

$$A_x C_y = \text{einsum}(A_x B, B_x C_y)$$

0	1
2	3

**Top-level partitioner:** default context

Found matching  $C_y$  sharding, reduce to shard size, group devices along on  $Y$ .

2D device mesh:

$X$  dim marked as  $\text{blue}_x$   
 $Y$  dim marked as  $\text{red}_y$

Recursion with new device context:

Logical to physical devices:  $\{0 \rightarrow \{0, 2\}, 1 \rightarrow \{1, 3\}\}$

$$A_x c = \text{einsum}(A_x B, B_x c)$$

**Second-level partitioner:**

Found matching  $A_x$  sharding, AllGather non-matching  $B_x$  and reduce  $A_x$  to shard size.

Partitioned graph:
