

Real network \mathbf{G}^*

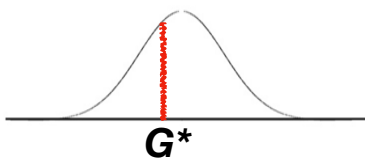

Measurements on \mathbf{G}^* = constraints
(e.g. degrees or strengths)

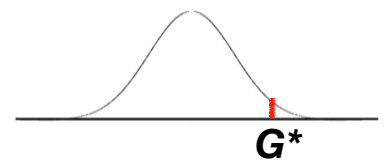

Statistical ensemble of networks

\mathbf{G}^* close to equilibrium

\mathbf{G}^* far from equilibrium

RECONSTRUCTION:

$\langle \mathbf{G} \rangle$ is representative of \mathbf{G}^*
and can be used at its place

VALIDATION:

deviations of \mathbf{G}^* from $\langle \mathbf{G} \rangle$
can reveal key information
