

Diagrammatic equation:

$$\begin{array}{c} \text{Diagram 1} \\ \text{Diagram 2} \end{array} = \text{Diagram 3} - \text{Diagram 4}$$

The diagrams are defined as follows:

- Diagram 1:** A shaded circle containing the symbol  $\epsilon$ , with two external lines entering from the top and exiting from the bottom.
- Diagram 2:** A shaded circle containing the symbol  $\epsilon$ , with two external lines entering from the bottom and exiting from the top.
- Diagram 3:** A single vertical line.
- Diagram 4:** A crossed line (an 'X' shape) formed by two intersecting lines.
