

(a) Latching circuit to support the cache read command

1: Initialize C-Latch	// enable M_4
2: Initialize S-Latch	// enable M_1
3: for each operand N_i do	
4: Sense N_i	// enable M_2
6: Move result from S-Latch to C-Latch	// enable M_3

(b) Bitwise AND procedure

1: Initialize C-Latch	// enable M_4
2: for each operand N_i do	
3: Initialize S-Latch	// enable M_1
4: Sense N_i	// enable M_2
5: Move result from S-Latch to C-Latch	// enable M_3

(c) Bitwise OR procedure
