

A **trial** related to a node u

Step 0	Step 1	Step 2	Step 3	Step 4
a change arrives	choose a testing node y from the testing nodes $TN(u)$	choose a candidate z from the candidate pool $CP(y)$	move y to S_z (i.e., z 's supernode)	decide whether to accept or reject the change
				

Trials are repeated for every testing node in $TN(u)$ and then for every testing node in $TN(v)$
