

The current node status is as follows:

The packet loss rate shows very high average value is 44.0%, extremely volatile fluctuation and has fell sharply and then rose trend.

The bits error rate shows high average value is 22.0%, extremely volatile fluctuation and has fell sharply and then rose trend.

The information about the communication links of the current node is as follows:

The packet loss rate shows slightly high average value is 19.0%, minor fluctuation and has down trend.

The bits error rate shows slightly high average value is 18.0%, significant fluctuation and has down trend.

The transport delay shows few average num minor fluctuation and has down trend.

The current node may have a fault for an application crash.
