

$$\Sigma_x^{\text{exact}} = \frac{\text{Diagram}}{G_y}$$

The diagram shows a semi-circular region on the left, shaded black, with a boundary labeled Γ . To its right is a rectangular region with a wavy top boundary and a straight bottom boundary. A wavy line extends from the top-right corner of the rectangle, labeled G_Φ . The entire diagram is divided by a horizontal line labeled G_y .

$$\Sigma_y^{\text{exact}} = \frac{\text{Diagram}}{G_x}$$

The diagram is identical to the one above, but the horizontal line is labeled G_x instead of G_y .

$$\Sigma_\Phi^{\text{exact}} = \frac{\text{Diagram}}{G_y}$$

The diagram shows a semi-circular region on the left, shaded black, with a boundary labeled Γ . To its right is a lens-shaped region formed by two curved boundaries. The top boundary is labeled G_x and the bottom boundary is labeled G_y .
