### About Amcor Masonry, an Oldcastle Company

Determined to supply the local construction market with the most sustainable building products available. Concrete Masonry Units have a lifecycle which is longer and at a lower cost than many other products available. Concrete Pavers have a lifespan of more than 50 years and can help to reduce stormwater runoff when properly designed. All Amcor concrete products can contribute to Low Impact Development, Reduced lifecycle cost, Carbon sequestration, LEED, and Green building initiatives.

### Limitations

Environmental declarations from different programs (ISO 14025) may not be comparable.

- "Comparison of the environmental performance of Concrete Masonry and Segmental Concrete Paving Products using EPD information shall be based on the product's use and impacts at the construction works level, and therefore EPDs may not be used for comparability purposes when not considering the construction works energy use phase as instructed under this PCR".
- "Full conformance with the PCR for Concrete Masonry and Segmental Concrete Paving Products allows EPD comparability only when all stages of a life cycle have been considered, when they comply with all referenced standards, use the same sub-category Part B PCR, and use equivalent scenarios with respect to construction works. However, variations and deviations are possible". Example of variations: Different LCA software and background LCI datasets may lead to differences in results for the upstream and downstream life cycle stages declared.

### **Product Scope**

This declaration and it LCA study are relevant to manufactured concrete products produced by Amcor Masonry, an Oldcastle Company, in North Salt Lake, Utah for the Western US region. As the owner of the declaration, Amcor Masonry may be liable for the underlying information and evidence. The program operator shall not be liable with respect to manufacturer information, life cycle assessment data and evidence.

### **Product Description**

This EPD includes representative products classified as articulating concrete block developed from the Amcor Masonry, an Oldcastle Company portfolio of products manufactured at its facility located in North Salt Lake, Utah. This Environmental Product Declaration (EPD) covers articulating concrete block markets throughout the Northwest USA region. The primary audiences for articulating concrete block are engineers, designers, architects, and project owners which can also include homeowners. The specific product names/identifiers associated with the EPD are presented in Appendix A with renditions shown below.

The results for this EPD are based on the full year 2020 of operational data and current raw materials and suppliers. All production is completed at the North Salt Lake facility.

Diamond Pro Mix Articulating Concrete Block

### **Product Specification**

The products evaluated for the EPD meet the technical specifications based on categories, CSI numbers and descriptions presented in the Part B PCR. Applicable UNSPSC codes and UNCPC codes are also noted in the PCR.

ASTM D6684

### **Application**

Amcor Masonry, an Oldcastle Company, articulating concrete block are used in various settings including but not limited to revetment systems where a matrix of interconnected concrete block is used for erosion protection. Guidance on the safe and correct installation, use and disposal of the products are available from Amcor Masonry, an Oldcastle Company, or the Oldcastle APG website at: <a href="https://www.crhamericas.com/apg">https://www.crhamericas.com/apg</a>

Date of Issue: May 27, 2022

Period of Validity: 5 years

Declaration: EPD10730

### **Technical Data**

The technical specifications from the products represented by this EPD are shown here.

Properties						
Diamond Pro Mix Articulating Concrete Block						
Wet Mix Density	138	lbs/ft <sup>3</sup>				
Compressive Strength	4,000	psi				
Flexural strength (slabs)	n/a	MPa				
Thickness (pavers, slabs and grids)	n/a	mm				

### **Manufacturing**

The main product components used in the manufacture of articulating concrete block are shown in table 2.

Material/Substance	Input Range
Cement	5-20%
Supplementary cementitious materials	1-5%
Fine aggregate	25-35%
Coarse aggregate	55-65%
Admixture	<1%

Table 2: Main component ranges for interlocking paving units

No substances required to be reported as hazardous are associated with the production of this product.

### **System Boundary**

The life cycle assessment for this EPD covers the cradle-to-gate stages as shown in figure 1.

Product Stage			Constr Proces	ruction s Stage		Use Stage				En	d of L	ife Sta	ige	Benefits and loads beyond the system		
Raw material supply	Transport	Manufacturing	Transport from the gate to the site	Assembly	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	Deconstruction and/or demolition	Transport	Waste processing	Disposal	Reuse, recovery, recycling potential

### **Production Stages**

Figure 2: Cradle-to-gate concrete products flow diagram

Information relevant to the product stages not included within the system boundary (A4-C4) as required by the Part B PCR.

- Product packaging waste includes 15.9 kg wood pallet waste, 0.23 kg cardboard waste and 0.43 kg of plastic shrink wrap waste per declared unit. The end-of-life treatment for all packaging for this analysis is assumed to be landfill.
- The actual end of life treatment for the product is not known but may involve landfilling or crushing and re-use as recycled aggregates. The product may also be re-used prior to end of life in similar applications either through reconfiguration or relocation.

### **Allocation Procedure**

A production process that generates more than one type of product may require the allocation of environmental flows from the process to different products to get product-based inventory data. If allocation is necessary, the requirements and guidance of the Part A PCR: Life Cycle Assessment Calculation Rules and Report Requirements, Section 3.3 are used. For this EPD, no allocation was necessary to conduct the life cycle assessment.

This EPD recognizes fly ash, silica fume and slag as recovered materials and thus the environmental impacts allocated to these materials are limited to the treatment processes and transportation required for their use as concrete material inputs.

#### **Cut-Off Rules**

All material and energy flows known or suspected to release substances in the air, water or soil in quantities that contribute significantly to any of the indicators in ISO 21930-2017 are included. In cases where there is insufficient input data for a unit process or data gaps, the cut-off criteria is 1% of renewable primary resources (energy), 1% of non-renewable primary resource usage (energy), 1% of total mass input of that unit process and 1% of environmental impacts. The total of neglected input flows per module does not exceed 5% of energy usage, mass, and environmental impacts. No known flows are deliberately excluded from this EPD.

### Interpretation

The A1 product stage (raw material supply) dominates most environmental impacts reported with cement generating the highest percentage of impacts for this stage. This EPD was calculated using manufacturer specific cement data from the cement producers EPD and represents 100% of the total cement used in this mix.

Life cycle impact assessment (LCIA) results are relative expressions and do not predict impacts on category endpoints, the exceeding of thresholds, safety margins or risks (ISO 14044, ISO 14040). EPDs are comparable only if they comply with ISO 21930, 2017, use the same sub-category PCR where applicable, include all relevant information modules and are based on equivalent scenarios with respect to the context of construction works.

#### **Data Quality**

Data Set	Data Base	Region	Year	Temporal	Technological Representativeness	Geographical	Completeness
Concrete admixture - water resisting admixtures	Ecoinvent 3,6	Europe	2019	Good	Good	Fair	Good

### **Declaration of Environmental Indicators Derived from LCA**

Results of the LCA - environmental impact: 1 m3 of concrete formed into manufactured concrete products - TRACI v 2.1								
LCIA results are relative expressions and do not predict impacts on category endpoints, the exceeding of thresholds, safety margins or risks.								
Impact Assessment A1 A2 A3 Total								
Global warming potential (GWP 100) [kg CO <sub>2</sub> eq.]	1.92E+02	1.26E+01	1.04E+01	2.15E+02				
Ozone depletion potential (ODP) [kg CFC 11 eq.]	7.57E-06	3.07E-06	1.19E-06	1.18E-05				
Acidification potential (AP) [kg SO <sub>2</sub> eq]	4.10E-01	4.76E-02	5.29E-02	5.10E-01				
Eutrophication potential (EP) [kg N eq.]	4.55E-02	6.61E-03	9.90E-03	6.21E-02				
Smog formation potential (SFP) [kg O₃ eq]	8.11E+00	1.02E+00	1.03E+00	1.02E+01				
Abiotic depletion potential for fossil resources (ADPfossil) [MJ]	8.78E+02	1.95E+02	1.81E+02	1.25E+03				
Note: These six impact categories are globally deemed mature enough to be included in	Type III environmental declarat	ions. Other c	ategories are	being				
devalenced and defined and LCA should continue making advances in their devalenment	Howayar the EDD usars shall	nat usa additi	anal maacure	oc for				

Note: These six impact categories are globally deemed mature enough to be included in Type III environmental declarations. Other categories are being developed and defined and LCA should continue making advances in their development. However, the EPD users shall not use additional measures for comparative purposes.

Resource Use	A1	A2	A3	Total
Abiotic depletion potential for non fossil resources (ADPelements) [kg Sb eq]	3.54E-02	2.15E-04	1.66E-04	3.58E-02
Renewable primary energy as energy carrier (RPR <sub>E</sub> ) [MJ]	4.66E+01	2.10E+00	1.57E+02	2.06E+02
Renewable primary energy resources used as raw materials (RPR <sub>M</sub> ) [MJ]	0.00E+00	0.00E+00	6.10E+02	6.10E+02
Non-renewable primary energy as energy carrier (NRPR <sub>E</sub> ) [MJ]	8.78E+02	1.95E+02	1.81E+02	1.25E+03
Non-renewable primary energy resources used as raw materials (NRPR <sub>M</sub> ) [MJ]	1.69E+00	0.00E+00	7.36E-03	1.69E+00
Use of secondary material (SM) [kg]	5.23E+01	0.00E+00	4.49E-05	5.23E+01
Use of renewable secondary fuels (RSF) [MJ]	1.97E-04	0.00E+00	0.00E+00	1.97E-04
Use of non-renewable secondary fuels (NRSF) [MJ]	1.89E-03	0.00E+00	0.00E+00	1.89E-03
Recovered energy (RE) [MJ]	0.00E+00	0.00E+00	0.00E+00	0.00E+00
Use of net fresh water (FW) [m3]	3.82E+00	4.08E-02	5.26E-02	3.91E+00

Waste and Ouptput Flows	A1	A2	A3	Total
Hazardous waste disposed (HWD) [kg]	4.96E+00	2.36E-01	9.61E-01	6.16E+00
Non-hazardous waste disposed (NHWD) [kg]	1.40E+02	2.15E+01	2.00E+01	1.81E+02
High level radioactive waste (HLRW) [kg]	4.49E-05	3.49E-05	2.70E-05	1.07E-04
Intermediate and low level radioactive waste (ILLRW) [kg]	1.27E-03	1.13E-03	4.73E-04	2.87E-03
Components for reuse (CRU)	0.00E+00	0.00E+00	0.00E+00	0.00E+00
Materials for recycling (MR)	0.00E+00	0.00E+00	0.00E+00	0.00E+00
Materials for energy recovery (MER)	0.00E+00	0.00E+00	0.00E+00	0.00E+00
Recovered energy exported from the product system (EE) [MJ]	0.00E+00	0.00E+00	0.00E+00	0.00E+00

Additional Inventory Parameters	A1	A2	A3	Total
Emissions from calcination (kg CO₂e)	9.284E+01	0.000E+00	0.000E+00	9.28E+01

Notes: E merging LCA impact categories and inventory items are still under development and can have high levels of uncertainty that preclude international acceptance pending further development. Use caution when interpreting data in these categories. Not all LCA datasets for upstream materials included these impact categories and thus results may be incomplete. Use caution when interpreting data in these categories.
