```
# Stocktalk

## Purpose
*Stocktalk is a visualization tool that tracks tweet volume and sentiment on Twitter, given a series of queries.*

*It does this by opening a local websocket with Twitter and pulling tweets that contain user-specified keywords. For example, I can tell Stocktalk to grab all tweets that mention Ethereum and periodically tally volume and measure average sentiment every 15 minutes.*

*It will then record this data continuously and update an online database that can be used to visualize the timeseries data via an interactive Flask-based web application.*

## Code Examples
...

## Underlying Features

1. Text Processing
2. Sentiment Analysis
...
```

②  Repository Sketch (the stocktalk repository)

```
.
├── README.md
└── stocktalk
    ├── app.py # from scripts import mongio;
    ├── listen.py # from scripts import *;
    └── scripts
        ├── mongio.py # from scripts import settings;
        ├── settings.py
        └── streaming.py # from scripts import mongio;
```

③  File Sketch (stocktalk/app.py)

```
from json import loads
from flask import Flask, render_template
from scripts import mongio

app = Flask(__name__)

@app.route("/", methods=["GET"])
def index():
    """TODO"""

if __name__ == "__main__":
    pass
```

④  Function Body (def index())

```
def index():
    volume, sentiment = {}, {}
    for document in mongio.db.logs.find():
        logs = loads(document["logs"])
        t = [i["timestamp"] for i in logs]
        v = [i["volume"] for i in logs]
        s = [i["sentiment"] for i in logs]
        volume[document["query"]] = [{ "x": i, "y": j } \
                                     for i, j in zip(t, v)]
        sentiment[document["query"]] = [{ "x": i, "y": j } \
                                         for i, j in zip(t, s)]

    return render_template("index.html", v=volume, \
                           s=sentiment)
```

(a) Items from a code repository

 RepoSketcher (the stocktalk repository)

```
Below is a detailed README.md of repository. Please write a repository sketch in the form of a tree, including all folders, files, as well as imports information if necessary.
