

Data release information

The file contains the main results obtained from the data taken in 2019 with the superFGD prototype with the Los Alamos National Lab LANSCE WNR beamline. The plots were published in *Physics Letters B* **840 (2023) 137843**.

The total cross-section measurement results were provided with our standard “single-track” selection. The single track is defined as a single temporal and spatial cluster in the data with several topological linearity requirements. An exponential fit was applied to the “single-track” events along the depth of the detector for each energy range. The exponential coefficient indicates the total cross section for each energy range. The detail can be found in the publication. The data release includes the measured total cross section as a function of neutron kinetic energy with all systematic and statistical uncertainties. The simulated total cross section with the same “single-track” reconstruction has been included as well. The simulation was performed with the Geant4.10.3 Bertini model.

In addition, the measured and simulated energy spectra with the time-of-flight technique were included. For completeness, the neutron flux provided by the beamline scientists was inserted in the file also.

All the curves except the neutron flux were imported as TH1 objects. The neutron flux was in TGraph. Any versions of ROOT should open the file. The description of each object is shown as following. If you have any questions, contact Guang Yang at gyang9@berkeley.edu or Ciro Riccio at ciro.riccio@stonybrook.edu.

TH1F spectrum_tof_mc: Time-of-flight spectrum (simulation)
TH1D spectrum_tof_data: Time-of-flight spectrum (data)
TGraph neutron_flux: Neutron flux provided by the beamline scientists
TH1D data_xsec_vs_ke_with_totalUnc: Total cross section vs. Neutron kinetic energy with total uncertainty(data)
TH1D data_xsec_vs_ke_with_statUnc: Total cross section vs. Neutron kinetic energy with statistical uncertainty(data)
TH1F simulation_xsec_vs_ke: Total cross section vs. Neutron kinetic energy (simulation)
TH1D rel_err_tot: Relative total uncertainty vs. Neutron kinetic energy
TH1D rel_err_stat: Relative statistical uncertainty vs. Neutron kinetic energy
TH1D rel_err_time: Relative time resolution uncertainty vs. Neutron kinetic energy
TH1D rel_err_invisible: Relative invisible scattering uncertainty vs. Neutron kinetic energy
TH1D rel_err_det: Relative detection uncertainty vs. Neutron kinetic energy
TH1D rel_err_ly: Relative light yield uncertainty vs. Neutron kinetic energy
TH1D rel_err_geoAcc: Relative geometric acceptance uncertainty vs. Neutron kinetic energy
TH1D rel_err_collimator: Relative collimator-induced energy uncertainty vs. Neutron kinetic energy
