

$$\Pi = \Pi_0 + \text{Diagram 1} + \text{Diagram 2}$$

Diagram 1 ( $\Pi_1$ ): A horizontal chain of two circles, both labeled  $\mathcal{T}^\omega$ . They are connected by two curved arrows: one pointing right on top and one pointing left on bottom. External wavy lines enter from the left and exit to the right.

Diagram 2 ( $\Pi_2$ ): A horizontal chain of three circles. The first and third are labeled  $\mathcal{T}^\omega$ , and the middle one is labeled  $\Gamma^\omega$ . They are connected by two curved arrows (top-right, bottom-left). External wavy lines enter from the left and exit to the right.

$$+ \text{Diagram 3} + \dots$$

Diagram 3 ( $\Pi_3$ ): A horizontal chain of four circles. The first and last are labeled  $\mathcal{T}^\omega$ , and the two middle ones are labeled  $\Gamma^\omega$ . They are connected by two curved arrows (top-right, bottom-left). External wavy lines enter from the left and exit to the right.

$$\Pi_0 = \text{Diagram 4}$$

Diagram 4: A single circle labeled  $\mathcal{T}^\omega$  on the left, followed by a shaded oval with diagonal lines. External wavy lines enter from the left and exit to the right.
