

SU(N) lattice gauge theory

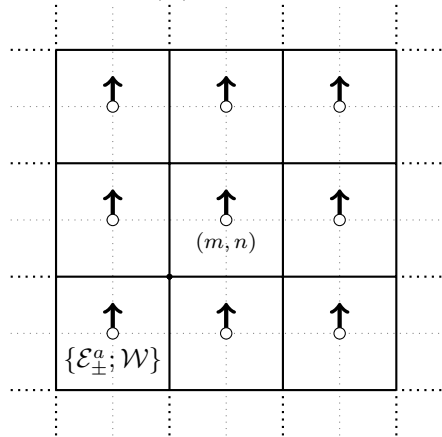

Local Gauss law :

$$\mathcal{G}^a(m, n) = \sum_{i=1}^2 \left[E_+^a(m, n, \hat{i}) + E_-^a(m, n, \hat{i}) \right] = 0$$

SU(N)
Duality/Canonical
transformations

SU(N) spin model.

Global Gauss law :

$$\mathcal{G}_{global}^a = \sum_{m, n} \left[\mathcal{E}_+^a(m, n) + \mathcal{E}_-^a(m, n) \right] = 0$$
