

1. Replicated:

- Every partition has full data

2. Tiled:

- Every partition has one $\frac{1}{4}$ data
- Device order can be specified
- Device mesh tensor $[[0,2],[1,3]]$
- `mesh_split(t, device_mesh,`
`dims_mapping=[0, 1])`

3. Partially Tiled:

- Replicated in subgroups
- Each subgroup has a different subset of data
- Device mesh tensor $[[[0,1],[2,3]]]$, inner-most dim is replication
- `mesh_split(t, device_mesh, dims_mapping=[-1, 0])`
