

The figure displays three box plots side-by-side, representing different data distributions. The first plot on the left shows a single horizontal orange line at the bottom, indicating a distribution with no visible spread. The middle plot features a green box with an orange median line, whiskers extending to the minimum and maximum values, and two outliers represented by open circles. The rightmost plot shows a brown box with a black median line, whiskers, and a cluster of outliers, including one open circle and several filled circles.

$$\begin{array}{l} \text{stabCP} \\ \overline{cov} = 0.87 \\ \overline{T} = 1.89 \end{array}$$
