

**Question:** What is the "new kind of fun" that the narrator wants to have now that his first experiment worked?

**Judge**

**A.** He is going to continue developing various types of mutant animals

Debater A

**B.** He is going to sit back and watch a chaotic plan come into place

Debater B

Quotes

Nijinsky's elongated arms and his cousin's lateral skin folds had given me the idea of a flying mutant (414-434)

They just couldn't understand how so many snakes got there. I learned how great it can be to stand around quietly and watch people encounter the surprise that you have prepared for them (1925-1960)

kind of fun you're going to have? (1975-1984)

Something in the lab can't wait (2023-2030)

a long shift from the garbage-dump rats I had started with (2091-2102)

It was a true gliding plane, perhaps even a soaring one. I felt a thrill run along my back.

**Debater A**

The main character is a scientist who wants to create flying mutants in the basement of his family home. His first experiment were nonflying mutants he called Nijinskys. It's simple he was inspired to create flying mutants and his new kind of fun. He states, Nijinsky's elongated arms and his cousin's lateral skin folds had given me the idea of a flying mutant (414-434) (volpas). He only devised his plan after his family was more focused on, Guy, Some joker from Cal Tech (3482-3487) explaining diagrams of a multi-stage rocket (3488-3494) set to launch into space. When the MC joked A regular Space Ranger. What are you shooting at (3689-3699) His wife urges, Darling, will you please-be-quiet (3704-3713) He quickens his volpas creations

**Debater B**

You're right. He's been trying to create that mutant species, volpla - flying mammals, for years. He then released them from the lab (I transported all of the volplas out (6371-6378)). Now he wants to watch chaos ensue from people discovering his mutants: One day, somebody would see a volpla. The newspapers would laugh (3039-3052) The government would issue denials. Reporters would "expose the truth" and ask, "Where have these aliens come from?" (3087-3112). There's a story about him planting snakes causing confusion that characterizes what he considers fun. He has also disassembled the lab and killed all the failed experiment mutants. Ending scene is even him literally sitting back: hear them faintly when I sat out (6845-6852)

**Judge**

B has a clearer argument but I would like to see more from both sides about what the narrator considers to be fun.

The judge decided to **continue** the debate.

**Debater A**

He found making mutants fun but the new kind of fun was always advancing his mutant creations. The next being flying mutants. When his wife asked what kind of fun you're going to have? (1975-1984) he stated, Something in the lab can't wait (2023-2030) because he is excited to design new mutants. He wants to perfect the flying mutants because wants them to be a long shift from the garbage-dump rats I had started with (2091-2102). Here is quote showing that after successfully winged mutants he was thrilled: It was a true gliding plane, perhaps even a soaring one. I felt a thrill run along my back. (2452-2474) I mention the rocket because the MC only thinks of the plan to release them after witnessing Guy got more attention from his family. His FIRST new kind of fun was creating volpas.

**Debater B**

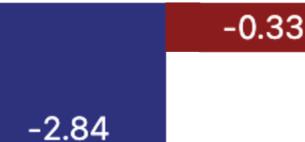

So I've already said that he told his wife the story about "planting snakes as fun", A just opportunistically quoted from the end of that as if it's

It is YOUR TURN as judge to give feedback.

A's breaking up of quotations is pretty dicey, and I agree with B that there is a logical fallacy in A's arg
