

# High multiplicity $\pi$ simulation

$1.0 < p_T^{ee} < 1.2 \text{ GeV/c}$

(a)

$10^3$  Counts

— FG

—  $\text{BG}_{\text{uncorr}}$

—  $\text{BG}_{\text{corr}} + \text{BG}_{\text{comb}}$

—  $\text{BG}_{\text{comb}}$

■  $\text{BG}_{\text{corr}}$

side band for normalization

Ratio

—  $(\text{FG} - \text{BG}) / \text{BG}_{\text{uncorr}}$

— 2 order pol fit

(b)

residual / sig: -0.9%

$m_{ee\gamma} [\text{GeV}/c^2]$
