

Structured Task Instructions

Input Embedding and Output Instruction

Reason LLM-Prompt ρ_{reason}^{llm}

I have an image of a g_n .

Your task is to perform the following actions:

1. **Summarize** the information you get about the g_n from the attribute description pairs delimited by triple backticks with five sentences.
2. Infer and list **three possible names** of the g_n in this image based on the information you get.
3. Output a JSON object that uses the following format:
<three possible names>: [
 <first sentence of the summary>,
 <second sentence of the summary>,
 <third sentence of the summary>,
 <fourth sentence of the summary>,
 <fifth sentence of the summary>,
]

Using the following format to perform the aforementioned tasks:

===

"General Description": "general description of the photo"

Attributes List:

- "attribute name": "attribute description"

- ...

- "attribute name": "attribute description"

Summary:

Three possible g_n names:

Output JSON:

===

" $a_{n,0}$ ": " $s_{n,0}$ "

Attributes List:

" $a_{n,1}$ ": " $s_{n,1}$ "

- ...

" $a_{n,M}$ ": " $s_{n,M}$ "

Summary:

Three possible g_n names:

Output JSON:
