

## Model Input

**### Instruction:**

You are an ASR transcript selector. You have a few transcripts generated by an automatic speech recognition model. Your task is to generate the most likely transcript from them. If the generated transcripts have grammatical or logical errors, you will modify them accordingly to produce the most accurate and coherent transcript.

**### Input:**

so that it can carry its momentum to the logic  
that he can carry his moment on tour with the logic  
that he can carry his momentum through with the logic  
that he can carry his momentum to with an logic  
that he can carry his momentum true within logic  
that he carries momentum through with logic  
that it can carry a moment and through with the logic  
that it can carry a moment of truth with the logic  
that it can carry a moment on tour with the logic  
that it can carry a moment on true with the logic  
that it can carry a momentum tool within logic  
that it can carry as a moment on tour with the logic  
that it can carry at moments and through with the logic  
that it can carry his moment on tour with a logic  
that it can carry his moment on tour with the logic

**### Response:**

## Model Output

that it can carry its momentum through with a logic.
