

1. Exchange maximum halo for left (1) and right (3)

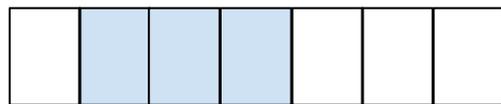

slice and  
collective-permute

slice and  
collective-permute

2. Concatenate exchanged left and right halos

3. DynamicSlice on the region actually needed  
(e.g., 0 left halo and 2 right halo **for partition 2**)

Dynamic  
Slice

4. Mask out invalid regions with the identity value (0)  
(e.g., **partition 3** has 4 elements in the invalid region)
