

Photolysis and Photoionization

Reaction ^a	Photon wavelength (nm)
$\text{N}_2 + h\nu \rightarrow \text{N}(^2\text{D}) + \text{N}(^2\text{D})$	$\lambda < 85.4$
$\text{N}_2 + h\nu \rightarrow \text{N}(^2\text{P}) + \text{N}(^4\text{S})$	$85.4 < \lambda < 89.1$
$\text{N}_2 + h\nu \rightarrow \text{N}(^2\text{D}) + \text{N}(^4\text{S})$	$89.1 < \lambda < 102.1$

Notes:

- (1) No dissociation for $\lambda > 102.1$ nm.
- (2) Electron impact dissociation must also be included in models.

Example Ion Reactions

PRODUCTION

Dissociative recombination:

Ion-molecule reactions:

LOSS

Very little reactivity in neutral diatomic form. After ionization, charge transfer reactions can occur e.g.:

Example Neutral Reactions

PRODUCTION

Radical-molecule reactions:

Photolysis:

LOSS

Very little reactivity in neutral diatomic form.
