

Front end

Pipeline

Pipeline interface

← *Input*

Working place

- database
- configuration

Input place

- raw data

Output place

- results

DataIO

Control of database connection

Central database

- data sets (e.g. images, analysis results)
- attributes (e.g. pixel scale, dither position)

Abstract interface for ports between pipeline modules and database

InputPort

OutputPort

ConfigPort

Port types

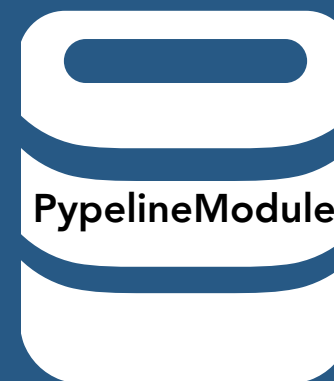

Processing

Reading data (e.g. raw science and calibration images, parallactic angles)

Writing data (e.g. preprocessed images, fit results, MCMC samples)

Processing and analysis (e.g. background subtraction, PSF subtraction, photometry)

Abstract interface for pipeline modules

ReadingModule

WritingModule

ProcessingModule

Abstract interfaces for different module types
