

FINITE GROUPS WITH A PRESCRIBED NUMBER OF CYCLIC SUBGROUPS II

RICHARD BELSHOFF, JOE DILLSTROM, AND LES REID

ABSTRACT. In [4], Tărnăuceanu described the finite groups G having exactly $|G| - 1$ cyclic subgroups. In [1], the authors used elementary methods to completely characterize those finite groups G having exactly $|G| - \Delta$ cyclic subgroups for $\Delta = 2, 3, 4$ and 5 . In this paper, we prove that for any $\Delta > 0$ if G has exactly $|G| - \Delta$ cyclic subgroups, then $|G| \leq 8\Delta$ and therefore the number of such G is finite. We then use the computer program GAP to find all G with exactly $|G| - \Delta$ cyclic subgroups for $\Delta = 1, \dots, 32$.

1. INTRODUCTION

Throughout this paper, a cyclic group of order n is denoted C_n and the dihedral group of order $2n$ is denoted D_{2n} . In [4], Marius Tărnăuceanu proved the following theorem.

Theorem 1 (Tărnăuceanu). *A finite group G has exactly $|G| - 1$ cyclic subgroups if and only if G is one of the following groups: C_3 , C_4 , S_3 , or D_8 .*

Let G be a finite group, and let $C(G)$ denote the poset of cyclic subgroups of G . We define $\Delta(G)$, or just Δ if the group is understood, to be the difference between the order of G and the number of cyclic subgroups of G :

$$\Delta(G) = |G| - |C(G)|.$$

It is known that $\Delta = 0$ if and only if G is an elementary abelian 2-group, i.e., $G = C_2^n$ for some n .

In [4] where Tărnăuceanu described all groups satisfying $\Delta = 1$, he also posed the following natural open problem.

Problem. Describe the finite groups G having $|G| - \Delta$ cyclic subgroups, where $2 \leq \Delta \leq |G| - 1$.

In [1] we determined those finite groups for which $\Delta = 2, 3, 4$, and 5 . In this paper we will show that $|G| \leq 8\Delta(G)$ and use this bound and a GAP program to find all G such that $\Delta(G) = 1, \dots, 32$.

Date: October 22, 2018.

2. MAIN RESULT

Let G be a finite group. Denote by $C(G)$ the poset of cyclic subgroups of G , and let $\Delta(G) = |G| - |C(G)|$. For any positive integer d , let $n_d = |\{H \in C(G) : |H| = d\}|$ be the number of cyclic subgroups of order d . Since every element of G generates a cyclic subgroup and $\phi(d)$ is the number of generators of a cyclic group of order d , it follows that

$$\sum_{d \geq 1} n_d \phi(d) = |G|.$$

Because $|C(G)| = \sum_{d \geq 1} n_d$, we have

$$\sum_{d \geq 1} n_d (\phi(d) - 1) = \Delta(G). \quad (\star)$$

Since $\phi(d) \geq 2$ for $d > 2$, we have

$$\Delta(G) = \sum_{d \geq 1} n_d (\phi(d) - 1) \geq \sum_{d > 2} n_d = |C(G)| - i_2(G), \quad (1)$$

where $i_2(G)$ denotes the number of elements of order 2 or less.

Now by [3], if $G \not\cong C_2^k$, then $i_2(G) \leq \frac{3}{4}|G|$ with equality if and only if $G \cong D_8 \times C_2^k$ for some $k \geq 0$. If $\Delta(G) > 0$, then $G \not\cong C_2^k$ so we have

$$\begin{aligned} |G| &= \Delta(G) + |C(G)| \\ &\leq \Delta(G) + \Delta(G) + i_2(G) \\ &= 2\Delta(G) + i_2(G) \\ &\leq 2\Delta(G) + \frac{3}{4}|G|. \end{aligned}$$

Solving the inequality for $|G|$ yields the following result.

Theorem 2. *For any finite group G , if $\delta > 0$ and $\Delta(G) = \delta$, then $|G| \leq 8\delta$. Equality only occurs when $\delta = 2^k$ and in that case $G \cong D_8 \times C_2^k$.*

Corollary 1. *If $\delta > 0$, the number of groups such that $\Delta(G) = \delta$ is finite.*

This gives an alternate proof of Tărnăuceanu's result. If $\Delta(G) = 1$, then $|G| \leq 8$ and one only need check the nine groups (up to isomorphism) of order less than 8 [$C_1, C_2, C_3, C_4, C_2 \times C_2, C_5, C_6, D_6, C_7$](if $|G| = 8$ we must have $G \cong D_8$).

In the remainder of this paper, we will report on the results of a GAP program that finds all groups of order less than 8δ such that $\Delta(G) = \delta$ for $\delta = 1, \dots, 32$.

3. COMPUTER RESULTS

Here we list all groups with difference δ , for $\delta = 1$ to 32. The GAP notation is as follows:

$A \times B$ denotes a direct product of a group A by a group B ,

$A:B$ denotes a split extension of A by B ,

$A.B$ denotes just an extension of A by B (split or nonsplit).

For each group, we list both GAP's `StructureDescription` and `GroupID`, in the form

$$\text{StructureDescription} = \text{GroupID}$$

For example, the line below that reads

$$D8 = [8,3]$$

means that the dihedral group of order 8 is the third group of order 8 in GAP's `SmallGroups` library.

Four groups with difference 1 (Tărnăuceanu [4]).

$$C3 = [3, 1]$$

$$C4 = [4, 1]$$

$$S3 = [6, 1]$$

$$D8 = [8, 3]$$

Four groups with difference 2 (Tărnăuceanu [5], and BDR [1]).

$$C6 = [6, 2]$$

$$C4 \times C2 = [8, 2]$$

$$D12 = [12, 4]$$

$$C2 \times D8 = [16, 11]$$

Three groups with difference 3 (BDR [1]).

$$C5 = [5, 1]$$

$$Q8 = [8, 4]$$

$$D10 = [10, 1]$$

Eleven groups with difference 4 (BDR [1]).

$$C8 = [8, 1]$$

$$C3 \times C3 = [9, 2]$$

$$A4 = [12, 3]$$

$$C6 \times C2 = [12, 5]$$

$$(C4 \times C2) : C2 = [16, 3]$$

$$D16 = [16, 7]$$

$$\begin{aligned} C4 \times C2 \times C2 &= [16, 10] \\ (C4 \times C2) : C2 &= [16, 13] \\ (C3 \times C3) : C2 &= [18, 4] \\ C2 \times C2 \times S3 &= [24, 14] \\ C2 \times C2 \times D8 &= [32, 46] \end{aligned}$$

Three groups with difference 5 (BDR [1]).

$$\begin{aligned} C7 &= [7, 1] \\ C3 : C4 &= [12, 1] \\ D14 &= [14, 1] \end{aligned}$$

Thirteen groups with difference 6.

$$\begin{aligned} C9 &= [9, 1] \\ C10 &= [10, 2] \\ C12 &= [12, 2] \\ C4 \times C4 &= [16, 2] \\ C4 : C4 &= [16, 4] \\ QD16 &= [16, 8] \\ C2 \times Q8 &= [16, 12] \\ D18 &= [18, 1] \\ D20 &= [20, 4] \\ D24 &= [24, 6] \\ (C2 \times C2 \times C2 \times C2) : C2 &= [32, 27] \\ (C4 \times C4) : C2 &= [32, 34] \\ (C2 \times D8) : C2 &= [32, 49] \end{aligned}$$

Three groups with difference 7.

$$\begin{aligned} C3 \times S3 &= [18, 3] \\ (C6 \times C2) : C2 &= [24, 8] \\ S4 &= [24, 12] \end{aligned}$$

Fifteen groups with difference 8.

$$\begin{aligned} C8 \times C2 &= [16, 5] \\ C8 : C2 &= [16, 6] \\ Q16 &= [16, 9] \\ C6 \times C3 &= [18, 5] \\ C5 : C4 &= [20, 3] \\ C2 \times A4 &= [24, 13] \\ C6 \times C2 \times C2 &= [24, 15] \\ C2 \times ((C4 \times C2) : C2) &= [32, 22] \\ (C4 \times C2 \times C2) : C2 &= [32, 28] \\ C2 \times D16 &= [32, 39] \\ C4 \times C2 \times C2 \times C2 &= [32, 45] \end{aligned}$$

$$C2 \times ((C4 \times C2) : C2) = [32, 48]$$

$$C2 \times ((C3 \times C3) : C2) = [36, 13]$$

$$C2 \times C2 \times C2 \times S3 = [48, 51]$$

$$C2 \times C2 \times C2 \times D8 = [64, 261]$$

Three groups with difference 9.

$$C11 = [11, 1]$$

$$D22 = [22, 1]$$

$$C4 \times S3 = [24, 5]$$

Eleven groups with difference 10.

$$C14 = [14, 2]$$

$$C2 \times (C3 : C4) = [24, 7]$$

$$C3 \times D8 = [24, 10]$$

$$D28 = [28, 3]$$

$$((C4 \times C2) : C2) : C2 = [32, 6]$$

$$C4 \times D8 = [32, 25]$$

$$(C4 \times C2 \times C2) : C2 = [32, 30]$$

$$(C4 \times C4) : C2 = [32, 31]$$

$$(C2 \times D8) : C2 = [32, 43]$$

$$(C2 \times Q8) : C2 = [32, 50]$$

$$S3 \times S3 = [36, 10]$$

Eight groups with difference 11.

$$C13 = [13, 1]$$

$$C15 = [15, 1]$$

$$C16 = [16, 1]$$

$$C5 : C4 = [20, 1]$$

$$SL(2,3) = [24, 3]$$

$$D26 = [26, 1]$$

$$D30 = [30, 3]$$

$$D32 = [32, 18]$$

Twenty-one groups with difference 12.

$$C18 = [18, 2]$$

$$C10 \times C2 = [20, 5]$$

$$C7 : C3 = [21, 1]$$

$$C3 : Q8 = [24, 4]$$

$$C12 \times C2 = [24, 9]$$

$$(C4 \times C2) : C4 = [32, 2]$$

$$(C8 \times C2) : C2 = [32, 9]$$

$$C4 \times C4 \times C2 = [32, 21]$$

$$C2 \times (C4 : C4) = [32, 23]$$

$(C4 \times C4) : C2 = [32, 24]$
 $(C2 \times Q8) : C2 = [32, 29]$
 $(C4 \times C4) : C2 = [32, 33]$
 $C2 \times QD16 = [32, 40]$
 $(C8 \times C2) : C2 = [32, 42]$
 $C2 \times C2 \times Q8 = [32, 47]$
 $D36 = [36, 4]$
 $C2 \times C2 \times D10 = [40, 13]$
 $C2 \times D24 = [48, 36]$
 $C2 \times ((C2 \times C2 \times C2 \times C2) : C2) = [64, 202]$
 $C2 \times ((C4 \times C4) : C2) = [64, 211]$
 $C2 \times ((C2 \times D8) : C2) = [64, 264]$

Five groups with difference 13.

$(C3 \times C3) : C3 = [27, 3]$
 $C3 \times C3 \times C3 = [27, 5]$
 $(C3 \times C3) : C4 = [36, 9]$
 $D8 \times S3 = [48, 38]$
 $(C3 \times C3 \times C3) : C2 = [54, 14]$

Thirteen groups with difference 14.

$C20 = [20, 2]$
 $C3 \times Q8 = [24, 11]$
 $(C8 : C2) : C2 = [32, 7]$
 $(C4 \times C4) : C2 = [32, 11]$
 $C4 \times Q8 = [32, 26]$
 $(C2 \times C2) \cdot (C2 \times C2 \times C2) = [32, 32]$
 $C4 : Q8 = [32, 35]$

$$C2 \times C2 \times C2 \times ((C3 \times C3) : C2) = [144, 196]$$

$$C2 \times C2 \times C2 \times C2 \times C2 \times S3 = [192, 1542]$$

$$C2 \times C2 \times C2 \times C2 \times C2 \times D8 = [256, 56083]$$

4. ACKNOWLEDGEMENT

This paper is a continuation of [1], which was an expansion and revision of the Master's thesis of the second author, directed by the first and third authors.
