\*BJD–2458400. †In units of orbital phase. ‡In units of the binary separation.

§Upper 95% credible interval. ||Lower 95% credible interval. #Ic includes both the I and Ic passband.

**Fig. E1.** Results of Eclipse modelings. Each label represents the eclipse number and filter, corresponding with in table E1. Each horizontal and vertical axes represent orbital phase with a range of -0.2–0.2 and Normalized flux with a range of -0.4–1.5, respectively. Dashed lines represent 0 level. Black points and red solid lines represent normalized flux and model light curves made from estimated parameters, respectively. Lower blue points represent residuals. Ic includes both the I and Ic passband.

**Table E2.** Log of observations of the superoutburst of ASASSN-18aan.
