Hi! I'm OpenDevin, an AI Software Engineer. What would you like to build with me today?

Can you explain what <https://github.com/OpenDevin/OpenDevin/pull/17> did?

Sure! To explain what the pull request (PR) did, I will first need to fetch the details of the PR from GitHub. Let me do that for you.

It seems that I cannot access the detailed content of the pull request directly. However, I can clone the repository and check the changes made in the pull request locally. Let me do that for you. First, I will clone the repository and then check out the specific pull request.

The repository has been successfully cloned, and the pull request branch has been checked out. Now, let's examine the changes made in this pull request. I will list the files changed in this pull request to get an overview of the modifications.

Add prototype OpenDevin frontend #17

Merged huybery merged 1 commit into `OpenDevin:main` from `neubig:neubig/add_prototype_frontend` on Mar 16

Conversation 9 Commits 1 Checks 0 Files changed 26 +18,978 -0

neubig commented on Mar 16

This PR adds a simple prototype frontend in React that is similar to the Devin Frontend. It looks like this, with a chat interface on the left, and two tabs on the right. Shell

```

I want to test this project https://github.com/OpenDevin/OpenDevin
$ git clone https://github.com/OpenDevin/OpenDevin
$ cd OpenDevin
$ npm install
$ npm run dev
  
```

Hi! I'm OpenDevin, an AI Software Engineer. What would you like to build with me today?

Google search OpenDevin

Sure! Let me perform a Google search for "OpenDevin".

Here are some of the top results for "OpenDevin":

- OpenDevin GitHub Pages:** OpenDevin GitHub Pages
- OpenDevin is an autonomous AI software engineer capable of executing complex engineering tasks and collaborating actively with users on software development.
- Introducing OpenDevin CodeAct 1.0:** xwang.dev
- OpenDevin CodeAct 1.0 is a new agent for solving coding tasks. It is based on CodeAct, a framework that consolidates LLM agents' capabilities.
- OpenDevin GitHub:** OpenDevin GitHub
- Repository and resources related to OpenDevin.
- OpenDevin: Open Source AI Developer:** Anakin.ai
- OpenDevin is a self-contained AI software engineer designed to perform complex engineering tasks and actively collaborate with users on software development.
- Anyone use OpenDevin?:** Reddit
- Discussion on Reddit about the usage of OpenDevin.
- Would you like to visit any of these links or need more information on a specific topic?

Let's add a retry mechanism to the script to handle this situation. We will wait for a few seconds and retry the request if we receive a 202 status code. I'll update the script accordingly.

The script has been updated to include a retry mechanism. Let's execute the script again to fetch the number of commits per week for the `OpenDevin/OpenDevin` repository.

The script successfully fetched the number of commits per week for the `OpenDevin/OpenDevin` repository. Here are the results:

```

Week starting 1710028800: 4 commits
Week starting 1710633600: 41 commits
Week starting 1711238400: 109 commits
Week starting 1711843200: 106 commits
Week starting 1712448000: 63 commits
Week starting 1713052800: 78 commits
Week starting 1713657600: 83 commits
Week starting 1714262400: 77 commits
Week starting 1714867200: 70 commits
Week starting 1715472000: 92 commits
Week starting 1716076800: 103 commits
Week starting 1716681600: 83 commits
Week starting 1717286400: 57 commits
  
```

If you need any further assistance or modifications, please let me know!

The data has been successfully saved to `commits_per_week.csv`. Now, let's visualize the data using `matplotlib`. First, we need to install `matplotlib` if it's not already installed.

Great! Now, let's write a script to read the `commits_per_week.csv` file and visualize the data using `matplotlib`. I'll create a new Python script file for this purpose.

Let's write the code to read the `commits_per_week.csv` file and visualize the data using `matplotlib`. I'll update the `visualize_commits.py` file with the necessary code.

The script to visualize the commits data has been written. Let's execute the `visualize_commits.py` script to generate the plot and save it as an image file.

The script executed successfully, and the plot should have been saved as `commits_per_week.png`. Let's check if the file exists in the current directory.

The `commits_per_week.png` file has been successfully created. Let's display the image to visualize the number of commits per week.

STDOUT/STDERR

<IPython.core.display.Image object>

Terminal (read-only)

```

Week starting 1716681600: 83 commits
Week starting 1717286400: 57 commits

$ python3 github_commits.py
Data saved to commits_per_week.csv

$ python3 visualize_commits.py
Matplotlib created a temporary cache directory at /tmp/matplotlib-57cbk7e because the default path (/home/opendevin/.cache/matplotlib) is not a writable directory; it is highly recommended to set the MPLCONFIGDIR environment variable to a writable directory, in particular to speed up the import of Matplotlib and to better support multiprocessing.

$ ls -l commits_per_week.png
-rw-r--r-- 1 opendevin root 33224 Jun  5 18:18 commits_per_week.png
