

$\theta$  (FSIM swap angle)

$$d \times \theta = 1$$

asymptotic regime  
(Heisenberg limit  $d \rightarrow \infty$ )

- $\text{Var}(\hat{\theta}_{\text{opt}}^{\text{asym}}) = \Omega(\frac{1}{d^3 M})$
- $\text{Var}(\hat{\phi}_{\text{opt}}^{\text{asym}}) = \Omega(\frac{1}{d^3 M})$
- $\text{Var}(\hat{\chi}_{\text{opt}}^{\text{asym}}) = \Omega(\frac{1}{d M})$

pre-asymptotic regime

$(d \ll 1/\theta)$

- $\text{Var}(\hat{\theta}_{\text{opt}}^{\text{pre-asym}}) \approx \frac{1}{8d^2 M}$
- $\text{Var}(\hat{\phi}_{\text{opt}}^{\text{pre-asym}}) \approx \frac{3}{8d^4 \theta^2 M}$
- $\text{Var}(\hat{\chi}_{\text{opt}}^{\text{pre-asym}}) \approx \frac{1}{2d^2 \theta^2 M}$

$d$  (#FSIM gates)
