

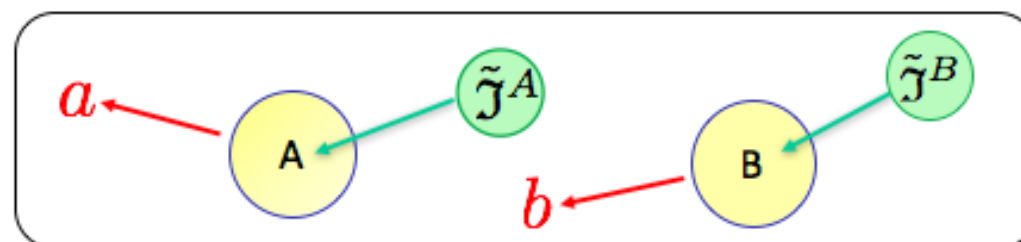

Figure 1. Operational elements

➤ *Local regions* (A, B, C, \dots)

➤ *Local controllables*: all locally controllable properties ($\tilde{J}^A, \tilde{J}^B, \tilde{J}^C, \dots$)

➤ *Local outcomes*: all possible outcomes associated to local contexts (a, b, c, \dots)

➤ *External environment*: represents any causal influence, mechanisms, or global dynamics that could mediate correlations between different regions (\tilde{W})
