

## Photolysis and Photoionization

Reaction <sup>a,b</sup>	Dissociation yields (photon $\lambda$ in nm)		
	< 121.6	121.6	> 121.6
CH <sub>4</sub> + h $\nu$ → CH <sub>3</sub> + H	0.26	0.42	0.50
→ <sup>1</sup> CH <sub>2</sub> + H <sub>2</sub>	0.17	0.48	0.50
→ CH + H <sub>2</sub> + H	0.09	0.07	0.00
→ <sup>3</sup> CH <sub>2</sub> + 2H	0.48	0.03	0.00

Photoionization:

*N.B.* Electron impact dissociation must also be include in models.
