

Instrument Simulation

- Optics (PSF, etc.)
- Detector characteristics
- Filter responses

Astrophysical Simulations

- Hydrodynamics
- Semi-analytics
- Photon propagation, dust
- Star, galaxy catalogs
- "Pixellated sky" data
- Time series

part of the
data simulator

"Intrinsic skies" of
wavelength, position,
and time

Data Simulation / Synthetic Data

- Readout, noise properties
- Single image, spectrum generation
- Mosaicking and co-adding

part of the
data simulator

Observing Parameters

- Filters, gratings
- Integration time
- Dither method
- Cadence
- Survey Footprint

Cataloging and Archiving

- Similar processing and search tools as for "real" data
 - Detected objects, features
 - Database generation
- includes relevant physical info
from astrophysical simulations*
