

Given the sentence "on april first i need a ticket from tacoma to san jose departing before 7 am", which of the two terms, 'flight' and 'airfare', is more likely to be the inquiry's intent?

sample from boundary

sample from boundary

Given two classes corresponding samples "flight: what flights are there from pittsburgh to san francisco on friday" and "airfare: what is the fare for flights from denver to atlanta"

Appending into the next context

Appending into the next context

Summarize what they have in **common** in terms of expression, leading the model to incorrectly assume that the pair of intents are in the same class.

The two sentences both ask for **flights**.

Appending into the next context

The two sentences both ask for **flights**. The first question is about the **flights** from Pittsburgh to San Francisco, while the second is about the **fare** for flights from Denver to Atlanta. Based on such opinion, Given the sentence "on april first i need a ticket from tacoma to san jose departing before 7 am", which of the two terms, 'flight' and 'airfare', is more likely to be the inquiry's intent?

It's more like describing an **airline ticket**, although they both mention flights, So the answer is **"airfare"**.

Summarize what they have in **difference** in terms of expression, helping the model to distinguish the pair of intents.

The first question is about the **flights** from Pittsburgh to San Francisco while the second is about the **fare** for flights from Denver to Atlanta.
