

Future context leakage

Source Code

Commit at Sep 21, 2015

```
def register_lookup(cls, lookup, lookup_name=None):
    if lookup_name is None:
        lookup_name = lookup.lookup_name
    if 'class_lookups' not in cls.__dict__:
        cls.class_lookups = {}
    cls.class_lookups[lookup_name] = lookup
    return lookup
```

Commit at Sep 2, 2022

```
def register_instance_lookup(self, lookup, lookup_name=None):
    if lookup_name is None:
        lookup_name = lookup.lookup_name
    if "instance_lookups" not in self.__dict__:
        self.instance_lookups = {}
    self.instance_lookups[lookup_name] = lookup
    return lookup
```

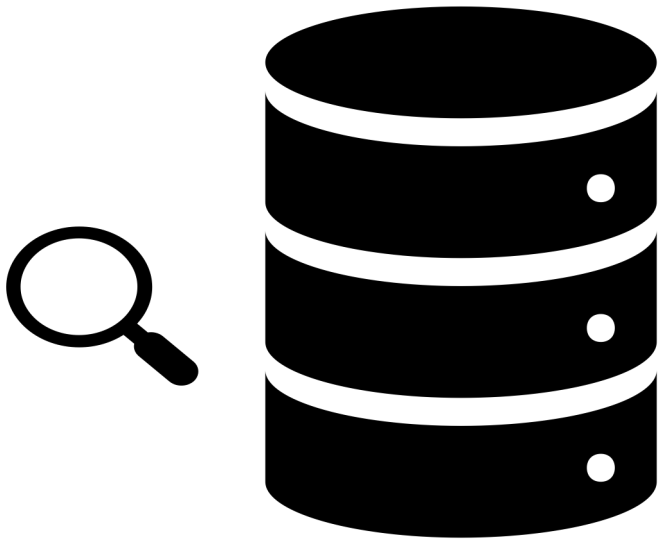

When prompting LLM to generate code:

Generating method body for:

```
def register_lookup(cls, lookup, lookup_name=None):
```
