Contamination in CM

1 Don O2 masks and/or PGA's immediately

2 Evaluate contamination level (isolate & correct source of contamination if possible) and proceed with one of the following steps:

a. Retain O2 masks or remain in suit and accept contamination level in cabin.

CAUTION

If in PGA's, adjust DIRECT O2 to maintain suit to cabin ΔP> 0.38 psi.

b. Retain O2 masks and scrub cabin atmosphere through suit loop. If initially suited, establish partially suited or shirtsleeve configuration and don O2 masks.

CAUTION

Change LiOH cartridges after scrub completed.

c. Retain PGA's or don PGA's
Verify suit integrity (visually)
Perform Cabin Dump
Perform Cabin Repress

c. Acquire star in SCT by rotating shaft. Line up R line on star read trun angle on mech. counter.

d. SCT MODE - Slave to SXT. Set trun to angle observed in SCT. This will roughly align SLOS and SCT on star. Star will also move to 0° MSCT. Now star (through SLOS) and landmark (through LLOS) should be seen through SXT.

V60-63 DESCRIPTION

Before any of the following verbs will be effective, the RCS DAP must be activated.

V60 - Keying V60E will load present gimbal angles (N20) into N17 cells.

V61 - Keying V61E will display DAP phase plane errors on error needles provided the CMC has access to one of the FDAI displays.

V62 - Keying V62E will display the difference between present gimbal angles (N20) and N22 desired gimbal angles provided the CMC has access to one of the FDAI displays. The difference is resolved into CSM control axes before being displayed.

V63 - Keying V63E will display the difference between present gimbal angles (N20) and N17 (astronaut) desired gimbal angles provided the CMC has access to one of the FDAI displays. If V60E is keyed while V63 needles are active, the needles will be zeroed.
