

A photograph of a scientific instrument setup, likely a particle detector or spectrometer. The setup is constructed from aluminum extrusions and includes several key components: a large circular fan at the top left, a series of parallel metal bars, a lens, a prism, and a large grid-like structure labeled as an MCP-PMT Array. Red arrows point from text labels on the right to the corresponding components. The MCP-PMT Array is a large, rectangular grid of many small, square cells. The prism is a triangular piece of transparent material. The lens is a circular component. The bars are long, thin metal rods. The fan is a large, silver-colored, circular fan with many blades. The entire setup is mounted on a black base.
