

Vocabulary

```
graph BT; Entity[Entity] -- "W_{HL x E}" --> Hidden[Hidden Layer]; Hidden -- "W_{V x HL}" --> Vocabulary[Vocabulary];
```

The diagram illustrates a three-layer neural network architecture. At the bottom is the 'Entity' layer, which connects to a middle 'Hidden Layer' via a weight matrix $W_{HL \times E}$. The 'Hidden Layer' then connects to the top 'Vocabulary' layer via a weight matrix $W_{V \times HL}$. All layers are represented by rectangular boxes, and the connections are indicated by upward-pointing arrows.

$W_{V \times HL}$

Hidden Layer

$W_{HL \times E}$
