

Section II

A Bird's Eye view of 4G, 5G, and Moving Network Architecture

4G cellular architecture

5G new radio and network heterogeneity

Moving network architecture

Section III

Moving Networks' Use Cases and Applications

Mobile cache

Moving networks as relays

Adaptive radio access network

Section IV

Connectivity Moving Networks

Wired backhaul links

Wireless backhaul links
(IEEE 802.11p, LTE-A, mmWave)

In-vehicle access links
(Wi-Fi, LTE-A, mmWave)

Section V

Survey of the Current Solutions in Moving Networks

Performance enhancement with moving networks

Network capacity
& coverage

Throughput and QoS

Backhaul bottleneck

Interference management

Handover

Lessons learned

Dedicated vs shared spectrum

Lack of analytical analysis

Lack of intelligent solutions

Section VI

Open Issues and Future Directions

Challenges in high speed railways
(backhaul, handover, channel modeling)

Security

Practical considerations

Energy Efficiency in Mobile Cells

Mobile nodes in the air
