

$P_t(X)$ drift
 $P_t(y/X)$ remains

data distribution at time t

(a) Source I

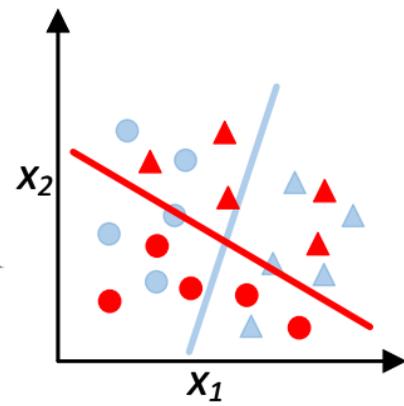

data distribution at time $t+1$

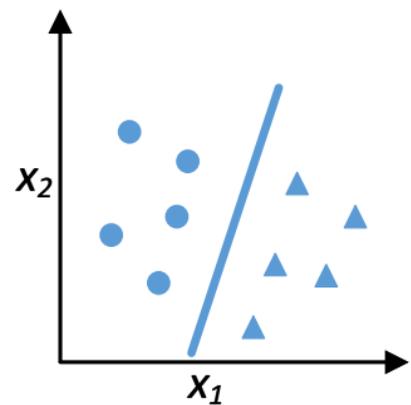

$P_t(y/X)$ drift
 $P_t(X)$ remains

data distribution at time t

(b) Source II

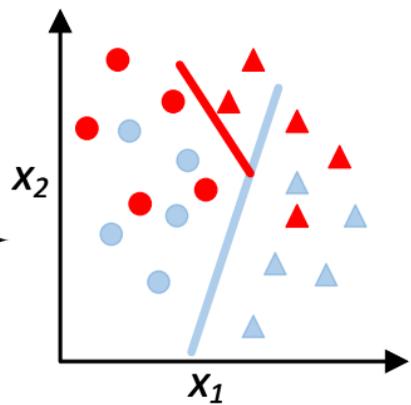

data distribution at time $t+1$

$P_t(X)$
 $P_t(y/X)$ drift

data distribution at time t

(c) Source III

data distribution at time $t+1$

Two dimensional
 data $X = \{x_1, x_2\}$
 with two class label
 $y = \{y_0, y_1\}$

- label y_0 at time t
- ▲ label y_1 at time t
- label y_0 at time t
- ▲ label y_1 at time t
