

**Example#1:** what flights are there from boston to denver on monday morning.

Flight

**Example#2:** what is the schedule of flights from boston to denver next Monday.

Flight Time

**Classify:** monday morning i would like to fly from columbus to indianapolis.

or

## • Human reasoning

We need to compare the pair of examples from different classes:

### Step1: Common analysis

First, they both mention the offline time and the same origin and destination.

### Step2: Differ analysis

The flight time examples focus on inquiring about the schedule as patent infringement, another's object is the flight.

### Step3: Make the decision

Based on the the analysis above, the term that is more likely to represent the intent of this query is Flight, although the time is mentioned.

## • Robot reasoning

The specific takeoff time is mentioned above, so it's the same as the possible Flight time category.
