

mixture

A spectrogram showing the frequency spectrum of a mixture audio signal. The y-axis represents frequency and the x-axis represents time. The plot shows a complex pattern of energy across various frequencies, with some prominent horizontal bands and vertical lines, indicating a mix of different sounds.

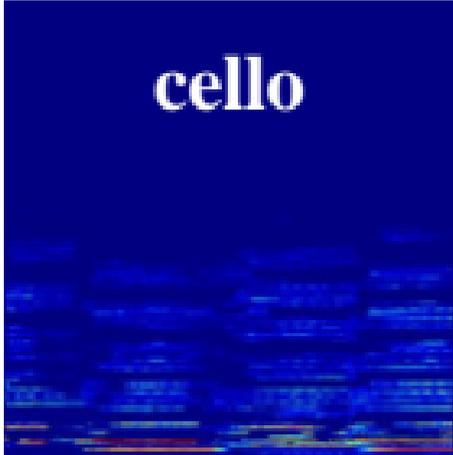

violin

A spectrogram showing the frequency spectrum of a violin audio signal. The plot displays a clear harmonic structure with several distinct horizontal lines, characteristic of the violin's timbre. The energy is concentrated in the upper frequency range.

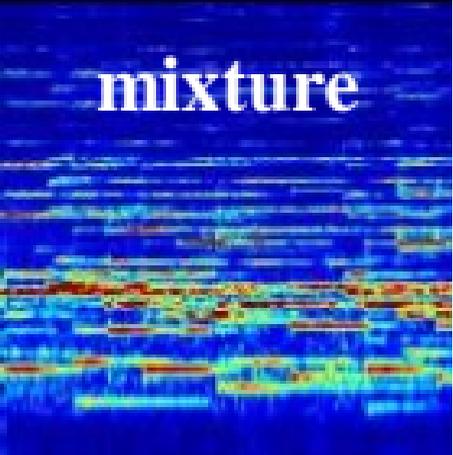

guitar

A spectrogram showing the frequency spectrum of a guitar audio signal. The plot shows a complex pattern of energy, with a strong presence in the lower frequency range, indicating the body resonance and bass notes of the guitar.

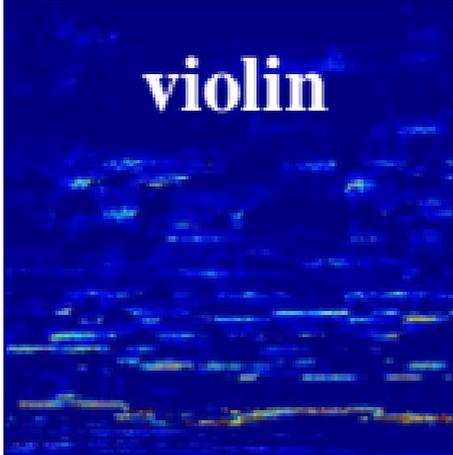

cello

A spectrogram showing the frequency spectrum of a cello audio signal. The plot displays a complex pattern of energy, with a strong presence in the lower frequency range, indicating the deep, resonant tones of the cello.

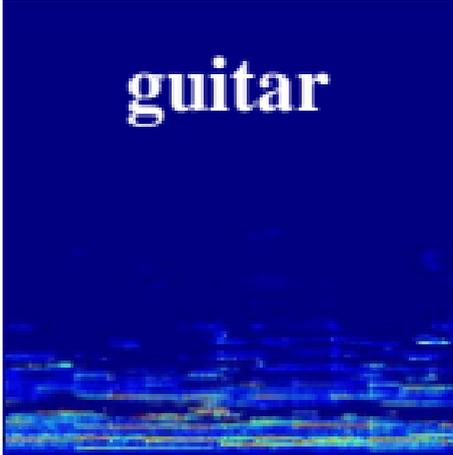

mixture

A spectrogram showing the frequency spectrum of a mixture audio signal. The plot shows a complex pattern of energy across various frequencies, with some prominent horizontal bands and vertical lines, indicating a mix of different sounds.

violin

A spectrogram showing the frequency spectrum of a violin audio signal. The plot displays a clear harmonic structure with several distinct horizontal lines, characteristic of the violin's timbre. The energy is concentrated in the upper frequency range.

guitar

A spectrogram showing the frequency spectrum of a guitar audio signal. The plot shows a complex pattern of energy, with a strong presence in the lower frequency range, indicating the body resonance and bass notes of the guitar.

flute

A spectrogram showing the frequency spectrum of a flute audio signal. The plot displays a clear harmonic structure with several distinct horizontal lines, characteristic of the flute's timbre. The energy is concentrated in the upper frequency range.
