This figure shows a circular astronomical image, likely a deep field or a zoomed-in view of a galaxy cluster. The image is predominantly blue, representing a low-intensity background. Several bright, cyan-colored spots are visible, indicating regions of higher intensity or emission. These spots are scattered across the field, with a notable concentration in the lower-left quadrant. The image is framed by a black border, and a white label '-5' is positioned in the top right corner. The y-axis on the left is labeled 'North offset ["]' and ranges from -15 to 15.
