

## System Prompt Describing the Structure of Meta-prompt and the Expected Output

You are provided with prompt template examples for a dataset, which are provided to the LLM to generate descriptions for the categories in these datasets. Your task is to generate  $\langle N \rangle$  diverse prompts for another dataset for which you are also provided the dataset name and the description. Format it correctly for use in a Python script, and do not repeat the prompts.

### In-context Pseudocode

#### Example

**Dataset Name:**  $\langle$  *Input example dataset name*  $\rangle$   
**Description:**  $\langle$  *Input example dataset description*  $\rangle$   
**Prompts:**  
prompts.append(" $\langle$  *Input Example Prompt - 1*  $\rangle$ ")  
prompts.append(" $\langle$  *Input Example Prompt -2*  $\rangle$ ")  
....

### Downstream Task Specification Pseudocode

**Dataset Name:**  $\langle$  *Dataset name for which to generate prompts*  $\rangle$   
**Description:**  $\langle$  *Dataset description for which to generate prompts*  $\rangle$   
**Prompts:**  $\langle$ Generated by LLMs $\rangle$

### Example In-context Demonstrations for Bootstrapping LLM Output

**Dataset Name:** Describable Textures Dataset (DTD)  
**Description:** The (DTD) is an evolving collection of textural images in the wild...  
**Prompts:** A. Describe how does the  $\langle$ class name $\rangle$  texture looks like  
B. How can you recognize the texture of  $\langle$ class name $\rangle$ ?  
C. What does the texture of  $\langle$ class name $\rangle$  look like?  
...

### Example Downstream Task (top) & LLM Generated Queries (bottom)

**Dataset Name:** ImageNet-Rendition  
**Description:** ImageNet-R(endition) contains art, cartoons, tattoos, graffiti, toys ...  
**Prompts:** A. Describe the artistic representation of the  $\langle$ class name $\rangle$ .  
B. How would you visually recognize the  $\langle$ class name $\rangle$  in art or cartoons? What is different from real world?  
C. Detail the visual aspects of graffiti, embroidery, and graphics associated with the  $\langle$ class name $\rangle$ .  
...
