

Test  
x-vector

Typical  
device  $\sigma$

N samples

$$\left[\frac{1}{Q}\right] = [p][x]$$

Repeat 20 times

$$\mu = \mu(N \text{ samples})$$
$$\sigma = \frac{\sigma(N \text{ samples})}{\sqrt{N}}$$

Monte Carlo  
M=1000

$$\frac{1}{Q} = [p][x]$$
