

**Initial Aligned
Model**

```
graph LR; A[Initial Aligned Model] --> B[Synthetic Data]; B --> C[Supervised/Preference Learning]; C --> D[Better Aligned Model]; D --> E["(Better) Base Model"]; E --> B;
```

The diagram illustrates a cyclical process for improving an AI model. It begins with an 'Initial Aligned Model', which is used to generate 'Synthetic Data'. This data is then used in a 'Supervised/Preference Learning' phase to produce a 'Better Aligned Model'. This improved model is then used to create a '(Better) Base Model', which in turn provides more refined 'Synthetic Data' for the next iteration of the learning process.

Synthetic Data

**Supervised/
Preference Learning**

**Better Aligned
Model**

**(Better)
Base Model**
