

# WDC-Shoes

Explain matching label class given the entity descriptions:

Prompt

**E\_a:** Nike Sportswear AF-1 488298-436 MN Navy.

**E\_b:** Air Force 1 [BRAND] Nike [COLOR] Navy (488298-436)

**Label:** Match

**Explanation:** Both entities refer to Nike AF shoes with the same model number, therefore they're a match.

New  $X_{train}$  Instance

**E\_a:** Air Jordan 14 Retro Varsity "Laney" Black-White for Sale.

**E\_b:** Cheap Air Jordans 4 Retro "Motorsports" Varsity White.

**Label:** Not a Match

**Explanation:**

Binary Labeled Training Data

  
**Massive LLM**  
(Alpaca/Mistral/GPT)

GPT-4

Entity A is a "Laney" version which is Maize-Black-White in color, while Entity B is a "Motorsports" version which is Blue-Black in color, therefore they are not a match.

Alpaca

Entity A is Jordan 14 while Entity B is Cheap Jordan Retro 4, therefore the two are not a match.

Mistral-7B-Instruct

While both entities refer to Air Jordans, Entity A is a "Laney" version, while Entity B is a "Motorsports" version, therefore they are not a match.
