

Task Instance Overview			
Instance id	5feceb66ffc8	Owner/Repo	astropy/astropy
Version	5.1	Dependency level	standalone
Base commit	2ae987ba1160486e36eb315ee0e9d85cdbea5844		
Function declaration			
<pre>def _get_nonflat_cls(cls, kls: Optional[Type[_CosmoT]]=None) ->Optional[Type[Cosmology]]:</pre>			
Brief docstring	Find the corresponding non-flat class.		
Detailed docstring			
<pre>Find the corresponding non-flat class. The class' bases are searched recursively. Parameters ----- kls : :class:`astropy.cosmology.Cosmology` class or None, optional If `None` (default) this class is searched instead of `kls`. Raises ----- TypeError If more than one non-flat class is found at the same level of the inheritance. This is similar to the error normally raised by Python for an inconsistent method resolution order. Returns ----- type A :class:`Cosmology` subclass this class inherits from that is not a :class:`FlatCosmologyMixin` subclass.</pre>
