policy	12
70-332	Business, Society and Ethics	9
73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9
84-104	Decision Processes in American Political Institutions	9
84-110	The Economics of Politics, Policy, and Technology	9
84-352	Representation and Voting Rights	9
84-393	Legislative Decision Making: US Congress	9
84-402	Judicial Politics and Behavior	9
88-281	Topics in Law: 1st Amendment	9
88-284	Topics of Law: The Bill of Rights	9

EHPP students will also be able to complete the Foundations of Law and Social Science category by participating in the Washington Semester Program. Students are encouraged to pursue additional policy-relevant courses in law and social science, along lines consistent with their career ambitions.

V. EHPP Capstone Course 12 units

In Fall semester of senior year, EHPP students will participate in an interdisciplinary capstone course that asks students to integrate their studies in Ethics and History by addressing a policy topic of contemporary national urgency (e.g., climate change, immigration, infrastructure, abortion, hate speech, reparations, law enforcement and policing, charter schools, affirmative action, vaccination, taxation, voting rights, global justice). The Departments of History and Philosophy will alternate teaching the EHPP Capstone Course.

79-449	EHPP Capstone Course [cross-listed]	12
80-449	EHPP Capstone Course [cross-listed]	12

VI. Bachelor of Science Option

Students may elect to earn a Bachelor of Science rather than a Bachelor of Arts degree by completing two courses from the list below, or by petitioning the Director of EHPP to accept equivalent courses as substitutions.

21-257	Models and Methods for Optimization	9
36-202	Methods for Statistics & Data Science	9
or 70-208	Regression Analysis	
36-303	Sampling, Survey and Society	9
36-309	Experimental Design for Behavioral & Social Sciences	9
70-257	Optimization for Business	9
80-305	Game Theory	9
80-306	Decision Theory	9
88-221	Markets, Democracy, and Public Policy	9
88-223	Decision Analysis	12
88-251	Empirical Research Methods	9
88-300	Programming and Data Analysis for Social Scientists	9

Additional Major

The B.A./B.S. in Ethics, History, and Public Policy may be scheduled as an additional major in consultation with the Director of Ethics, History, and Public Policy.

Ethics, History, and Public Policy Sample Curriculum

Third-Year		Fourth-Year	
Fall	**Spring**	**Fall**	**Spring**
Foundations Course in History	Foundations Course in Law and Social Sciences	EHPP Capstone Course	Ethics and Policy Core Course
Foundations Course in Philosophy	Foundations Course in Law and Social Sciences	Ethics and Policy Core Course	History and Policy Core Course
Ethics and Policy Core Course	Ethics and Policy Core Course	History and Policy Core Course	Third Course (open)
History and Policy Core Course	History and Policy Core Course	Fourth Course (open)	Fourth Course (open)
Fifth Course Open	Fifth Course (open)	Fifth Course (open)	Fifth Course (open)

The above sample program is presented as a two-year (junior-senior year) plan for completing EHPP major requirements. Its purpose is to show that this program can be completed in as few as two years; not that it must be.

Students may enter the EHPP major, and begin major course requirements, as early as they wish. Students should consult their advisor when planning their program.

The Major in Information Systems

Joseph S. Mertz, Jr., *Faculty Program Director*
Location: Hamburg Hall 3028, JoeMertz@cmu.edu

Artificial intelligence. Machine learning. Deep learning. Big data. Social networks. Neural networks. Robotics. Automated voice assistants. Blockchain. Driverless vehicles. Web design. Carnegie Mellon University's Information Systems (IS) program (p. 443) will help you do just that. At CMU, Information Systems is a joint degree program between Heinz College and Dietrich College of Humanities and Social Sciences and is strongly technical, drawing from Carnegie Mellon's leadership in computer science, human-centered design, business management, and software engineering. It is deeply rooted in the humanities and social sciences, allowing students the lifelong benefits of a rich liberal arts education. And it provides pathways for students to find their own Information Systems niche through advanced study and exploration with leading researchers.

In addition to General Education Requirements and basic prerequisites in Mathematics and Computer Science, The IS program curriculum includes a broad grounding in humanities and social sciences to promote critical thinking, and interdisciplinary problem-solving, an Information Systems Core to provide business-facing skills needed to design and build effective real-world systems solutions, an Information Systems Breadth focused on professional communications, quantitative analysis, and how technology functions in society, and a concentration that gives you the flexibility and agency to gain expertise in a supporting area and define your own niche in IS.

The IS major is the perfect place for you if you are passionate about using technology for positive gains across society, both economic and humanistic.

For full program information, go to The Major in Information Systems (p. 443).

The Major in Linguistics

Patrick Doyle, *Academic Program Manager*
Location: Baker Hall 161G
pdoyle2@andrew.cmu.edu
https://go.oncehub.com/PatDoyle (https://go.oncehub.com/PatDoyle/)

Linguistics is the scientific study of human language. The central goal of the Linguistics Major is to provide students with the analytical skills and linguistic concepts needed to understand language scientifically, whether formally, as researchers, or informally, as participants in daily linguistic interactions. The foundation of the Linguistics Major is a set of rigorous core courses, informed by contemporary approaches to the study of linguistic form and meaning.

The **Core courses** cover the principal domains of linguistic analysis: phonetics and phonology, syntax and meaning.

Students then move on to the **Extended Core**, which includes more advanced courses as well as courses on a wider range of topics, such as intonation and language variation. These courses are supplemented by a wide-ranging set of electives including linguistically relevant courses taught in other departments.

Primary majors complete their course of study with a Senior Thesis, a semester-long research project carried out independently with one-on-one guidance from a member of the linguistics faculty.

Curriculum

The Linguistics **primary major** requires a total of 12 courses plus a senior thesis. The Linguistics **additional major** requires a total of 13 courses (senior thesis not required). This includes 2 semesters of sequential language study for all majors. At least three courses (not including specific language courses) must be at the 300-level or higher. All courses counted towards the major must be taken for a letter grade and passed with a grade of "C" or above. Students may double count any course for the major simultaneously with another major or minor.

Linguistics Core (36 units)

Complete the following requirements.

80-180	Nature of Language: An Introduction to Linguistics	9
80-282	Phonetics and Phonology I	9
80-280	Linguistic Analysis	9
or 80-285	Natural Language Syntax	
80-381	Meaning in Language	9
or 80-383	Language in Use	

Extended Core (27 units)

Choose three courses (27 units) from Extended Core and/or additional courses from Linguistics Core.

80-283	It Matters How You Say It	9
80-286	Words and Word Formation: Introduction to Morphology	9
80-287	Language Variation and Change	9
80-288	Intonation: The Meaning of Linguistic Tunes	9
80-382	Phonetics and Phonology II	9
80-384	Linguistics of Turkic Languages	9
80-385	Linguistics of Germanic Languages	9
80-388	Linguistic Typology: Diversity and Universals	9
80-488	Acoustics of Human Speech: Theory, Data, and Analysis	9

LANGUAGE REQUIREMENT

Students must successfully complete 2 semesters of foreign language study in a single language (e.g. 100 & 200 level).

Electives

Primary majors choose **three** additional electives (27 or more units).
Additional majors choose **four** additional electives (36 or more units).
Primary majors: see thesis requirement below.

These Electives can be additional courses from the Core or Extended Core courses listed above, the electives list below, or any other course which is approved by the Academic Program Manager as a linguistics elective. Listed below are the additional electives taught on a regular basis. Additional appropriate courses are offered irregularly or on a one-off basis. The Academic Program Manager will provide students with a list of possible electives each semester, and will assist students in selecting electives which are consistent with their goals and interests.

Philosophy		
80-484	Language and Thought	9
English		
76-318	Communicating in the Global Marketplace	9
76-325	Intertextuality	9
76-385	Introduction to Discourse Analysis	9
76-386	Language & Culture	9
76-388	Coding for Humanists	9
76-389	Rhetorical Grammar	9
Modern Languages		
82-239	Crazy Linguistically Rich Asian Languages	9
82-304	French & Francophone Sociolinguistics	9
82-305	French in its Social Contexts	9
82-334	Structure of Chinese	9
82-585	Topics in Second Language Acquisition	9
82-373	Structure of the Japanese Language	9
82-383	Second Language Acquisition: Theories and Research	9
82-388	Topics in Second Language Acquisition	9
Psychology		
85-354	Infant Language Development	9
85-421	Language and Thought	9
Language Technologies Institute		
11-411	Natural Language Processing	12
11-423	ConLanging: Lrng. Ling. & Lang Tech via Constru Artif. Lang.	12
11-492	Speech Technology for Conversational AI	12
11-422	Grammar Formalisims	12

Note: all 11-xxx courses have significant Computer Science prerequisites. Interested students should check with the course instructor and with the Linguistics Academic Program Manager before registering.

Statistics and Data Science		
36-468	Special Topics: Text Analysis	9

SENIOR THESIS [PRIMARY MAJORS ONLY]

Primary majors must complete a senior thesis (a workload equivalent to a 12-unit course) 80-595 Senior Thesis. Topics must be approved by an advisor, who will work with the student and guide the thesis project. Students are responsible for identifying their topic and securing their thesis advisor. Students should work with the Academic Program Manager of the major to begin the process of identifying their thesis topic and advisor during the fall of their senior year at the latest. Students will be required to submit a written proposal of their thesis project, signed by their thesis faculty advisor, before the end of the semester preceding that in which the thesis research will be conducted..

Additional Major in Linguistics

The Linguistics additional major requires a total of 13 courses. This includes 2 semesters of language study for all majors. At least three courses (not including specific language courses) must be at the 300-level or higher. Additional majors are not required to write a thesis but must take four electives (36 or more units). All courses counted towards the major must be taken for a letter grade and passed with a grade of "C" or above. Students may double count any course for the major simultaneously with another major or minor. If you are interested in obtaining an additional major in Linguistics, please reach out to the Academic Program Manager, Philosophy Department.

The Major in Psychology and Biological Sciences

This unified major is intended to reflect the interdisciplinary nature of our current research in the fields of psychology and biology, as well as the national trend in some professions to seek individuals broadly trained in both the social and natural sciences. Students entering from the Dietrich College of Humanities and Social Sciences will earn a Bachelor of Science in Psychology and Biological Sciences. Students entering from the Mellon College of Sciences receive a Bachelor of Science in Biological Sciences and Psychology.

Pre-Major Requirements

The unified major specifies particular pre-major requirements in the areas of mathematical sciences and statistics, natural science, and computational reasoning. Particular courses are specified in these areas because they are prerequisites for courses required in the major and therefore they are the most efficient way to complete the general education requirements for either Dietrich College or SHS. All other general education categories can be filled in any way that satisfies the requirements of the student’s college or of the SHS program.

The major in Psychology and Biological Sciences is offered only as a B.S. degree. Full curriculum requirements can be viewed under the Department of Psychology (p. 478) section of the Catalog.

Student-Defined Major Program

Joseph E. Devine, *Director and Associate Dean for Undergraduate Studies*
Location: Baker Hall 154F
jd0x@andrew.cmu.edu
www.cmu.edu/dietrich/academics/degrees-majors-minors/student-defined-majors.html (https://www.cmu.edu/dietrich/academics/degrees-majors-minors/student-defined-majors.html)

For Dietrich College students whose educational goals cannot be as adequately served by the curricula of existing majors, the college offers the opportunity to self-define a major. The procedure for establishing such a major centers on a written proposal, submitted to the Dietrich College Dean's Office. This proposal consists of two parts:

Major Description and Rationale

A description of the components of the proposed program of study; a presentation of the objectives of the program of study, how it represents a coherent and (given available faculty, courses, and other resources) viable course of study, and the reason(s) why these objectives cannot be accomplished within one or more of the college's existing majors.

Curriculum

Presentation of a complete outline of all courses that will comprise the requirements for the major. These courses should be categorized in two ways: first, according to that component of the major program to which each belongs (e.g., mathematical prerequisites; research methods; theoretical perspectives; etc.); and second, a semester-by-semester outline that indicates when each course is to be taken (or, for any already taken, when taken and grade received). In addition to courses taken at Carnegie Mellon, the major's curriculum may include courses taken (or to be taken) at other schools, related projects or internships, or programs of study abroad. The minimum requirements for graduation is, as with all majors in the college, 360 units of credit and completion of the Dietrich College general education program.

Proposals and curricula are evaluated for clarity of focus, coherence and depth in related areas, and viability. Proposals should generally be developed no later than the sophomore year, and approved majors begin their program generally no later than the junior year.

The student-defined option is also possible to propose as an additional major or minor. These options extend to undergraduates from all Carnegie Mellon colleges.

Dietrich College Interdisciplinary Minors

Dietrich College interdepartmental minors are programs whose content and components span two or more academic departments to form coherent patterns of study.

A number of interdepartmental minors are offered by Dietrich College and are, in general, available to all Carnegie Mellon undergraduate students. As well, there are numerous other minors offered by other colleges in the university that are generally available to Dietrich College students. The full list of minors available to Carnegie Mellon students is located in the catalog index under “Minors.”

Completion of the requirements for any of these minors is noted on the final transcript.

To declare a Dietrich College interdepartmental minor, students should contact the college's Academic Advisory Center (AAC) and the faculty advisor for that minor.

To discuss the possibility of declaring a non-Dietrich College minor, contact the advisor listed for the minor in question.

In general, unless noted, no course taken to fulfill requirements for these interdepartmental minors may apply toward any other program's requirements.

The Minor in African and African American Studies

Professor Edda L. Fields-Black, *Faculty Advisor,* History Department
Location: Baker Hall 231B, 412-268-8012
fieldsblack@andrew.cmu.edu

Dr. Alexandra Garnhart-Bushakra, *Academic Program Manager*, History Department
Location: Baker Hall 240, 412-268-2880

Mission

The African and African American Studies minor introduces students to several large regions of the world: sub-Saharan Africa, the Americas, and the Caribbean. Broad geographic coverage and a comparative framework encourage students to make connections between Africa and the African Diaspora, as well as among different Diasporan communities. The minor offers undergraduates the opportunity to undertake an empirical and theoretical examination of the cultural, political, social, and historical experiences of Africans and people of African descent.

This unique transnational minor brings together several departments and colleges within the university and allows students to develop analytical skills particular to the arts, humanities, social sciences, public policy, and management. The African and African American Studies minor allow students a considerable degree of freedom in their choice of electives and independent research projects, including opportunities to study and conduct research in a relevant foreign language.

Courses taken to fulfill requirements in other major or minor programs may only be applied to this minor with permission of the Faculty Advisor.

Requirements

- The minor is composed of 54 units - two core courses and four elective courses.
- The elective courses must include one course that requires a research paper or project.
- Students may take an additional two core courses as electives, but not more than four total courses.
- Students must take courses in at least two of the four regions (African, African American, Latin American, and the Caribbean) between their core and elective courses.

Core Courses — 18 units

Choose two from the History and/or English Department courses listed below:

African		
79-226	African History: Earliest Times to 1780	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
African American		
76-232	Introduction to Black Literature	9
79-242	African American History: Reconstruction to the Present	9

Elective Courses — 36 units

African		
79-225	West African History in Film	9
79-237	Comparative Slavery *	9
79-290	The Slave Passage: From West Africa to the Americas	9
79-385	Out of Africa: The Making of the African Diaspora *	9
82-303	French & Francophone Cultures	9
82-304	French & Francophone Sociolinguistics **	9
African American		
57-480	History of Black American Music	6
76-407	Topics in Literary & Cultural Studies : There Are Black People in the Future	9
79-237	Comparative Slavery *	9
79-247	African Americans, Imprisonment, and the Carceral State	9
79-252	"Harriet": Harriet Tubman, Slavery, and the Underground Railroad	6
79-333	African Americans, Race, and the Fight for Reparations	9
79-371	African American Urban History	9
Caribbean		
79-237	Comparative Slavery *	9
79-385	Out of Africa: The Making of the African Diaspora *	9
82-303	French & Francophone Cultures	9
82-304	French & Francophone Sociolinguistics **	9
Latin American		
79-317	Art, Anthropology, and Empire	9
82-343	Latin America Language and Culture	9
82-451	Studies in Latin American Literature and Culture	9

Notes:

* Denotes courses that require a research paper/project.

** Denotes courses taught in a foreign language

The Minor in Film and Media Studies

Laura E. Donaldson, *Academic Advisor*
Jeffrey Hinkelman, *Faculty Advisor*

Location: Department of English, Baker Hall 259

Film and the electronic media are a crucial part of contemporary culture and society; they constitute an important tool for under-standing social arrangements, historical changes, and play an increasingly important role in the development of aesthetic and cultural theory. The Dietrich College minor in Film and Media Studies offers students the opportunity to engage with film and visual media, from theoretical framing and historical-cultural contextualization to training skills in both creating and analyzing film, as well as the development of a complex blend of creative, professional, and technical competencies.

A maximum of two courses may double count with other programs.

The courses listed below are offered with at least general regularity. Participating departments may subsequently develop and offer other courses that, while not listed here, are deemed appropriate for this minor. A faculty advisor for the minor should be consulted (especially when the schedule of courses to be offered for a given semester becomes available) to identify such additional courses.

Required Introductory Course 9 units

76-239	Introduction to Film Studies (prerequisite for 76-439)	9

Required Intermediate Course 9 units

76-310	Advanced Studies in Film and Media	9

Film and Media Electives 27 units

Complete a minimum of 27 units of course work at the 200-level or above when the primary topic is film and media. Courses may include, but are not limited to, the following:

54-191	Acting for Non-Majors	9
76-259	Film History	9
76-269	Introduction to Screenwriting	9
76-292	Introduction to Film Production	9
76-295	Russian Cinema: From the Bolshevik Revolution to Putin's Russia	9
76-312	Crime and Justice in American Film	9
76-313	Creative Visual Storytelling in Film Production	9
76-339	Topics in Film and Media *	9
76-353	Transnational Feminisms: Fiction and Film	9
76-367	Fact Into Film: Translating History into Cinema	9
76-374	Mediated Narrative	9
76-439	Seminar in Film and Media Studies	9
76-448	Shakespeare on Film	9
76-454	Rise of the Blockbuster	9
76-456	Independent Study in Film & Media Studies (requires prior approval)	Var.
76-469	Screenwriting Workshop	9
79-220	Screening Mexico: Mexican Cinema, 1898 to Present	6
79-306	Fact into Film: Translating History into Cinema	9
79-308	Crime and Justice in American Film	9
79-309	The Chinese Revolution Through Film (1949-2000)	9
79-319	India Through Film	6
79-340	Juvenile Delinquency & Film: From "Boyz N the Hood"(1991) to "The Wire"(2002-08)	6
82-215	Arab Culture Through Dialogues, Film, and Literature	9
82-278	Japanese Film and Literature: The Art of Storytelling	9
82-296	From Augustine to Avatars: Personal Narratives Across Media	6
82-362	Italian Language and Culture II (if significant portion of course pertains to film)	9
82-253	Korean Culture Through Film	9
82-428	History of German Film	9
82-456	Topics in Hispanic Studies (if significant portion of course pertains to film)	9
82-533	Cultural Topics in Chinese Studies (if significant portion of course pertains to film)	6

* May be taken up to three times and counted for additional credit toward Film and Media Electives if topics differ.

Students should consult with a faculty advisor for the minor regarding courses not listed above.

400-level Film and Media Course 9 units

Complete one 400-level course from the Department of English that concentrates on film/media directly or that uses it as a tool of social or cultural analysis.

76-439	Seminar in Film and Media Studies	9
76-448	Shakespeare on Film	9
76-454	Rise of the Blockbuster	9
76-456	Independent Study in Film & Media Studies (requires prior approval)	Var.
76-467	Crime Fiction and Film	9
76-469	Screenwriting Workshop	9

The Minor in Gender Studies

Lisa Tetrault, *Professor of History and Faculty Advisor*
tetrault@andrew.cmu.edu
Location: English Department, Baker Hall 259

Gender studies is an interdisciplinary field that investigates how gender is embedded in social, cultural, and political relationships. It understands gender as a category of power that intersects with other power relations, including race, class, and sexuality.

Courses allow students to develop a deeper understanding of how gender operates, and to transfer the analytical skills they acquire to other courses as well as to their personal and professional lives. The minor combines coursework in some combination of the following fields: English, history, anthropology, psychology, philosophy, economics, and modern languages.

Courses listed are only examples. Course offerings change regularly, so please consult semester offerings and the minor advisor for other courses.

The courses listed below are offered with at least general regularity. Participating departments may develop and offer other courses that, while not listed here, are appropriate for the study of gender. Consult the minor advisor to confirm the relevance of unlisted, gender-focused courses.

Complete 1 of the following required courses. 9 units

76-241	Introduction to Gender Studies	9
79-320	Women, Politics, and Protest	9
79-331	Body Politics: Women and Health in America	9

Complete 5 or more additional courses totaling at least 45 units. 45 units

See examples below, but other courses may fulfill this requirement.*

76-353	Transnational Feminisms: Fiction and Film	9
79-244	Women in American History	9
79-320	Women, Politics, and Protest **	9
79-323	Making Modern Cities	9
79-324	#MeToo: Naming and Resisting Gender Violence	6
79-325	U.S. Gay and Lesbian History	6
79-331	Body Politics: Women and Health in America **	9
82-300	Language & Society in the Arab World	9
84-312	Terrorism in Sub-Saharan Africa	6
85-350	Psychology of Prejudice	9
85-446	Psychology of Gender	9

* Consult with Gender Studies Minor Advisor Professor Lisa Tetrault at tetrault@andrew.cmu.edu.
** If not taken as a requirement.

Minor in Health Care Policy and Management

Sponsored by:
Heinz College of Information Systems and Public Policy
Dietrich College of Humanities and Social Sciences
Mellon College of Science

Faculty Advisors:
Jason D'Antonio, Mellon College of Science
James F. Jordan, H. John Heinz III College

The face of health care is changing. The practice of medicine is being fundamentally altered by the forces of change in public policy, health care organizations and in the industry as a whole. The role of individual professionals in this industry is changing as rapidly as the industry itself. Traditional career paths have disappeared overnight to be replaced by new opportunities that require new skills. New organizations are placing new demands on their professional and medical staffs. The criteria of efficiency and financial stability are entering the domains of diagnosis and treatment.

This minor is designed to provide students considering a career in the health professions with an understanding of how these changes are likely to affect their careers. Students will become familiar with the critical policy and management issues and will begin to learn to operate effectively in the emerging health care environment. The curriculum combines economic, organizational, managerial, historical and psychological perspectives on these issues to provide a foundation for a deepened understanding of the changing structure of health care organizations and policy.

Required Courses for HCPM Minor

A total of 54 units are required to complete this minor. Entry into the minor requires completion of 73-102 Principles of Microeconomics or the equivalent by approval.

Required Courses

Complete a total of 21 units from the following:		
79-330	Medicine and Society: Health, Healers, and Hospitals	9
90-436	Health Systems	6
90-472	Health Policy	6

Elective Courses

Complete a minimum of 24 units from these two sections:

Heinz College Courses		
94-409	Healthcare Information Systems	12
73-328	Health Economics	12
90-832	Health Law	6
90-433	Population Health	6
90-834	Health Care Geographical Information Systems	12
Other courses as approved		

Humanities and Social Sciences Courses (9 units each)		
80-245	Medical Ethics	9
76-494	Healthcare Communications	9
88-365	Behavioral Economics and Public Policy	9
42-444	Medical Devices	9
Other courses as approved		

Please note that some of these courses have prerequisites that will not count toward the completion of the requirements for this minor.

Elective Focus Areas

Focus areas are suggested groupings of electives based on student interest. Students *do not* need to take all electives within one focus area; they are free to choose their 18-unit elective minimum from any combination of focus areas.

Health Management/Administration Focus		Units
90-832	Health Law	6
80-245	Medical Ethics	9
76-494	Healthcare Communications	9

Health Policy Focus		Units
73-328	Health Economics	12
90-832	Health Law	6
90-433	Population Health	6
88-365/90-882	Behavioral Economics and Public Policy	9
Other courses as approved		

Health Analytics & IT Focus		Units
94-409	Healthcare Information Systems	12
90-834	Health Care Geographical Information Systems	12
42-444	Medical Devices	9
Other courses as approved		

The Minor in Linguistics

Linguistics is the scientific study of human language. The central goal of the Linguistics Program is to provide students with the analytical skills and linguistic concepts needed to understand language scientifically, whether formally, as researchers, or informally, as participants in daily linguistic interactions. The foundation of the Linguistics Minor is a set of rigorous core courses, informed by contemporary approaches to the study of linguistic form and meaning. The Core courses cover the principal domains of linguistic analysis: phonetics and phonology, syntax, and meaning. Students then move on to the Extended Core, which includes more advanced courses as well as courses on a wider range of topics, such as intonation and language variation. All courses counted towards the minor must be taken for a letter grade and passed with a grade of "C" or above.

Core (27 units)

Required		
80-180	Nature of Language: An Introduction to Linguistics	9

Select 2 from the following 3 options		
80-282	Phonetics and Phonology I	9
80-280	Linguistic Analysis	9
or 80-285	Natural Language Syntax	
80-381	Meaning in Language	9
or 80-383	Language in Use	

Extended Core: Choose 3 courses (27 units) from the Extended Core and/or additional courses from Core.

Extended Core		
80-283	It Matters How You Say It	9
80-286	Words and Word Formation: Introduction to Morphology	9
80-287	Language Variation and Change	9
80-288	Intonation: The Meaning of Linguistic Tunes	9
80-382	Phonetics and Phonology II	9
80-384	Linguistics of Turkic Languages	9
80-385	Linguistics of Germanic Languages	9
80-388	Linguistic Typology: Diversity and Universals	9
80-488	Acoustics of Human Speech: Theory, Data, and Analysis	9

The Minor in Logic and Computation

The Minor in Logic and Computation provides students with general course work in logic, the theory of computation, and philosophy. Students must complete six courses, among them the following three core courses. All courses counted towards the minor must be taken for a letter grade and passed with a grade of "C" or above.

Logic and Computation Core Courses — 27 units

80-150	Nature of Reason	9
80-211	Logic and Mathematical Inquiry	9
or 80-210	Logic and Proofs	
80-310	Formal Logic	9
or 80-311	Undecidability and Incompleteness	

Logic and Computation Electives — 27 units

Students must take two courses in the Philosophy Department at the 300-level or higher, in subjects related to logic and computation. And an additional course at the 300-level or higher in an area that uses logical and computational tools, such as philosophy, computer science, linguistics, mathematics, psychology, or statistics. The choice of electives must be approved by the Academic Program Manager.

Neural Computation Minor

Dr. Tai Sing Lee, *Director*
Melissa Stupka, *Administrative Coordinator*
https://www.cmu.edu/ni/academics/minor-in-neural-computation.html

Neural computation is a scientific enterprise to understand the neural basis of intelligent behaviors from a computational perspective. Study of neural computation includes, among others, decoding neural activities using statistical and machine learning techniques, and developing computational theories and neural models of perception, cognition, motor control, decision-making and learning. The neural computation minor allows students to learn about the brain from multiple perspectives, and to acquire the necessary background for graduate study in neural computation. Students enrolled in the minor will be exposed to, and hopefully participate in, the research effort in neural computation and computational neuroscience at Carnegie Mellon University.

The minor in Neural Computation is an intercollege minor jointly sponsored by the School of Computer Science, the Mellon College of Science, and the Dietrich College of Humanities and Social Sciences, and is coordinated by the Neuroscience Institute (https://www.cmu.edu/ni/) and the Center for the Neural Basis of Cognition (CNBC) (http://www.cnbc.cmu.edu/).

The Neural computation minor is open to students in any major of any college at Carnegie Mellon. It seeks to attract undergraduate students from computer science, psychology, engineering, biology, statistics, physics, and mathematics from SCS, CIT, H&SS and MCS.

The Neural Computation minor is open to students in any major of any college at Carnegie Mellon. It seeks to attract undergraduate students from computer science, psychology, engineering, biology, statistics, physics, and mathematics from SCS, CIT, Dietrich College and MCS. The primary objective of the minor is to encourage students in biology and psychology to take computer science, engineering and mathematics courses, to encourage students in computer science, engineering, statistics and physics to take courses in neuroscience and psychology, and to bring students from different disciplines together to form a community. The curriculum and course requirements are designed to maximize the participation of students from diverse academic disciplines. The program seeks to produce students with both basic computational skills and knowledge in cognitive science and neuroscience that are central to computational neuroscience.

APPLICATION

Students must apply for admission no later than November 30 of their senior years; an admission decision will usually be made within one month. Students are encouraged to apply as early as possible in their undergraduate careers so that the director of the Neural Computation minor can provide advice on their curriculum, but should contact the program director any time even after the deadline.

To apply, send email to the director of the Neural Computation minor Dr. Tai Sing Lee (tai@cnbc.cmu.edu) and copy Melissa Stupka (mstupka@andrew.cmu.edu). Include in your email:

- Full name
- Andrew ID
- Preferred email address (if different)
- Your class and College/School at Carnegie Mellon
- Semester you intend to graduate
- All (currently) declared majors and minors
- Statement of purpose (maximum 1 page) – Describes why you want to take this minor and how it fits into your career goals
- Proposed schedule of required courses for the Minor (this is your plan, NOT a commitment)
- Research projects you might be interested in

Curriculum

The Minor in Neural Computation will require a total of five courses: four courses drawn from the four core areas (A: neural computation, B: neuroscience, C: cognitive psychology, D: intelligent system analysis), one from each area, and one additional depth elective chosen from one of the core areas that is outside the student’s major. The depth elective can be replaced by a one-year research project in computational neuroscience. No more than two courses can be double counted toward the student’s major or other minors. However, courses taken for general education requirements of the student’s degree are not considered to be double counted. A course taken to satisfy one core area cannot be used to satisfy the course requirement for another core area. The following listing presents a set of current possible courses in each area. Other computational neuroscience courses are being developed at Carnegie Mellon and University of Pittsburgh that will also satisfy core area A requirement and the requirements will be updated as they come on-line. Substitution is possible but requires approval.

A. Neural Computation

		Units
15-386	Neural Computation	9
15-387	Computational Perception	9
15-883	Computational Models of Neural Systems	12
85-419	Introduction to Parallel Distributed Processing	9
86-375	Computational Perception	9
Pitt-Mathematics-1800 Introduction to Mathematical Neuroscience		9

B. Neuroscience

03-362	Cellular Neuroscience	9
03-363	Systems Neuroscience	9
03-365	Neural Correlates of Learning and Memory	9
42-630	Introduction to Neural Engineering (crosslisted with 18-690)	12
85-765	Cognitive Neuroscience	9
Pitt-Neuroscience 1000 Introduction to Neuroscience		9

C. Cognitive Psychology

85-211	Cognitive Psychology	9
85-213	Human Information Processing and Artificial Intelligence	9
85-412	Cognitive Modeling	9
85-419	Introduction to Parallel Distributed Processing	9
85-426	Learning in Humans and Machines	9
85-765	Cognitive Neuroscience	9

D. Intelligent System Analysis

10-301	Introduction to Machine Learning	12
or 10-315	Introduction to Machine Learning (SCS Majors)	
15-281	Artificial Intelligence: Representation and Problem Solving	12
15-386	Neural Computation	9
15-387	Computational Perception	9
15-494	Cognitive Robotics: The Future of Robot Toys	12
16-299	Introduction to Feedback Control Systems	12
16-311	Introduction to Robotics	12
16-385	Computer Vision	12
18-290	Signals and Systems	12
24-352	Dynamic Systems and Controls	12
36-225	Introduction to Probability Theory	9
36-401	Modern Regression	9
36-410	Introduction to Probability Modeling	9
42-631	Neural Data Analysis	12
42-632	Neural Signal Processing	12
86-375	Computational Perception	9
86-631	Neural Data Analysis	12

Prerequisites

The required courses in the above four core areas require a number of basic prerequisites: basic programming skills at the level of 15-110 Principles of Computing and basic mathematical skills at the level of 21-122 Integration and Approximation or their equivalents. Some courses in Area D require additional prerequisites. Area B Biology courses require, at minimum, 03-121 Modern Biology. Students might skip the prerequisites if they have the permission of the instructor to take the required courses. Prerequisite courses are typically taken to satisfy the students' major or other requirements. In the event that these basic skill courses are not part of the prerequisite or required courses of a student's major, one of them can potentially count toward the five required courses (e.g. the depth elective), conditional on approval by the director of the minor program.

Research Requirements (Optional)

The minor itself does not require a research project. The student however may replace the depth elective with a year-long research project. In special circumstances, a research project can also be used to replace one of the five courses, as long as (1) the project is not required by the student's major or other minor, (2) the student has taken a course in each of the four core areas (not necessarily for the purpose of satisfying this minor's requirements), and (3) has taken at least three courses in this curriculum not counted toward the student's major or other minors. Students interested in participating in the research project should contact any faculty engaged in computational neuroscience or neural computation research at Carnegie Mellon or in the University of Pittsburgh. A useful webpage that provides listing of faculty in neural computation is https://www.cmu.edu/ni/academics/pnc/pnc-training-faculty.html. The director of the minor program will be happy to discuss with students about their research interest and direct them to the appropriate faculty.

Fellowship Opportunities

The Program in Neural Computation (PNC) administered by the Center for the Neural Basis of Cognition currently provides 3-4 competitive full-year fellowships ($11,000) to Carnegie Mellon undergraduate students to carry out mentored research in neural computation. The fellowship has course requirements similar to the requirements of the minor. Students do not apply to the fellowship program directly. They have to be nominated by the faculty members who are willing to mentor them. Therefore, students interested in the full-year fellowship program should contact and discuss research opportunities with any CNBC faculty at Carnegie Mellon or University of Pittsburgh working in the area of neural computation or computational neuroscience and ask for their nomination by sending email to Dr. Tai Sing Lee, who also administers the undergraduate fellowship program at Carnegie Mellon. See www.cnbc.cmu.edu/training/undergraduate/undergraduate-research-fellowships-in-computational-neuroscience/ (http://www.cnbc.cmu.edu/training/undergraduate/undergraduate-research-fellowships-in-computational-neuroscience/) for details.

The Program in Neural Computation also offers a summer training program for undergraduate students from any U.S. undergraduate college. The students will engage in a 10-week intense mentored research and attend a series of lectures in neural computation. See www.cnbc.cmu.edu/training/undergraduate/summer-undergraduate-research-program-in-computational-neuroscience/ (http://www.cnbc.cmu.edu/training/undergraduate/summer-undergraduate-research-program-in-computational-neuroscience/) for application information.

The Minor in Rationality, Uncertainty, and Choice: Formal Methods

Core Requirements

Complete all of the following:		Units
80-305	Game Theory	9
80-306	Decision Theory	9
88-223	Decision Analysis	12
or 88-312	Decision Models and Games	

Note: Students must complete three elective courses from the following two categories and must complete at least one course in each category.

Elective Category 1: Formal Foundations 9-18 units

80-201	Knowledge and Justified Belief	9
80-208	Critical Thinking	9
80-210	Logic and Proofs	9
80-315	Logics for Knowledge and Belief	9
80-325	Foundations of Causation and Machine Learning	9
80-516	Causality and Machine Learning	9
80-521	Seminar on Formal Epistemology: Belief and Evidence	9
80-524	Topics in Formal Epistemology: Topological Philosophy of Science	9
88-223	Decision Analysis	12
88-312	Decision Models and Games	9
88-379	Data-Driven Decision Analysis	9

Elective Category 2: Theory and Applications 9-18 units

80-246	Moral Psychology	9
80-249	AI, Society, and Humanity	9
80-252	Kant	9
80-255	Pragmatism: Making Ideas Work	9
80-261	Experience, Reason, and Truth	9
80-324	Philosophy of Economics	9
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9

The Minor in Religious Studies

Professor Allyson Creasman, *Faculty Advisor,* History Department
Location: Baker Hall 242D, 412-268-9832
acreasman@cmu.edu

Dr. Alexandra Garnhart-Bushakra, *Academic Program Manager*, History Department
Location: Baker Hall 240, 412-268-2880

The Religious Studies minor offers students a range of intellectual tools for thinking about religious ideas, behaviors and institutions. It also enables students to build a base of knowledge that extends beyond any one particular religious tradition.

Curriculum 54 units

The minor consists of six courses, totaling at least 54 units. Courses taken to fulfill requirements in other major or minor programs may only be applied to this minor with permission of the Faculty Advisor.

Religious Studies minors must satisfy the requirements listed below:

Required Core Course 9 units

All Religious Studies minors are required to take 79-281, Introduction to Religion. This required course introduces several modes of inquiry into religion, such as the philosophy of religion, sociological and behavioral approaches to religion, historical analysis of religious subject, literary and critical analysis of religious texts, theological modes of thought, and anthropological treatments of religion. This course is offered regularly, usually in the Spring semester.

79-281	Introduction to Religion	9

Distribution Requirements 18 units

In addition to the required Core Course, students must complete Distribution Courses totaling 18 units (usually two 9-unit courses). A Distribution Course is one that applies a particular discipline to more than one religion. Some examples of qualifying Distribution Courses that have been offered include:

Historical Approaches		
79-208	Witchcraft and Witch-Hunting	9
79-352	Christianity Divided: The Protestant and Catholic Reformations, 1450-1650	9

Philosophical Approaches		
80-276	Philosophy of Religion	9

Textual Approaches

In addition to the courses listed above, participating departments often offer other courses that may qualify as Distribution Courses for the minor. The Faculty Advisor should be consulted to identity qualifying courses (especially after the Schedule of Courses for a given semester becomes available).

Elective Courses 27 units

In addition to the required Core Course and the Distribution Courses, students must complete Elective Courses totaling at least 27 units (usually three 9-unit courses). Unlike Distribution Courses, an Elective Course may focus on the study of only one religion (although courses examining more than one religious tradition can also count as Elective Courses if not otherwise used to fulfill the Distribution Requirement).

Some examples of qualifying Elective Courses that have been offered include:

79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-296	Religion in American Politics	6
79-350	Early Christianity	9
79-375	Science & Religion	6

In addition to the courses listed above, participating departments often offer other courses that may qualify as Elective Courses for the minor. The Faculty Advisor should be consulted to identify qualifying courses (especially after the Schedule of Courses for a given semester becomes available).

In addition to courses offered at CMU, relevant courses taken at the University of Pittsburgh, Duquesne University, or other Pittsburgh institutions may count toward the Elective Requirement with the permission of the Religious Studies minor's Faculty Advisor. The option to cross-register for relevant courses at other local institutions allows students some flexibility in meeting the minor's requirements and gives them the opportunity to explore interests in religious subjects that might not otherwise be covered at CMU. Students who wish to cross-register for courses at other institutions should consult with the Faculty Advisor about whether the selected course(s) will meet the minor's Elective Requirement.

The Minor in Science, Technology and Society

Professor Christopher J. Phillips, *Faculty Advisor,* History Department
Location: Baker Hall 231C, 412-268-1753
cjp1@cmu.edu

Dr. Alexandra Garnhart-Bushakra, *Academic Program Manager*, History Department
Location: Baker Hall 240, 412-268-2880

This minor provides interdisciplinary perspectives on the development and meaning of science and technology in modern society. The core courses enable you to develop a historical and philosophical understanding of the interplay among science, technology, and society. Elective courses enable you to pursue in greater depth and variety subjects and approaches that build on both the core courses and your primary major.

Courses taken to fulfill requirements in other major or minor programs may only be applied to this minor with permission of the Faculty Advisor.

Curriculum 54 units

Core Courses 27 units

Complete one course from each area. Additional courses from the History of Science Core and the History of Philosophy Core may count as electives for the minor.

Area 1. History of Science Core

Take at least 1 course from the list below.

79-160	Introduction to the History of Science	9
79-170	Introduction to Science, Technology, and Society	9
79-175	Moneyball Nation: Data in American Life	9
79-234	Technology and Society	9
79-330	Medicine and Society: Health, Healers, and Hospitals	9
79-370	Technology in the United States	9
79-380	Hostile Environments: The Politics of Pollution in Global Perspective	9

Area 2. Philosophy of Science Core

Take at least 1 course from the list below.

80-220	Philosophy of Science	9
80-221	Philosophy of Social Science	9
80-226	The Nature of Scientific Revolutions	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-249	AI, Society, and Humanity	9

Area 3. Science Core

Take at least 1 course (9 units total) from the following departments: 15-xxx Computer Science, 09-xxx Chemistry, 03-xxx Biological Sciences, 33-xxx Physics

Electives 27 units

Complete three courses from the approved list of elective courses. Courses listed in Areas 1 and 2 may also be taken as electives if not already completed for an Area requirement. To petition for a course not listed to be approved as an elective, contact the Faculty Advisor, cjp1@cmu.edu, directly.

18-482	Telecommunications Technology and Policy for the Internet Age	12
48-448	History of Sustainable Architecture	9
73-427	Sustainability, Energy, and Environmental Economics	9
76-319	Environmental Rhetoric	9
76-395	Science Writing	9
76-425	Rhetoric, Science, and the Public Sphere	9
76-476	Rhetoric of Science	9
76-492	Rhetoric of Public Policy	9
76-494	Healthcare Communications	9
79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-204	American Environmental History	9
79-208	Witchcraft and Witch-Hunting	9
79-215	Environmental Justice from Conservation to Climate Change	9
79-246	Industrial America	9
79-283	Hungry World: Food and Famine in Global Perspective	9
79-297	Technology and Work	9
79-302	Killer Robots? The Ethics, Law, and Politics of Drones and A.I. in War	9
79-303	Pittsburgh and the Transformation of Modern Urban America	6
79-331	Body Politics: Women and Health in America	9
79-357	Science and the Body	6
79-368	Un-natural Disasters: Societies and Environmental Hazards in Global Perspective	6
79-372	The Rise and Fall of Pittsburgh Steel	6
80-101	Dangerous Ideas in Science and Society	9
80-150	Nature of Reason	9
80-312	Mathematical Revolutions	9
80-324	Philosophy of Economics	9
84-387	Remote Systems and the Cyber Domain in Conflict	9
85-380	In Search of Mind: The History of Psychology	9

The Minor in Societal & Human Impacts of Future Technologies (SHIFT)

Core Courses (2 courses, 10 to 18 units total)		Units
80-249	AI, Society, and Humanity	9
80-445	Shift Capstone Experience	1-9

Area Courses (6 courses, 54 units total)
Note: Five of the six Area Courses must be taken in different departments

Technology area (18 units)
Courses that build basic technological competence, and teach concepts and frameworks that provide high-level understanding of computational technologies, including their possibilities and limits.

Complete two courses		Units
05-317	Design of Artificial Intelligence Products	12
05-318	Human AI Interaction	12
05-320	Social Web	12
05-452	Service Design	12
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
16-467	Introduction to Human Robot Interaction	12
17-303	Cryptocurrencies, Blockchains and Applications	9
17-313	Foundations of Software Engineering	12
17-331	Information Security, Privacy, and Policy	12
17-333	Privacy Policy, Law, and Technology	9
17-355	Program Analysis	12
36-202	Methods for Statistics & Data Science	9
67-250	The Information Systems Milieux	9
88-300	Programming and Data Analysis for Social Scientists	9

Social & Behavioral Sciences area (18 units)
Courses that teach the concepts and frameworks of social and behavioral sciences (e.g., economics, psychology, sociology), including methods and analyses such as experimental design and quantitative and qualitative data analysis.

Complete two courses		Units
05-413	Human Factors	9
17-224	Influence, Persuasion, and Manipulation Online	9
36-200	Reasoning with Data	9
70-311	Organizational Behavior	9
70-321	Negotiation and Conflict Resolution	9
70-341	Team Dynamics and Leadership	9
73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9
84-266	Research Design for Political Science	9
84-267	Data Science for Political Science	9
84-369	Decision Science for International Relations	9

Ethics, Policy & Design Area (18 units)
Courses that teach core concepts and frameworks to address and analyze ethical, policy, and design challenges relevant to current and near-future computational technologies.

Complete two courses		Units
05-413	Human Factors	9
08-200	Ethics and Policy Issues in Computing	9
16-161	ROB Seminar: Artificial Intelligence and Humanity	9
17-224	Influence, Persuasion, and Manipulation Online	9
36-200	Reasoning with Data	9
51-173	Human Experience in Design	9
51-241	How People Work	9
51-371	Futures I	4.5
51-373	Futures II	4.5
51-382	Design Center: Design for Social Innovation	9
70-311	Organizational Behavior	9
70-321	Negotiation and Conflict Resolution	9
70-332	Business, Society and Ethics	9
70-341	Team Dynamics and Leadership	9
70-364	Business Law	6
73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9
79-175	Moneyball Nation: Data in American Life	9
79-234	Technology and Society	9
79-302	Killer Robots? The Ethics, Law, and Politics of Drones and A.I. in War	9
80-130	Introduction to Ethics	9
80-135	Introduction to Political Philosophy	9
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9
84-266	Research Design for Political Science	9
84-267	Data Science for Political Science	9
84-275	Comparative Politics	9
84-319	Civil-Military Relations	9
84-325	Contemporary American Foreign Policy	9
84-369	Decision Science for International Relations	9
84-370	Nuclear Security & Arms Control	9
84-372	Space and National Security	9
84-373	Emerging Technologies and International Law	9
84-380	US Grand Strategy	9
84-386	The Privatization of Force	9
84-387	Remote Systems and the Cyber Domain in Conflict	9
84-389	Terrorism and Insurgency	9
84-390	Social Media, Technology, and Conflict	9
84-405	The Future of Warfare	9
88-221	Markets, Democracy, and Public Policy	9

The Minor in Sociology

Peter Schwardmann, *Faculty Director*
Connie Angermeier, *Senior Academic Program Manager and Advisor*
Location: Porter Hall 208H
cla2@andrew.cmu.edu
Schedule an appointment: https://go.oncehub.com/ConnieAngermeier (https://go.oncehub.com/ConnieAngermeier/)

The Sociology minor introduces the student to central concepts in sociological theory and methods of empirical inquiry needed to broadly understand social behavior, including its structure, history, and dynamics. Students choose among a range of methodological approaches and substantive topic areas including social psychology, work and organizations, social networks, technology and society, medical sociology, and gender and family. Exposure to these topics will help students understand and appreciate the processes by which families, groups, and organizations form and evolve over time; by which individuals affect and are affected by the society in which they live; and by which technology and institutions shape and influence society. This background in empirical tools and social theory will strengthen the student’s ability to pursue graduate studies in sociology, social history, social science, and organizational theory; to begin professional careers involving social analysis, network analysis, data analysis of teams, groups and organizations, social analysis within journalism, political institutions, the government, and online; and to enter the corporate environment with a thorough understanding of organizational activity.

Curriculum 54 units

In addition to the general education requirements of the student's college and the requirements of the student's major, Sociology minors must satisfy the following requirements. The Core courses comprise 18 units of the minor. One course is taken from the Organizations cluster, and one course is taken from the Methodology cluster. The Elective courses comprise 36 units of the minor. Sociology minors should consult with the program advisor to plan a course schedule prior to registration.

NOTE: The core courses are offered regularly; the elective courses are offered with at least general regularity. Participating departments may subsequently develop and offer other courses that, while not listed here, are deemed appropriate for this minor. The program advisor should be consulted (especially when the schedule of courses to be offered for a given semester becomes available) to identify such additional courses.

No more than two courses (18 units) in the Sociology minor may be counted to fulfill any other major or minor's requirements.

Core Courses 18 units

A. Organizations

Complete one course.		
88-140	Introduction to Sociology	9
or 70-311	Organizational Behavior	

B. Methodology

Complete one course.		
36-202	Methods for Statistics & Data Science	9
70-208	Regression Analysis	9
85-310	Research Methods in Cognitive Psychology	9
85-340	Research Methods in Social Psychology	9
88-251	Empirical Research Methods	9
88-252	Causal Inference: from Data to Decisions	9

Elective Courses 36 units

Complete four courses (a minimum of 36 units) from the following list. Two courses (18 units) must be taken from one category to complete the depth requirement. One course (9 units) must be taken from the other category. The remaining course (9 units) may be taken from either category. Appropriate courses offered by the Department of Sociology at the University of Pittsburgh (available during the academic year through cross-registration) may also be included as part of this option. Contact the Sociology program advisor for more information.

1. Sociology of Gender, Family, and Culture		
70-342	Managing Across Cultures	9
70-385	Consumer Behavior	9
76-241	Introduction to Gender Studies	9

79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-320	Women, Politics, and Protest	9
79-331	Body Politics: Women and Health in America	9
79-343	Education, Democracy, and Civil Rights	9
79-377	Food, Culture, and Power: A History of Eating	9
80-245	Medical Ethics	9
80-246	Moral Psychology	9
80-305	Game Theory	9
80-335	Social and Political Philosophy	9
80-348	Health, Human Rights, and International Development	9
84-369	Decision Science for International Relations	9
85-241	Social Psychology	9
85-350	Psychology of Prejudice	9
85-442	Health Psychology	9
85-446	Psychology of Gender	9
88-230	Human Intelligence and Human Stupidity	9
88-231	Thinking in Person vs. Thinking Online	9
88-285	Deconstructing and Dismantling Discrimination	9
88-290	Confessions, Lies, and Gossip	9

2. Sociology of Work, Organizations, and Technology

70-332	Business, Society and Ethics	9
79-275	Introduction to Global Studies	9
88-234	Negotiation: International Focus	9
88-235	Negotiation: Strategies and Behavioral Insights	9
88-255	Strategic Decision Making	9
88-261	Health Policy and Decision Making	9
88-262	Medical Decision Making	9
88-275	Bubbles: Data Science for Human Minds	9
88-341	Team Dynamics and Leadership	9
88-344	Systems Analysis: Environmental Policy	9
88-365	Behavioral Economics and Public Policy	9
88-366	Behavioral Economics of Poverty and Development	9
88-367	Behavioral Economics & Field Experiments in Organizations	9
88-451	Policy Analysis Senior Project	12
88-452	Policy Analysis Senior Project	12

Note: Some courses have additional prerequisites.

Dietrich College Interdisciplinary Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes *(*https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/*) each semester for course offerings and for any necessary pre-requisites or co-requisites.*

Dietrich College Interdisciplinary Courses

66-003 Contested Histories: The Israel-Palestine Conflict

Intermittent: 1 unit
Join one of several small groups of students, faculty and staff in discussing Neil Caplan's remarkable book "The Israel-Palestine Conflict: Contested Histories" (Second Edition). There will be six options for book discussion groups, each led by an expert faculty member, taking place in late February and early March. In-person and remote options will be available. Discussions will explore the contested Palestinian and Israeli narratives of events and aim to move readers beyond assigning blame to wrestling with the complexities and contradictions of the conflict. Is there a chance for peaceful resolution? Registered CMU students who attend a discussion group lead by a university expert and a discussion group with Caplan will receive one unit of academic credit.

66-101 Dietrich Introductory Seminar: College & University Success Strategies

Fall: 3 units
This interactive course is designed to help new students transition successfully to academic and student life in the Dietrich College at Carnegie Mellon. Students will explore campus resources and opportunities; their skills, identity, interests, and goals; and strategies for personal and academic success to help them make the most of their Dietrich experience. This course is only available to be taken by first year students in their first semester at Dietrich College.

66-106 Applied Quantitative Social Science I (QSSS students)

Fall: 9 units
The first course in the QSSS core sequence provides a fast-paced introduction to a range of methods in the quantitative social sciences. Organized around a set of case studies, the course introduces the language and methods of empirical research through a combination of seminar-style discussions of academic papers, and hands-on lab work using the statistical software R. Students will replicate results from a high-profile labor market discrimination paper, explore agent-based models of neighborhood segregation, and scrape Wikipedia data to examine imbalances in gender representation. Enrollment restricted to QSSS students.

66-122 DC Grand Challenge First-Year Seminar: Beyond Earth

Spring: 9 units
The aim in the course is to foster in students a planetary perspective, to see Earth in its context of the cosmos and to see humans in their relation to real or possible forms of life in the universe. The obsession with outer space is found among scientists, business people and politicians, in deed and story, in film and even computer games. If we are to fully appreciate the potentials of space, we must also consider the search for intelligent life in its scientific and societal aspects, and investigate how we could adapt our systems of communication to reach species across distances that may be physically insurmountable. This interdisciplinary course will be taught by scholars from distinct cultural and linguistic backgrounds. Course materials will be taken from scientific literature, the history of science, and science fiction. We will explore scientific writing and reasoning, the space race between global powers, space travel and colonization, and the promise and pitfalls of interspecies and interspace communication. A planetary perspective, once achieved, can change the way one sees other inhabitants of this planet - as partners in survival in a universe which sets enormous odds against it, or as unwelcome intruders grasping for scant resources within this thin epidermis of soil, air, and water which surrounds Earth and makes our lives possible.

66-123 DC Grand Challenge First-Year Seminar: Science on Stage

Spring: 9 units
Art and Science and #8212; two fields of study that are most often considered diametrically opposed. Art is frivolous entertainment. Science is hard rational fact. In this Grand Challenge course, we hope to break that supposition or at least examine it in great detail. Specifically, we will use theater to argue that drama can produce challenging, demanding and intelligent work that showcases the impact of science on current discourse. We want to link the two cultures. The word "theater" has the same etymological root as "theory" - both words come from the Greek thea meaning view. This shared origin demonstrates ways we can work to analyze and interpret both fields and show the common ground between these two cultures. As we attend to plays and writing ranging from Tom Stoppards Arcadia and Michael Frayns Copenhagen to Caryl Churchills A Number and Oliver Sacks Man Who Mistook his Wife for a Hat, our class discussions will consider questions that include: Why is science a trend in contemporary theater? Does it reflect on our dependence on technology? What kinds of questions are being asked when science or scientific theory is presented on the stage? Are people attracted to plays about science because of their difficult subject matter or does it does it lack the engagement of popular culture? In addition to integrating humanities and scientific approaches within Dietrich College, this course will utilize the expertise of both individuals in the School of Drama and the producers in the local theater community, and local science writers. Finally, in addition to weekly writing assignments, the course will ask students to produce original dramatic scenes that incorporate scientific exploration which will, ultimately, lead to staged readings of their work.

66-125 DC Grand Challenge First-Year Seminar: Democracy & Data

Fall: 9 units
From gerrymandering to online political ads, data is being used in ways that raise urgent questions about the integrity of democratic elections. But the relationship between democracy and data goes far beyond elections. In a world of constant surveillance, in which vast amounts of data are gathered from our phones, our computers, and from other facets of our lives - and in which new breakthroughs in machine learning and data analytics make such data dramatically more powerful - what does it mean for average citizens to have control over their own lives? What does democracy mean?

66-126 DC Grand Challenge First-Year Seminar: Voting: An American Tradition

Fall: 9 units
This course investigates the sacred American practice of voting, the cornerstone of American democracy, using the 2020 election cycle as our laboratory. The course uses a multi-disciplinary approach, examining the topic from several different perspectives. We'll investigate social movements to expand the vote, the role of technology, game theory, polling, predictions, electoral mapping, social media, the structures of American governance, and more. Questions include: What is the electoral college? Who gets to vote and why? How well is that vote accounted for? How can voting systems be compromised? Why is it so hard to predict who will win? How do people make decisions? How useful are polling and amp; predictions? What disrupts voting? Why is turnout so low? How does money play a role in the election cycle? Why do we vote the way we do? How is social media changing elections? What are global best practices? Did the founders even intend for a mass democracy? (The answer is no!) Many of you will be first-time, eligible voters in one of the most remarkable presidential campaigns in American history. We'll build your skills as new democratic citizens, of this nation or others, and help you make sense of the history-making U.S. news cycle. A note on partisanship: All political viewpoints are welcome in this class. This is a course on how we navigate and account for political difference in a diverse, disparate nation. This is something we'll practice in class, while we will also study that very process across the nation.

66-127 DC Grand Challenge First-Year Seminar: Environmental Justice

Fall: 9 units
Wondering what the "Green New Deal" proposal is about? Does it seem like you have to choose between protecting people and protecting the planet? How does environmentalism connect to struggles over social justice and human rights? This first-year interdisciplinary seminar is an introduction to the Grand Challenge: Environmental Justice. In Giovanna de Chiro's words, the environmental justice movement is working "toward building diverse, dynamic, and powerful coalitions to address the world's most pressing social and environmental crises global poverty and global climate change by organizing across scales and 'seeking a global vision' for healthy, resilient, and sustainable communities." In this seminar, we'll study the history and science behind two interconnected challenges for environmental justice: global climate change and fine-particulate air pollution. Both types of pollution start with combustion of fossil fuels. Particulate air pollution kills roughly 7 million globally each year; these air pollution deaths happen close to the source, with unequal levels of exposure and risk for people according to class and race. Climate change, mostly from carbon dioxide and methane emissions, is spread globally and lasts well beyond our lifetimes, yet the effects are again disproportionately based on class and race. In this course, we'll explore the science, history, ethics, and public perception of these problems, with implications for Pittsburgh and the planet, and for the near- and long-term future.

66-128 DC Grand Challenge First-Year Seminar: Palestinian and Israeli Food Cultures

Spring: 9 units
In a region beset by conflict, how do food cultures allow us to approach cultural intersections and connections? This course is designed to provide students with a historical, cultural, and linguistic understanding of the hybrid nature of Jewish and Arab cultures, and the multiple ethnic contributions to local food cultures in Israel and Palestine. The two instructors, from the fields of Jewish history and Arabic Studies, will introduce students to the history, literature, film, and languages of the region, as well as to critical scholarship on food and foodways in the Palestinian and Israeli context. Students will have the opportunity to engage in cooking either locally or in Philadelphia - subject to travel restrictions - and to learn from Michael Solomonov and Reem Kassis, two award-winning US-based celebrity chefs and authors of Israeli and Palestinian cook books respectively. Throughout the semester we will also host a range of guest speakers who will deliver lectures on our course topic in the classroom and in the community.

66-129 DC Grand Challenge First-Year Seminar: Unreality: Immersive and Spatial Media

Intermittent: 9 units
Virtual news stories and game worlds are accessible by putting on cardboard goggles, theme parks are engineered to provide convincing multisensory experiences, and workforces are reliant on augmented views of factory floors. Immersive and spatial media constitute a suite of emerging technologies that offer the opportunity to expand arts, entertainment, science, design, commercial enterprises and countless other domains in ways that were previously limited to science fiction. The potential for augmented reality to disrupt our current technological ecosystem is tremendous. Many of these technologies are now 50 years old and just starting to enter the commercial realm. As immersive experiences and augmented realities become more integrated into our work and leisure, do we need to worry about the ways that unreality affect our experiences of reality, or our interactions with each other? How do we know that we can trust our senses to tell us what is real? How do we begin to grapple with the ethical, cultural, social, technological, and regulatory implications of this shift?

66-131 DC Grand Challenge First-Year Seminar: Culture, Sports, and Conflict in/and VR

Intermittent: 9 units
Sports have been celebrated for bringing people together; yet, sports have also been a locus of tensions and conflict that most of us only experience from the sidelines. We understand sports, the people, and their cultural impact through the stories that we tell about them in such places as museums, stadium tours, and Halls of Fame as well as in books, documentaries, and podcasts. Through immersive technologies, these stories are brought to life and bring fans to the heart of the action. In this course, students and faculty together will seek to achieve two main objectives: (1) examine ways in which cultural and societal values are reflected in sports and (2) how Virtual Reality (VR) technology can help design experiences that enhance the users awareness of these issues by engaging with these cultural and societal perspectives. We will first unpack sports stories that are squarely situated at the crossroads of sports and culture(s) (e.g., racism, human rights, and the role of government and/in national politics). Then we will explore the role of VR technology to help craft these narratives. Students, then, will discover what it means to write stories for VR experiences. The course will culminate in students designing an immersive experience about a sports conflict of their choice, which will be developed more fully to be displayed in the Askwith Kenner Global Languages and Cultures Room.

66-132 DC Grand Challenge First-Year Seminar: Health in Unhealthy Times

Intermittent: 9 units
We live in times when health is a major global concern, whether we worry about the increase in Covid-19 cases, await our immunization, strive to understand the disproportionate impact of the disease on BIPOC populations, or debate mitigation measuresnot to mention ongoing concerns with common chronic illnesses such as diabetes, cancer, autoimmune disease, depression, anxiety, etc.. Health, or lack thereof, has always been a critical part of the human experience, and it is fundamentally impacted by different human experiences. This seminar will introduce students to the scientific aspects of health, its political and social determinants, ethical constraints, historical roots, as well as to the cultural and communicative skills required to dialogue about health, make decisions, and engage empathically with others in their health stories. We will read and discuss a broad variety of materials from medical science articles to social psychological experimental reports and personal or literary narratives about health. The course is divided into three components: health and preventative behaviors, managing chronic health challenges, and coping with disruptive health experiences. We believe these components can represent a broad array of interest and engage students on a personal level.

66-133 DC Grand Challenge Seminar: We're Not Beyond Race: Race and Identity in America

Intermittent: 9 units
Race matters. How have social institutions and historical factors led to the belief systems and stereotypes that shape how race is experienced in American society, and how do these belief systems affect the way individuals come to view and define themselves and others? This course considers how race and identity affect peoples lived experiences - how they think, feel, and act - in America. In this course, we will examine the structural and systemic origins of the racial status quo, as well as the way that individuals navigate the social and racial landscape of modern-day America. Including insights from psychology, literature, economics, sociology, and history, the course will focus on how race matters at both a societal level and an individual level. We will consider different racial situations throughout American society to understand how individuals navigate and experience race and identity. Throughout the course, we will watch films, read literature, and analyze music and art that reflect the experience of race and identity.

66-134 DC Grand Challenge First-Year Seminar: Native Americas: Facts and Fictions

Intermittent: 9 units
How did Indigenous people respond to the challenges of populating the American hemisphere and creating complex, diverse and dynamic cultures, languages and political entities? How did they survive, adapt to, and resist the conquest and colonization of their lands, and ensuing social and cultural dislocations? How have they resurged politically, culturally, artistically and intellectually in recent years? This course considers the history, experiences, and perspectives of native populations across the Americas. It seeks to reckon with the facts of the Native American experience, while challenging the fictions of stereotypes and narratives that have often relegated Indigenous people to the social and cultural margins of the nations in which they now live. After introducing students to a few of the myriad Indigenous groups of North, Central and South America, we will then survey the implications of the era of European conquest and colonization. Well consider the implications of the rise of new nations in the Americas, as new and intensifying campaigns of violence were unleashed against Indigenous populations. We will consider the rise of Native American civil rights and political and cultural sovereignty movements from the late 20th century forward, as they coalesced into major political challenges to native marginalization and demands for recognition and reparation of historical injustices. Finally, we will explore how contemporary Indigenous artists, authors, and political and social activists are reimagining indigeneity (the condition and experience of being Indigenous) in ways that demonstrate how indigeneity is not a fixed kind of identity, not one that is confined or defined in any way by a static conception of tradition, but rather one that challenges the present and reimagines the future in dynamic and creative ways.

66-135 DC Grand Challenge First-Year Seminar: Designing Better Human-AI Futures

Intermittent: 9 units
This course will explore the societal impacts of artificial intelligence (AI) based decision-making systems, especially focusing on the societal biases they may enhance or reduce. Students will gain a fundamental understanding of how these systems are designed and work, as well as the role of data in mitigating or enhancing biases. The course is multidisciplinary in nature and brings together social scientists, engineers, data scientists, and designers to tackle the grand challenge of dealing with issues of bias and fairness in Human-AI collaborative systems, ranging from the data that is used to train them, to their human creators that are responsible for deciding how they work and get used. Students will investigate policy, technology and societal elements aimed at reducing and mitigating the impact of AI biases that can negatively impact society, especially its vulnerable members.

66-136 DC Grand Challenge First-Year Seminar: Becoming Resilient in Challenging Times

Spring: 9 units
"My heart is in my work" - a phrase that once rang true to many CMU students and remains the motto our institution lives by. But what happens if life has been interrupted by a global pandemic and our hearts suddenly aren't in our work anymore? How do we as a society respond to challenges and struggles that go beyond our daily work routine and encompass threats to our physical and mental health, social interactions, family life, and hobbies and leisure activities? Today, when the "new normal" seems to be lasting forever and we face an unprecedented mental health crisis, how can we address questions of resilience, wellbeing and perseverance in the classroom, both from an academic and a personal point of view? How can we rebuild communities and societies after traumatic and scarring events, communicate and collaborate across disciplines to solve complex problems, and establish a world where we thrive and succeed again? In a more fundamental way, what does it mean to be resilient, and where is the boundary between our own health and wellness and the cultural, societal, or economic expectations around these ideas? To answer these questions, this course will use graphic novels from English-speaking, German-speaking, and Spanish-speaking countries as its core to introduce students to a variety of graphic approaches to the concept of resilience, including from the graphic medicine genre. We will explore mental and physical health and healing in innovative ways to analyze different perspectives on and models for wellbeing. Working comparatively across cultures, the graphic novels in the course will help re-examine and re-define our understanding of wellbeing and health and explore how visual storytelling can drive social change around issues of individual and community resilience.

66-137 DC Grand Challenge Seminar: Causes and Consequences of Health Disparities

Spring: 9 units
Why do some people live well into their nineties while others are more likely to die at an earlier age? The answer to this question can be more complex than one might think. Life expectancy can be influenced by a host of individual and population-level factors. This course is designed to critically examine the social factors research has found to impact individual and population health experiences. This course will introduce students to the multiple approaches to researching the complex problem of health disparities in the United States with particular emphasis on perspectives from the social sciences and humanities. Specifically, students will examine how factors such as socioeconomic status, education, crime, housing, health care and food availability play important roles in the production of disparate health. Students will examine psychological factors that can create disparate health experiences and the impact of such disparities on psychological health. We will address health disparities at the individual and population levels, learning how disparate health experiences are historically and socially produced, and how such disparities produce negative physical and mental health outcomes for individuals and minoritized populations. At the end of the course, students will present a collaborative group project that examines a specific facet of US health disparities and offer a proposed solution. Using a multi- disciplinary perspective, we will challenge students to discover just how important seemly unimportant interpersonal and structural factors can be in explaining health disparities and how important it is for society to take measures to address these disparities.

66-138 DC Grand Challenge First-Year Seminar: Militarizing Freedom Arms in U.S. Culture

Spring: 9 units
This seminar examines the way American culture and politics have utilized the tools, tactics, and values of the military during both war and peacetime. Utilizing several disciplinary perspectives, including history, rhetorical criticism, fictional narrative, and the discourse of public policy, we will consider the different ways that gun culture, military mobilization, veteran affairs, and police power have influenced American society, including how people relate toor fearone another. We will explore some historical roots of the U.S.'s militarized culture, alongside the linguistic, argumentative, and narrative trends that have contributed to urgent democratic issues like police brutality, domestic terrorism, and the rise of the carceral state. This course will address themes and questions such as: - American exceptionalism: Does violence play an extraordinary role in American and culture, in contrast to other nations? What are its historical antecedents? - The escalation of violence in American political culture: Why does political polarization engender violence? Do traditional appeals to "freedom" accelerate such violence? - How has America become a country of prisons and mass incarceration? - Global impacts: How does the U.S.'s militarized political culture impact nations and people beyond its borders?

66-139 DC Grand Challenge Seminar: Reducing Conflict Around Identity and Positionality

Spring: 9 units
Learning to reduce conflict requires understanding positionality and identities, and why and how societies build barriers in their populations. In this interdisciplinary course, students will learn how to talk to each other and strangers about identity: its defining characteristics and how our bias influences our judgments. The social sciences elements will stress Social Identity Theory, bias, stereotypes, and in-groups and out-groups. The humanities elements will include close-reading strategies and incorporate conceptual frameworks from cultural studies, literary studies, and narrative theory. In addition to practicing the methodologies in these two disciplines, students will undertake two projects. In the first project, they will develop and implement a semi-structured interview protocol for their campus peers centered around belonging. In the second project, students will employ close reading techniques to analyze Young Adult novels that address complex questions of identity, isolation, bias, and rejection. Working with one novel and Project 1 data, each team of social sciences, humanities, and data specialists will create a website to highlight inclusive successes and challenges. This final cohesive 'picture' of themes pertaining to feelings of belonging on our campus will help guide the CMU community toward deeper understanding and acceptance practices.

66-140 Grand Challenge Seminar: Equitable Access and Success in Higher Education at CMU

Spring: 9 units
With the Supreme Court poised to rule on affirmative action, the challenge of equitable access to higher education is back in the public spotlight. Carnegie Mellon, as a university that brings together students from a wide variety of backgrounds, serves as a case study for exploring the challenges and opportunities for achieving equitable access and success in higher education. The array of social identities (e.g., race, gender, national origin, etc.) represented on campus creates an environment where students can engage with a diversity of ideas and experiences. However, this same diversity can also present challenges when students are viewed as "equal" (i.e., all the same) rather than as unique individuals with a diverse set of needs and assets (i.e., equity). Using archival materials, students will explore the history of Carnegie Mellon University from its founding to present day, with attention to the composition of its student body, its approach(es) to equitable access (e.g., admission policies), and students' experiences at the university. Through historical and linguistic analyses, students will examine how language about social identities and equitable access changed over time and how those changes may have impacted student experiences and success at CMU. The historical and linguistic focus of this course will be enhanced via guest speakers involved with initiatives related to equitable access and success at CMU as well as via class materials from other disciplines (e.g., educational psychology). During class meetings and guest speaker sessions, students will be expected to engage with ideas and with each other through discussion. Outside of class, students will complete a variety of course assignments, including readings, written assignments, reflections, and a collaborative project.

66-141 DC Grand Challenge Seminar: Freedom of Speech & Academic Freedom

Intermittent: 9 units
This Grand Challenge course offers a comprehensive exploration of the principles, controversies, and significance of Freedom of Speech (FOS) and Academic Freedom (AF). By exploring actual and hypothetical cases, students will analyze the complex dilemmas that arise when we try to balance two interests: maximizing freedom of expression and creating an inclusive, respectful community. By engaging a wide range of disciplinary perspectives and methods of inquiry from philosophy, history, psychology, law, etc., students will examine how different policies and norms impact these competing interests and vice versa. Students will practice informed and constructive dialogue within the seminar to facilitate independent thought, rigorous inquiry, and how to discuss difficult topics productively. Course topics will include: - the rights and responsibilities involved in FOS for both individuals and institutions, - the history and current state of the law with respect to FOS, - the history and state of university policies and practices about AF for research and education, including scholarship, artistic freedom, teaching, in particular trigger warnings, safe spaces, censorship, protest, and controversial outside speakers, - developmental perspectives on how children learn about freedom of expression, - FOS in advertising, media, and social media, including recommendation algorithms. The broader goal is to empower students to become informed, responsible, and productive members of Carnegie Mellon's transformative university community.

66-142 DC 1st Year Seminar: The Mirror of Technology: Biases in Computation & Cognition

Spring: 9 units
The title of the show, Black Mirror, refers to the blank screens of tech devices that reflect back an image of the human user. The image captures some parts of us, say our facial expression, while deemphasizing, distorting or missing others, say the color of our eyes or skin. Further, the reflection is silent about what goes on under the surface in our heads, what we feel, think and value. At the same time, the screen presents a cover for a computational device which, when activated, is massively interconnected with local and global structures around us and with our minds in ways that we do not notice. Can we understand and explain this increasingly symbiotic relation, sometimes healthy, sometimes not? Through active discussion, group work, engaging with local and national experts, and argument and analysis in written work, we will explore the ways in which recent technologies mirror our minds as well as how our minds are impacted by and come to mirror those technologies. We will focus on the idea of bias and a type of informational selectivity we capture as attention. Topics will include: the nature of meaning, thinking and understanding in animals and machines, tests for cognition in artificial systems with focus on recent large language models such as CHAT GPT, biases in cognition and attention in humans and biases in algorithms and the impacts of these on society, the attention economy and the manipulation of our attention therein, and the symbiosis between mind and machine where machines extend our minds. These topics span philosophy, cognitive science and computer science. Our goal will be to acquire the analytical skills needed to help critically engage with and transform this symbiotic relation between mind and machine, moving it systematically towards a virtuous and healthy state.

66-143 DC Grand Challenge Seminar: Realizing Human Rights

Spring: 9 units
This course will introduce first year students to the challenge of protecting and promoting human rights in a world fraught with conflict, political strife, economic exploitation, and environmental hazards. We will focus on how human rights frameworks can be used to make the world more just, equitable, and free. We will begin by discussing the theoretical foundations of human rights and the development of human rights institutions in the 20th century. Students will learn how rights have been constructed through legal action, activism, and treaty negotiations in the past and examine the emergence and contestation of new rights today. We will explore why particular rights frameworks are privileged in some societies but not others. We will then focus on how practitioners investigate and document potential rights violations around the world, including in our own backyard. The instructors bring disciplinary expertise in history, journalism, and data analysis, and the course will feature guest lectures by legal experts and human rights practitioners. Topics covered will include genocide and other war crimes; political repression; economic, social, and cultural rights; environmental rights; migration and refugees; gender identity and sexuality; and indigenous rights. By the end of semester, students will be prepared to propose an action plan to address a specific human rights challenge in a community that they are familiar with. In previous semesters, our students have worked on projects related to deaths in Pennsylvanias jails and prisons in partnership with local organizations, proposed a project to assess human rights violations of migrants at the US/Mexico border, and conducted an international open source investigation of human rights violations using online media and satellite imagery.

66-144 DC Grand Challenge Seminar: In Transit: Exile, Migration, and Culture

Spring: 9 units
The world is currently experiencing the worst refugee crisis since the end of World War II. Large numbers of people are forced from home for political, personal, or racial reasons, and many others leave home because of grinding poverty and need. Conflicts about the mass migration provoked by this crisis have emerged all over the globe, from the United States, Latin America, and Europe, to Africa, the Middle East, Asia, and even Oceania. Writers, filmmakers, and artists have attempted to address the plight of refugees and migrants in their works, and many writers, filmmakers, and other artists are themselves refugees or migrants. Pittsburgh has a unique institution, City of Asylum, whose mission is to assist and advocate for persecuted writers and other artists. It hosts the largest residency program in the world for writers living in exile under threat of persecution or worse: death. The goal of this Grand Challenge Seminar is (1) to familiarize students with todays plight of refugees (e.g., social, political, economic factors; cross-cultural comparisons; dynamics of class, race, gender, and nationality), and (2) introduce them to a variety of textual (literary and theoretical) and visual materials and to the resources available through City of Asylum. Through readings, discussions, guest speakers, short papers, and group film projects/presentations, students will examine the ways in which writers, filmmakers, musicians, and other artists have addressed exile and migration in their work by constructing, revising, and reinventing images and cultures of the homeland. Students will explore a variety of texts (e.g., films, documentaries, art, music, photography; prose, poems, and presentations by exiled artists; archival materials; news reports, articles) and meet with and interview exiled writers and other artists.

66-145 DC First Year Seminar: Appalachia: Development, Decline, and Identity in America

Spring: 9 units
The Appalachian region, which stretches from Georgia to New York's southern tier, has a particular place in American history and memory. This course will examine the political, literary, economic, and historical narratives that surround the region, as well as examining the role that Appalachia can play as a model for developing regions in other parts of the world. The paradoxes of Appalachia have confronted American culture since its first settlement by Europeans in the 18th century: a region of unparalleled biodiversity, it has nevertheless been characterized by ongoing poverty and isolation. Politically, it has given rise to both progressive collective action and conservative rhetoric. Economically, its natural resources have been widely exploited by outside economic and industrial interests. Its inhabitants have been characterized as either fiercely independent or widely dysfunctional, giving rise to the archetypes of Mountaineers, Rednecks, or Hillbillies. Its cultural ethos has resisted ready inclusion into mainstream culture. This course will examine these paradoxes by utilizing history, literature, and public policy documents that detail the ongoing debates surrounding Appalachian development, while consulting with several invited writers, political figures, and artists who have interpreted the regions role in American history.

66-146 DC 1st Year Seminar: From Pandemics to Politics: Modeling Complex Social Systems

Fall: 9 units
TBA

66-147 DC Grand Challenge First-Year Seminar: (Mis)Trust in Research

Fall: 9 units
TBA

66-148 Introduction to Community Engagement

Intermittent: 3 units
This course is designed to prepare students to actively and thoughtfully engage in their community. Students will evaluate various models for community engagement and community-based leadership and examine ethical and social justice issues related to college and university involvement in the community. Through course discussions and direct engagement with community leaders, students will develop the ability to consider multiple perspectives, demonstrate cultural humility and critically reflect to make meaning from experiences. Students will create a plan to infuse community engagement into their academic journey that aligns with their values. This is part of the Dietrich College Community Engagement Fellowship and is only open to students that have been accepted into the program.

66-151 DC Grand Challenge First-Year Seminar: Equity and the Environment

Fall: 9 units
TBA

66-181 Grand Challenge Seminar

Fall and Spring: 9 units
In their firm desire to perfect the new Constitution, which defined and limited the powers and roles of their new government, the founding fathers insisted on explicit statements that would protect the rights of the new nation's citizens. Indeed, the protection of these essential rights in many ways drove and defined their successful rebellion from Britain. This impulse resulted in ten amendments to the Constitution, which we have come to know as the Bill of Rights. The very first (and arguably considered at the time as the most essential) of these was the First Amendment, which we sometimes call the "free speech" amendment to the Constitution. This amendment guarantees every U.S. citizen five freedoms: freedom of religion, speech, press, peaceable assembly, and the freedom to petition the government for redress of grievances. This course examines the historical and philosophical roots of this key constitutional amendment, how it has been fleshed out and defined over time through case law, and the bases of some more recent critics of this amendments and current interpretations.

66-182 Grand Challenges Seminar: Preserving History with Blockchain Technology

Spring: 9 units
Historical information, artifacts, and relics provide a window to our past and help us understand our present and foresee and prepare for the future. During times of conflict and internecine warfare, it is essential to preserve objects of historical and cultural heritage. Blockchain is a block of data chained together. It does three noteworthy things: 1. digitization, 2. tracing, and 3. security. For any non-digital historical data, Blockchain can provide digitization. For any data that requires tracing, such as scientific findings, religious information, or scriptures (including Hadith/sayings of the Prophet (s)), so on, tracing can play a pivotal role in going back to the originator and understanding the change on the way, as well as preserving it from any changes (which is part of security). Blockchain also involves a mining process, which includes stakeholders that audit the information of any newly added block of data, making Blockchain auditable, which is significant for history. Using topics from blockchain technology, history, preservation, and science, this course provides students with the grand challenge of understanding how bitcoin and cryptocurrency can assist in providing potential solutions to the problems of authorship, impermanence, managing shared ownership, and stewardship of artifacts taken through war or colonialism. Many institutions and archives are considering and advocating the merits of blockchain-based repositories. In this Grand Challenge course, we want to examine how the seemingly opposed fields of study - history and blockchain technology - can be synergized to create a futuristic museum that captures monuments and artifacts, making them accessible to future generations.

66-195 Documenting Israeli and Palestinian Food Cultures: Teaching and Travel

Spring: 9 units
How does the study of food cultures allow us to approach cultural intersections, conflict, and peacemaking, especially in a region as fraught as Israel and Palestine? This course, cotaught by CMU faculty in the departments of History, Modern Languages, and the Entertainment Technology Center, is designed to provide students with a historical and cultural background about the hybrid nature of Jewish and Palestinian-Arab cultures and the multiple ethnic contributions to food cultures in Israel/ Palestine, as well as with media-tech skills, with the aim of preparing them for travel to Israel and the West Bank during Spring Break 2023. In the weeks leading up to the trip, the professors will introduce students to the history, literature, film, and language(s) of the region, as well as to critical scholarship in food studies. Students will also begin developing and creating their own personal narrative experience in the media of their choice. During the trip, students will participate in documenting local food cultures through film and other media. Upon their return, they will work on the production of a collaborative multi-layered interactive documentary (iDoc) meant to capture their first-hand experiences with local and regional cuisine practices in Israel and the West Bank, and present separate small group final projects based on these experiences. Specific course themes will include: the shared history of Arabs and Jews from the rise of Islam to Al-Andalus (Muslim Spain) and the Ottoman Empire to the modern and contemporary history of the Arab-Israeli conflict; the history of Sephardi, Ashkenazi, and Mizrahi Jewish immigration and contributions to Israeli cuisine; Palestinian identity, culinary traditions and gendered aspects of food practices; the politics of food; and Palestinian and Jewish voices in literary contexts. To apply to be considered for this course, go to https://forms.gle/UbixDaA9xCBhNaoP8

Course Website: https://forms.gle/UbixDaA9xCBhNaoP8 (https://forms.gle/UbixDaA9xCBhNaoP8/)

66-204 Film Festival

Spring
Students will take on the project of planning and managing a film festival that draws a college- and city-wide audience. Students will collaborate on all aspects of the festival: selecting films, generating and distributing marketing materials, designing and scheduling events, arranging facilities and general logistics, coordinating internal and external public relations, organizing fundraisers, rallying the local communities - in short, all the aspects involved in making the event a spectacular/sensational success! A unique feature of this course-cum-festival will be several directors' participation as guest speakers on the festival theme and other issues informing their films. Previous Film Festivals have covered such topics as: Democracy, Mechanization, Realism, Globalization, Migration, Media and Work. This course is also designed to supplement the study of film with the historical, political and sociological background that students need for critically analyzing the images and ideologies they see on the screen and understand how those images effect our views of the past and present time. NOTE: Interview with course instructor required prior the registration.

66-215 The Innovation Trials

Fall: 9 units
This course will examine some of the most influential intellectual property court battles throughout history and their impact on innovation. This course is geared toward students curious about Americas industrial development and interested in the political and business strategies behind the greatest innovations and technological advances of the past several centuries. The course will answer the who, what, where, when, why and how of a number of legal cases involving various technologies and areas of innovation and place them in their historical context.

66-216 Connecting with the Pittsburgh Community

Spring: 1 unit
This course is designed to engage students in an exploration of various communities within the Pittsburgh area. Students will examine the ways that local organizers have been able to effectively promote positive social change. Students will develop the ability to honor the histories of diverse communities in the region while learning about the communities and the ingredients of successful communities. This course is part of the Dietrich College Community Engagement Fellowship and is only open to students who have been accepted into the program.
Prerequisite: 66-148

66-221 Topics of Law: Introduction to Intellectual Property Law

Intermittent: 9 units
This course provides students with an overview of patent, trademark, copyright, and trade secret laws. Goals for the course include identifying intellectual property (IP) rights and understanding how to take the necessary steps to protect and enforce those rights. Many recent developments in IP law will also be covered.

66-225 Politics, Persuasion, and the Press

Intermittent: 6 units
This course, conducted in the wake of a brutal presidential election, an assault on the Capitol, and a second impeachment, is intended to examine American politics and to look at how the political system in the United States and its interchange with the press shape the process of making policy. It is one part history, one part political science, one part policy studies, with special emphasis on local and national politics. In this course, students will be exposed to the 18th century Constitutional origins of the American political system as well as the 21st century implications of the American political systemall in the context of political upheaval in a country that, until recently, cultivated an air of stability. Through challenging readings, guest speakers, and yeasty class conversation, this course is intended to provide insights into the political system of the preeminent power in North America and, even now, around the world. In addition to the course readings alluded to below, students will be expected each day to have read in detail the Post-Gazette and either The Wall Street Journal or The New York Times, plus websites of your choice. (Rationale: Even in the Internet age, it remains the case that, in the United States, when one person involved in politics and government encounters another by 9 AM, each will have assumed of the other that they have read both The Journal and The Times.)

66-236 Introduction to Environmental Ideas

Fall and Spring: 9 units
By recognizing that environmental problems are themselves complex and require insights from social, political, and scientific perspectives, the interdisciplinary Program in Environmental and Sustainability Studies (ESS) prepares students to gain proficiency in different disciplinary habits of thinking. As part of this endeavor, students take part in informed discussions about interpretive lenses; ways of seeing; and thinking about social, cultural, and historical contexts for interpretations of environment and sustainability. This seminar-style course introduces key methods and approaches for interdisciplinary inquiry within a framework of Environmental Humanities and Environmental Justice. Scholar Giovanna de Chiro writes: "The term 'environmental justice' emerged from the activism of communities of color in the United States in the latter half of the twentieth century...They advocate for social policies that uphold the right to meaningful, democratic participation of frontline communities in environmental decision making." The implications of disciplinary narratives and approaches to questions of environment and sustainability, and the implications for social justice, are a key and repeated question in the course. The role of poverty as a cultural, political, and historical phenomenon is a motif in many of our discussions. We'll explore contrasting historical, cultural, and disciplinary explanations for hunger, famine, and food insecurity. Further, we'll explore how so-called "environmental" explanations for food scarcity, which rationalize the persistence of hunger and poverty in the 21st century, have distracted from decades of expertise, reminding us that hunger and poverty are social problems. In contrast to these so-called "environmental" explanations, there is no scarcity of food in the present era. This course will examine how these narratives contradict each other, and why it matters.

66-300 Using Collective Leadership to Pursue Community Goals

Fall: 6 units
This course serves as the third required course in the Dietrich College Community Engagement Fellowship. This course is designed to further prepare students to actively and thoughtfully engage alongside a community focusing on a topic of the students choice. This course will bring together prior topics of cultural humility, asset-based framing, cultural competence, and community-based leadership models alongside additional topics (such as collective leadership, tailored community-focused communication, among others) responsive to their community-based learning experiences. This will prepare students to narrow their focus on a topic and community in preparation for their capstone project.
Prerequisites: 66-148 and 66-216

66-307 Independent Study

All Semesters
This course is intended for students with a special interest in an interdisciplinary area in the humanities and/or social sciences not covered by a normal course. Readings and other works are developed by the student and an individual faculty member. The number of units will be assigned at the time of registration based on the number of hours to be completed (decided in advance with the sponsoring faculty member).

66-310 Internship

All Semesters: 10 units
Internships-for-credit allow students to apply course-based knowledge in a non-classroom setting, under joint supervision and evaluation by an on-site supervisor and a faculty sponsor. Approved internships must conform to college guidelines for internships-for-credit, and are available by permission only arranged through the Associate Dean's Office in Baker Hall 154.

66-320 Dietrich College Experiential Learning

All Semesters
Experiential Learning occurs when a student participates in an opportunity that allows them to apply what they are learning in the classroom to a real-world context. This may include internships, undergraduate research with a faculty member, community engaged learning, study abroad or work-based learning through structured consulting projects. Students enrolled in this course will be expected to identify several learning goals for their experience, identify a mentor and complete a reflection upon completion. Registration is by permission-only; contact the Director of Experiential Learning.

66-400 Dietrich College Senior Honors Colloquium

Fall: 1 unit
The purpose of this course is to provide students admitted to the Dietrich College Senior Honors Program with a shared set of intellectual and practical sessions that will enhance their senior honors thesis experience. The course will consist of seven bi-weekly 80-minute meetings. Each will be organized around a theme and related topics that are relevant to the senior honors thesis experience, and that take advantage of both the high caliber and interdisciplinary diversity of the course members. Guest visitors will also be a common feature of the course. Topics could include: the meaning(s) of "honors;" getting started and keeping pace: the ebb and flow of an independent research project (including how to recognize and avoid procrastination; forging a successful relationship with your thesis advisor - the myth of the separation of research from writing; writing for publication); ethics in research; "interdisciplinarity," or the "unity of knowledge;" funding for research; preparing for and delivering effective presentations; intellectual property rights, and human subjects policy. Guest speakers invited to address and engage class members in discussion/debate of topics that lend themselves to interdisciplinary discussion and debate (e.g., stem cell research, which calls into play science, ethics, etc.). Course requirements will include mandatory attendance, occasional readings (where appropriate), acting as co-leader for at least one session, and - at course's end - (a) a written, formal preliminary thesis statement and action plan, endorsed by the thesis advisor, and tentatively, (b) a brief oral presentation of the thesis statement and plan to the class + thesis advisors during the last class meeting. All students will participate in critiques of fellow-students' presentations and plans.

66-402 Dietrich Leadership Development Seminar

Fall and Spring: 9 units
The Dietrich Leadership Development Seminar is for juniors and seniors in Dietrich College wishing to advance their understanding of leadership theory and practice and to develop their own skills in this regard, while creating a context for their lifelong leadership development. The course is predicated on a six pillar model proposing that ideal leaders must at once be visionary, ethical, engaging, tactical, technical - including sub-expert conversancy in realms beyond their own expertise, and reflective - including both personal mindfulness and assessment against clear metrics. In this context, the course includes a focus on strategic planning, teamwork, cultural awareness, conflict resolution, risk management, sustainability and personal welfare, professionalism, personal financial planning, and ongoing professional development. The course includes an attendance requirement and active engagement in class discussion, assigned readings/videos/podcasts (2 hours/week), self-selected experiential opportunities (2 hours/week), reflective journaling (2 hours/week), three hour-long one:ones per semester with the instructor, special guests who are leaders in various occupational and service domains, a mid-term, a final, and a final presentation. The course includes case studies and role plays to amplify the learning experience. The course is limited to twelve students, with registration based on approval of the faculty member.

66-403 Community Engagement Fellowship Capstone

Spring
This course serves as the final component of the Dietrich College Community Engagement Fellowship and is designed to engage students in completion of their culminating project. The course will build on students' work in the previous semester in which they identified a community, established an understanding of the community goals and proposed a plan to pursue one of these goals. During the semester, students will implement their capstone project utilizing the knowledge and skills developed during earlier stages of the program. Working with a mentor who is also a community stakeholder, students will implement their project, solicit feedback from the community, evaluate project effectiveness and make appropriate changes. Students will also articulate ways their project can be sustained and present their findings to a variety of audiences.
Prerequisites: 66-148 and 66-216 and 66-300

66-501 Dietrich College Senior Honors Thesis I

Fall and Spring: 9 units
This is the first semester of a two-semester sequence that culminates in an original, year-long independent research or creative project. The course is open only to students who have been approved for entry into the Dietrich College Senior Honors Program. Thesis topics are selected by faculty and students, and reviewed and approved through the senior honors program application process. Dietrich College senior honors students are also required to participate in the annual Meeting of the Minds Undergraduate Research Symposium, offering either an oral presentation or poster session based on their senior honors thesis

Course Website: http://www.cmu.edu/dietrich/undergraduate/programs/shp/index.html (http://www.cmu.edu/dietrich/undergraduate/programs/shp/)

66-502 Dietrich College Senior Honors Thesis II

Fall and Spring: 9 units
This is the second semester of a two-semester sequence that is the culmination of an original, year-long independent research or creative project. The course is open only to students who have been approved for entry into the Dietrich College Senior Honors Program. Thesis topics are selected by faculty and students, and reviewed and approved through the senior honors program application process. Dietrich College senior honors students are also required to participate in the annual Meeting of the Minds Undergraduate Research Symposium, offering either an oral presentation or poster session based on their senior honors thesis
Prerequisite: 66-501

Course Website: http://www.cmu.edu/dietrich/undergraduate/programs/shp/index.html (http://www.cmu.edu/dietrich/undergraduate/programs/shp/)

66-503 Dietrich College Senior Honors Thesis

All Semesters: 18 units
This course is a one-semester alternative to the two-semester Dietrich College Senior Honors Thesis sequence 66-501/66-502. The course is open only to students who have been approved for entry into the Dietrich College Senior Honors Program, and whose senior honors thesis project has been approved as a one-semester undertaking. Thesis topics are selected by faculty and students, and reviewed and approved through the senior honors program application process. The thesis culminates in an original independent research or creative project. Dietrich College senior honors students are also required to participate in the annual Meeting of the Minds Undergraduate Research Symposium, offering either an oral presentation or poster session based on their senior honors thesis.

66-504 Senior Capstone I

All Semesters: 9 units
Dietrich College student-defined majors (primary or additional) must complete a senior capstone project for at least 9 units (in one semester), or 18 units across both semesters of the senior year. The capstone project culminates in an original independent research or creative project that draws on all of the strands of the student's particular student-defined program. This course is the first in a two-course capstone sequence open only to seniors who have been admitted to the Dietrich College Student-Defined Program as a primary or additional major, and who choose the two-semester capstone sequence option. The second course in the sequence is 66-505, Senior Capstone II. Projects are proposed by eligible students, and must be approved by a member of the faculty who agrees to be the project's primary advisor, as well as by the Dietrich College Student-Defined Program Director. These approvals must be secured no later than registration week of the semester prior to the start of the student's senior year. NOTE: For Dietrich College student-defined majors (primary or additional) who are accepted into the Dietrich College Senior Honors Program and who successfully complete a senior honors thesis based primarily on their student-defined major, the senior honors thesis fulfills the student-defined major capstone requirement.

66-505 Senior Capstone II

All Semesters: 9 units
Dietrich College student-defined majors (primary or additional) must complete a senior capstone project for at least 9 units (in one semester), or 18 units across both semesters of the senior year. The capstone project culminates in an original independent research or creative project that draws on all of the strands of the student's particular student-defined program. This course is the second in the two-course capstone sequence, and is open only to seniors who have been admitted to the Dietrich College Student-Defined Program as a primary or additional major, and who have chosen the two-semester capstone option. The first course in the sequence is 66-504, Senior Capstone I. Projects are proposed by eligible students, and must be approved by a member of the faculty who agrees to be the project's primary advisor, as well as by the Dietrich College Student-Defined Program Director. These approvals must be secured no later than registration week of the semester prior to the start of the student's senior year. NOTE: For Dietrich College student-defined majors (primary or additional) who are accepted into the Dietrich College Senior Honors Program and who successfully complete a senior honors thesis based primarily on their student-defined major, the senior honors thesis fulfills the student-defined major capstone requirement.

66-506 Senior Capstone

All Semesters: 9 units
Dietrich College student-defined majors (primary or additional) must complete a senior capstone project for at least 9 units (in one semester), or 18 units usually spread across both semesters of the senior year. The capstone project culminates in an original independent research or creative project that draws on all of the strands of the student's particular student-defined program. This course is a one-semester option for student-defined majors who propose a 9-unit/one-semester capstone project; it is also an 18-unit/one-semester alternative to the two-semester Senior Capstone sequence (66-504/66-505) for Dietrich College student-defined majors who choose the 18-unit capstone option, but who are unable to spread these units across both semesters of the senior year. The course is open only to seniors who have been admitted to the Dietrich College Student-Defined Program as either a primary or additional major. Projects and unit values are proposed by eligible students, and must be approved by a member of the faculty who agrees to be the project's primary advisor, as well as by the Dietrich College Student-Defined Program Director. These approvals must be secured no later than registration week of the semester prior to the start of the student's senior year. NOTE: For Dietrich College student-defined majors (primary or additional) who are accepted into the Dietrich College Senior Honors Program and who successfully complete a senior honors thesis, the senior honors thesis fulfills the student-defined major capstone requirement.

General Dietrich College Courses

65-198 Research Training: History

Intermittent: 9 units
For Fall 2021: The Pittsburgh Queer History Project The Pittsburgh Queer History Project (PQHP) is an ongoing research effort to collect and catalog archival material that document the experiences of LGBTQ people in Pittsburgh and its environs from the second half of the 20th century to the present. The PQHP is co-directed by Prof. Tim Haggerty, the Director of the Humanities Scholars Program and Dr. Harrison Apple, a BXA graduate of Carnegie Mellon who received a doctorate degree from the University of Arizona in 2021, studying with the noted trans scholar Susan Stryker. Students will meet with community activists, learn how to conduct community outreach, organize archival material, and help formulate research questions based on these documents. There is no prior experience needed. The Dietrich College research training program is open to second-semester first-year students and sophomores with a 3.0 QPA or by petition. By permission of the relevant professor and the Director of Undergraduate Studies. Students sign up for these courses through both the History Department and the Dietrich College Dean's Office.

65-200 Applied Quantitative Social Science I

Fall: 9 units
The first course in the QSSS core sequence provides a fast-paced introduction to a range of methods in the quantitative social sciences. Organized around a set of case studies, the course introduces the language and methods of empirical research through a combination of seminar-style discussions of academic papers, and hands-on lab work using the statistical software R. Students will replicate results from a high-profile labor market discrimination paper, explore agent-based models of neighborhood segregation, and scrape Wikipedia data to examine imbalances in gender representation. Enrollment restricted to QSSS students.

65-201 Humanities Scholars III

Fall: 9 units
Fall 2021: Modern Love As an emotional state love is central to the human experience, whether it is the bonding that occurs between parents and their children, the camaradierie that happens between friends, colleagues, or compatriots, or the romantic attachments that occur between partners. In the modern era, love underwent a transformation: children became more precious, comradeship was reexamined and romance assumed a preeminent place in psychology, legal theory, and social organization. None of this was immutable or unchanging. This class, utilizing fiction, social science and other media, will examine the manner in which love has transformed over time and the consequences that these changes have had upon our understanding of personal interactions, sexualities, and conceptions of health, wellness and social order.
Prerequisite: 65-102

Course Website: http://www.hss.cmu.edu/hsp/

65-203 Applied Quantitative Social Science II

Spring: 9 units
Applied Quantitative Social Science II is the second course in the QSSS core sequence. Conducted in a seminar format, the course will feature guest lectures from a series of faculty at CMU. Students will discuss ongoing research across the social sciences, and over the course of the semester will develop a research project proposal. Seminar participation is limited to QSSS students.

Heinz College of Information Systems and Public Policy

Ramayya Krishnan, Dean
Location: 1003 Hamburg Hall
www.heinz.cmu.edu (http://www.heinz.cmu.edu)

The next generation of leaders must deeply understand this critical point of intersection: People, policy, and technology. The connections between the three define our time, and will continue to shape the future of humankind.

At Heinz College, we've understood this since our founding, and we provide students with a foundation of data analytics, technology, evidence-based management, and rich experiential learning in contexts that are crucial to society, such as public policy, health care, information systems, cybersecurity, the arts, and entertainment.

Our research programs are best described as data-intensive social science. Our economists, statisticians, operations researchers, computer scientists, and management experts sit side by side, collaborating constantly and not sitting in traditional departmental silos. For this reason, they are able to approach complex societal problems in an altogether different way and impart this interdisciplinary mindset to our students.

The unique co-location of our two schools, the School of Public Policy and Management (https://www.heinz.cmu.edu/about/public-policy-management/) and the School of Information Systems and Management (https://www.heinz.cmu.edu/about/information-systems-management/), offers opportunities for collaboration that simply cannot be duplicated elsewhere. We also offer two groundbreaking Joint Degree Programs with the CMU College of Fine Arts (https://www.heinz.cmu.edu/about/fine-arts/).

Graduates of Heinz College are highly sought by employers across sectors for their interdisciplinary expertise and ability to use relevant data to solve complex problems. Our alumni work for government agencies at the federal, state, and local levels. They work in roles that directly impact national security. They work for tech giants, big consulting firms, major media outlets, cultural institutions, top hospitals and health systems, non-profits, and community organizations of all sizes. They work for startups—or they found their own.

Learn more about Heinz College graduate degree programs (https://www.heinz.cmu.edu/programs/).

Public Interest Technology

Public Interest Technology (PIT) is an emerging field unto itself, but Carnegie Mellon University has been a leader in this space for over 50 years, promoting the use of technology to advance the public interest. Continued excellence in this space is a priority for Heinz College.

Learn more about PIT at Heinz College (https://www.heinz.cmu.edu/about/public-interest-technology/).

Minor in Decision Analytics and Systems (DAS)

Students in any undergraduate major at Carnegie Mellon University can elect the Minor in Decision Analytics and Systems (DAS), building along the way a robust interdisciplinary toolkit that draws on computer science, economics, statistics, operations research, machine learning, and information systems. You will also learn how-to apply this toolkit to consequential societal problems!

Heinz College offers the undergraduate **Minor in Decision Analytics and Systems (DAS)**, providing you with the opportunity to add systems thinking and evidence-based problem solving to any field of study.

Data is a means to an end—creating value for people and society. But before data can create value, there comes a critical decision point. DAS prepares you to be the one who makes that decision, navigating the process from end to end: from identifying a current decision point and the problem it could solve, to determining the right decision and its potential value, and finally communicating that value and putting the decision into action.

Using Heinz College's deep expertise in analytics, public policy and information systems as a launchpad, the DAS minor features gamechanging experiential courses that ground DAS strategies in real world application, so you can see the social impacts of this work firsthand.

For more information, contact Professor Raja Sooriamurthi at raja@cmu.edu.

DAS MINOR CURRICULUM AND COURSEWORK

DAS Core Courses:

- Introduction to DAS (94-416 Introduction to Decision Analytics and Systems)
- Simulation for DAS (94-417)
- Optimization for DAS (94-433 Optimization for DAS)
- Applied Econometrics for DAS (94-431 Applied Econometrics for DAS)
- Critical Analysis of Policy Research (90-440 Critical Analysis of Policy Research)
- Machine Learning for Public Policy Lab (94-489 Machine Learning for Public Policy Lab)

Expected Pre-requisites:

- Calculus (21-111 Calculus I, 21-112 Calculus II, OR 21-256 Multivariate Analysis)
- Matrix Algebra (21-240 Matrix Algebra with Applications)
- Computer Science (15-112 Fundamentals of Programming and Computer Science AND 15-122 Principles of Imperative Computation)
- Probability and Statistics (36-225 Introduction to Probability Theory AND 36-226 Introduction to Statistical Inference)
- Principles of Microeconomics (73-102 Principles of Microeconomics)

SAMPLE SCHEDULE: DAS

*Below is one possible schedule for the **DAS minor**. Actual schedules may vary based on course availability and other factors.*

Year Two - Fall Semester

- Introduction to DAS
- Optimization for DAS

Year Two - Spring Semester

- Simulation for DAS
- Applied Econometrics for DAS

Year Three - Fall Semester

- Critical Analysis of Policy Research

Year Three - Spring Semester

- Machine Learning for Public Policy Lab

Minor in Health Care Policy and Management

Sponsored by:
Heinz College of Information Systems and Public Policy
Dietrich College of Humanities and Social Sciences
Mellon College of Science

Faculty Advisors:
Jason D'Antonio, Mellon College of Science
James F. Jordan, H. John Heinz III College

The face of health care is changing. The practice of medicine is being fundamentally altered by the forces of change in public policy, health care organizations and in the industry as a whole. The role of individual professionals in this industry is changing as rapidly as the industry itself. Traditional career paths have disappeared overnight to be replaced by new opportunities that require new skills. New organizations are placing new demands on their professional and medical staffs. The criteria of efficiency and financial stability are entering the domains of diagnosis and treatment.

This minor is designed to provide students considering a career in the health professions with an understanding of how these changes are likely to affect their careers. Students will become familiar with the critical policy and management issues and will begin to learn to operate effectively in the emerging health care environment. The curriculum combines economic, organizational, managerial, historical and psychological perspectives on these issues to provide a foundation for a deepened understanding of the changing structure of health care organizations and policy.

Required Courses for HCPM Minor

A total of 54 units are required to complete this minor. Entry into the minor requires completion of 73-102 Principles of Microeconomics or the equivalent by approval.

Required Courses

Complete a total of 21 units from the following:		
79-330	Medicine and Society: Health, Healers, and Hospitals	9
90-436	Health Systems	6
90-472	Health Policy	6

Elective Courses

Complete a minimum of 24 units from these two sections:

Heinz College Courses		
94-409	Healthcare Information Systems	12
73-328	Health Economics	12
90-832	Health Law	6
90-433	Population Health	6
90-834	Health Care Geographical Information Systems	12
Other courses as approved		

Humanities and Social Sciences Courses (9 units each)		
80-245	Medical Ethics	9
76-494	Healthcare Communications	9
88-365	Behavioral Economics and Public Policy	9
42-444	Medical Devices	9
Other courses as approved		

Please note that some of these courses have prerequisites that will not count toward the completion of the requirements for this minor.

Elective Focus Areas

Focus areas are suggested groupings of electives based on student interest. Students *do not* need to take all electives within one focus area; they are free to choose their 18-unit elective minimum from any combination of focus areas.

Health Management/Administration Focus		Units
90-832	Health Law	6
80-245	Medical Ethics	9
76-494	Healthcare Communications	9

Health Policy Focus		Units
73-328	Health Economics	12
90-832	Health Law	6
90-433	Population Health	6
88-365/90-882	Behavioral Economics and Public Policy	9
Other courses as approved		

Health Analytics & IT Focus		Units
94-409	Healthcare Information Systems	12
90-834	Health Care Geographical Information Systems	12
42-444	Medical Devices	9
Other courses as approved		

Five-Year (Accelerated) Master's Programs

Students with the drive to develop as leaders and enter the job market more quickly can earn their CMU undergraduate degree **and** a professional master's degree from Heinz College together in five years instead of the typical six.

An Accelerated Master's Program (AMP) isn't just a savings of time. It's also a considerable savings in cost, and adds a tremendous level of experience and expertise in a specific industry.

In the Heinz College AMP program, students complete 3 years in a CMU undergraduate program (any major), followed by 1 year of integrated study, followed by 1 full year at Heinz College.

The following Heinz College master's degree programs offer accelerated options for CMU undergraduates:

- Master of Arts Management (MAM)
- Master of Entertainment Industry (MEIM)*
- Master of Information Systems Management (MISM)
- Master of Science in Health Care Policy and Management (MSHCPM)
- Master of Science in Information Security Policy and Management (MSISPM)
- Master of Information Security Policy and Management (MSISPM)
- Master of Science in Public Policy and Management (MSPPM)*

Students must apply and be admitted to Heinz College. Learn more about Heinz College admissions requirements (https://www.heinz.cmu.edu/admissions/).

For more information on Accelerated Master's Programs, please contact the Heinz College Office of Admissions at hnzadmit@andrew.cmu.edu or by phone 412-268-2164.

***Note on AMP planning for MEIM and MSPPM - Washington, D.C.:** Due to the rigorous format and unique academic demands of the MEIM and MSPPM – Washington D.C. programs—with their second years at CMU's Los Angeles and D.C. campuses, respectively—interested students should begin the AMP planning process as early as possible in their undergraduate career. Students must ensure that they have satisfied all requirements for their undergraduate degree, as well as their first-year master's requirements, by the end of the fourth AMP year.

Ph.D. Program

Distinguished by the interdisciplinary model of Heinz College and Carnegie Mellon University, our Ph.D. programs prepare graduates to lead change in their chosen fields through meaningful collaborations and hands-on work with our renowned and extremely accessible faculty.

Heinz College features the unique co-location of two schools: The School of Information Systems and Management and The School of Public Policy and Management; however, below that larger structure, we are a college without departments and their characteristic silos. Our faculty, students, and research centers thrive by working together to solve problems across subjects, disciplines, and business verticals.

In the Heinz College Ph.D. program, you will conduct innovative research to address increasingly complex challenges facing society, whether those challenges are technical, organizational, political, economic, social, or—as is often the case—some combination thereof.

- Ph.D. in Information Systems and Management (https://www.heinz.cmu.edu/programs/phd-programs/information-systems-management/)
- Ph.D. in Public Policy and Management (https://www.heinz.cmu.edu/programs/phd-programs/public-policy-management/)
- Joint Ph.D. Programs (https://www.heinz.cmu.edu/programs/phd-programs/joint-phd/)
- Recent Ph.D. Placements (https://www.heinz.cmu.edu/programs/phd-programs/phd-placements/)

Faculty and Research Centers

FACULTY

Heinz College has an international reputation for the quality of its research. Our interdisciplinary environment creates exciting opportunities for collaboration and produces a breadth of research work not typically found in schools of our size.

Our faculty and research centers consistently receive funding support from government agencies, foundations and corporate partners, like the National Science Foundation; the Heinz Endowments; the Mellon Foundation; the

U.S. Departments of Defense, Commerce, Health and Human Services, and Housing and Urban Development; the Sloan Foundation; and the National Institute of Justice.

Visit our Faculty pages (https://www.heinz.cmu.edu/faculty-research/) to learn more about individual faculty members, accomplishments, and current research.

RESEARCH CENTERS

We host, or are closely associated with, these CMU research centers:

- Arts Management and Technology Laboratory (AMTLab) (http://amt-lab.org/)
- Block Center for Technology and Society (https://www.cmu.edu/block-center/)
- Center for Behavioral Decision Research (CBDR) (http://cbdr.cmu.edu/)
- Center for Economic Development (CED) (https://www.heinz.cmu.edu/ced/)
- CyLab (http://www.cylab.cmu.edu/)
- Digital Transformation and Innovation Center (https://www.cmu.edu/risk-reg-center/)
- iLab (http://ilab.heinz.cmu.edu/)
- Initiative for Digital Entertainment Analytics (IDEA) (http://idea.heinz.cmu.edu/)
- Living Analytics Research Centre (LARC) (https://larc.smu.edu.sg/)
- Metro21: Smart Cities Institute (https://www.cmu.edu/metro21/)
- Mobility21: USDOT National University Transportation Center (https://mobility21.cmu.edu/)
- Privacy Economics Experiments (PEEX) Lab (https://peex.heinz.cmu.edu/)
- Program for Research and Outreach on Gender Equity in Society (PROGRESS) (https://www.cmu.edu/dietrich/progress-equity-leadership/)
- Traffic21 (https://traffic21.heinz.cmu.edu/)

Diversity and Inclusion

The Heinz College of Information Systems and Public Policy represents over 50 nations and over 40 U.S. states, which increases our ability to foster a community with greater variation in perspectives and approaches to our work.

By design, Heinz College is an empathetic and open environment that inspires continuous learning, conversation, and intelligent action that will impact society for the better.

Diversity, inclusion, and equity are not radical concepts. Rather, the ongoing pursuit of these ideals is fundamental to the energetic exchange of ideas; the success of our students, faculty, and staff; and the unlocking of innovations that will improve the human condition.

Heinz College proudly champions the unique experiences of all members of our campus community. It is a priority for Heinz College to attract, maintain, and nurture a student body of diverse viewpoints, backgrounds, and talents. We are also committed to improving access to our graduate programs, in particular for underrepresented populations. We support these efforts through a variety of initiatives, programming, and partnerships in addition to Carnegie Mellon University's campus-wide efforts.

Learn more about Diversity & Inclusion at Heinz College (https://www.heinz.cmu.edu/about/diversity/).

Faculty

ALESSANDRO ACQUISTI, Assistant Professor of Information Systems and Public Policy – Ph.D., UC Berkeley; Carnegie Mellon, 2003–

LEMAN AKOGLU, Dean's Associate Professor of Information Systems – PhD, Computer Science, Carnegie Mellon University; Carnegie Mellon, 2012–

UTTARA ANANTHAKRISHNAN, Assistant Professor of Information Systems – Ph.D. in Information Systems, Heinz College at Carnegie Mellon University;

LINDA BABCOCK, James M. Walton Professor of Economics – Ph.D., University of Wisconsin at Madison; Carnegie Mellon, 1988–

EDWARD BARR, Associate Teaching Professor – M.S., Indiana University of Pennsylvania; Carnegie Mellon, 2000–

MARTIN BARRETT, Associate Teaching Professor – Ph.D. in Commputer Science, University of Wisconsin-Madison;

DAREEN BASMA, Assistant Dean of Diversity, Inclusion, Climate & Equity (DICE) – Bachelor's degree in Psychology & Religious Studies, Master's degree in Mental Health Counseling, Ph.D. in Counselor Education & Supervision, University of Tennessee;

ELI BEN-MICHAEL, Assistant Professor – PhD in Statistics, U.C. Berkeley;

ALFRED BLUMSTEIN, J. Erik Jonsson University Professor of Urban Systems and Operations Research; Director, National Consortium on Violence Research – Ph.D., Cornell University; Carnegie Mellon, 1969–

SILVIA BORZUTSKY, Associate Teaching Professor – Ph.D., University of Pittsburgh; Carnegie Mellon, 2001–

LEE BRANSTETTER, Associate Professor of Economics – Ph.D., Harvard University; Carnegie Mellon, 2006–

JONATHAN CAULKINS, Professor of Operations Research and Public Policy; Faculty Chair, Master of Public Policy and Management Program – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1990–

GEORGE CHEN, Assistant Professor of Information Systems – Ph.D. in Electrical Engineering and Computer Scienc, MIT; Carnegie Mellon, 2015–

DAVID CHOI, Assistant Professor of Statistics and Information Systems – Ph.D, Electrical Engineering, Stanford University; Carnegie Mellon, 2004–

JACK CHOW, Distinguished Service Professor – M.D., University of California at San Francisco School of Medicine; Carnegie Mellon, 2011–

KAREN CLAY, Assistant Professor of Economics and Public Policy – Ph.D., Stanford University; Carnegie Mellon, 1997–

AVINASH COLLIS, ssistant Professor at the Heinz College of Information Systems and Public Policy – Ph.D. from the Sloan School of Management, Massachusetts Institute of Technology;

BRETT ASHLEY CRAWFORD, Associate Teaching Professor of Arts Management – Ph.D. in Theatre History and Criticism, University of Maryland;

GEORGE T. DUNCAN, Professor of Statistics, Emeritus – Ph.D., University of Minnesota; Carnegie Mellon, 2011–

MARIANA ESCALLON BARRIOS, Assistant Teaching Professor of Information Systems – Ph.D. in Industrial Engineering and Management Sciences, Northwestern University;

PEDRO FERREIRA, Associate Professor of Information Systems – PhD, Engineering and Public Policy Specialization in Telecom Policy, Carnegie Mellon University; Carnegie Mellon, 2004–

REBEKAH FITZSIMMONS, Assistant Teaching Professor of Professional Communication – PhD in English, University of Florida;

ANDREW GARIN, Assistant Professor of Economics – Ph.D., Harvard University;

MARTIN GAYNOR, E.J. Barone Professor of Economics and Health Policy; Faculty Chair, Ph.D. Program – Ph.D., Northwestern University; Carnegie Mellon, 1995–

RAYID GHANI, Distinguished Career Professor – Machine Learning, Carnegie Mellon University;

WILLIAM GOGOLAK, Assistant Teaching Professor – PhD in Finance, Illinois Institute of Technology;

GABRIELA GONGORA-SVARTZMAN, Assistant Teaching Professor of Information Systems – PhD in Engineering Management, Stevens Institute of Technology, School of Systems and Enterprises;

CHRISTOPHER GORANSON, Distinguished Service Professor – Master of Geographic Information Systems, Penn State University;

WILPEN GORR, Professor of Public Policy and Information Systems – PhD, Operations Research, Carnegie Mellon University;

COREY HARPER, Assistant Professor of Civil and Environmental Engineering – BS in Civil Engineering, MS and PhD , Morgan State University, Carnegie Mellon University;

AMELIA HAVILAND, Professor of Statistics and Health Policy – PhD, Statistics and Public Policy, Carnegie Mellon University;

KIM J. HYATT, Associate Teaching Professor

AKSHAYA JHA, Assistant Professor of Economics and Public Policy – Ph.D. in Economics, Stanford University;

MARK S. KAMLET, Provost, CMU, and H. John Heinz III Professor of Economics and Public Policy – Ph.D., University of California at Berkeley; Carnegie Mellon, 1978–

FELIX KOENIG, Assistant Professor of Economics – Ph.D. and MSc in Economics, London School of Economics;

BRIAN KOVAK, Associate Professor of Economics and Public Policy – Ph.D., Economics, University of Michigan;

DAVID KRACKHARDT, Professor of Organizations and Public Policy – Ph.D., University of California at Irvine; Carnegie Mellon, 1991–

RAMAYYA KRISHNAN, William W. and Ruth F. Cooper Professor of Management Science and Information Systems; Faculty Chair, Master of Information Systems Management Program – Ph.D., University of Texas at Austin; Carnegie Mellon, 1987–

KRISTIN KURLAND, Associate Teaching Professor (joint with School of Architecture) – B.A., University of Pittsburgh; Carnegie Mellon, 1999–

CHRIS LABASH, Assistant Teaching Professor

DAVID LASSMAN, Distinguished Service Professor of Organizational Management – BS, Mechanical and Aerospace Engineering, MBA, Princeton University, Harvard Business School;

GORDON LEWIS, Associate Professor of Sociology; Faculty Chair, Master of Public Management Program – Ph.D., Stanford University; Carnegie Mellon, 1969–

BEIBEI LI, Associate Professor of IT and Management – PhD in Information Systems, Stern School of Business, New York University;

ARI LIGHTMAN, Practice Professor, Digital Media and Marketing – M.B.A., Carnegie Mellon University; Carnegie Mellon, 2011–

PETER MADSEN, Senior Lecturer in Ethics and Public Policy – Ph.D., Duquesne University; Carnegie Mellon, 1988–

DAN MARTIN, Director, Master of Arts Management Program, and Associate Professor (College of Fine Arts) – M.F.A., Brooklyn College/City University of New York; Carnegie Mellon, 1993–

HAYLEE MASSARO, Assistant Teaching Professor

ANNA MAYO, Assistant Professor of Organizational Behavior – PhD in Organizational Behavior & Theory, Carnegie Mellon's Tepper School of Business;

MICHAEL MCCARTHY, Associate Teaching Professor of Information Systems Management – M.S., University of Pittsburgh; Carnegie Mellon, 1999–

SARAH MENDELSON, Distinguished Service Professor of Public Policy and Head of Heinz College in Washington, DC – PhD in Political Science, Columbia University;

JOE MERTZ, Associate Teaching Professor – Ph.D., Carnegie Mellon; Carnegie Mellon, 1994–

DANIEL NAGIN, Theresa and H. John Heinz III Professor of Public Policy, and Research Director, National Consortium on Violence Research – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1979–

JOHN OSTLUND, Clinical Professor of Information Systems

REMA PADMAN, Professor of Operations Research and Information Management; Faculty Chair, Master of Science in Health Care Policy and Management Program – Ph.D., University of Texas at Austin; Carnegie Mellon, 1989–

SEAN QIAN, Henry Posner, Anne Molloy, and Robert and Christine Pietrandrea Associate Professor of Civil Engineering; Director, Mobility Data Analytics Center (MAC) – PhD, University of California Davis;

SETH RICHARDS-SHUBIK, Assistant Professor of Economics and Public Policy – Ph.D., University of Pennsylvania; Carnegie Mellon, 2011–

DAVID RIEL, Distinguished Service Professor – Ph.D. ABD in Education, West Virginia University;

STACY ROSENBERG, Associate Teaching Professor – MA in Media, Culture, and Communication, New York University;

DENISE ROUSSEAU, H. J. Heinz II Professor of Organizational Behavior (joint with Graduate School of Industrial Administration) – Ph.D., University of California at Berkeley; Carnegie Mellon, 1994–

ANANYA SEN, Assistant Professor of Information Technology and Management – Ph.D in Economics, Toulouse School of Economics;

EDSON SEVERNINI, Associate Professor of Economics and Public Policy – Ph.D., Economics, University of California at Berkeley; Carnegie Mellon, 2013–

MICHAEL SMITH, Assistant Professor of Information Technology – Ph.D., Alfred P. Sloan School of the Massachusetts Institute of Technology; Carnegie Mellon, 2000–

RAJA SOORIAMURTHI, Teaching Professor Information Systems Program, Director Decision Analytics and Systems minor

DAVID STEIER, Distinguished Service Professor – Doctor of Philosophy (PhD) in Computer Science, Carnegie Mellon University;

JILLIAN STEPHENSON, Assistant Teaching Professor; Certified Public Accountant – Bachelor of Science in Business Administration, Accounting, University of Pittsburgh;

ROBERT STRAUSS, Professor of Economics and Public Policy; Faculty Chair, Master of Science in Educational Technology Management Program – Ph.D., University of Wisconsin; Carnegie Mellon, 1979–

LAURA SYNNOTT, Associate Teaching Professor, Healthcare Policy and Management – M.S., Health Services Administration, University of Michigan; Carnegie Mellon, 2004–

JANUSZ SZCZYPULA, Associate Teaching Professor in Information Systems – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2000–

JOEL TARR, Richard S. Caliguiri Professor of Urban and Environmental History and Policy – Ph.D., Northwestern University; Carnegie Mellon, 1967–

LOWELL TAYLOR, Professor of Economics and Public Policy; Associate Dean of Faculty – Ph.D., University of Michigan; Carnegie Mellon, 1990–

RAHUL TELANG, Assistant Professor of Information Systems – Ph.D., Carnegie Mellon; Carnegie Mellon, 2001–

XIAOYING TU, Assistant Teaching Professor – PhD, Information Systems and Management, Carnegie Mellon University;

HOLLY WIBERG, Assistant Professor of Operations Research and Public Policy – PhD in Operations Research, MIT;

PETER ZHANG, Assistant Professor of Operations Research – Ph.D. in Engineering Systems, Massachusetts Institute of Technology;

SHIXIANG ZHU, Assistant Professor of Data Analytics – Ph.D. in Machine Learning, Georgia Institute of Technology; Carnegie Mellon, 2022–

Mellon College of Science

Curtis Meyer, Interim Dean

Maggie Braun, Associate Dean for Undergraduate Affairs

Kenneth Hovis, Assistant Dean for Educational Initiatives

Location: Doherty Hall 1324
www.cmu.edu/mcs (http://www.cmu.edu/mcs/)

The Mellon College of Science (MCS) has provided the undergraduate training for many of today's leading scientists. We have earned national recognition for our integration of undergraduate education and research from such organizations as the National Science Foundation, the Howard Hughes Medical Institute, and the Beckman Foundation. MCS students gain a broad education in science, mathematics, and the liberal arts while using state-of-the-art computational approaches in their courses, laboratories, and research activities. Our faculty members are committed to teaching as well as to a wide range of scientific research. This combined emphasis on education and research brings special benefits to students, including increased awareness of current scientific developments that are incorporated in classroom instruction, and, most importantly, opportunities to participate with faculty, graduate students, and other research scientists in a variety of research projects.

In the context of rigorous training in each field, the MCS curriculum emphasizes problem-solving, communication, and analytical skills, and it teaches our students the value of hard work and discipline. Our students go on to highly successful careers in a broad range of fields like astrophysics, biotechnology, computer science, business management, environmental science, health care policy, investment banking, marketing analysis, medicine, patent law, and pharmaceuticals. Our alumni credit their education in science for preparing them for a lifetime of learning and achievement; their employers attest to their ability to succeed and to continue learning in an ever-changing world.

The MCS Departments of Biological Sciences, Chemistry, Mathematical Sciences, and Physics each outline their degree programs and courses in the departmental sections. Students select their major in the spring of the first year so that the sophomore year begins with a focus within a department. Most of the courses required within a major are scheduled in the sophomore and junior years, leaving much of the senior year and part of the junior year open for electives. This provides the opportunity to participate in undergraduate research, explore interdisciplinary studies, study abroad, pursue additional majors or minors in other fields, or take other specialty courses oriented toward immediate job placement upon graduation or entry into graduate studies.

Science education in the 21st Century demands educational experiences that are much broader than the traditional preparation of a scholar in a chosen field of science. We want our MCS graduates to be **scholars** who are deeply trained in their discipline(s), and also **professionals** adept at communicating to broad audiences, accustomed to working in diverse, multidisciplinary teams, and keenly aware of the global context of their work. We want them to be **citizens** who are actively involved and globally engaged, and to grow as **persons** with a sense of wellness and balance.

With these ambitions in mind, we have set forth fifteen (15) outcomes that all MCS undergraduate students should complete in their time at Carnegie Mellon. Upon graduation, MCS students should be able to:

1. Apply foundational and advanced mathematical and scientific knowledge in a chosen field of study appropriately and fluently to solve complex problems, to integrate concepts across disciplines, and to adapt their knowledge to new situations.
2. Critically assess their current state of knowledge and expertise and acquire new knowledge in pursuit of both specific scientific goals and new intellectual interests broadly throughout their lifetime.
3. Communicate effectively via oral, visual, and written formats with an understanding of the perspectives and expectations of diverse audiences, including those within their chosen discipline, outside that discipline (but within STEM), and non-scientists.
4. Participate effectively in multidisciplinary research and/or other teams pursuing a shared vision while optimizing team outcomes.
5. Use the appropriate tools and required media literacy to acquire, assess, and analyze data and information from diverse sources.
6. Recognize and explain the importance of at least one current research topic in a STEM field outside of their major.
7. Recognize and explain the similarities and differences in analyzing/approaching problems, including in technical and non-technical fields other than their major.
8. Demonstrate knowledge of the arts, humanities, and social sciences.
9. Recognize the interplay of science, society, public policy, business, and economics.
10. Identify global examples of the reciprocal relationships among science, technology, political forces, societal contexts, and environmental issues.
11. Describe multiple similarities and differences between one's own culture and that of others.
12. Engage in recursive, reflective processes to assess their own levels of physical, emotional, and social wellness and then to choose activities that promote these aspects of wellness.
13. Engage in recursive, reflective processes to balance multiple endeavors by setting priorities and managing time in academic, meta-curricular, and personal dimensions.
14. Recognize ethical issues and appreciate the complexities of interrelationships among them, and the use of information in ethical and legal manners.
15. Articulate how one's own developing skills in science and technology can be increasingly used in constructive community service or engagement that recognizes the potential impact on local and global issues, including environmental impact and sustainability.

Tailoring Your Education

The Mellon College of Science offers students tremendous opportunity for tailoring their education to meet individual professional objectives. Whether you target your degree to a particular field in your discipline via departmental options and concentrations, add a secondary major, minor, or degree to your primary degree program, participate in honors programs, or pursue a master's degree along with your bachelor's degree, MCS has much to offer you. Many of these opportunities are outlined below.

Departmental Concentrations

Each department in MCS offers degrees and programs that allow students to explore particular fields within a science discipline. These are outlined below — see the departmental sections for further details.

Biological Sciences

- Biochemistry
- Biophysics
- Cell Biology
- Computational Biology
- Developmental Biology
- Genetics
- Molecular Biology
- Neuroscience

Chemistry

- Biochemistry
- Biological Chemistry
- Colloids, Polymers, and Surfaces
- Computational Chemistry
- Environmental Chemistry
- Management
- Material Chemistry
- Polymer Science

Mathematical Sciences

- Computational and Applied Mathematics
- Computational Finance
- Discrete Mathematics and Logic
- Mathematics
- Operations Research
- Statistics

Physics

- Applied Physics
- Astrophysics
- Biological Physics
- Chemical Physics
- Computational Physics
- Quantum Physics

Minors, Double Majors, and Double Degrees

As an MCS student, you can pursue additional majors and minors to complement your primary degree, not only within the science college, but also through the other colleges at Carnegie Mellon. Carnegie Mellon offers many exciting interdisciplinary majors and minors, some of which are listed below. In addition, every college and most departments have designed minors or second majors in their discipline so that you can gain expertise in their fields as well.

Some students choose to gain this expertise by following a double degree program. This results in two distinct bachelor's degrees. Please see the section on Undergraduate Academic Regulations for a more formal definition of these "Multiple Degree" programs.

Interdisciplinary Majors and Minors

Here is a sampling of just a few of the interdisciplinary minors and majors offered at Carnegie Mellon (not all are in MCS). Please see the appropriate sections elsewhere in this catalog for specific descriptions and course requirements.

- Biological Sciences and Psychology Major
- Engineering Studies Minor
- Environmental and Sustainability Studies Additional Major or Minor
- Environmental Policy Major
- Health Care Policy and Management Minor
- International Affairs Minor
- Mathematics and Economics Major
- Neuroscience Major and Minor
- Operations Research Minor
- Robotics Minor
- Scientific Computing Minor
- Technology and Policy Minor

For a complete list of the minors offered at Carnegie Mellon, please go to Undergraduate Options (http://coursecatalog.web.cmu.edu/aboutcmu/undergraduateoptions/#minorstext).

University Student-Defined Majors

With a well-thought proposal, you may be able to pursue a major you have designed to meet your particular interests and goals. Please see the catalog section on Student-Defined Majors (http://coursecatalog.web.cmu.edu/aboutcmu/undergraduateoptions/#studentdefinedmajortext). MCS students wishing to pursue a student-defined major should contact the MCS Associate Dean for Undergraduate Affairs (https://www.cmu.edu/mcs/undergrad/advising/).

General Education Requirements

Students pursuing any MCS bachelor's degree will fulfill the 15 Core Education outcomes (p. 560) through their primary MCS major and by completing the following technical and nontechnical breadth requirements prior to graduation. Please see MCS Course Planning Guide (https://www.cmu.edu/mcs/undergrad/course-planning.html) for the recommended timeline to complete these requirements.

Technical Breadth Requirements

As a 21st Century practicing scientist or mathematician, our graduates will work with others from a variety of technical backgrounds. Therefore, all of our students will be broadly trained within the technical fields of science and math. Students will fulfill this training by completing four (4) technical courses in the Science, Technology, Engineering, and/or Mathematics (STEM) fields at Carnegie Mellon University.

A student must take at least 9 units, outside of their primary major department, from each of four categories listed below. These may include prerequisite courses or courses required by their major department but must be outside their home department. AP/IB/Cambridge credit may NOT be used to fulfill these requirements. At least three of these courses must be taken in their first year. The categories are:

A. Life Sciences

(Refer to your specific department for how this category should be fulfilled. Some courses have prerequisites that can be satisfied by AP, IB, Cambridge A Level Exams. Please check the prerequisites requirements as necessary.)

LIFE SCIENCES		
02-250	Introduction to Computational Biology	12
02-261	Quantitative Cell and Molecular Biology Laboratory	9
03-117	Frontiers, Analysis, and Discovery in Biological Sciences	6
03-121	Modern Biology	9
03-151	Honors Modern Biology	10
03-124	Modern Biology Laboratory	9
03-125	Evolution	9
03-132	Basic Science to Modern Medicine	9
03-133	Neurobiology of Disease	9
03-135	Structure and Function of the Human Body	9
03-161	Molecules to Mind	9
03-231	Honors Biochemistry	9
or 03-232	Biochemistry I	
42-101	Introduction to Biomedical Engineering	12
42-202	Physiology	9
85-219	Foundations of Brain and Behavior	9

B. Physical Sciences

(Refer to your specific department for how this category should be fulfilled. Some courses have prerequisites that can be satisfied by AP, IB, Cambridge A Level Exams. Please check the prerequisites requirements as necessary.)

PHYSICAL SCIENCES		
09-105	Introduction to Modern Chemistry I	10
09-106	Modern Chemistry II	10
09-107	Honors Chemistry: Fundamentals, Concepts and Applications	10
09-111	Nanolegos: Chemical Building Blocks	9
09-214	Physical Chemistry	9
09-217	Organic Chemistry I	9

09-219	Modern Organic Chemistry	10
09-221	Laboratory I: Introduction to Chemical Analysis	12
09-225	Climate Change: Chemistry, Physics and Planetary Science	9
09-348	Inorganic Chemistry	10
33-121	Physics I for Science Students	12
33-122	Physics II for Biological Sciences & Chemistry Students	9
33-141	Physics I for Engineering Students	12
33-142	Physics II for Engineering and Physics Students	12
33-151	Matter and Interactions I	12
33-152	Matter and Interactions II	12
33-211	Physics III: Modern Essentials	10
33-224	Stars, Galaxies and the Universe	9
33-225	Quantum Physics and Structure of Matter	9

C. Mathematics, Statistics, and Computer Science

(Refer to your specific department for how this category should be fulfilled. Some courses have prerequisites that can be satisfied by AP, IB, Cambridge A Level Exams. Please check the prerequisites requirements as necessary.)

MATH, STATS, and CS		
21-120	Differential and Integral Calculus	10
21-122	Integration and Approximation	10
21-124	Calculus II for Biologists and Chemists	10
21-127	Concepts of Mathematics	12
21-128	Mathematical Concepts and Proofs	12
21-228	Discrete Mathematics	9
21-241	Matrices and Linear Transformations	10
or 21-240	Matrix Algebra with Applications	
or 21-242	Matrix Theory	
21-259	Calculus in Three Dimensions	10
or 21-268	Multidimensional Calculus	
or 21-269	Vector Analysis	
21-260	Differential Equations	9
or 21-261	Introduction to Ordinary Differential Equations	
36-200	Reasoning with Data	9
36-202	Methods for Statistics & Data Science	9
36-220	Engineering Statistics and Quality Control	9
36-225	Introduction to Probability Theory	9
36-309	Experimental Design for Behavioral & Social Sciences	9
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
15-122	Principles of Imperative Computation	12
15-150	Principles of Functional Programming	12
15-251	Great Ideas in Theoretical Computer Science	12

D. STEM Course

- All of the above courses
- Any introductory engineering course from CIT
- A STEM course approved by an MCS advisor

Technical Breadth-Departmental Requirements

Some of the majors in MCS require certain courses from the technical breadth requirement that are necessary for either prerequisite knowledge in the major or scientific breadth. For each of the four majors in MCS the Technical Breadth Requirement is completed as follows. If these requirements are met by AP/IB/Cambridge A Level Exams, students can choose any course from the categories to fulfill the Technical Breadth Requirement.

Biological Sciences

1. Life Sciences: any courses in this category **except** for the 03-XXX courses
2. Physical Sciences: 09-105, 09-106, 33-121 and 33-122
3. Math/CS/Stats: 21-120 and (21-122 or 21-124)
4. STEM Elective: will be filled by courses above or any STEM course from the approved list.

Chemistry

1. Life Sciences: 03-121 or 03-231 or 03-232
2. Physical Sciences: 33-121 and 33-122
3. Math/CS/Stats: 21-120 and (21-122 or 21-124)
4. STEM Elective: will be filled by courses above or any STEM course from the approved list.

Mathematical Sciences

1. Life Sciences: any courses in this category
2. Physical Sciences: any course in this category
3. Math/CS/Stats: any course in this category **except** for the 21-XXX courses, 36-200 Reasoning with Data, or 36-202
4. STEM Elective: any STEM course from the approved list.

Physics

1. Life Sciences: 03-121
2. Physical Sciences: 09-105
3. Math/CS/Stats: 21-120, 21-122, 21-259
4. STEM Elective: will be fulfilled by courses above or any STEM course from the approved list.

Nontechnical Breadth Requirements

MCS aspires for all of our undergraduates to leave our campus with a strong sense of personal integrity, social responsibility, ethics, working with diverse others, global engagement, and personal health and well-being. The following nontechnical breadth requirements will require students to develop a personalized plan for their course selection and meta-curricular participation to maximize their CMU experience. Our graduates will be well trained to be life-long and life-wide learners that will lead the scientific community and the world at large.

All candidates for MCS bachelor's degrees must complete the following nontechnical breadth requirements:

A. First Year Courses:

The following three courses must be taken in the first year:

38-101	EUREKA!: Discovery and Its Impact	6
or 38-100	CATALYST - MCS First-Year Seminar	
76-101	Interpretation and Argument A total of nine units must be completed in order to fulfill this requirement	9
or 76-102	Advanced First Year Writing: Special Topics	
or 76-106	Writing about Literature, Art and Culture	
or 76-107	Writing about Data	
or 76-108	Writing about Public Problems	
99-101	Core@CMU	3

B. Science and Society Course:

This requirement must be completed no later than the penultimate semester. Any student who finds an appropriate Carnegie Mellon course not on the pre-approved elective list below that might fulfill this requirement should contact their home department's Director of Undergraduate Studies to review the course description to determine if it can be substituted. In addition, transfer courses will also be considered for this category. However, this course requirement *cannot* be satisfied with AP/IB/Cambridge exam credit.

- Option 1: Take 38-304 Reading and Writing Science
- Option 2: Take one of the pre-approved (https://www.cmu.edu/mcs/science-society/electives.html)electives (https://www.cmu.edu/mcs/science-society/electives.html)

Note: QBS students should plan to enroll in 38-301 PROPEL in spring of junior year to fulfill this requirement.

C. ENGAGE Courses:

The ENGAGE courses are self-directed learning opportunities (using the MyCORE online platform) designed to enhance students' engagement with wellness, the arts and community service. Please see the course description for information on when these courses should be taken:

ENGAGE COURSES		
38-110	ENGAGE in Service	1
38-220	ENGAGE in the Arts	2
38-230	ENGAGE in Wellness: Looking Inward	1

38-330	ENGAGE in Wellness: Looking Outward	1
38-430	ENGAGE in Wellness: Looking Forward	1

D. Cultural/Global Understanding Course:

Cultural or global understanding course(s) may be taken at any time. Nine (9) or more units from the following group of courses will fulfill this requirement. Any student who finds an appropriate Carnegie Mellon course not on the list below that might fulfill this requirement should contact their home department's Director of Undergraduate Studies to review the course description to determine if it can be substituted. Cultural and global understanding courses that are taken while studying abroad can be used to fulfill this category. In addition, transfer courses will also be considered for this category. However, this course requirement *cannot* be satisfied with AP/IB/Cambridge exam credit.

CULTURAL/GLOBAL UNDERSTANDING		
57-173	Survey of Western Music History	9
57-306	World Music	9
70-100	Global Business	9
70-342	Managing Across Cultures	9
76-217	Literature & Culture of the 20th and 21st Century	9
76-221	Books You Should Have Read By Now	9
76-232	Introduction to Black Literature	9
76-239	Introduction to Film Studies	9
76-241	Introduction to Gender Studies	9
76-287	Sex & Texts	9
76-386	Language & Culture	9
79-112	Introduction to Asian American History	9
79-145	Genocide and Weapons of Mass Destruction	9
79-160	Introduction to the History of Science	9
79-170	Introduction to Science, Technology, and Society	9
79-175	Moneyball Nation: Data in American Life	9
79-189	Democracy and History: Thinking Beyond the Self	9
79-201	Introduction to Anthropology	9
79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-203	The Other Europe: The Habsburgs, Communism, & Central/Eastern Europe, 1740-1990	9
79-205	20th Century Europe	9
79-208	Witchcraft and Witch-Hunting	9
79-211	Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange	9
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-229	The Origins of the Palestinian-Israeli Conflict, 1880-1948	9
79-230	The Arab-Israeli Conflict and Peace Process Through 1948 to Present	9
79-232	Arabian Peninsula Environmental History	9
79-234	Technology and Society	9
79-237	Comparative Slavery	9
79-240	Development of American Culture	9
79-242	African American History: Reconstruction to the Present	9
79-244	Women in American History	9
79-245	Capitalism and Individualism in American Culture	9
79-257	Germany and the Second World War	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-263	Mao and the Chinese Cultural Revolution	9
79-264	Tibet and China: History and Propaganda	9
79-265	Russian History: Game of Thrones	9
79-266	Russian History and Revolutionary Socialism	9
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-268	World War I: The Twentieth Century's First Catastrophe	9
79-275	Introduction to Global Studies	9
79-278	How (Not) to Change the World	9
79-280	Coffee and Capitalism	9
79-281	Introduction to Religion	9
79-283	Hungry World: Food and Famine in Global Perspective	9
79-343	Education, Democracy, and Civil Rights	9
79-345	Roots of Rock & Roll	9
79-346	U.S. Political Films and Satire	9
79-350	Early Christianity	9
79-377	Food, Culture, and Power: A History of Eating	9
80-100	Introduction to Philosophy	9
80-101	Dangerous Ideas in Science and Society	9
80-130	Introduction to Ethics	9
80-180	Nature of Language: An Introduction to Linguistics	9
80-246	Moral Psychology	9
80-250	Ancient Philosophy	9
80-251	Modern Philosophy	9
80-252	Kant	9
80-253	Continental Philosophy	9
80-254	Analytic Philosophy	9
80-255	Pragmatism: Making Ideas Work	9
80-271	Mind and Body: The Objective and the Subjective	9
80-276	Philosophy of Religion	9
82-xxx	Any course from Languages, Cultures, and Applied Linguistics *Please note the category requirement is for 9+ units. Depending on the selected course you may need to take 1 or more courses together.	Var.
84-226	International Relations	9
84-275	Comparative Politics	9
84-306	Latin American Politics	9
84-319	Civil-Military Relations	9
84-322	Nonviolent Conflict and Revolution	9
84-323	War and Peace in the Contemporary Middle East	9
84-324	The Future of Democracy	9
84-325	Contemporary American Foreign Policy	9
84-328	Military Strategy and Doctrine	9
84-362	Diplomacy and Statecraft	9
84-365	The Politics of Fake News and Misinformation	9
84-370	Nuclear Security & Arms Control	9
84-372	Space and National Security	9
84-373	Emerging Technologies and International Law	9
84-380	US Grand Strategy	9
84-387	Remote Systems and the Cyber Domain in Conflict	9
84-389	Terrorism and Insurgency	9
84-390	Social Media, Technology, and Conflict	9
84-405	The Future of Warfare	9
85-350	Psychology of Prejudice	9
85-352	Evolutionary Psychology	9
88-221	Markets, Democracy, and Public Policy	9
88-234	Negotiation: International Focus	9

***Please note the units on the following course options. You may mix and match these courses together to meet the 9-unit minimum.**

57-209	The Beatles	6
79-216	Genghis Khan and the Mongol Empire	3
79-220	Screening Mexico: Mexican Cinema, 1898 to Present	6
79-222	China and the Second World War	6
79-238	Modern African American Film: History and Resistance	6
79-319	India Through Film	6
79-355	Fake News: "Truth" in the History of American Journalism	6
79-375	Science & Religion	6
82-xxx	Any course from Languages, Cultures, and Applied Linguistics	Var.
99-3xx	Any of the Country Today courses	3

E. Nontechnical Elective Courses

To fulfill this requirement, students must complete a minimum of four (4) nontechnical courses totaling at least 36 units in the College of Fine Arts, the Tepper School of Business, and/or the Dietrich College for Humanities and Social Sciences. A maximum of 18 units of these units may be fulfilled via AP/IB/Cambridge exam credit. Up to 36 units of these nontechnical elective units may be filled by transfer credit (with prior approval through the MCS transfer credit process).

Notes:

1. Courses counted toward the Cultural/Global Understanding requirement and the First-Year Writing requirement **do not** count toward this requirement.
2. Check our web site for courses from DC, CFA, and Tepper that may NOT be used (http://www.cmu.edu/mcs/undergrad/advising/hss-finearts/deletions.html) to satisfy this requirement because they are too technical in nature, plus a list of courses in other colleges (including SCS, CIT, and Heinz College) that do satisfy (http://www.cmu.edu/mcs/undergrad/advising/hss-finearts/additions.html) this requirement.
3. Mix and match nontechnical courses with less than 9 units either from an approved college (as specified above) or the additions list (https://www.cmu.edu/mcs/undergrad/advising/hss-finearts/additions.html) as long as the combined total is at least 36 units.

The following requirements apply to all MCS bachelor's degrees:

1. Students must complete a minimum of 360 units.
2. The four courses required for the Technical Breadth category can be completed at Carnegie Mellon or via transfer credit.
3. AP/IB/Cambridge exam credit cannot be used to fulfill the Science and Society Requirement. Transfer courses will also be considered for this category.
4. AP/IB/Cambridge exam credit cannot be used to fulfill the Cultural/Global Requirement. Cultural and global understanding courses that are taken while studying abroad can be used to satisfy this requirement. In addition, transfer courses will also be considered for this category.
5. For the Nontechnical Electives requirement, students must complete a minimum of four courses totaling at least 36 units with a maximum of 18 units from AP/IB/Cambridge exam credit. In addition, transfer courses will also be considered for this category.

Double Counting Restrictions

Double counting occurs when a student attempts to use one course to meet more than one major, college, or university degree requirement. Any student attempting to double count a course should only do so in close consultation with all relevant academic advisor(s) and/or the Assistant Dean for Educational Initiatives to ensure that all degree requirements are appropriately met.

Generally speaking, students are permitted to double count courses from the MCS Core Education requirements towards their primary major, additional major, or additional minor requirements. However, the following information describes limitations to double counting policies within the MCS Core Education requirements themselves.

The goals of the MCS core technical breadth requirements are different from the goals of the non-technical breadth requirements. Therefore, students are not permitted to double count courses across the following categories/courses:

1. Technical Breadth Requirements (students must take 4 courses total, 1 each from the life sciences, physical sciences, and math, statistics and computer science).

2. Non-Technical Breadth Requirements (including the first-year seminar, first-year writing requirement, ENGAGE courses, third year seminar, cultural/global understanding requirement, and non-technical breadth requirements).

Furthermore, students are not permitted to double count courses across the following list of non-technical core requirements.

1. First-Year Writing Requirement

2. Global/Cultural Understanding Requirement

3. Science and Society Requirement

4. Non-Technical Breadth Requirements (36 units total)

Honors Degree Programs in MCS

Several of the departments in MCS offer students an opportunity to participate in a departmental honors degree program. Some of these programs result in a master's degree along with the bachelor's degree (see next section on accelerated master's programs). These programs are listed below; see the department's section of the catalog for more details.

- Honors Program in Research Biology
- Departmental Honors in Chemistry
- Honors B.S./M.S. Program in Chemistry
- Honors B.S./M.S. Program in Mathematical Sciences

Accelerated Master's Programs

Carnegie Mellon offers some accelerated master's programs for motivated students, whereby students complete both the bachelor's and the master's degree in four or five years. Some programs are in the student's home department in MCS as part of an honors program, while others are offered through one of our graduate schools at Carnegie Mellon. Below is a listing of the programs currently available to MCS students; please see the appropriate sections of the catalog for more details.

- Honors B.S./M.S. Program in Chemistry
- Honors B.S./M.S. Program in Mathematical Sciences
- Accelerated Master's Program in the Heinz College

Study Abroad

There are many programs for studying abroad, usually during your junior year. Please see the catalog section on Undergraduate Options for more details, and talk with the Office of International Education to get information and advice specifically for you.

Pre-Professional Programs

Many students in the Mellon College of Science decide to pursue professional training such as medical school or law school after completing their undergraduate work. Carnegie Mellon offers strong advising services to support these students. Through these programs, students get help with everything from course selection to identification of important experiential opportunities to the application process itself.

Health Professions Program

Faculty Contact: Jason D'Antonio

Please see the Undergraduate Options (http://coursecatalog.web.cmu.edu/aboutcmu/undergraduateoptions/#healthproftext) section for details on the Health Professions Program.

Pre-Law Advising Program

Faculty Contact: Joseph Devine

Please see the Undergraduate Options (http://coursecatalog.web.cmu.edu/aboutcmu/undergraduateoptions/#prelawtext) section for details on the Pre-Law Advising Program.

Intercollege Programs

Bachelor of Science and Arts Degree Program (BSA)

Students in the Bachelor of Science and Arts Degree Program (http://coursecatalog.web.cmu.edu/servicesandoptions/intercollegeprograms/bxaintercollege/.html) are jointly admitted to MCS and the College of Fine Arts (CFA). This is a degree program for students who are naturally gifted in both the arts and the sciences, and allows for the combining of talents in these areas.

Additional Major in Environmental and Sustainability Studies

The Dietrich College of Humanities & Social Sciences and the Mellon College of Science have joined together to establish the interdisciplinary Program in Environmental & Sustainability Studies offering a Minor or an Additional Major. Please see the Intercollege section (p.) of the catalog for requirements of these programs.

Applying Your Education Through Research

An important feature of education in MCS is the opportunity for undergraduate research experience. This experience may be arranged as a course taken for credit or occasionally as a part-time job. Our website (https://www.cmu.edu/mcs/) offers a range of useful information including links to faculty research areas, links to undergraduate research programs at other institutions, and ideas on how to get involved. Because of the strong research base of MCS, undergraduate research positions offer an exciting opportunity to apply your theoretical training to participate in the discovery of new knowledge.

Students can earn MCS Research Honors for significant research accomplishments; see the policy outlined below for the requirements.

Mellon College of Science Research Honors

Undergraduates in the Mellon College of Science will be awarded MCS College Honors at the completion of their degree if they have met one of these requirements:

1. Successfully completed the Honors BS/MS program in the Department of Chemistry or Department of Mathematical Sciences.
2. Successfully completed the departmental honors program in the Department of Biological Sciences or the Department of Chemistry.
3. Earned a cumulative grade point average of ≥3.20 (by the end of their seventh semester or by the time of graduation) and carried out significant research. Typically, this would consist of an academic project carried out for at least two semesters. However, a single project that spans a summer and a semester or that the research mentor deems to be significant and sustained, even if the student worked for pay rather than credit, will be allowed. In addition, some form of public dissemination of this research, which has been approved by the MCS Associate Dean for Undergraduate Affairs, such as a peer reviewed publication, research thesis, or presentation at an external scientific meeting is required. The Meeting of the Minds by itself is not sufficient and participation in a pre-approved judged competition (eg. Sigma Xi, Math Department competition, or Psychology department competition) is necessary.

Final approval of nominations for MCS Honors will come from the Dean of MCS and the MCS Associate Dean for Undergraduate Affairs. Students can apply to their primary departmental advisor using this form on the MCS website: https://www.cmu.edu/mcs/undergrad/advising/college-research-honors.html.

Research Centers

The Mellon College of Science is home to a number of innovative research centers. These centers are particularly strong because of the interdisciplinary collaboration of their scientists. This interdisciplinary research brings international prestige to the college. Many students conduct undergraduate research with one of these centers.

The Bruce and Astrid McWilliams Center for Cosmology joins research efforts in astrophysics and particle physics and partners with computer science, statistics, and other disciplines to unravel the mysteries of the universe.

The Center of Atmospheric Particle Study's goal is to be the world leader in science, engineering, and policy covering the full role of fine particulate matter in the atmosphere. Our goal in research is to advance the state of knowledge across this spectrum substantially, to provide both policy-relevant research, and to participate directly and actively in the evolution of environmental policy related to particulate matter.

The Center for Computational Finance's mission is to improve the interaction between academic research and the finance industry.

The Center for Macromolecular Engineering's goals are to enhance the benefits of polymer science to society by developing new methods to prepare advanced polymer materials, train and develop tomorrow's scientists, and transfer technology to industry.

The Center of Nano-enabled Device and Energy Technologies' mission is to work on real-world problems that can be solved potentially with appropriate nano-enabled technologies.

The Center for the Neural Basis of Cognition is a joint program between Carnegie Mellon University and the University of Pittsburgh. It synthesizes the disciplines of basic and clinical neuroscience, cognitive psychology, and computer science, combining neurobiological, behavioral, computational, and brain imaging methods.

The Center for Nonlinear Analysis was established in 1991. A special focus for applications emphasizes new and innovative methods to study contemporary issues in materials science. The center has created a vigorous environment for collaboration among mathematical and allied scientists.

The Center for Nucleic Acids Science and Technology is a community of Carnegie Mellon scientists and engineers unified by interests in the chemistry, biology, and physics of DNA, RNA, and PNA (peptide nucleic acid).

The Institute for Green Science has been established as a research, education, and development center in which a holistic approach to sustainability science is being developed. The focus of the institute is in three areas: renewable energy technologies, chemical feedstocks, and benign alternatives to polluting technologies.

The Pittsburgh Supercomputing Center provides information on advanced scientific computing for engineering and research.

Academic Standards

MCS Dean's List

Each semester MCS recognizes those students with outstanding academic records by naming them to the Dean's List. The criteria for such recognition are as follows:

Dean's List

The student must earn a quality point average of at least 3.50 while completing a minimum of 36 factorable units and earning no incomplete grades.

Dean's List with High Honors

The student must earn a quality point average of at least 3.75 while completing a minimum of 36 factorable units and earning no incomplete grades.

Academic Actions

In order to maintain good academic standing, students from the Mellon College of Science must attain at least minimum quality point averages for each semester (as well as cumulatively), and also make and maintain adequate progress toward completing their degree requirements. "Adequate progress towards graduation" generally means that students are successfully completing an average of 45 units per semester so that at the end of eight semesters they will have accumulated the minimum of 360 units required for graduation, have a cumulative QPA of at least 2.00, and completed all college General Education and primary major course requirements.

Specifically, MCS students will make satisfactory academic progress if they meet the following criteria:

- The semester GPA is ≥ 2.00.
- The cumulative QPA is ≥ 2.00.
- A student maintains full-time status (≥ 36 units) after the 10th day of classes in a semester.
- Completing ≥80% of attempted units in a semester (calculated using total units carried when grades are entered). Grades of N, W, or R grade do not count as completed units.

When a student fails to meet minimum performance criteria, it normally results in an "academic action." Depending on the circumstances, one of the following actions is taken: Academic Warning, Continued Academic Warning, Suspension, or Drop. These academic actions are recommended by the college's departments based on the guidelines described below. However, the sequence of the academic actions is not automatic in all cases.

Academic actions are not meant to be punitive and are put into place to support student success. These actions are designed to notify students of specific academic requirements, outline goals for completion, and identify avenues of support to help students succeed. Students on academic action (except drop) will be asked to identify a plan of action to use resources to improve their academic performance. Resources can include the Student Academic Success Center, CaPS, UHS, and/or regular meetings with advisors, among others.

Warning

The action of Warning will be taken if in any semester a student fails to make satisfactory academic progress as defined above.

The term of Warning is one semester as a full-time student. Students on academic probation may not overload above 54 units in the semester of Warning.

A student is occasionally continued on Warning who has had one semester on Warning and is not yet in good academic standing (as defined above) but whose record indicates that the standards are likely to be met at the end of the next semester of study.

Suspension

A student who does not meet minimum standards at the end of one semester of Warning will be suspended. The minimum period of suspension is one academic year (two semesters). At the end of that period a student may return to school on final academic Warning by:

- Receiving permission in writing from the MCS Associate Dean for Undergraduate Affairs.
- Completing a Return from Leave form from Enrollment Services (https://www.cmu.edu/hub/registrar/leaves-and-returns/).
- Providing transcripts and clearance forms if the student has been in a degree program at another college or university, even though academic credit earned will not transfer to Carnegie Mellon unless prior approval has been granted by the MCS Associate Dean for Undergraduate Affairs.

Students on suspension can review a list of available resources on the HUB's website (https://www.cmu.edu/hub/registrar/leaves-and-returns/access.html). A student who has been academically suspended and who is not employed by the University must absent themselves from campus and is, for the term of the suspension, barred from all activities and affiliations that stem from one's status as an enrolled student. These include registering or enrolling for courses, sitting in on classes, living in residence halls or Greek houses, membership and participation in student activities, and employment in student jobs. (NOTE: Exceptions to the restriction from student jobs for students on academic suspension will in general be granted for summer employment if the position was accepted prior to the decision to suspend.)

Notably, employment within the university in non-student jobs is possible for students on academic suspension, subject to the hiring criteria of the hiring department. However, a student on academic suspension wishing to accept a job on campus must speak with the Associate Dean of the student's college to ensure that the employment will not constitute a violation of the terms of suspension. The Associate Dean will generally allow such employment, in consultation with the Dean of Student Affairs. One employment benefit not available to students on academic suspension who accept a full-time job with the University is the option to take courses through tuition remission. The option to take courses becomes available only after the academic suspension is over.

Students returning from suspension should plan to work with their advisor and Associate Dean for undergraduate affairs at least 30 days prior to the semester they plan to return. Ideally, students will connect with the Associate Dean several weeks before registration for the semester of planned return. In addition to the steps for a smooth return (https://www.cmu.edu/hub/registrar/leaves-and-returns/) described on the Registrar's website, MCS students should prepare a short (1000 word maximum) essay describing how they've been preparing for a successful return to CMU.

Upon return, students will be on **Final Academic Warning**. Students in this situation must work closely with all available resources (particularly their academic advisor) to ensure all resources are being properly used to maximize success to avoid progression to academic drop. Students returning on Final Academic Warning may not overload above 54 units in the semester of return.

Drop

This is a permanent severance from the Mellon College of Science. Students are dropped when it seems clear that they will not be able to meet minimum standards. A student who has been suspended and who fails to meet minimum standards after returning to school is dropped.

A student who has been academically dropped and who is not employed by the University must absent themselves from campus and is barred from all activities and affiliations that stem from one's status as an enrolled student. These include registering or enrolling for courses, sitting in on classes, living in residence halls or Greek houses, membership and participation in student activities, and employment in student jobs. (NOTE: Exceptions to the restriction from student jobs for students on academic drop will in general be granted for summer employment if the position was accepted prior to the decision to drop.)

Appeals of Academic Actions

In accordance with the Appeal of Academic Actions Policy (https://www.cmu.edu/student-affairs/theword/academic/appeal-of-grades-and-academic-actions.html) outlined in The Word student handbook:

"If a student believes an academic action is inconsistent with the policies of the college, a student should:

1. Submit a formal written appeal to the Associate Dean of the college responsible for the decision, with a copy to the dean, requesting review of the action including all relevant materials to substantiate the inconsistency in policy and to support their concerns. Appeals are due within 10 days of the date the student is notified of the action.
2. The Dean of the college, or the dean's designate, will review the appeal and issue a decision and the basis for it within 30 days.

If, after carrying out the steps of either process described above, the student believes that the matter has not been adequately resolved, or if no decision has been rendered by the appropriate date, the student may appeal at the university level. To appeal at the university level, the student must present copies of all documents and a formal letter of appeal to the provost. Appeals to the Provost office are due within 5 days of a decision from the student's college-level appeal. The Provost or another designated university officer will respond in writing with a final resolution, including the basis for it, within thirty (30) days, or as soon thereafter as practical."

Course Overloads

```
Overloading is defined as taking more than the equivalent of five
 full-semester courses in one semester; for MCS students overload
 means registering for more than 54 units in one semester.
Eligibility to overload is defined as:
```

1. Student must be in good academic standing (not on any academic action listed above).
2. Student must have a QPA of at least 3.25 in the last completed semester or student must have a current cumulative QPA of at least 3.25.
3. Students new to the college and university (i.e., first-year students and new external transfer students from outside of CMU) may not overload during their first Carnegie Mellon semester.
4. Advisors can, in accordance with these policies, approve overloads up to 61 units. Associate Dean approval is required for overload requests over 61 units. In addition to the other criteria listed above, students must have also successfully completed ≥45 units in a previous semester to request to overload >61 units.

Eligibility to overload based on QPA does not automatically allow the student to register for an overload. Rather, students must petition and discuss the proposed overload with their primary academic advisor. The discussion will include the reason for overload (additional major/minor, trying to graduate early, etc.). If approved, the academic advisor will increase the student's unit maximum for the relevant semester.

The first opportunity to register for a course overload is after registration week for the proposed overload semester. Registration week for the spring semester is usually the third week in November; for the fall semester, it is usually the third week in April. Consult the official university academic calendar for the exact dates.

If as a result of final grades for the current semester a student approved to overload for the next semester falls below the overload eligibility criteria listed above, the academic advisor may withdraw the overload permission. Students thus affected are responsible for resolving this in consultation with their academic advisor.

Students may appeal their advisor's overload request decision to the Associate Dean for Undergraduate Affairs in writing (email is appropriate for this petition, but a meeting may be requested by the Associate Dean to discuss the appeal).

Transfer into MCS Departments

This section describes the variety of entry points into the Mellon College of Science for students already admitted to a university (Carnegie Mellon or another university). All prospective students not already enrolled should contact the Office of Admission for details about the application process for Carnegie Mellon University.

General Internal Transfer Information:

MCS does not accept undeclared internal transfer students. Students will need to declare which major they intend to pursue upon transfer into MCS at the time of application. The list of prerequisite courses for each department are listed below. *Students will not be considered for transfer on the basis of AP/IB/Cambridge scores alone*. Applicants may use AP/IB/Cambridge credit as prerequisites to the courses listed below prior to applying for transfer but must have completed at least one prerequisite course at CMU.

Applications are accepted on a rolling basis. Students applying for transfer into MCS must have approval from the new department (through the director of undergraduate studies/affairs in the MCS department) and from the MCS Associate Dean for Undergraduate Affairs. Students can complete the application for transfer (https://www.cmu.edu/mcs/undergrad/advising/forms/mcs_transfer_or_additional_degree.pdf) with the MCS departmental program director. Students will be considered for transfer on the basis of available space and the student's academic performance in coursework related to their intended MCS major.

Students should complete the prerequisite requirements of their intended department prior to applying for internal transfer:

- Potential transfer students into the **Department of Biological Sciences** must have completed 03-121 Modern Biology or 03-220 Genetics AND 09-105 Introduction to Modern Chemistry I with a C grade or better.
- The **Chemistry Department** requires students wishing to transfer to complete and have earned the following grades in one of the following options at CMU:
  - an A in 09-107 or
  - have C grade or better in 09-105 or 107 AND a C grade or better in 09-106 (at CMU) or
  - have a C grade or better in 09-217 or 09-219.
- Students wishing to transfer into the **Physics Department** must have earned a C grade or better in one of the following classes completed at CMU: 33-121, 33-151, 33-141, 33-142, 33-152, or 33-211 AND have earned a C grade or better in one of the following classes completed at CMU: 21-120, 21-122, or 21-259.
- Students wishing to transfer into the **Department of Mathematical Sciences** must have completed 21-127 Concepts of Mathematics or 21-128 Mathematical Concepts and Proofs AND 21-241 Matrices and Linear Transformations or 21-242 Matrix Theory with a B grade or better in both courses as well as an overall QPA of 3.5 or higher.

Students entering MCS or already declared in MCS:

Entering undergraduate students admitted to MCS can choose to pursue any major within MCS. This choice is usually made prior to the first semester of the sophomore year (normally during the second semester of the first year) and does not require approval by any department. While it is possible to remain undeclared beyond the first year, declaring a major offers access to departmental resources, advising, and course reservations.

Students who have declared a major in MCS and wish to transfer into another department within MCS must meet the prerequisites listed above and have approval from the relevant department program director for their intended major (see the internal transfer form (https://www.cmu.edu/mcs/undergrad/advising/forms/mcs_transfer_or_additional_degree.pdf) for details) and from the MCS Associate Dean for Undergraduate Affairs. Students wishing to transfer into a department in MCS beyond the first semester will be considered for transfer on the basis of available space and the student's academic performance in coursework related to their intended MCS major.

Students enrolled in another college at Carnegie Mellon:

Undergraduate students admitted to colleges other than MCS and wishing to transfer into an MCS department should consult with the relevant department program director for their intended major (see the internal transfer form (https://www.cmu.edu/mcs/undergrad/advising/forms/mcs_transfer_or_additional_degree.pdf) for details) and obtain approval from the MCS Associate Dean for Undergraduate Affairs. Students must meet the prerequisites of their intended department (listed above). Students may submit an internal transfer request no earlier than the first day of their second semester.

Undergraduate students not in MCS and wishing to transfer into a department in MCS will be considered for transfer on the basis of available space and the student's academic performance in coursework related to their intended MCS major.

Students wishing to transfer from another university into an MCS department:

A student first applies through the Office of Admission. If the Office of Admission believes the applicant is acceptable, the student's record is sent to the appropriate department for evaluation and a decision on acceptance. Students will be considered for transfer on the basis of available space and the student's academic performance in coursework related to their intended MCS major.

Graduation Requirements

To be eligible to graduate, undergraduate students must complete all course requirements for their program with a cumulative Quality Point Average of at least 2.00 for all courses taken. \ Some programs may have additional QPA requirements in order to graduate. Students are encouraged to confirm all graduation requirements with their academic advisor.

A minimum of 360 units must be completed. This will include the MCS Core Courses (technical and nontechnical electives) and all departmental course requirements.

Students will be required to meet the residency requirement and to have met all financial obligations to the university before being awarded a degree. The residency requirement is detailed in the Academic Regulations section of the catalog. A student may seek permission to modify graduation requirements by petition to the MCS College Council.

Graduation Honors

There are two types of honors awarded at graduation.

University Honors

University Honors are automatically awarded to students who have earned a cumulative Q.P.A. of 3.5 or better after either seven semesters or by the time they are certified for graduation.

College Research Honors

Please see the section "Mellon College of Science Research Honors (p. 564)" for information on how to qualify for College Research Honors.

Faculty

MAGGIE BRAUN, Associate Dean for Undergraduate Affairs – Ph.D. ,

JASON D'ANTONIO, Director of Health Professions Program – Ph.D.,

KENNETH HOVIS, Assistant Dean for Educational Initiatives – Ph.D.,

MANFRED PAULINI, Associate Dean for Graduate and Faculty Affairs – Ph.D.,

MICHAEL YOUNG, Associate Dean for Diversity – Ph.D.,

Administration

KRYSTALYN KOVACS, Undergraduate Programs Coordinator, HPP

ABIGAIL PINNOW, Undergraduate Programs Administrator, MCS

TARA PRIMIERO, Senior Academic Advisor, MCS

Department of Biological Sciences

Veronica Hinman, Department Head

Amanda Willard, Director of Undergraduate Studies

Location: Doherty Hall 1321
www.cmu.edu/bio (http://www.cmu.edu/bio/)

A major revolution is occurring in the field of biological sciences. Biology is undergoing unprecedented technological advances in biochemistry, biophysics, cell biology, genetics, molecular biology, developmental biology, neuroscience and computational biology. Carnegie Mellon's Department of Biological Sciences is nationally recognized as one of the outstanding departments in these areas. Advances in basic research are already being used to solve problems, not only in medicine and public health, but also in areas such as agriculture, forestry, mining, energy, and in industrial and pharmaceutical manufacturing processes. The department provides its students with an education that has both intellectual breadth and depth of exposure to modern research biology. This education can be used to gain employment immediately after graduation in government, industry or academic research laboratories, or to pursue graduate studies in a variety of areas such as science, medicine, public health, law, or business. A degree in biological sciences provides excellent preparation for medical school or other graduate programs in the health professions. These students are aided by the Carnegie Mellon Health Professions Program (HPP), an advisory and resource service for all Carnegie Mellon students who are considering careers in the health care field. (See the HPP (p.) section in this catalog or www.cmu.edu/hpp (http://www.cmu.edu/hpp/) for more information.)

The department offers a Bachelor of Science (B.S.) degree in Biological Sciences. This program has a distinctive core curriculum that provides a foundation in biology, chemistry, computer science, mathematics, and physics. In addition to the core courses, the program includes six biology electives, free electives as well as humanities, social science and fine arts electives. With these electives, students can shape a degree program according to their own interests and career goals. For students who have an interest in a particular field of biology and wish to have a specialized focus, the department offers options in biochemistry, biophysics, cell biology, computational biology, developmental biology, genetics, molecular biology and neuroscience that provide the relevant training in each area. The options are especially recommended for students who are considering graduate school in one of these areas.

In this exciting era that includes the influence of biology and the life sciences on many fields from medicine to law, the in-depth exposure to multiple disciplines provides opportunities for students to prepare for involvement at the forefront of emerging new fields, markets, and policy changes. The Department of Biological Sciences at Carnegie Mellon is working at these new interfaces through interdisciplinary research and educational programs. Innovative interdisciplinary degrees which are offered by the department include the inter-college B.S. degree in Neuroscience as well as the unified B.S. degree in Biological Sciences and Psychology. Students also pursue interests at the interface between the arts and sciences through the Bachelor of Science and Arts (B.S.A.) degree program combining biological sciences or neurobiology with a discipline in the College of Fine Arts. A stand-alone Bachelor of Arts (B.A.) degree is available for students who wish to expand their educational training into other fields. Many students choose to broaden their education by pursuing minors and additional majors in disciplines throughout the university, not just within the Mellon College of Science.

One of the most important features of the Department of Biological Sciences is the opportunity for undergraduate students to interact with faculty. Providing a solid foundation to scientific practice is critical; therefore, the department offers first-year students a variety of inquiry-based, hands-on courses that incorporate a wide range of topics and interests within Biological Sciences. These courses kick-start the transformation of science students to scientists. We encourage our students to get to know their faculty through one of these courses, or through mentored, independent research projects in the faculty laboratories. Our faculty members are prominent research scientists who also teach beginning and advanced courses. The upper level teaching laboratories are located in the same building as the faculty research laboratories and share scientific equipment. We encourage students to make themselves aware of the research areas of the faculty and to develop research projects with faculty. While such research is usually most important in the senior year, it may begin earlier in a student's undergraduate training. The department has an Honors Program in Research Biology to facilitate a more intensive involvement in research for eligible students. During the past four years, more than 85 percent of the undergraduate biology majors have worked with faculty on their research and, in some cases, have been co-authors of research papers and have given presentations at national meetings.

Since the fall of 2011, the Department of Biological Sciences has offered a B.S. degree in Biological Sciences at Carnegie Mellon University in Doha, Qatar. Students enrolled in this degree program will also complete the requirements outlined below. One of the required courses for the CMU-Qatar program is offered through a collaboration with the Weill Cornell Medical College in Qatar. For a listing of how the degree requirements are fulfilled for students enrolled in Doha, please consult the CMU-Qatar website (www.qatar.cmu.edu/curriculum-bs (https://www.qatar.cmu.edu/curriculum-bs/)).

Program Outcomes

Upon graduation recipients of the B.S. or B.A. degree in Biological Sciences will:

- Use the basic concepts and experimental, computational, and theoretical methods of the core fields of science, mathematics and technology.
- Use foundational knowledge from the natural sciences and mathematics for advanced work in the discipline.
- Understand and apply the scientific method.
- Apply disciplinary knowledge toward solving problems.
- Use modern methods for finding and sharing current scientific information and primary literature.
- Convey information including scientific content in written and oral formats within Biological Sciences.
- Work in multidisciplinary and culturally diverse teams.
- Demonstrate proper values and ethics within Biological Sciences, the University, and the larger scientific community.

B.S. Biological Sciences

The Bachelor of Science (B.S.) in Biological Sciences is built around a core program and elective units as detailed in the following section.

Degree Requirements:

Biological Sciences		Units
03-151	Honors Modern Biology	10
or 03-121	Modern Biology	
03-201	Undergraduate Colloquium for Sophomores	2
03-220	Genetics	9
or 03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	
03-231	Honors Biochemistry	9
or 03-232	Biochemistry I	
02-250	Introduction to Computational Biology	12
03-320	Cell Biology	9
03-343	Experimental Techniques in Molecular Biology	12
03-344	Experimental Biochemistry	12
or 03-345	Experimental Cell and Developmental Biology	
or 03-346	Experimental Neuroscience	
03-411	Topics in Research	1
03-412	Topics in Research	1
03-xxx	Biological Sciences Electives [1]	54
Total Biology units		**131**

[1] Details on electives can be found in the "Biological Sciences Electives" section (see below).

Mathematics, Physics and Computer Science		Units
15-110	Principles of Computing	10
or 15-112	Fundamentals of Programming and Computer Science	
21-120	Differential and Integral Calculus	10
21-124	Calculus II for Biologists and Chemists	10

or 21-122	Integration and Approximation	
33-121	Physics I for Science Students	12
or 33-141	Physics I for Engineering Students	
33-122	Physics II for Biological Sciences & Chemistry Students	9
or 33-142	Physics II for Engineering and Physics Students	
99-101	Core@CMU	3
Total Science units		**54**

Chemistry		Units
09-105	Introduction to Modern Chemistry I [2]	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
09-106	Modern Chemistry II	10
09-217	Organic Chemistry I	9
09-218	Organic Chemistry II	9
09-207	Techniques in Quantitative Analysis	9
09-208	Techniques for Organic Synthesis and Analysis	9
Total Chemistry units		**56**

[2] Students who complete 09-107 with an A grade will be exempted from the requirement to take 09-106 Modern Chemistry II.

Elective Units	Units
Free Electives	48
MCS Nontechnical Breadth Requirements [3]	72
Total Elective units	**120**

[3] For more information on the MCS Technical and Nontechnical Breadth Requirements, please refer to the MCS General Education Requirements (p. 561) section of this catalog. MCS Technical Breadth Requirements are all met through the required curriculum for the Biological Sciences degree (see below).

Minimum number of units required for degree: 360

MCS Technical Breadth Requirements

Majors entering CMU and majoring in Biological Sciences (or affiliated majors) in the Fall of 2015 or beyond will fulfill the MCS Technical Breadth requirements as follows:

1. Life Sciences: any courses in this category except for the 03-xxx courses. For the B.S. in Biological Sciences, this will be fulfilled by 02-250.
2. Physical Sciences: 09-105, 09-106, 33-121 and 33-122
3. Math/CS/Stats: 21-120 and (21-122 or 21-124)
4. STEM Elective: will be filled by courses above or any STEM course from the approved list.

Biological Sciences Electives

The following specifications apply to Biological Sciences electives:

- At least 18 units must be at the 03-3xx level or above, exclusive of 03-445 and 03-545 and interdisciplinary electives.
- Up to three interdisciplinary electives may count as general biology electives.
- Up to 18 units of 03-445 Undergraduate Research and/or 03-545 Honors Research may count as general biology electives; a maximum of 36 units of research can count for the minimum units required for graduation.
- Courses in biology taken through cross-registration or study abroad at another university may count as electives if prior permission is obtained from the Director of Undergraduate Studies.

Departmental Electives Group

03-113	Biologies in Text and Film *Offered only in Doha	9
03-117	Frontiers, Analysis, and Discovery in Biological Sciences	6
03-118	Beer: A Yeast's Perspective	6
03-119	Biology for Life Special Topics Micro	3
03-120	Biology for Life Special Topics Mini	Var.
03-124	Modern Biology Laboratory	9
03-125	Evolution	9
03-128	Biology for Life Special Topics	9
03-129	Human Health and Disease *Offered only in Doha	9
03-132	Basic Science to Modern Medicine	9
03-133	Neurobiology of Disease	9
03-135	Structure and Function of the Human Body	9
03-140	Ecology and Environmental Science	9
03-161	Molecules to Mind	9
03-230	Intro to Mammalian Physiology *Offered only in Doha	9
03-327	Evolutionary Bioinformatics: Trees, Sequences and the Comparative Method	9
03-350	Developmental Biology	9
03-351	Computation and Biology Integrated Research Lab	9
03-360/02-319	Genomics and Epigenetics of the Brain	9
03-362	Cellular Neuroscience	9
03-363	Systems Neuroscience	9
03-365	Neural Correlates of Learning and Memory	9
03-366	Neuropharmacology: Drugs, Brain and Behavior	9
03-380	Virology *Offered only in Doha	9
03-390	Molecular and Cellular Immunology	9
03-391	Microbiology	9
03-410	Special Topics in Biological Sciences	Var.
03-435	Cancer Biology	9
03-439	Introduction to Biophysics	10
03-442	Molecular Biology	9
03-445	Undergraduate Research	Var.
03-451	Advanced Developmental Biology and Human Health	9
03-511	Computational Molecular Biology and Genomics	9
03-545	Honors Research	9
03-711	Computational Molecular Biology and Genomics	12
03-713	Bioinformatics Data Integration Practicum	6
03-727	Evolutionary Bioinformatics: Trees, Sequences and the Comparative Method	12
03-728	Genome Editing Biotechnology	6
03-729	Entrepreneurship and protein-based drug development	6
03-730	Advanced Genetics	12
03-738	Synthetic Biology	6
03-740	Advanced Biochemistry	12
03-741	Advanced Cell Biology	12
03-742	Advanced Molecular Biology	12
03-751	Advanced Developmental Biology and Human Health	12
03-762	Advanced Cellular Neuroscience	12
03-763	Advanced Systems Neuroscience	12
03-766	Advanced Neuropharmacology: Drugs, Brain and Behavior	12
03-791	Advanced Microbiology	12
03-871	Structural Biophysics	12

Interdisciplinary Electives Group

Up to three of the following courses may count as general biology electives:

02-331	Modeling Evolution	12
02-425	Computational Methods for Proteogenomics and Metabolomics	9
02-450	Automation of Scientific Research	9
02-510	Computational Genomics	12
02-512	Computational Methods for Biological Modeling and Simulation	9
02-518	Computational Medicine	12
02-740	Bioimage Informatics	12
09-518	Bioorganic Chemistry: Nucleic Acids and Carbohydrates	9
09-519	Bioorganic Chemistry: Peptides, Proteins and Combinatorial Chemistry	9
09-803	Chemistry of Gene Expression	12
21-127	Concepts of Mathematics	12
21-259	Calculus in Three Dimensions	10
21-260	Differential Equations	9
36-200	Reasoning with Data	9

42-202	Physiology	9
85-219	Foundations of Brain and Behavior	9

Options for the B.S. in Biological Sciences

Students who wish to specialize in a particular area of biology can do so through a set of departmentally defined options. Options are not required and need not be declared. The elective courses required for each of the options are listed below. Students can elect to complete a maximum of two options. Please discuss interest in these options with the Carnegie Mellon Department of Biological Sciences advisor to plan out any pre-requisite coursework and identify appropriate course alternatives in the event that a graduate-level course is not being offered during a particular academic year.

Biochemistry Option

Required Biology Electives:

03-740	Advanced Biochemistry	12
21-259	Calculus in Three Dimensions	9-10
or 21-260	Differential Equations	

Any ONE of the following courses:

09-518	Bioorganic Chemistry: Nucleic Acids and Carbohydrates	9
09-519	Bioorganic Chemistry: Peptides, Proteins and Combinatorial Chemistry	9
09-521	Metals in Biology: Function and Reactivity	6

Recommended Biology Electives:

03-442	Molecular Biology	9
03-439	Introduction to Biophysics	10
03-871	Structural Biophysics	12

Biophysics Option

Required Biology Electives:

03-740	Advanced Biochemistry	12
03-439	Introduction to Biophysics	10
21-259	Calculus in Three Dimensions	9-10
or 21-260	Differential Equations	

Recommended Biology Electives:

03-871	Structural Biophysics	12

Cell Biology Option

Required Biology Electives:

03-350	Developmental Biology	9
03-741	Advanced Cell Biology	12

Any ONE of the following courses:

03-362	Cellular Neuroscience	9
03-390	Molecular and Cellular Immunology	9

Computational Biology Option

Required Biology Electives:

03-711	Computational Molecular Biology and Genomics	12
15-210	Parallel and Sequential Data Structures and Algorithms	12

Any ONE of the following courses:

36-200	Reasoning with Data	9
21-260	Differential Equations	9
21-241	Matrices and Linear Transformations	11

Recommended Biology Electives:

02-512	Computational Methods for Biological Modeling and Simulation	9
15-451	Algorithm Design and Analysis	12

Developmental Biology Option

Required Biology Electives:

03-350	Developmental Biology	9
03-442	Molecular Biology	9
03-751	Advanced Developmental Biology and Human Health	12

Recommended Biology Electives:

03-741	Advanced Cell Biology	12

Genetics Option

Required Biology Electives:

03-327	Evolutionary Bioinformatics: Trees, Sequences and the Comparative Method	9
03-442	Molecular Biology	9
03-730	Advanced Genetics [6]	12

[6] Minimum grade of B in 03-220 required.

Recommended Biology Electives:

03-391	Microbiology	9

Molecular Biology Option

Required Biology Electives:

03-442	Molecular Biology	9
09-518	Bioorganic Chemistry: Nucleic Acids and Carbohydrates	9
03-727	Evolutionary Bioinformatics: Trees, Sequences and the Comparative Method	12

Recommended Biology Electives:

03-390	Molecular and Cellular Immunology	9
03-391	Microbiology	9
03-730	Advanced Genetics	12

Neuroscience Option

Required Biology Electives:

03-362	Cellular Neuroscience [7]	9
03-363	Systems Neuroscience [7]	9

Any ONE of the following courses:

03-133	Neurobiology of Disease	9
03-350	Developmental Biology	9
03-365	Neural Correlates of Learning and Memory	9
03-366	Neuropharmacology: Drugs, Brain and Behavior	9
42-202	Physiology	9
85-219	Foundations of Brain and Behavior	9

[7] One of these courses must be completed at the Graduate Level (Complete either 03-762 or 03-763).

B.S. Biological Sciences/Neuroscience Track

The Bachelor of Science in Biological Sciences/Neuroscience Track provides an option for those Biological Sciences majors who are interested in an intensive curricular focus in neuroscience. The requirements of the Track are the same as those listed for the B.S. in Biological Sciences with the following changes to the biological sciences elective requirements:

Degree Requirements:

03-362	Cellular Neuroscience	9
03-363	Systems Neuroscience	9
03-365	Neural Correlates of Learning and Memory	9

Plus three of the following electives:

03-133	Neurobiology of Disease	9
03-350	Developmental Biology	9
03-360/02-319	Genomics and Epigenetics of the Brain	9
03-366	Neuropharmacology: Drugs, Brain and Behavior	9
15-385	Introduction to Computer Vision	6
15-386	Neural Computation	9

42-202	Physiology	9
85-211	Cognitive Psychology	9
85-213	Human Information Processing and Artificial Intelligence	9
85-219	Foundations of Brain and Behavior	9

B.S. Neuroscience

The Bachelor of Science in Neuroscience is listed in the Intercollege Programs (p. 891) section of this catalog. It is a joint degree program offered between the Mellon College of Science and the Dietrich College of Humanities and Social Sciences. Current MCS students interested in pursuing this degree should contact Biological Sciences Undergraduate Programs Office (bio-ungrad@andrew.cmu.edu).

B.S. Biological Sciences and Psychology

Veronica Hinman, *Department Head, Biological Sciences*

Susanne Ferber, *Department Head, Psychology*

This major is intended to reflect the interdisciplinary nature of current research in the fields of biology and psychology, as well as the national trend in some professions to seek individuals broadly trained in both the social and natural sciences.

Note: Students entering from the Dietrich College of Humanities and Social Sciences will earn a Bachelor of Science in Psychology and Biological Sciences. Students in the Mellon College of Science will earn a Bachelor of Science in Biological Sciences and Psychology.

Depending on a student's home college (DC or MCS), General Education (GenEd) requirements will be different. GenEd requirements for DC (p. 353) and MCS (p. 560) are found on their respective Catalog pages.

Degree Requirements:

Biological Sciences		Units
03-151	Honors Modern Biology	10
or 03-121	Modern Biology	
03-201	Undergraduate Colloquium for Sophomores *Only required for MCS Students	2
03-220	Genetics	9
or 03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	
03-231	Honors Biochemistry	9
03-320	Cell Biology	9
03-343	Experimental Techniques in Molecular Biology	12
03-411	Topics in Research	1
03-412	Topics in Research	1
03-xxx	General Biology Elective [1]	9
03-3xx	Advanced Biology Elective [1]	18
Total Biology units		**80**

[1] Please see description and requirements for electives under the B.S. in Biological Sciences section of this Catalog.

Mathematics, Statistics, Physics and Computer Science		Units
21-120	Differential and Integral Calculus	10
21-124	Calculus II for Biologists and Chemists	10
or 21-122	Integration and Approximation	
36-200	Reasoning with Data	9
36-309	Experimental Design for Behavioral & Social Sciences	9
or 85-309	Statistical Concepts and Methods for Behavioral and Social Science	
33-121	Physics I for Science Students [3]	12
or 33-141	Physics I for Engineering Students	
15-110	Principles of Computing	10-12
or 15-112	Fundamentals of Programming and Computer Science	
99-101	Core@CMU	3
Total Science units		**63-65**

[3] MCS students must also complete 33-122 Physics II for Biological Sciences & Chemistry Students.

Chemistry		Units
09-105	Introduction to Modern Chemistry I	10
09-106	Modern Chemistry II	10
09-217	Organic Chemistry I	9
09-218	Organic Chemistry II	9
09-207	Techniques in Quantitative Analysis	9
09-208	Techniques for Organic Synthesis and Analysis	9
Total Chemistry units		**56**

Psychology Courses		Units
85-102	Introduction to Psychology	9
85-219	Foundations of Brain and Behavior	9
85-xxx	Survey Psychology Courses *	18
85-310	Research Methods in Cognitive Psychology	9
or 85-300	Introduction to Research Methods	
or 85-314	Cognitive Neuroscience Research Methods	
or 85-320	Research Methods in Developmental Psychology	
or 85-330	Analytic Research Methods	
or 85-340	Research Methods in Social Psychology	
85-3xx	Advanced Psychology Electives	18
Total Psychology units		**63**

* Excluding 85-104 Psychopathology

Additional Advanced Elective 9 units

(Choose one of the following courses)

85-3xx	Advanced Psychology Elective	9
or		
03-3xx	Advanced Biology Elective	9

Additional Laboratory or Research Methods 9-12 units

(Choose one of the following courses)

03-344	Experimental Biochemistry	12
03-345	Experimental Cell and Developmental Biology	12
03-346	Experimental Neuroscience	12
85-310	Research Methods in Cognitive Psychology	9
85-314	Cognitive Neuroscience Research Methods	9
85-320	Research Methods in Developmental Psychology	9
85-330	Analytic Research Methods	9
85-340	Research Methods in Social Psychology	9

Elective Units	Units
Free Electives	33-36
MCS Nontechnical Breadth or DC General Education requirements	36-48
Total Elective units	**69-84**

Minimum number of units required for degree: 360

B.A. Biological Sciences

The Department of Biological Sciences offers a Bachelor of Arts (B.A.) degree that is intended for students who wish to combine their interest in science with their interest(s) in other discipline(s) across campus. The requirements for the B.A. degree are distributed as follows:

Degree Requirements:

Biological Sciences		Units
03-151	Honors Modern Biology	10
or 03-121	Modern Biology	
03-201	Undergraduate Colloquium for Sophomores	2
03-220	Genetics	9
or 03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	
03-231	Honors Biochemistry	9
or 03-232	Biochemistry I	
03-320	Cell Biology	9
03-343	Experimental Techniques in Molecular Biology	9-12
or 03-124	Modern Biology Laboratory	

03-411	Topics in Research	1
03-412	Topics in Research	1
03-xxx	General Biology Electives [1]	18
03-3xx	Advanced Biology Electives [1]	18
Total Biology units		**86-89**

[1] Please see description and requirements for electives under the B.S. in Biological Sciences section of this Catalog.

Chemistry		Units
09-105	Introduction to Modern Chemistry I [2]	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
09-106	Modern Chemistry II	10
09-217	Organic Chemistry I	9
09-218	Organic Chemistry II	9
09-207	Techniques in Quantitative Analysis	9
Total Chemistry units		**47**

[2] Students who complete 09-107 with an A grade will be exempted from the requirement to take 09-106 Modern Chemistry II.

Mathematics, Physics, and Computer Science		Units
15-110	Principles of Computing	10
or 15-112	Fundamentals of Programming and Computer Science	
21-120	Differential and Integral Calculus	10
21-124	Calculus II for Biologists and Chemists	10
or 21-122	Integration and Approximation	
33-121	Physics I for Science Students	12
or 33-141	Physics I for Engineering Students	
33-122	Physics II for Biological Sciences & Chemistry Students	9
or 33-142	Physics II for Engineering and Physics Students	
99-101	Core@CMU	3
Total Science units		**54**

Elective courses	Units
MCS Nontechnical Breadth Requirements	72
Free Electives	96-99
Total Elective units	**168-171**

360Minimum number of units required for degree:

Additional Major and Dual Degree in Biological Sciences

Biological Sciences may be taken as an additional major (also known as a “double major”) or as a second degree, with another department granting the primary degree. The rules of the Biological Sciences Department for these two options are distinct, as discussed below.

Additional Major

In order to receive an Additional Major in Biological Sciences, with another department granting the primary degree, all requirements listed below must be fulfilled:

Biological Sciences		Units
03-151	Honors Modern Biology	10
or 03-121	Modern Biology	
03-201	Undergraduate Colloquium for Sophomores	2
03-220	Genetics	9
or 03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	
03-231	Honors Biochemistry	9
or 03-232	Biochemistry I	
02-250	Introduction to Computational Biology [1]	12
03-320	Cell Biology	9
03-343	Experimental Techniques in Molecular Biology	12
03-344	Experimental Biochemistry	12
or 03-345	Experimental Cell and Developmental Biology	
or 03-346	Experimental Neuroscience	
03-411	Topics in Research	1
03-412	Topics in Research	1
03-xxx	Biological Sciences Electives [2]	54
Total Biology units		**131**

[1]This course requires 15-110 or 15-112 as a prerequisite.

[2]Please see description and requirements for electives under the B.S. in Biological Sciences section of this Catalog.

Chemistry		Units
09-105	Introduction to Modern Chemistry I [3]	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
09-106	Modern Chemistry II	10
09-217	Organic Chemistry I	9
09-218	Organic Chemistry II	9
09-207	Techniques in Quantitative Analysis	9
09-208	Techniques for Organic Synthesis and Analysis	9
Total Chemistry units		**56**

[3] Students who complete 09-107 with an A grade will be exempted from the requirement to take 09-106 Modern Chemistry II.

Minimum number of units required for additional major: 187

Dual Degree

In order to receive a Dual Degree in another subject and Biological Sciences, all requirements of the Biological Sciences degree must be fulfilled. Students may choose to complete the B.A. or the B.S. in Biological Sciences, with or without Options. Students must complete all technical and non-technical requirements, and should consult with the Carnegie Mellon Biological Sciences advisor for questions about double counting. The number of units required for a Dual Degree is 90 more than the total units required by the department requiring the fewer total units. Since Biological Sciences requires 360 units, the lowest possible minimum for a Dual Degree with Biological Sciences is 450 units.

Minor in Biological Sciences

All university students are eligible to pursue a minor in biological sciences in conjunction with a major in any other department in the university. A minimum of six biological sciences courses (and two chemistry prerequisites) must be completed to fulfill the minor in biological sciences. The curriculum includes four required courses and two elective courses as specified below. Units awarded for undergraduate research are not applicable to elective courses. Courses taken in other departments or colleges will be considered on an individual basis by the Director of Undergraduate Studies.

Courses for the Minor in Biological Sciences

Prerequisites:		Units
09-105	Introduction to Modern Chemistry I	10
09-217	Organic Chemistry I	9

Required courses:		Units
03-121	Modern Biology	9
or 03-151	Honors Modern Biology	
03-220	Genetics	9
or 03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	
03-231	Honors Biochemistry	9
or 03-232	Biochemistry I	
03-320	Cell Biology	9
03-xxx	General Biology Elective [1]	9
03-3xx	Advanced Biology Elective [1]	9

[1]Please see description and requirements for electives under the B.S. in Biological Sciences section of this Catalog.

Minimum number of units required for the Minor in Biological Sciences: 73

Minor in Neuroscience

The curriculum within the Neuroscience minor will allow students from various disciplines to gain fundamental knowledge of neuroscience concepts. The interdisciplinary nature of the coursework echoes the nature of the field itself; students will select courses from the natural, social, and computer sciences. Neuroscientists not only require foundational knowledge of molecular, cellular, and systems neuroscience, but they should also understand the behavioral significance and appreciate how computational work and imaging techniques can aid in clarifying normal and abnormal functioning of these fundamental processes.

Students pursuing the minor in Neuroscience will:

- Acquire foundational knowledge of the basic biological foundations of the nervous system, from the cellular through systems levels.
- Understand the effects of basic neurological function on behavior, including cognition.
- Gain an appreciation of the interdisciplinary nature of the field of neuroscience.

All university students are eligible to pursue a minor in neuroscience in conjunction with a major in any other department in the university. A minimum of seven courses must be completed to fulfill the minor in neuroscience. The curriculum includes four required courses and three elective courses as specified below. Units awarded for undergraduate research are not applicable to elective courses. Courses taken in other departments or colleges will be considered on an individual basis by the Director of Undergraduate Studies.

NOTE: Because the curriculum within this minor may overlap with some degree requirements, no more than 2 courses fulfilling Neuroscience Minor requirements may count towards the requirements of a student’s major or other minor.

Course Requirements

Minimum units required for Neuroscience minor 63

Required courses (4):

		Units
03-121	Modern Biology	9
or 03-151	Honors Modern Biology	
03-362	Cellular Neuroscience	9
03-363	Systems Neuroscience	9
85-219	Foundations of Brain and Behavior	9
or 03-161	Molecules to Mind	

Neurobiology Elective Requirements:

27 units of electives required, including at least 1 course 300-level or higher

Neurobiology Electives		Units
03-133	Neurobiology of Disease	9
03-351	Computation and Biology Integrated Research Lab	9
03-360/02-319	Genomics and Epigenetics of the Brain	9
03-365	Neural Correlates of Learning and Memory	9
03-366	Neuropharmacology: Drugs, Brain and Behavior	9
85-104	Psychopathology	9
85-211	Cognitive Psychology [1]	9
85-310	Research Methods in Cognitive Psychology	9
85-370	Perception	9
85-406	Autism: Psychological and Neuroscience Perspectives	9
85-414	Cognitive Neuropsychology	9
85-435	Biologically Intelligent Exploration	9
03-119	Biology for Life Special Topics Micro *Offered only in Doha, requires approval from minor advisor	3

[1]NOTE: 85-213 may be used instead of 85-211 when offered

Masters Degrees

Students who are interested in more advanced training in the intersection of biology and computation or biology and engineering may want to consider the Department of Biological Science's Masters programs: the Master of Science in Quantitative Biology and Bioinformatics (https://www.cmu.edu/bio/graduate/ms_quant_bioinformatics/), the Master of Science in Computational Biology (https://www.cmu.edu/ms-compbio/) (joint with the Department of Computational Biology), or the Master of Science in Biotechnology and Pharmaceutical Engineering (https://www.cmu.edu/ms-biotech-pharma/) (joint with the Department of Chemical Engineering).

For more information about these programs, contact the Biological Sciences Graduate Programs Office (bio-graduate-office@andrew.cmu.edu).

Honors Program in Research Biology

The departmental Honors Program offers an opportunity to become extensively involved in research. The program requires students to conduct an independent project and to prepare a formal thesis that is written and defended in the senior year. This program does not preclude a student from completing any of the options within the department nor is it the only way in which students can participate in undergraduate research, although it is excellent preparation for graduate studies. Please contact the Director of Undergraduate Studies for more information.

Transfer Credit for Biological Sciences Courses

1. Requests for transfer credit for biology classes taken at other institutions should be made to the Director of Undergraduate Studies. Students making such requests should follow the policies and procedures in place within their home colleges in assembling materials for such requests. Consult with your advisor on the appropriate steps.
2. Requests should be placed **before** paying tuition for a class in case transfer credit is denied. Allow 1-2 weeks for approval.
3. At minimum requests must be accompanied by a complete syllabus including the textbook that will be used, a detailed list of topic areas and an indication of whether or not the course is part of the curriculum for science majors at the other institution. Check to ensure that the institution is on a semester system. Most schools on a quarter system (many in the UC system of schools) teach general biology over three quarters; therefore one of these classes would not be equivalent to one CMU class.
4. In assessing the suitability of courses for transfer credit, the following factors are considered:
    - The rigor of the course must be comparable to that offered at Carnegie Mellon. This is usually assessed via the quality of the institution and its biology program, the textbook used, the amount of time spent on topic areas, and the course assessment structure.
    - The topic areas should match to a degree of at least 80% those covered in the comparable course at Carnegie Mellon University.
5. No transfer credit will be awarded for the laboratory classes required for the biological sciences majors at Carnegie Mellon University, 03-124, 03-343, 03-344, 03-345 and 03-346. Core biological sciences courses required for the BS degrees and the additional major that are numbered 03-2xx or higher must be taken at Carnegie Mellon University. Exceptions must be requested of and approved by the Director of Undergraduate Studies. In general such requests will be approved only under unusual or extenuating circumstances. Transfer credit for biological elective coursework will be assessed on a case by case basis by the Director of Undergraduate Studies.
6. Students wishing to transfer credit for 03-121 Modern Biology from another institution must meet the following requirements:
    - The course in question should have at least an 80% match in topics with 03-121. Topics in 03-121 cover the genetic, molecular, cellular, developmental, and evolutionary mechanisms that underlie biological processes and include: Cell theory; Cell chemistry; Cell structure; Function and structure of proteins, DNA, RNA, lipids and carbohydrates; Cell respiration and fermentation; The cell cycle; Cell-cell interactions and communication; Transcription; Translation; RNA processing in Eukaryotes; DNA replication; DNA mutation and repair; Meiosis; Mitosis; and Regulation of Gene Expression. *This information is sometimes available in the course description, but more detail is often found in a course syllabus.*
    - The textbook used in the transfer course should be at a comparable level to S. Freeman et al (2016) "Biological Science" Sixth Edition, Pearson, ISBN 9780134255033 (eText).
    - Introductory level courses that focus on other biology areas (i.e. anatomy, physiology, ecology, evolution, and/or development) will not be accepted for 03-121 credit. These courses may receive credit for a general biology elective.

Faculty

NESRINE AFFARA, Associate Teaching Professor, Carnegie Mellon-Qatar – Ph.D., The Ohio State University; Carnegie Mellon, 2017–

CATHERINE ARMBRUSTER, Assistant Professor – Ph.D. , University of Washington; Carnegie Mellon, 2024–

ALISON L. BARTH, Professor – Ph.D., University of California, Berkeley; Carnegie Mellon, 2002–

MOHAMED BOUAOUINA, Associate Teaching Professor, Carnegie Mellon-Qatar – Ph.D., Pierre and Marie Curie University; Carnegie Mellon, 2013–

DANIEL BRASIER, Teaching Professor and Assistant Department Head for Graduate Affairs – Ph.D., University of California, San Diego; Carnegie Mellon, 2012–

MAGGIE BRAUN, Teaching Professor and Associate Dean of Undergraduate Affairs for MCS – Ph.D., University of Pittsburgh; Carnegie Mellon, 2008–

ANDREW BRIDGES, Assistant Professor – Ph.D., Dartmouth College; Carnegie Mellon, 2022–

AMY L. BURKERT, Teaching Professor and Senior Vice Provost for Academic Initiatives – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1997–

EN CAI, Assistant Professor – Ph.D., University of Illinois at Urbana-Champaign; Carnegie Mellon, 2021–

JASON M. D'ANTONIO, Associate Teaching Professor and Director of the Health Professions Program – Ph.D., University of Pittsburgh School of Medicine; Carnegie Mellon, 2013–

CARRIE B. DOONAN, Teaching Professor and Director of Undergraduate Laboratories – Ph.D., University of Connecticut; Carnegie Mellon, 1993–

LYNLEY DOONAN, Assistant Teaching Professor – Ph.D. , University of Pittsburgh; Carnegie Mellon, 2018–

EMILY DRILL, Associate Teaching Professor – Ph.D., University of Pittsburgh; Carnegie Mellon, 2012–

M. DANNIE DURAND, Associate Professor – Ph.D., Columbia University; Carnegie Mellon, 2000–

CHARLES A. ETTENSOHN, Professor – Ph.D., Yale University; Carnegie Mellon, 1987–

ARYN GITTIS, Professor – Ph.D., University of California, San Diego; Carnegie Mellon, 2012–

JONATHAN HENNINGER, Assistant Professor – Ph.D., Harvard University; Carnegie Mellon, 2024–

N. LUISA HILLER, Associate Professor – Ph.D., Northwestern University Medical School; Carnegie Mellon, 2012–

VERONICA F. HINMAN, Professor and Department Head – Ph.D., University of Queensland; Carnegie Mellon, 2006–

KATE HONG, Assistant Professor – Ph.D., Harvard University; Carnegie Mellon, 2020–

KENNETH HOVIS, Associate Teaching Professor and Assistant Dean for Educational Initiatives for MCS – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2011–

IRENE KAPLOW, Assistant Professor – Ph.D., Stanford University; Carnegie Mellon, 2024–

ZHENG KUANG, Assistant Professor – Ph.D., Johns Hopkins University; Carnegie Mellon, 2021–

FREDERICK LANNI, Associate Professor – Ph.D., Harvard University; Carnegie Mellon, 1982–

AMBER LAPERUTA, Special Lecturer – Ph.D. , Carnegie Mellon University; Carnegie Mellon, 2023–

CHRISTINA H. LEE, Associate Professor – Ph.D., University of California, San Francisco; Carnegie Mellon, 2000–

ADAM D. LINSTEDT, Professor – Ph.D., University of California, San Francisco; Carnegie Mellon, 1995–

BROOKE M. MCCARTNEY, Associate Professor – Ph.D., Duke University; Carnegie Mellon, 2003–

NATALIE M. MCGUIER, Associate Teaching Professor – Ph.D., Medical University of South Carolina; Carnegie Mellon, 2016–

C. JOEL MCMANUS, Associate Professor – Ph.D., University of Wisconsin-Madison; Carnegie Mellon, 2011–

JONATHAN S. MINDEN, Professor – Ph.D., Albert Einstein College of Medicine; Carnegie Mellon, 1990–

ADVITI NAIK, Assistant Teaching Professor, Carnegie Mellon-Qatar – Ph.D., University of Tuebingen; Carnegie Mellon, 2023–

ELIZABETH RANSEY, Assistant Professor – Ph.D. , Harvard University; Carnegie Mellon, 2024–

GORDON S. RULE, Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1996–

RUSSELL S. SCHWARTZ, Professor and Head, Computational Biology Department – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2002–

ANNETTE VINCENT, Teaching Professor and Associate Dean for Diversity and Climate, Carnegie Mellon-Qatar – Ph.D., National University of Singapore; Carnegie Mellon, 2012–

JOHN L. WOOLFORD JR., Professor and Co-Director of CNAST – Ph.D., Duke University; Carnegie Mellon, 1979–

AMANDA WILLARD, Assistant Teaching Professor and Director of Undergraduate Studies – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2020–

BRETT WISNIEWSKI, Special Faculty – Ph.D., Northwestern; Carnegie Mellon, 2023–

STEPHANIE WONG-NOONAN, Associate Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2016–

IHAB YOUNIS, Teaching Professor, Carnegie Mellon-Qatar – Ph.D., The Ohio State University; Carnegie Mellon, 2005–

ERIC YTTRI, Eberly Family Associate Professor – Ph.D., Washington University in St. Louis; Carnegie Mellon, 2017–

HUAIYING ZHANG, Assistant Professor – Ph.D., McGill University; Carnegie Mellon, 2019–

YONGXIN ZHAO, Associate Professor – Ph.D., University of Alberta; Carnegie Mellon, 2017–

Affiliated Faculty

BRUCE A. ARMITAGE, Professor of Chemistry and Co-Director of CNAST – Ph.D., University of Arizona; Carnegie Mellon, 1997–

PHIL G. CAMPBELL, Research Professor at the Institute for Complex Engineering Systems – Ph.D., Pennsylvania State University; Carnegie Mellon, 1999–

PHILLIP COMPEAU, Assistant Teaching Professor – Ph.D., University of California-San Diego; Carnegie Mellon, 2015–

WILLIAM F. EDDY, Professor of Statistics – Ph.D., Yale University; Carnegie Mellon, 1976–

T.D. JACOBSEN, Assistant Director and Principal Research Scientist at the Hunt Institute for Botanical Documentation – Ph.D., Washington State University; Carnegie Mellon, 1979–

ROBERT W. KIGER, Distinguished Service Professor and Botany Professor and the History of Science Director and Principal Research Scientist for the Hunt Institute for Botanical Documentation – Ph.D., University of Maryland; Carnegie Mellon, 1974–

CARLETON L. KINGSFORD, Associate Professor of Computational Biology – Ph.D., Princeton University; Carnegie Mellon, 2005–

PHILIP LEDUC, William J. Brown Professor, Mechanical Engineering; Director, Center for the Mechanics and Engineering of Cellular Systems – Ph.D., Johns Hopkins University; Carnegie Mellon, 1999–

CARL R. OLSON, Professor of the CNBC – Ph.D., University of California, Berkeley; Carnegie Mellon, 1996–

ANDREAS R PFENNING, Assistant Professor of Computational Biology – Ph.D., Duke University ; Carnegie Mellon, 2016–

FREDERICK H. UTECH, Principal Research Scientist at the Hunt Institute for Botanical Documentation – Ph.D., Washington University; Carnegie Mellon, 1977–

Adjunct Faculty

AMESH ADALJA, Adjunct Assistant Professor, Senior Scholar-Johns Hopkins Center for Health Security – M.D., American University of the Caribbean School of Medicine; Carnegie Mellon, 2002–

RITA BOTTINO, Adjunct Associate Professor and Principal Investigator at Institute of Cellular Therapeutics - Allegheny Health Network – Ph.D. , University of Genova; Carnegie Mellon, 1990–

ROBERT CAMERON, Adjunct Professor, CalTech-Beckman Institute – Ph.D., University of California, Santa Cruz;

YONG FAN, Adjunct Associate Professor and Principal Investigator at Institute of Cellular Therapeutics - Allegheny Health Network – Ph.D., University of Pittsburgh; Carnegie Mellon, 1999–

NICK GIANNOUKAKIS, Adjunct Associate Professor and Principal Investigator at Institute of Cellular Therapeutics - Allegheny Health Network – Ph.D., McGill University in Montreal; Carnegie Mellon, 1997–

JON W. JOHNSON, Professor of Neuroscience at the University of Pittsburgh – Ph.D., Stanford University; Carnegie Mellon, 2006–

KARL KANDLER, Professor of Otolaryngology and Neurobiology at the University of Pittsburgh – Ph.D., University of Tubingen, Germany; Carnegie Mellon, 2006–

CYNTHIA LANCE-JONES, Associate Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of Massachusetts; Carnegie Mellon, 2006–

CYNTHIA M. MORTON, Associate Curator and Head of Botany at the Carnegie Museum of Natural History – Ph.D., New York Botanical Garden/CUNY; Carnegie Mellon, 2002–

JAMES POST, Adjunct Professor, Allegheny Singer Research Institute – Ph.D., University of Pittsburgh School of Public Health; Carnegie Mellon, 2018–

PETER L. STRICK, Co-Director of CNBC and Distinguished Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of Pennsylvania; Carnegie Mellon, 2000–

D. LANSING TAYLOR, President and Chief Executive Officer of Cellumen, Inc. – Ph.D., State University of New York at Albany; Carnegie Mellon, 1982–

MASSIMO TRUCCO, Adjunct Associate Professor and Principal Investigator at Institute of Cellular Therapeutics - Allegheny Health Network – M.D., University of Torino School of Medicine;

KARL WILLIAMS, Adjunct Professor of Otolaryngology and Neurobiology - University of Pittsburgh – M.D., University of Pittsburgh School of Medicine ; Carnegie Mellon, 1974–

Emeriti Faculty

PETER B. BERGET, Professor Emeritus – Ph.D., University of Minnesota; Carnegie Mellon, 1986–

ERIC W. GROTZINGER, Teaching Professor Emeritus – Ph.D., University of Pittsburgh; Carnegie Mellon, 1979–

DAVID D. HACKNEY, Professor Emeritus – Ph.D., University of California, Berkeley; Carnegie Mellon, 1978–

CHIEN HO, Professor Emeritus – Ph.D., Yale University; Carnegie Mellon, 1979–

JONATHAN W. JARVIK, Professor Emeritus – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1978–

LINDA R. KAUFFMAN, Teaching Professor Emeritus – Ph.D., University of Pittsburgh; Carnegie Mellon, 1977–

A. JAVIER LOPEZ, Professor Emeritus – Ph.D., Duke University; Carnegie Mellon, 1989–

WILLIAM R. MCCLURE, Professor Emeritus – Ph.D., University of Wisconsin; Carnegie Mellon, 1981–

ROBERT F. MURPHY, Ray and Stephanie Lane Professor of Computational Biology – Ph.D., California Institute of Technology; Carnegie Mellon, 1983–

JOHN F. NAGLE, Professor Emeritus – Ph.D., Yale University; Carnegie Mellon, 1967–

ALAN S. WAGGONER, Professor Emeritus – Ph.D., University of Oregon; Carnegie Mellon, 1999–

JAMES F. WILLIAMS, Professor Emeritus – Ph.D., University of Toronto; Carnegie Mellon, 1976–

C. ROY WORTHINGTON, Professor Emeritus – Ph.D., Adelaide University; Carnegie Mellon, 1969–

Department of Biological Sciences Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes *(*https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/*) each semester for course offerings and for any necessary pre-requisites or co-requisites.*

03-050 Study Abroad

Fall
This course number is a placeholder for biological sciences majors who are studying abroad.

03-051 Study Abroad

Spring
This course number is a placeholder for biological sciences majors who are studying abroad.

03-052 Summer Internship

Summer: 3 units
Course Description: The Department of Biological Sciences considers experiential learning opportunities important educational options for its undergraduate students. One such option is an internship, normally completed during the summer. Students do not need to officially register for an internship unless they want it listed on their official transcripts. The Director of Undergraduate Programs (or designee) will add the course to the student's schedule, and the student will be assessed tuition for 3 units. Upon completion of the internship, students must submit a 1-2 page report of their work experience to the Director of Undergraduate Programs (or other designated faculty member). After the reports have been reviewed and approved, a "P" grade will be assigned.

03-113 Biologies in Text and Film

All Semesters: 9 units
The course enables students to interpret and apply scientific findings meaningfully by enhancing their critical thinking and analytical skills through the examination of how science is represented in media. In their personal lives, students become more discerning consumers of scientific information. learning to differentiate between accurate scientific facts and speculative fiction. Professionally, the course equips students with the ability to communicate complex scientific concepts to diverse audiences and to apply scientific reasoning to problem-solving in various fields. Civically, the course fosters an understanding of the societal and ethical implications of scientific advancements, empowering students to engage in informed public discussions to make thoughtful decisions on science-related issues.

03-116 Phage Genomics Research

Spring: 6 units
Spring Semester: The DNA sequences will be analyzed with bioinformatic tools and compared with those of phages isolated at other locations to identify genes, their organization, the differences that may characterize different phage groups, and how these have arisen during evolution.
Prerequisite: 03-115

03-117 Frontiers, Analysis, and Discovery in Biological Sciences

Fall and Spring: 6 units
In this hands-on laboratory class, students will investigate a current biology problem. Students will read literature articles, design hypotheses, plan and carry out experiments, analyze and interpret data, and design future questions as part of a collaborative research team. In addition, teams will work with faculty and fellow students to understand and explore the relevance of their projects in the field of biology and other disciplines. Finally, teams will communicate results in an oral presentation to peers and faculty. Students will gain research skills, analytical skills, communication skills (both written and oral), and project design skills.
Prerequisites: 03-110 or 03-121 or 03-151

03-118 Beer: A Yeast's Perspective

Fall and Spring: 6 units
This is a combined lecture and laboratory course in which students will investigate the biochemistry of fermentation using strains of yeast commonly used in brewing science. Lectures and readings will cover all necessary information to succeed in the course, including topics like yeast metabolism, fermentation at the micro and industrial levels, and a history of fermentation's influence on society. Lab experiments will investigate yeast growth and fermentation processes in various strains used in brewing, and quantitative assessments of beer at the molecular level. The course puts a focus on microbiology lab techniques and yeast biochemistry; however, no previous lab experience or biology coursework is required, and anyone with an interest in the science behind brewing yeast can succeed in the class.

03-119 Biology for Life Special Topics Micro

Intermittent: 3 units
Special Topics in Biological Sciences Micro Courses. Topics will vary depending on the semester and instructor. Courses offered under this course number will not require prior knowledge of or exposure to biological sciences and are open to students from any major and class year. Please read individual section descriptions for more information. Spring 2023: Sections W3 and amp; A4: Stayin' Alive: Human Immunity: This course will provide the tools for the layperson to understand how their immune system works to prevent disease and cancer. The course also explains the basis of modern immunotherapies such as vaccines and cancer treatment. Biology at the high-school level is the only requirement. This requirement can be waived after completing a short series of simple on-line modules.

03-120 Biology for Life Special Topics Mini

Fall and Spring: 6 units
Special Topics in Biological Sciences Mini Courses. Topics will vary depending on the semester and instructor. Courses offered under this course number will not require prior knowledge of or exposure to biological sciences and are open to students from any major and class year. Please read individual section descriptions for more information. Fall 2024 Section A2: Sex, Race, and amp; Science: Humans make sense of the world through categorization. We have created the categories of race and sex, among others, to understand our own diversity. But how much do we know about whether these divisions are scientifically valid? How much variation exists within and even outside of them? To what extent do these categories help us make important discoveries in basic research and medicine, and to what extent do their assumptions and blindspots hold us back? In this class, we will read a mix of research papers, popular science communication, and feminist theory to explore these questions. The majority of each class will be spent in discussion, and the main assessments will be reading reflections, quizzes, and an independent project. No prerequisite knowledge is required. Section W1: Neurobiology of Disease: This introductory-level mini course explores the biological basis of neuropsychiatric diseases and their treatments. It is intended to broaden students' understanding of how these diseases are diagnosed, treated, and studied. It will explore the anatomical and biological basis of several neuropsychiatric diseases (including OCD, ADHD, mood disorders, and anxiety), with emphasis placed on the cellular and anatomical basis of the diseases as well as methods of treatment. We will discuss neurobiological research to serve as a basis for better understanding mechanisms of disease and investigating new avenues for treatment. No prerequisite knowledge is required.

Course Website: https://www.cmu.edu/bio/undergrad/academics/intro_courses.html

03-121 Modern Biology

All Semesters: 9 units
This is an introductory course that provides the basis for further studies in biochemistry, cell biology, genetics and molecular biology. This course emphasizes the chemical principles underlying biological processes and cell structures as well as the analysis of genetics and heredity from a molecular perspective. This is the introductory biology course for all science and non-science majors.

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html (http://www.cmu.edu/bio/undergrad/courses/)

03-124 Modern Biology Laboratory

Fall and Spring: 9 units
This laboratory is designed to introduce students to modern concepts in the biological sciences. The experiments illustrate many of the principles covered in 03-121 and 03-230. Experimentation using living organisms and/or their tissues, cells or molecules is an essential component of this course.

03-125 Evolution

Fall: 9 units
Evolutionary theory is the unifying principle of biology. A good comprehension of the concepts that underlie this theory is therefore important to properly appreciate and understand any biological process. This course is designed for students intending to continue studies in biology so that they may gain an understanding of the evolutionary framework in their more advanced courses, and also non-biology majors who want to extend their knowledge of biology at an introductory level. The lectures will include (i) an examination of the history and development of evolutionary theory, (ii) consideration of some of the facts that have established the theory, (iii) an introduction to the concepts of phylogenetics, (iv) discussion of the patterns and mechanism that lead to the diversity and origins of the groups of life, (v) an introduction to genetics and population genetic theory, and (vi) discussion of and how this applies to natural selection and speciation. The course will also include some more specialist topics, including evolution of development, sexual selection, evolutionary applications to medicine and conservation biology, and genome evolution. Assessment will be based on several in-class exams and quizzes, homework assignments, a written term paper, and a final exam.

03-128 Biology for Life Special Topics

Fall and Spring: 9 units
Special Topics in Biological Sciences. Topics will vary depending on the semester and instructor. Courses offered under this course number will not require prior knowledge of or exposure to biological sciences and are open to students from any major and class year. Please read individual section descriptions for more information. Summer 1/All 2023: Tropical Ecology at Monteverde Institute. This is a course offered through a study abroad program to Costa Rica. Students will be addressing general questions about tropical ecosystems such as: What are tropical forests? What makes them different than other forests? Where are they and why do global climate patterns result in their geographic distribution? What are the different kinds of tropical forests? What controls the diversity, phenology and successional processes of tropical forests? What are tropical marine ecosystems? This course will also cover specific ecological interactions between organisms such as: seed dispersal, pollination, herbivory, mutualisms, prey-predator interactions in the tropics. Students will also learn about humans in the tropics, both those groups that have evolved and adapted to these environments and the current threats imposed by local/global economic systems. As a part of this course, students will participate in field work and use nature as a laboratory to study the diversity of life forms and interactions between plants, animals, and microorganisms and with the physical environment.

Course Website: https://www.cmu.edu/bio/undergrad/academics/intro_courses.html

03-129 Human Health and Disease

Intermittent: 9 units
The main objective of the course is not only to teach the students how the body works but also to construct a global view of all 9 organ systems and how these organ systems coordinate with each other when homeostasis is challenged. An additional emphasis of this course is the pathophysiological changes that can be associated with each organ malfunction.

03-132 Basic Science to Modern Medicine

Fall and Summer: 9 units
The goal of this course is to give students an understanding of the biology that impacts their everyday lives. Disease can be a tragic part of human life, a fact that is even more apparent in during a global pandemic. To understand how specific diseases like COVID-19 or cancer affect the human body, and how modern medicine can tackle them, this course includes a fundamental study of the basic molecular biology, genetics, and cell biology that underlies disease. This is a topics-based course, with topics chosen to cover aspects of biology and health that students are likely to encounter in their daily lives. The topics for summer 2024 will include COVID-19, genome editing, and cancer. We will explore these topics from both a basic science and a modern medicine perspective. Student's will gain the expertise to critically evaluate media reports about biology and health, and to ask the questions that will help them to make educated decisions in their lives.

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html (http://www.cmu.edu/bio/undergrad/courses/)

03-133 Neurobiology of Disease

Spring: 9 units
This course will explore the biological basis of several neurological and neuropsychiatric diseases, with an emphasis on medical diagnostic tools and techniques. It will include discussions of the anatomical basis of neurological diseases as well as recent research into understanding the mechanisms of disease. This course is intended to broaden students' understanding of how diseases are diagnosed and studied. Students will also learn how basic neurological and psychiatric evaluations are conducted. We will discuss neurobiological research to serve as a basis for understanding brain structures and functional alterations in a variety of developmental, degenerative, neurological, and psychiatric disorders.

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html (http://www.cmu.edu/bio/undergrad/courses/)

03-135 Structure and Function of the Human Body

Fall: 9 units
Structure and Function of the Human Body is a non-majors course designed to explore fundamental relationships between form and function of the human body. The anatomy and physiology of major organ systems will be studied in the context of normal and disease states. Students will learn about critical biological processes such as the central dogma, membrane diffusion and transport, cell signaling, gas exchange, blood flow, nutrient absorption, blood pH balance, and action potential generation and propagation. Students will then apply this knowledge to understand how organs respond to various inputs in maintaining homeostasis. Hands-on demonstrations will be incorporated to provide a practical framework for the information presented in lectures. At the culmination of the semester, students will gain a broad understanding of how the body systems function at the cellular, tissue and organ levels and be able to relate simple physiological processes to better understand highly prevalent diseases in society.

03-140 Ecology and Environmental Science

Fall: 9 units
Environmental science is a highly interdisciplinary field that integrates knowledge and modes of inquiry from across the sciences to understand some of the most important challenges of the 21st century. This course provides a foundational background in scientific method, critical thinking and problem solving strategies used to study and evaluate the environment. Modules include: principles of ecology and eco-systems, biological diversity, biogeochemical cycles, endangered species management, human population growth, atmosphere, climate and global warming. Assessment will include class attendance, quizzes, individual and small group projects, in class exams. Projects may involve visits to local sites.

03-151 Honors Modern Biology

Fall: 10 units
Honors Modern Biology (03-151) is an honors introductory course. This course has been designed for freshman students with an interest in a major in the biological sciences who have had solid preparation in this field as indicated by the following examinations: SAT II Molecular Biology, AP, or IB Biology. This course will present the concepts and principles necessary for a general understanding of the processes occurring in living cells and is the basis for further study in cell biology, biochemistry, genetics, molecular and developmental biology. While similar core topics will be covered in all sections of Modern Biology, this section will be offered at an accelerated pace, requiring more independent learning. The extra class time this pacing provides will allow the exploration of the molecular basis of life to help students integrate and apply the core principles of biology covered in the course. THIS SECTION IS RESERVED FOR INCOMING FIRST-YEAR MCS STUDENTS.

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html (http://www.cmu.edu/bio/undergrad/courses/)

03-161 Molecules to Mind

Spring: 9 units
This course provides a depth-first approach to understanding neuroscience. We will begin with a clinical focus on neuroanatomy, introducing students to some basic neurological diagnostic techniques. We will then explore the biological basis of neuronal function and link the function of individual neurons to a broader context of neural systems. This will be done in the context of primary literature. Students who complete this course will therefore have an understanding of research methods and be prepared to evaluate scientific literature. The course will have a strong focus on the biological and cellular basis of neuronal excitability and also give students significant, in depth exposure to the function of synapses and their plasticity. Finally, the course will give students an in depth look at sensory and/or motor systems by focusing on one system in particular.

03-201 Undergraduate Colloquium for Sophomores

Fall
The purpose of this seminar series is to update biology undergraduates about university and departmental functions, seminars, etc. that are pertinent or useful. In addition, research talks by faculty and undergraduates will be used to introduce students to the research being conducted in faculty laboratories. Additional topics may include graduate and medical school applications, career options, topics in the press, and important scientific discoveries.

03-202 Undergraduate Colloquium for Sophomores

Spring
Missing Course Description - please contact the teaching department.

03-206 Biomedical Engineering Laboratory

Fall and Spring: 9 units
This laboratory course is designed to provide students with the ability to make measurements on and interpret data from living systems. The experimental modules reinforce concepts from 42-101 Introduction to Biomedical Engineering and expose students to four areas of biomedical engineering: biomedical signal and image processing, biomaterials, biomechanics, and cellular and molecular biotechnology. Several cross-cutting modules are included as well. The course includes weekly lectures to complement the experimental component. Priority for enrollment will be given to students who have declared the Additional Major in Biomedical Engineering. Notes: This course number is reserved for students who are CIT majors and registered with the HPP program. If you require a biology lab for pre-health admissions requirements, register for 42-203 and Dr. Sang Chalacheva will work with students once the semester begins to register for 03-206 instead of 42-203. Priority for enrollment will be given to students who have declared the Additional Major in Biomedical Engineering.
Prerequisites: (03-121 or 03-151) and 42-101

03-210 Independent Study

Fall and Spring
Students will read papers from the original literature under the direction of a faculty member. Students will be required to demonstrate mastery of the readings by discussions with the sponsoring faculty member, oral presentations, or writing of one or more papers summarizing and extending the information in the readings. If appropriate, students may write a program(s) to satisfy this last requirement. A student may take this course only once. This is a mini format course. Special permission required. **Students MUST contact bio-ungrad@andrew.cmu.edu and complete the application form in order to participate and amp; register.**

03-220 Genetics

Fall: 9 units
The mechanisms of transmission of inherited traits in viruses, bacteria, fungi, plants and animals are discussed. Molecular mechanisms of gene expression and gene regulation are analyzed. Recombinant DNA and its applications in genetic analysis, biotechnology, forensics, agriculture, medicine, and the pharmaceutical industry are presented. Special topics in human genetics are considered, such as the genetics of cancer. Principles and methods for the study of developmental genetics, population genetics and complex traits are also introduced.
Prerequisites: 03-151 or 03-121

03-221 Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis

Spring: 9 units
Scientific and technical advances in genetics have accelerated dramatically since the draft human genome sequence was published in 2001. The development of massively parallel DNA sequencing and associated technologies has transformed the way we approach genetic questions. Contemporary genetics is increasingly concerned with generating, processing and analyzing vast amounts of data to extract information about genetic variation, expression, interactions and associations. At the same time, comparative genomics, bioinformatic and reverse genetic methods are transforming the way in which gene functions are investigated, while the development of powerful methods for precise modification of genomes is opening the way to cell- and gene-based therapies for disease. In parallel, the promise of precision or personalized medicine is predicated on advances in understanding of complex traits, genetic interactions and networks. These and other topics will be covered following a review of basic principles of gene structure and expression, the fundamental principles of Mendelian genetics, and their underpinnings in cellular mechanisms for the replication, recombination and transmission of genetic material. Although the topics overlap extensively with 03220 (Genetics), they will be presented at a more advanced level, with a greater emphasis on current methods of quantitative and statistical analysis. This course is recommended for students with a particular interest in emerging technologies for analysis of human genetics, genomics, gene therapy and precision medicine.
Prerequisites: (03-121 Min. grade B or 03-151 Min. grade B) and (21-124 Min. grade C or 36-217 Min. grade C or 36-200 Min. grade C or 36-225 Min. grade C or 15-259 Min. grade C or 36-219 Min. grade C or 36-218 Min. grade C or 36-201 Min. grade C or 36-247 Min. grade C or 15-359 Min. grade C)

03-230 Intro to Mammalian Physiology

Spring: 9 units
This course has been designed to explore human physiology at an introductory level. Emphasis will be placed on the physiological processes in an organ system framework and focus on a wide range of pertinent clinical topics. Our aim is to instill in you a deeper appreciation for the complexity and beauty of the human body, and most importantly, to motivate you to carry away physiological principles that you may need later in your profession or simply may be relevant to a real-world situation.
Prerequisites: 03-151 or 03-121

03-231 Honors Biochemistry

Spring: 9 units
This course provides an introduction to molecules and processes found in living systems. Amino acids, sugars, lipids and nucleotides and their corresponding higher structures, proteins, polysaccharides, membranes and nucleic acids are studied. Kinetics and mechanisms of enzymes as well as elementary metabolic cycles and the energetics of biological systems are studied with a quantitative approach.
Prerequisites: 03-121 or 03-151

03-232 Biochemistry I

Spring: 9 units
This course provides an introduction to the application of biochemistry to biotechnology. The functional properties of amino acids, nucleotides, lipids, and sugars are presented. This is followed by a discussion of the structural and thermodynamic aspects of the organization of these molecules into higher-order structures, such as proteins, nucleic acids, and membranes. The kinetics and thermodynamics of protein-ligand interactions are discussed for non-cooperative, cooperative, and allosteric binding events. The use of mechanistic and kinetic information in enzyme characterization and drug discovery are discussed. Topics pertinent to biotechnology include: antibody production and use, energy production in biochemical systems, expression of recombinant proteins, and methods of protein purification and characterization. The course is an alternate to 03-231.
Prerequisites: 09-107 or 09-105 or 06-221 or 06-223

03-320 Cell Biology

Fall: 9 units
This course provides descriptive information and mechanistic detail concerning key cellular processes in six areas: membrane function, protein targeting, signaling, cytoskeleton, cell division, and cell interaction. An attempt is made to introduce the methodology that was used to obtain this information and to discuss how our understanding of these processes relates to the treatment of human disease.
Prerequisites: (03-120 or 03-121 or 03-151) and (03-233 or 03-232 or 03-231)

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html (http://www.cmu.edu/bio/undergrad/courses/)

03-327 Evolutionary Bioinformatics: Trees, Sequences and the Comparative Method

Intermittent: 9 units
An advanced introduction to the evolutionary concepts and bioinformatic skills that are central to molecular, cell, developmental, and microbiology. Proteins that share common ancestry also share functional properties. This is the guiding principle of model organism research and sequence-based bioinformatics. Evolutionary trees (phylogenies) and multiple sequence alignments provide evidence for predicting structural and functional constraints, sites of molecular interaction, and residues that confer functional specificity. In 2021, phylogenetics is emerging as an essential technique in metagenomics, cancer, and infectious disease, driven by technological advances such as high through-put sequencing and single-cell phenotyping. This course covers both the conceptual foundation and the practical skills of evolutionary bioinformatics. Students will acquire the "tree thinking" skills required for critical interpretation of phylogenetic analyses and figures in the literature and a rigorous understanding of phylogenetic inference methods. Theoretical knowledge will be complemented by hands-on experience with sequence data repositories, bioinformatic tools for database retrieval, sequence analysis, and tree building. Students will walk out of the course with the knowledge required to apply those tools correctly to messy, genuine data sets, and the ability to evaluate alternate hypotheses in light of these bioinformatic analyses. Students with a range of computational backgrounds are welcome.
Prerequisites: 03-121 or 03-151

Course Website: http://www.cs.cmu.edu/~durand/Phylogenetics/

03-342 Introduction to Biological Laboratory Practices

Fall: 1 unit
This course is designed for students in the BSA degree program. It is designed to be an introduction to basic laboratory practices. The course will introduce biological and chemical safety training and basic laboratory practices. Techniques of solution preparation and titration, pipetting, UV/VIS spectroscopy, and quantitation of biological compounds will be covered.

03-343 Experimental Techniques in Molecular Biology

Fall: 12 units
This laboratory course is designed to teach experimental methods of modern biology. Experiments in microbial genetics, molecular biology and eukaryotic genetics are performed. Emphasis is placed on understanding and applying the biological principles of each experiment. This course is designed to be taken during the junior year and is intended to prepare students for undergraduate research. Experimentation using living organisms and/or their tissues, cells or molecules is an essential component of this course.
Prerequisites: (03-231 or 03-232) and (qc211 or 09-223 or 09-208 or 09-222)

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html (http://www.cmu.edu/bio/undergrad/courses/)

03-344 Experimental Biochemistry

Spring: 12 units
This course is designed to be taken as a sequel to 03-343. Experiments cover a variety of methods for investigating the structure and function of biological molecules. Experimental methods with proteins, enzyme kinetics, lipids, spectroscopy, and isolation and quantization of biological molecules are covered. During several experiments, students design their own projects. Experimentation using living organisms and/or their tissues, cells or molecules is an essential component of this course.
Prerequisites: 03-343 and (03-231 or 03-232)

03-345 Experimental Cell and Developmental Biology

Spring: 12 units
This laboratory is designed to teach concepts and experimental methods in cell and developmental biology. Students work with a variety of organisms to examine how cells traverse development from rapidly dividing, undifferentiated cells, through cell commitment and the establishment of spatial and temporal patterns of gene expression, to the specific characteristics and responses of terminally differentiated cells. The course makes extensive use of video microscopy with phase contrast, DIC and fluorescence microscopes. Biochemical, immunological and molecular biological techniques are used to probe the molecules and processes of cells undergoing development. Experimentation using living organisms and/or their tissues, cells or molecules is an essential component of this course.
Prerequisites: 03-343 and (03-232 or 03-231) and (03-240 or 03-320)

03-346 Experimental Neuroscience

Intermittent: 12 units
This laboratory is designed to teach concepts and experimental methods in neurobiology. Students work with a variety of organisms to study the anatomy, function, and development of the nervous system. Immunological, molecular, biochemical, and ballistic labeling techniques are used to examine the gene expression and structure in the mature and developing nervous system. Students study the function of neurons through neurophysiological techniques in invertebrates and computer simulation. This course makes extensive use of video microscopy and phase contrast, DIC, and fluorescence microscopes.
Prerequisites: (03-240 or 03-320) and 03-362 and 03-343

03-350 Developmental Biology

Spring: 9 units
How does a complex, multicellular organism arise from a single cell? How do cells with identical genomes acquire distinctive properties? What are the medical consequences of abnormal embryonic development? How does regeneration occur? How has evolution modified developmental programs to produce different body plans? These are some of the central questions in the field of developmental biology. This course serves as an introduction to current concepts and experimental approaches in this rapidly advancing field. Topics in the course include genomics, differential gene expression, cell signaling, cell movements, tissue morphogenesis, stem cells, human development, and regeneration. The course examines the genes and signaling pathways that control development and the role that mis-regulation of these pathways plays in human disease.
Prerequisites: 03-320 or 03-240

03-351 Computation and Biology Integrated Research Lab

Fall: 9 units
Modern biological research is heavily interdisciplinary in nature requiring the use of a diverse set of experimental techniques and computational analysis. This course provides students with a modern research experience while training them to communicate and collaborate in an interdisciplinary setting to better prepare them to join the workforce as members of interdisciplinary teams. This will be accomplished by focusing efforts on a real research problem requiring sophisticated experimentation and computation for success. Class time will include both laboratory research time (wet lab and computational) and activities designed to teach and practice communication methods for interdisciplinary teams. Students are expected to have a strong background in biology or computation and an interest in both.
Prerequisites: 03-124 or 03-117 or 03-343 or 15-112

03-360 Genomics and Epigenetics of the Brain

Fall: 9 units
This course will provide an introduction to genomics, epigenetics, and their application to problems in neuroscience. The rapid advances in genomic technology are in the process of revolutionizing how we conduct molecular biology research. These new techniques have given us an appreciation for the role that epigenetics modifications of the genome play in gene regulation, development, and inheritance. In this course, we will cover the biological basis of genomics and epigenetics, the basic computational tools to analyze genomic data, and the application of those tools to neuroscience. Through programming assignments and reading primary literature, the material will also serve to demonstrate important concepts in neuroscience, including the diversity of neural cell types, neural plasticity, the role that epigenetics plays in behavior, and how the brain is influenced by neurological and psychiatric disorders. Although the course focuses on neuroscience, the material is accessible and applicable to a wide range of topics in biology.
Prerequisites: 03-220 or 03-330 or 03-221

03-362 Cellular Neuroscience

Fall: 9 units
Modern neuroscience is an interdisciplinary field that seeks to understand the function of the brain and nervous system. This course provides a comprehensive survey of cellular and molecular neuroscience ranging from molecules to simple neural circuits. Topics covered will include the properties of biological membranes, the electrical properties of neurons, neural communication and synaptic transmission, mechanisms of brain plasticity and the analysis of simple neural circuits. In addition to providing information the lectures will describe how discoveries were made and will develop students' abilities to design experiments and interpret data.
Prerequisites: 42-202 or 03-161 or 03-320 or 03-230 or 85-219

03-363 Systems Neuroscience

Spring: 9 units
Modern neuroscience is an interdisciplinary field that seeks to understand the function of the brain and nervous system. This course provides a comprehensive survey of systems neuroscience, a rapidly growing scientific field that seeks to link the structure and function of brain circuitry to perception and behavior. This course will explore brain systems through a combination of classical, Nobel prize-winning data and cutting edge primary literature. Topics will include sensory systems, motor function, animal behavior and human behavior in health and disease. Lectures will provide fundamental information as well as a detailed understanding of experimental designs that enabled discoveries. Finally, students will learn to interpret and critique the diverse and multimodal data that drives systems neuroscience.
Prerequisites: 03-240 or 42-202 or 85-219 or 03-320 or 03-161 or 03-230

03-365 Neural Correlates of Learning and Memory

Spring: 9 units
This course will examine the biological substrates of learning, memory, and behavioral adaptation. The focus will be on addressing how neural circuits change during new skill acquisition and adapt to variations in the environment. An introduction to experience-dependent changes in neural structure and function, in addition to behavioral learning paradigms, will be provided. Then we will consider the ways in which specific changes in biological substrates give rise to the emergent properties that drive behavioral adaptation, followed by in depth coverage of deciphering which biological substrates constitute a lasting memory trace. Finally, the concept of age-dependent learning will be examined. Concepts and specific examples will come through reading of primary literature and selected readings from advanced texts.
Prerequisites: 03-320 or 03-161 or 85-219 or 03-240

03-366 Neuropharmacology: Drugs, Brain and Behavior

Fall: 9 units
This course is designed to give students a comprehensive understanding of the major neurotransmitter systems in the brain. Students will explore approaches to understanding how various neurotransmitters function in sensory and motor systems as well as how they are modulated by endogenous and exogenous agents. The exploration will include basic principles of neural communication, signal transduction and second messenger systems, main classes of neurotransmitters, and the effects of medications and drugs of abuse. In terms of sensory and motor systems, student will learn how different neurotransmitters affect different aspects of systems neuroscience and how a single neurotransmitter can have multiple roles in different systems. Students will learn how these processes affect the endocrine system, neuroinflammatory responses, addictive behaviors, and neurotoxic or degenerative conditions.
Prerequisites: 03-232 or 03-362 or 03-231 or 03-133

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html (http://www.cmu.edu/bio/undergrad/courses/)

03-380 Virology

Fall: 9 units
The concepts and methods of virology are covered, with emphasis on animal viruses, within the framework of cell biology, genetics, molecular biology, immunology, pathology, and epidemiology. The strategies that a wide variety of different DNA and RNA viruses, including some new and emerging ones, use to replicate and express their genomes during infection of host cells will be examined in some detail. The effects that viruses inflict on these cells will also be examined, as will some of the host cell responses generated by such virus-cell interactions, including interferon induction, the antiviral response generated by interferon, and oncogenic transformation. In addition, anoverview of procedures used for prevention and treatment of viral diseases via vaccinesand antiviral drugs, respectively, will be presented, as will a brief discussion of viroids and prions, and the characteristics of these agents which distinguish them from viruses.
Prerequisites: 03-240 or 03-320

03-390 Molecular and Cellular Immunology

Spring: 9 units
This is a course that covers the fundamentals of cellular and molecular immunology in a comprehensive manner. The objective of this course is to introduce the students to the immune system, the cells that constitute it, their ontogeny, their structure, activities and responses to stimuli and the systems/signals that integrate these cells into a coherent functional entity. Additionally, the course will demonstrate where, when, and how, the immune system responds in pathologic states, how its cells can themselves become the causes of pathologies, and how medical science targets and uses the immune system to prevent and treat a wide range of diseases.
Prerequisites: (03-231 or 03-232) and (03-320 or 03-240)

03-391 Microbiology

Spring: 9 units
The course provides introductory level microbial science and molecular biology that is aimed for students from all disciplines of natural science. It covers microbiology, genetics, genomics, as well as bacterial, fungal, and protozoan pathogenesis. Topics include: the human microbiome, genome sequencing, gene transfer across species, virulence, and drug resistance.
Prerequisites: 03-232 or 03-231

03-409 Applied Cell Biology

Intermittent: 3 units
The course provides a hands-on experience in biology lab to conduct experiments, collect and analyze scientific data with the purpose of using the data to infer biological principals. Students will learn the details of western blot technique, commonly used in biology labs. In addition, they will apply the technique to study how insulin triggers specific signaling in target cells. This lab module will reinforce the students' understanding of material seen in Cell Biology lecture course (co-requisite 03-240) and will prepare them for future lab courses.

03-410 Special Topics in Biological Sciences

Fall and Spring: 9 units
Special Topics in Biological Sciences. Topics will vary depending on the semester and instructor. Please read the individual section descriptions for more information.
Prerequisites: 03-232 or 03-231

03-411 Topics in Research

Fall
During the year students attend weekly seminars given by outside speakers or members of the Biology Department on current research topics in modern biology; some seminars outside of the department may be substituted.

03-412 Topics in Research

Spring
Students attend weekly seminars by scientists from other universities who have been invited by the Department of Biological Sciences to present their research to our faculty, postdoctoral scientists, graduate students, and staff. A written response to questions about the seminar is prepared by each student during the seminar and turned in to the instructor at the end of the seminar.

03-435 Cancer Biology

Fall: 9 units
Cancer affects roughly 1 in 3 people worldwide, and originates from both hereditary as well as environmental causes. Its prevalence makes it practically inescapable. Its of great relevance from both scientific and sociocultural perspectives. This course aims to examine various hallmarks of the biology of cancer while exploring novel concepts that challenge our understanding of cell biology. From the perspective of a cancer cell, we will learn about basic concepts of cell division, DNA replication, cell signaling, cell cycle control, cell metabolism, the regulation of gene expression in human cells, oncogenes, tumor suppressor genes, mutations, the process of metastasis, cancer diagnosis, cancer treatments and ethical questions surrounding treating patients, the epidemiology of cancer including prevalence and historical trends in diagnosis, as well as social impacts of a cancer diagnosis. Students will also explore the primary literature and scientific review articles to better understand research and methods of investigation into the cellular and molecular processes of tumorigenesis. This course will include interactive lectures, guest speakers, and in class discussion exercises aimed at building class participation and association, as well as confidence in public speaking about the sciences. Given the well-documented link between stress and cancer, there will also be a small component aimed at making students aware of health and wellness, such as reducing stress and anxiety.
Prerequisites: 03-220 or 03-221 or 03-330

03-439 Introduction to Biophysics

Fall: 10 units
Biological physics, or the physics of living systems, is an exciting interdisciplinary frontier of physics that aims to understand the phenomenon of life using concepts and tools from Physics. This intermediate level course will introduce the general concepts and principles underpinning the physical behavior of living systems, from the dynamics of proteins and molecules to collective behavior of living cells and organisms. The course will develop key physics concepts that are most vital to biological processes, including energy conversion, information transfer, mechanics of movement, statistical phenomena, and fluid flow. We will apply these physics concepts to demonstrate how biological systems function, build simplified mathematical models to predict behavior, and use experimental data to inform and test models. The integration of biological phenomena, physical concepts, mathematical modeling, and analysis of experimental data represents an entirely new mode of learning, based on strategies adopted in research. These strategies will break traditional disciplinary barriers between physics and biology. The students will be expected to gain an intuitive grasp of ways to: frame the physical problem, identify appropriate theoretical frameworks, analyze experimental data, and ways to generalize and to understand the dependence of biophysical phenomenon on time and length scales. No prior knowledge of biology is expected. This class is offered in Fall of even years (e.g. Fall '22, 24, etc.)
Prerequisites: (03-121 or 03-151) and (33-122 or 33-152 or 33-107 or 33-142 or 33-112 or 33-132)

03-442 Molecular Biology

Fall: 9 units
The structure and expression of eukaryotic genes are discussed, focusing on model systems from a variety of organisms including yeast, flies, worms, mice, humans, and plants. Topics discussed include (1) genomics, proteomics, and functional proteomics and (2) control of gene expression at the level of transcription of mRNA from DNA, splicing of pre-mRNA, export of spliced mRNA from the nucleus to the cytoplasm, and translation of mRNA.
Prerequisites: 03-221 Min. grade B or 03-330 Min. grade B or 03-220 Min. grade B

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html (http://www.cmu.edu/bio/undergrad/courses/)

03-445 Undergraduate Research

Fall and Spring
Students may investigate research problems under the supervision of members of the faculty. Permission of a faculty advisor required. **Students MUST contact bio-ungrad@andrew.cmu.edu and complete the application form in order to participate and amp; register.** BIO MAJORS: The Biology Undergraduate Office will send out the paperwork toyou on the first day of classes each semester. Paperwork and research mentor approval will be due the Friday before the add deadline. NON BIO MAJORS:Please contact the office (bio-ungrad@andrew.cmu.edu) to request the updated form.

03-451 Advanced Developmental Biology and Human Health

Fall: 9 units
This course will examine current research in developmental biology, focusing on areas that have important biomedical implications. The course will examine stem cell biology, cellular reprogramming, cell signaling pathways, tissue morphogenesis, and genetic/developmental mechanisms of birth defects and human diseases. Emphasis will be placed on the critical reading of recent, original research papers and classroom discussion, with supporting lectures by faculty.
Prerequisites: (03-240 Min. grade B or 03-709 Min. grade B or 03-320 Min. grade B) and (03-330 Min. grade B or 03-220 Min. grade B or 03-621 Min. grade B)

03-511 Computational Molecular Biology and Genomics

Fall: 9 units
An advanced introduction to computational molecular biology, using an applied algorithms approach. This course provides an in-depth treatment of the algorithmic foundations of computational molecular biology.
Prerequisites: (03-121 or 03-151) and 15-122

Course Website: http://www.cs.cmu.edu/~durand/03-711/

03-545 Honors Research

Spring: 9 units
