

Working Paper User's Guide

Definition

A Working Paper is a preliminary scientific or scholarly document, that could be submitted to a peer reviewed conference or academic journal.

Purpose

The Working Papers series was established to facilitate the timely dissemination of research produced within the Research Areas of IMT to the scientific and academic community, both national and international. The series only publishes scientific or scholarly works that are in final or nearly final form. They should be appropriate for submission to a national or international journal. This also applies to reports and presentations given at conferences waiting to be published in the conference proceedings, collected, or otherwise.

The following materials are not appropriate for inclusion in the Working Paper Series: notes, course materials, exercises or parts of research reports or theses that have not been substantially reworked.

Scientific Areas

IMT has established two Working Papers series, one for each Research Area of IMT and the research carried out by its members.

Submission

Authors are to submit the paper to a designated representative of the relevant Research Area, attaching thereto the assessment by at least one authoritative scholars in the relevant field, to be selected by the author him or herself.

Once evaluated and approved by the representative of the Research Area, the publication will be made public in the IMT EPrints institutional repository.

Format and Presentation

Each Working Papers Series is assigned an identification code (print and online ISSN).

Once the paper has been evaluated and approved, the author must send a copy of the article in pdf format to the manager of EPrints, who will compile the official coverpage of the IMT Working Paper Series and add it to the relevant document.

It is recommended that all texts in word format should be written in Tahoma font, size 10. The Latex text should be written in the following document class: `\documentclass[11pt,twoside,a4paper]{article}`.

The template will be available at the Library.

The author(s) must provide the EPrints manager with the following bibliographic information:

Title; Subtitle; Author(s); Affiliation, membership and email address; Research Area; Abstract; classification specification (e.g. JEL classification).

The approved documents are numbered in sequential order, deposited in the IMT Working Papers section of the Eprints reserved for each Research Area, published online and made available for free download in pdf format.

Distribution

IMT Working Paper Series are accessible via Internet in the IMT Eprints institutional repository. Once the Working Paper has been deposited in Eprints, the author has the option of submitting it to other disciplinary repositories. In this case, the author is responsible for providing the manager of Eprints with the information pertaining to deposit in the other repository, such as DOI, URI and URL.

In the case that the Technical Report is presented at conference or published in a journal or book, the author should inform the Eprints manager thereof.

Copyright

It is the responsibility of the individual author to safeguard the copyright of the document and to exercise the rights and responsibilities pertaining thereto.
