

Question

What are flight numbers of flights departing from City "Aberdeen"?

Database schema (including tables and columns)

airlines (airlines)

uid (airline id)	airline (airline name)	abbreviation (abbreviation)	country (country)
---------------------	---------------------------	--------------------------------	----------------------

airports (airports)

city (city)	airportcode (airport code)	airportname (airport name)	country (country)
----------------	-------------------------------	-------------------------------	----------------------

countryabbrev (country abbrev)

flights (flights)

airline (airline)	flightno (flight number)	sourceairport (source airport)
----------------------	-----------------------------	-----------------------------------

destairport (destination airport)

Serialize schema items.

Schema sequence

```
airlines: uid, airline, abbreviation, county | airports:  
city, airportcode, airportname, county, countyabbrev |  
flights: airline, flightno, sourceairport, destairport
```

Question + Schema sequence

Seq2seq PLM (such as BART and T5)

SQL query

```
select flights.flightno from flights join airports on  
flights.sourceairport = airports.airportcode where  
airports.city = "Aberdeen"
```
