

Initialization

$\nabla P_{SG} \approx \nabla(\|A \odot (2 - XX^T)\|_F^2)$   
 Matrix completion is implicitly  
 regularized to be low rank so  
 $(XX^T)_{ij} \rightarrow 2 \forall i, j$

Phase 1: Alignment

$X_i^T X_j \rightarrow \infty \forall i, j$

Phase 2: Asymptotic
