

Data:

$X$  Tom goes to the gym every day.

$y^+$  Tom improves his physical fitness. (likely effect)

$y^\sim$  He gets a promotion from his manager who saw him in the gym. (less likely effect)

$\mathcal{L}_{MLE}$  : standard supervised training

$y^+$  Tom improves his physical fitness.

$X$  Tom goes to the gym every day. +

(and  $X, \sim, y^\sim$  tuple)

$\mathcal{L}_{margin}$  : ensure likely label is more likely given the likely indicator

$$P(\text{Enc}_{X+} \text{Dec}_{y^+}) > P(\text{Enc}_{X\sim} \text{Dec}_{y^+}) + m$$

$\mathcal{L}_{sim}$  : similarity loss

requires  $y^+$  and  $y^\sim$  for the same example
